The resolution provided that the argument before the Premier be confined to the question of the special 100 per cent. increase; also that the requirements for payment thereof be deferred, at least, until such time as the whole compensation matter could be submitted. In this connection President McLean had in mind the report soon to be fyled by the Price-Waterhouse Auditor, who is investigating the workings of the Compensation Board from its inception, and the provisions of the Compensation Act.

Presents Case to The Premier

R. W. McLellan, the Secretary, was requested to represent the Association before the Premier, and submit its views.

At the subsequent conference with the Premier, Mr. McLean outlined the objects of the appearance of the very large delegation, and Mr. McLellan explained the matters necessary to give him an understanding of the whole vexatious question.

The delegation was courteously received by Hon. Mr. Veniot, and after the case had been presented, he stated that, while he recognized some relief would have to be afforded in the immediate or near future, he could not see how the present extra assessment could be cancelled, otherwise the Board would be without funds to pay claims. He promised, however, that the auditor's report would be in the hands of the government in a short time, and within a reasonable period thereafter a general conference of all interested in the subject of compensation would be called to go fully into the whole question, with a view to amending the act so that its provisions would not bear so heavily on such a basic industry, which, under the present conditions, could not be expected to continue to pay what must be admitted to be excessive assessments.

The delegation being satisfied with the Premier's explanation, adjourned after appointing a committee to attend the expected round table conference, from which satisfactory results are anticipated.

The New Brunswick Lumbermen's Association have been strongly pressing upon the Government to make important amend-

The largest and most representative meeting of New Brunswick lumbermen held in years convened in the Board of Trade rooms, in Fredericton on September 4. The gathering was called to enter as strong a protest as possible against the increasing and now prohibitive Assessments of the Compensation Board resulting in a recent proclamation whereby rates were exactly doubled. The Board claims this doubling up will be only for the 1923 year, and states that the extra funds thereby to be brought in, will wipe out an alleged deficiency of about \$175,000. Lumbermen complain that for a number of years the existing rates have been too high, and when notification of the extra levy was published, it was decided that some drastic action

ments to the Compensation Act. Among the most outstanding are:

(a) That the personnel of the Board be changed, and that in future it be judicial, or failing this, that employers have a right to nominate one member of the Board—a privilege not now enjoyed.

(b) Recognition of the Association by the Board.

(c) Appeal to be allowed from the decisions of the Board on questions of both law and fact.

(d) Board to publish their decisions, findings and payments in the Royal Gazette.

(e) Contributions to be made by Employees sufficient to at least cover Medical Attendance and Hospital Fees.

(f) Liability in case of death of an Employee be restored to the old limit of \$3500.00, instead of unlimited amount in the Board's discretion.

(g) That Permanent Partial Disability be also reduced as well as allowances to Widows and Children.

The Committee to represent the Association is as follows:—Donald Fraser, (Fraser Companies, Ltd.); J. Fraser Gregory, (Murray & Gregory, Ltd.); Wm. Richards, (Richards Manufacturing Co., Ltd.); Angus McLean, (Bathurst Co., Ltd.); W. B. Snowball, (J. B. Snowball Co., Ltd.); J. W. Brankley, (Miramichi Lumber Co., Ltd.); J. H. Irving, (J. D. Irving & Co., Ltd.); T. H. McEvoy, (Sydney Lumber Co., Ltd.); George King, M.P.P. (King Lumber Co., Ltd.); H. E. Beedy, (Nashwaak Pulp & Paper Co., Ltd.); W. K. Haley, (Haley Bros. Ltd.); R. W. McLellan, Fredericton.

Appointed Supervisor of Crown Timber Agents

James I. Hartt, of Orillia, who was formerly representative for East Simcoe in the Ontario Legislature, will be the new overseer of Crown timber agents. At a recent meeting in Toronto, Hon. James Lyons, Minister of Lands and Forests, announced that an appointment would shortly be made of a supervisor of Crown lands and timber agents and bush operations. The idea, he stated, was to avoid, if possible, a good deal of waste in the cutting of timber and pulpwood. The selection of Major Hartt for the post is one that will be well received. He has had a wide practical experience in the lumber industry, being for several years with the Gilmour Co., of Trenton, and later with the Fesserton Timber Co., after which he was in the wholesale business for himself. Major Hartt, who is of Irish extraction, came to Canada in 1884 and has held many important offices. He served several years in the municipal council of Orillia and was first elected to the Ontario legislature in 1911. He was in command of a forestry battalion overseas which established a record in the matter of the quick construction and equipment of sawmills in France. Major Hartt is a past grand master of the L. O. L., and past supreme grand master of the Loyal True Blues and has long taken a deep interest in forestry and lumber problems.

Major J. I. Hartt, Orillia, Ont.

Estimate of Canada's Timber Resources

At the present time it is possible to obtain only incomplete estimates of the forest and pulpwood resources of the Dominion of Canada. It is estimated by the director of forestry branch of the Department of the Interior that the forests of Canada have a value of over two billion dollars and that, including all classes of timber, saw material, pulpwood, ties, poles, fuel, etc., accessible and inaccessible, the total stand may be 986,800,000 M. feet.

How Canadian Timber Has Shared and May Continue to Share in the Markets of the British Empire

* By A. C. Manbert

A. C. Manbert, Toronto

In presuming to address you upon "Trade in Forest Products," I suffer much diffidence. I make no parade of feigned humility but I have scant hope of interesting you unless I can so join the subject to the ideal of the conference as to give it a closely complementary relationship.

The forestry question has many sides and phases, but undoubtedly its principal justification in the common mind is in its contribution to man's daily need. Trade is perhaps the best measure of this contribution. This seems to give me a point of contact, but still a difficulty arises.

Our thought of trade is Empire trade and I have undertaken this task most reluctantly lest, because of certain convictions which I hold, I may sound a discordant note. I shall much regret if I run counter to any fond designs. The best that I can do is to forewarn you.

If I am to be so unfortunate as to excite any disfavor, I am sure that I will at the start receive your commiserations because to cover such a large subject in a short space of time is really formidable.

None of us have a fondness for the trite and obvious so that I can take no refuge in generalities. Another option is to aim at entertainment in stories of action and accomplishment, for the very aroma of the pine, spruce and balsam clings to the romance and adventure found in their exploitation. But we are here for information and pure entertainment must come by the way and secondarily.

It seems then that I must approach the subject appraisingly. This means a detailed inquiry into technical practices, which we might hope would reveal expanding possibilities to be encouraged, or restraining inhibitions to be admitted. But this brings to me no relief, for this proposal stands at the gate to a very wide field. To journey across it is a considerable undertaking and to do it in the brief time allotted me is quite impossible. If, therefore, my observations are fragmentary and inconclusive, I crave your indulgence.

A Thing is True if it Works

Nearly two hundred years ago, Adam Smith, in his "Wealth of Nations," laid down the fundamental economic principle that man seeks to satisfy his requirements with the minimum of effort. In more recent times, William James the eminent Psychologist of Harvard University, developed the theory in his Pragmatic Philosophy that "a thing is true if it works." It may seem a far cry from metaphysics to trade in forest products but I fancy that you will readily agree with me that these two postulates have a peculiar inherence in the practices of the timber trade.

Man undoubtedly found very early a primary interest in timber in his instinct for shelter. Later and secondary interests arising out of cultural refinements have had a more scientific basis in mathematical calculation and chemical formulae, but contact with timber has always been determined by practical and homely considerations of discernment, initiative and discrimination. Location of timber, quality of product, means of transportation have called for arbitrary and adventitious decisions that have given an Empirical basis to the development of the industry.

If the fact that it finds its material in God's Great Open, living, vital, majestic, is responsible for the lure which holds and fascinates, it is perhaps also true that the hazards of

operation in the conquest of nature inspire a native instinct for the practical and the real.

I make these observations with two thoughts in mind. It has been a somewhat popular indulgence in uninformed circles to proclaim the lumberman a wanton destroyer of the forest obsessed in wringing a fortune out of immediate circumstance with no vision nor concern for the future.

To this proposition, I give emphatic dissent. Pecuniary interest he unquestionably seeks; otherwise he could not persist. But large fortunes, while occasional, are not his common experience. His consolations are more in the enjoyment of robust and virile employment, than large competence. No commercial activity wrestles more with unrestrained competition and fortuitous conditions. No natural product comes to a more fickle and inconstant market. Today it will buy; tomorrow it will abstain.

Operations run in long cycles; a year or eighteen months from stump to purchaser. But even and always the lumberman must bring to market only what it will buy. Must he not therefore seek the shortest road and declare a thing to be true only as it works? My other thought is this.

The Empire Development of Timber

This conference is dedicated to the ideal of Empire development of timber for Empire use. This is most laudable and inspiring, but if we would hitch our wagon to a star, we must avoid vain of delightful sailing off into the empyrean. Let us hold our wheels to the earth and keep our seat, remembering that a thing is true if it works.

I have more than ordinary interest in this conference. For the better part of 1919, I gave up my business to inquire into timber conditions in Great Britain, in the interest of the Ontario Government and Canadian lumbermen. In my capacity as Timber Commissioner, I participated in some of the organizing meetings preliminary to the Imperial Conference held in 1920. Later, upon my return to Canada, I co-operated in consultations here preparatory to the conference. I mention this lest anything which I may say shall seem to sound a querulous note and suggest an unsympathetic attitude.

Another Explanation:—I am dealing only with the Trade of Eastern Canada. British Columbia will present her own situation. Furthermore, my observations are entirely personal and carry no sanction of trade organizations or fellow lumberman. I shall hope they are sufficiently sane and logical to merit considerable approval, but they are not dogmatic. On the contrary they are intended to be only suggestive. I claim no merit of newness, either in thought or expression. I shall offer no statistics. I hope that the narrative may suffice.

The timber industry of Eastern Canada, as is well

*Address delivered before the recent British Empire Forestry Conference at Ottawa.

known, had its origion and impulse in the export trade. Primarily British, it expanded into South America, the West Indies, and the United States, with occasional transactions in other countries. No trade can prosper without conformity in standards and methods and it is not too much to say that the British contact made an impress in tone and action upon the personnel and methods of the Canadian trade that is altogether invaluable. I may not suggest however that there was any chronological order in its development. On the contrary, the growth was, on the whole contemporaneous, for while the trade with the Old Land actually came first, it came to pass that, from the early part of the nineteenth century, when the trade really began to take on shape and volume, its activities embraced all these fields though with alternating degrees of expansion and contraction.

In this, political and sentimental considerations conspired to influence economic ones and the imposition or removal of a tariff by the United States, the levy of an import duty by the British Government against Baltic woods with the granting of a Colonial preference, all gave this incidence and effect.

Largest Single Commercial Activity

That the early trade was easily the largest single commercial activity of this new country is, of course, due to two facts; first, the marvelous wealth in quality and quantity of this timber; second, the fact that this was before iron for ship-building and all forms of structural use came to wrestle for supremacy in these fields.

I shall not enter into the detail of progress nor seek especially to trace out the competitions of iron and other materials that had their influence through changed habits of use. I assume that we must take it that in the broad scheme of things these changes were inevitable. Nor may we believe that they are at an end. They come through Adam Smith's law.

Our concern, I take it is to consider the degree to which our Canadian timber has shared and may continue to share in the market as it at the moment exists.

We may at this point frankly admit our partisanship. Canada possesses this tremendous asset of coniferous timber. How can its use be extended and perpetuated within the Empire? Great Britain imports normally an average of say four billion feet of timber, the larger portion of which is conifer. What is the situation.

We may well imagine that the sturdy British, the canny Scotch and the ardent Irish, who early engaged in the British export trade found in the virgin timber of New Brunswick, the St. Lawrence and Ottawa Valleys, a seemingly exhaustless supply. Catering to a critical market, they had no difficulty in satisfying customers who demanded particular sizes of approved quality, texture and mellowness, and who would take nothing else.

But this condition inevitably could not last forever. "He

who buys meat buys bones," and the forest is as definitely limited in the choicest cuts as the herds which range the hills. The poorer cuts and offal must be considered. How they were considered we shall presently indicate.

It is not our part, on this occasion to inquire closely into or question this broadly inflexible attitude of the British trade. Absolutely inflexible, it, of course, was not. But if its standard of requirement has been lowered it has never definitely sought the poorer qualities. Freight charges have, of course, played a large part in this attitude for it is axiomatic that quality determines the distance which goods will travel.

The Conservatism of the Britisher

A common explanation is in the steadfastness of British conservatism. Some carping spirits even suggest a constitutional incapacity for progress on the part of the British trader by which he is immune to opportunity. His conservatism I admit, but not the rest. On the contrary, I testify to his shrewdness and discriminative instinct for essential values that are often overlooked in the opportunistic atmosphere of our Western life. This is a subject for a Macauley or a Morley to elaborate and not for me. But when people naively smile at his queer-ness in insisting upon buying thick deals to saw into thin and narrow boards, where he might have these sizes from side boards and smaller logs, at lower prices, I remember that these thick sizes come from the best portion of the best logs which yield the mellowest wood, the straightest grain and the soundest knots; then I begin to understand why he is willing to be thought conservative and unprogressive. All things are relative and undoubtedly, he sometimes falls over backward and carries this attitude to extremes. But also, undoubtedly, he does this. He puts a premium on quality, on excellence, on painstaking care and on thrift. Best of all, he exalts and dignifies his business. I gladly pay him this tribute.

What would have been the attitude of the British trader without the timber of Northern Europe is vain speculation.

But, when we remember that, in pre war days, of the roughly four billion feet annually imported into Britain, fully 75% came from Russia and Sweden, we can understand his independence of Canada except for our white or so called yellow pine and why he could take what he would and only that. His market was and is absolutely necessary to the Russian and Swede, and the proximity which gives them a freight rate of, on the average, one half the carriage cost from Canada, also gives them a personal contact and financial association impossible in the same degree to our remoter situation.

Northern Woodsmen are Careful Producers

If the Britisher is a critical buyer, these hardy Northern woodsmen are careful producers, with a keenness which we may well believe grows not less through their relations with

It has been a somewhat popular indulgence in uniformed circles to proclaim the lumberman a wanton destroyer of the forest obsessed in wringing a fortune out of immediate circumstances with no vision nor concern for the future.

To this proposition, I give emphatic dissent. Pecuniary interest he unquestionably seeks; otherwise he could not persist. But large fortunes, while occasional, are not his common experience. His consolations are more in the enjoyment of robust and virile employment, than large competence. No commercial activity wrestles more with unrestrained competition and fortuitous conditions. No natural product comes to a more fickle and inconstant market. Today it will buy; tomorrow it will abstain.

Our concern is to consider the degree to which our Canadian timber has shared and may continue to share in the market as it at the moment exists. We may at this point frankly admit our partisanship. Canada possesses this tremendous asset of coniferous timber. How can its use be extended and perpetuated within the Empire? Great Britain imports normally an average of, say, four billion feet of timber, the larger portion of which is the conifer. What is the situation?

We may well imagine that the sturdy British, the canny Scotch and the ardent Irish, who early engaged in the British export trade found in the virgin timber of New Brunswick, the St. Lawrence and Ottawa valleys, a seemingly exhaustless supply. Catering to a critical market, they had no difficulty in satisfying customers who demanded particular sizes of approved quality, texture and mellowness, and who would take nothing else.

* * *

To one coming from the Old Land, where timber is so cherished and conserved, our prodigality in use must seem almost a sacrilege. But independent of any other considerations, we may well understand that relatively cheap labor and dear material, as against dear labor and cheap material must make for a striking difference in attitude. The amenability of wood for effective and quick construction was a happy solution of the pressing shelter needs of a rapidly settling continent.

This called for an entirely different manner of preparation as well as a wider use of qualities. Whereas the British trade requisitioned thick sizes of the better grades, this other call was for a larger proportion of thin lumber. The British trade preferred the odd widths—nine and eleven inches. The other trade adopted the twelve inch board as a common denominator with the natural sequence of multiples and even inches, four, six, eight and ten.

the sons of the "tight little Island." To make beautiful lumber and to practice all possible care in grading, branding and individualizing their product is to invest their business with real artistry.

Division of labor and exchange of products are especially direct and simplified in a new country; an almost instinctive process. It is not surprising then that the early lumbermen particularly of Nova Scotia and New Brunswick joined to theirs the occupations of shipbuilders and traders in carrying timber and cooperage stock to the West Indies and South America to bring back sugar, rum and other products of tropical and sub-tropical countries. This trade still continues, and, while the exchange is not so direct and intimate, it persists, in spite of the later developed competition of the Southern States, and the more recent encroachments of Pacific Coast woods, since the opening of the Panama Canal.

Trade with the United States early began in much the same way if not with the same routine.

The American philosopher, Emerson, has aptly proclaimed that if any man will make a better mouse trap than his neighbor, the world will beat a path to his door. With equal penetration, he might have added a correlative that if any man will create a need, all the world will clamor at his gate to satisfy it.

Canada found in the United States this need for its timber and with increasing enterprise and association has devoted itself in a large way to its satisfaction.

In the New England and Eastern Middle States of New York, Pennsylvania and New Jersey and all fairly contiguous to Canada was the genesis of its industrial and commercial life that has expanded South and West to such tremendous proportions.

While these sections had originally been well timbered, by the middle of the last century the cream had largely been cut and lumbermen were moving to Michigan and Wisconsin. The great expansion which followed the civil war gave to Canada its opportunity to strikingly increase, in the section named, that trade which had been gradually growing from a small beginning.

To one coming from the Old Land, where timber is so cherished and conserved, our prodigality in use must seem almost a sacrilege. But independent of any other considerations, we may well understand that relatively cheap labor and dear material, as against dear labor and cheap material must make for a striking difference in attitude. The amenability of wood for effective and quick construction was a happy solution of the pressing shelter needs of a rapidly settling continent.

This called for an entirely different manner of preparation as well as a wider use of qualities. Whereas the British trade requisitioned thick sizes of the better grades, this other call was for a larger proportion of thin lumber. The British trade preferred the odd widths—nine and eleven inches. This other trade adopted the twelve inch board as a common denominator with the natural sequence of multiples and even inches, four, six, eight and ten.

The Call For Thick and Thin Sizes

Now it is plain even to the uninitiated that the mill which faces its logs to make odd widths must make the burden of its product of these sizes. It is also apparent that the most careful maker in sawing thick must make some thick of the poorer qualities and culls. These last, were not suitable for the British market; neither were they suitable for the American.

The conclusion is obvious. Two masters could not thus be served. It was, therefore, inevitable that, other things being equal, the American market, with its wider range of use, offered certain marked attractions. But that these other things are not always equal, is well recognized.

Our first mills were located on or close to tide water and their plants designed for bulk shipments by water. These have primarily catered to the British trade. In recent times, they have been gradually installing auxiliary mills to remanufacture the rejects and sizes, undesirable for the British market. It is different with later built mills in the interior. Transportation charges handicap them in competing for the British trade, but, on the other hand, they frequently have a

compensating advantage in reaching the American market.

It is not my purpose to attempt to marshal all of the contrasting phases. But at the risk of wearying you, I am striving to outline significant factors which will suggest to your practised understanding, their logical corollaries.

In all of this, and quite purposely, I have made no mention of Canada's domestic trade—her home consumption. But you would quite misunderstand me if this seems to suggest a lack of importance. On the contrary, it has an importance, present and potential, that only the unobserving and unimaginative can ignore. We, who are intimate to the situation, may by our very nearness suffer a lack of perspective, but you who are strangers or visitors cannot fail to glimpse, in abundant evidences of our growth and promise, a keen impression of the demand, which this gives and will give to the timber trade. Interesting illustrations flood my mind, but where "he who runs may read," I am content to leave to friendly interest their ready discernment of the matter.

Sentiment and Economics in Opposition

My labor comes to this. If you can find substantial agreement with my observations, you likewise will agree with my conviction that, in the matter of extension of Eastern Canada's trade with Britain in timber products, sentiment and economics are in opposition. Great Britain and Canada are anxious to increase the trade in timber. During the war and directly thereafter, the mighty surge of consanguinity seemed to give its guarantee of renaissance. But with the removal of war imposed restraints, war hatreds and resentments fade, and the influence of proximity and old established understandings claims its own.

In like manner, we have seen how, and concurrently with revival in building and general business in the United States, these same factors of proximity and understanding gave with equal diligence their call.

These same governing conditions are reflected in Canada's import trade. Nationally speaking she wishes particularly to trade with Britain, and gives preferential tariff emphases, but none the less she buys most from the United States. Why is it? The instinct to uniformity reacts to the influence of the transient, of persistent styles, customs and manners, and circumstance, and the play of natural law rises superior to interference.

In the ordinary activities tinged with commercial flavor, the motive of any association largely arises out of self interest in rewards that are fairly immediate. We sow that we may reap in our own time and that more abundantly. I have no need to point the contrast in the stimulus to forestry proposals. Broadly altruistic, it springs out of a noble devotion to the common good. Its vision is to inspire the present for the need of the future.

If this be true, we have no room for motives of insular or sectional advantage.

Our ideal is Imperial interest. Let us approach this then from the standpoint of the new Imperialism. Let us escape the old Imperialism with what was involved in the Colonial viewpoint, into the exaltations of national Imperialism, if I may use the term.

Politically and socially our ideal is democracy. Its fundamental is the freedom of the individual and its inspiration runs to self development. The future of the state rests on the status of the individual.

So with the Empire. If the strength of the chain is the strength of the weakest link, the strength of the Empire is the strength of Canada, of Australia, of all the integers, as well as the strength of Britain, and sir! this strength can only come out of the freest possible self-expression. Artificial arrangements and arbitrary conventions have no part in this and it matters not how the incidence of trade runs within the Empire so long as it runs freely out of ideals of honor and dignity and to the development of a virile, sturdy and virtuous people.

Sir! I trust I have not trespassed upon your time to no purpose, but if I have failed of conviction or interest, I beg of you to understand that I have consistently sought to maintain the declared attitude of the lumberman to believe those things to be true only as they work. Let us hold to the truth for the truth shall make us free.

What Is Oleomargarine?

By R. D. MacLaurin, Ph. D.

The use of oleomargarine has been endorsed by lumbermen in various parts of Canada as a healthful, nutritious and palatable food. Those who carry on logging operations say that, as "oleo" is manufactured daily and sold fresh, it is a sweet, wholesome and economical food and the experience of operators proves that oleomargarine has excellent keeping qualities and is suitable for camp purposes.

The British Government some time ago made a thorough dietetic revision of the menu for the British army and navy, and prescribed oleomargarine as the official spread for the bread. For some years oleomargarine has been a "Canada Approved" food and at the last convention of the Canadian Lumbermen's Association, held in Montreal, a resolution was carried, that the C. L. A. directors earnestly urge upon the Prime Minister and members of the Dominion Government to enact permanent legislation pertaining to the manufacture and sale of oleomargarine in the Dominion of Canada so that the Canadian people would not be deprived of this healthful and nutritious product which is manufactured under the inspection of the Dominion Government. This was the attitude taken by the lumbermen, and the question whether oleomargarine should be manufactured in Canada or imported into the country is one which must be decided by the Canadian people through its parliamentary representatives.

Under the legislation passed at Ottawa last spring the manufacture and importation of oleomargarine ceased on August 31st and producers have until March 1st 1924 to get rid of their stock. The lumbermen of Canada have always been large consumers of oleomargarine in the camps and regret the course that events took at Ottawa last spring, particularly in view of the foregoing resolution which was unanimously adopted while they were assembled in Montreal in January last.

The opponents of oleomargarine have endeavoured to create a mysterious atmosphere around its composition accompanied by the innuendo that "fraud" is practiced in its manufacture. That method of attack is illustrated by Mr. McConica, member for Battleford (Hansard p. 3664) in the following words:

"What is oleomargarine? Nobody knows. You may search the statute books of Canada from end to end and you will find no definition, no formula, no restriction, no anything that indicates what oleomargarine is. There are a dozen of twenty different kinds of grease that they say may go into oleomargarine, but in what proportion and with what other constituents we have no means of knowing."

What are the facts? Oleomargarine is defined in the Oleomargarine Act of 1919 as follows:

Restrictions Make it Wholesome Food

"Oleomargarine" shall mean and include oleomargarine, butterine, or any other substitute for butter (a) which is manufactured wholly or in part from any fat or oil other than from milk or cream (b) which contains no foreign coloring matter and (c) which does not contain more than sixteen per cent of moisture."

Mr. McConica says that oleomargarine is not defined by any Statute in Canada, whereas the above definition is contained in the Statutes and so objection number one is disposed of.

The formula for oleomargarine is included in the foregoing definition stated that the total (81 per cent.) fat content of oleomargarine percentage of moisture as required by the formula for butter. The fat content of oleomargarine consists, wholly or in part, of any fat or oil other than that of milk or cream. If oleomargarine contains sixteen per cent of moisture, eighty four per cent is left, of which three per cent is salt and eighty one per cent fat. Further, the definition stated that the total (81 per cent fat content of oleomargarine may be one fat or oil or more than one fat or oil, i.e., such as oleo-oil, or oleo oil and cotton seed oil.

Mr. McConica says that no formula is given for oleomargarine, whereas the definition is clear to anyone who understands English,

so objection number two is nailed and most effectively disposed of.

There are twenty-nine restrictions incorporated in the regulations of the oleomargarine act. Mr. McConica says there are no restrictions. If space permitted, the citation of the twenty nine restrictions would clearly demonstrate what extraordinary precautions have been taken to protect the health of the people by insuring the production of one healthful, wholesome, hygienic food. By way of illustration, let me cite one restriction: "No milk shall be used in the manufacture of oleomargarine unless it's from non-reacting, tuberculin tested cows, or has been pasteurized under the supervision of an inspector appointed by the Minister, and no butter shall be used in such manufacture unless it is free from rancidity or any objectionable odour."

Public health is hereby protected against tuberculosis, typhoid fever, diphtheria, or septic sore throat, being contracted from oleomargarine. It should be emphasized that Mr. McConica will not find a corresponding regulation pertaining to milk, cream or butter in the Federal Statutes as there are no compulsory pasteurization requirements for dairy products under the Dairy Industry Act. Mr. McConica's "no restriction" charge must, therefore, be rejected.

The number of fats and oils used in manufacturing oleomargarine in Canada has never exceeded five. Two or three are in general use. The member for Battleford says there are twelve or twenty greases used which, by the way, is a considerable variation in itself. It is really difficult to find language to describe adequately such statements.

The Various Stages of Manufacture

The first stage in the manufacture of oleomargarine is the melting together of the fatty ingredients, e.g., oleo oil (from beef fat) and a vegetable oil such as peanut oil or cottonseed oil. The oils and fats are combined in such proportions that the final product will have a melting point between 25-28 degrees centigrade. Such a result may be obtained by combining together varying

percentages of different oils and fats or varying percentages of the same oils and fats. This may best be illustrated by two examples of cake margarines from Clayton's book on "Margarine" page 37.

A			C	
Oleostearine	23 per cent	Premier Jus	37 per cent	
Premier Jus	30 per cent	Oleo	21 per cent	
Cotton Seed Oil	47 per cent	Cotton Seed Oil	42 per cent	
100 per cent			100 per cent	

The melting point of A and C. is the same, 24 degrees centigrade and the digestibility and energy value is the same, although the percentage of oils varies in the two formulas.

In this connection it should be pointed out that the chemical composition of butter fat varies materially depending on the nature of the feed, breed of the cows, and the period of lactation. For instance, the iodine value may vary from 31-50 and other constants vary in a similar manner. This variation in the chemical constants of butter is exactly analogous to the variation in the chemical constants of margarine prepared from different percentages of different oils, or of the same oils. Therefore, the same grounds exist for making a charge against the variation in chemical composition of butter as there is for making a charge against oleomargarine on this ground.

Further, the much advertised vitamine content of butter is an extremely variable quantity. In this connection, Mr. McConica's interrogation is quite appropriate. What is the vitamine content of butter? Nobody knows. This disposes of his charge regarding the variation in the composition of oleomargarine.

During the war, the following formula was officially proposed

R. D. MacLaurin, Toronto

in England (May 1918) as a standard for a 55 per cent animal fat margarine:

Animal Fat	55 per cent
Cocanut Oil	20 per cent
Cotton Seed Oil	25 per cent
<hr/>	
	100 per cent

Oleomargarine manufactured in Canada contains a higher percentage of animal fat than that stated in the above formula, e.g., 75 per cent and the remaining 25 per cent is cotton seed oil or peanut oil.

The Preparation of the Milk

Milk is essential in the manufacture of oleomargarine as an emulsifying agent and it also serves as a source of flavor. The milk is pasteurized for the purpose of destroying all pathogenic bacteria and other micro-organisms inimical to a good flavor, and for protection to public health.

The oleomargarine manufacturer emphatically insists upon the absolute cleanliness and hygienic purity of the milk used in emulsifying the fats as the flavor of the finished oleomargarine depends on such conditions being scrupulously observed.

After the milk is pasteurized it is cooled and then inoculated with pure lactic acid culture prior to ripening. The ripening process is very carefully controlled so that the desirable flavor and aroma producing properties may be obtained.

The liquid fats and oils are then slowly run into the ripened milk, the mixture being constantly agitated so as to form a perfect emulsion of the oils and milk. When emulsification is complete the temperature is reduced to about 35 degrees centigrade in order to "fix" the emulsion, which is then discharged on to a chute where it is met by a spray of ice water under a slight pressure. Solidification of the fat takes place at once and the granules of oleomargarine float on the surface of the water. Another method of chilling the emulsion is by feeding it in a thin uniform layer on to revolving drums, cooled by brine to about 7 degrees centigrade, when it immediately solidifies and then is removed in the form of flakes by adjustable knives. The oleomargarine is next rolled, mixed with salt and packed in cartons or boxes and stamped "Canada Approved" oleomargarine.

The preparation of all the ingredients and each detail of the manufacturing process is carried out under the strict supervision of veterinary inspectors appointed by the Health Branch of the Department of Agriculture.

The food value of fats depend upon their energy value, digestibility and vitamine content.

Digestibility of the Fats and Oils

According to Bulletins 310, 505 and 613 of the U. S. Department of Agriculture the digestibility of the fats and oils under discussion is as follows:

Oleomargarine	97.55 per cent
Butter	97.00 per cent
Oleo Oil	96.80 per cent
Cotton Seed Oil	97.80 per cent
Cocanut Oil	97.90 per cent
Neutral Lard	97.00 per cent
Peanut Oil	98.30 per cent

The above values are, within the limits of experimental error, the same.

The energy value of foods is expressed in terms of calories. A calorie is the quantity of heat necessary to raise the temperature of a liter of water one degree centigrade. According to Bulletin No. 469 of the U. S. Department of Agriculture the following energy values are given:

1 pound margarine	3,500 calories
1 pound butter	3,500 calories
1 pound Oleo oil	4,080 calories
1 pound Cotton Seed Oil	4,080 calories
1 pound neutral	4,080 calories
1 pound peanut oil	4,080 calories

It is apparent therefore that the digestibility and energy value of oleomargarine and butter is the same.

Percentage of Ingredients in Oleomargarine

It has also been argued by the dairy interests that the percentage of the ingredients in oleomargarine should be stamped on the package. This demand is based upon the assumption that because the percentage of the oils constituting oleomargarine may vary that the energy value varies accordingly.

This assumption is entirely erroneous as a number of oleomargarines may be made by combining different percentages of various oils and yet the final products have exactly the same melting point,

digestibility and energy value. This fact is readily understood by referring to the energy and digestibility values given above.

However, there is no particular objection to stamping the percentage of ingredients on the package except that it serves no purpose, has no significance and is consequently futile.

Vitamines are Present in the Food

Vitamines are substances which have not been identified chemically but exist in minute quantities in foods and are necessary for normal nutrition. No one has succeeded in isolating any one of the vitamins in a pure state so their chemical constitution is unknown. The properties of these substances are known only by the physiological effects produced by their presence or by their absence. As vitamins exist in extremely small quantities in foods they have no significance from the standpoint of furnishing the energy requirements of the body.

The relative quantity of vitamins in food is determined by feeding experiments on small animals. This is accomplished by placing the animal under observation on a diet containing all food requirements except the one which it is desired to measure. For example, a mixture of purified protein, carbohydrate, an adequate salt mixture and a fat containing Vitamine A constitutes a complete diet for an animal with the exception of Vitamine B. If experiments are conducted in feeding such a food, supplemented by a natural food containing Vitamine B, the value of which it is desired to measure, it can be determined what is the smallest addition of this food required to promote normal growth and maintenance, and by a comparison of the quantity so added with quantities of other foods necessary to acquire the same result the relative amount of vitamine is approximately ascertained.

There are at least three Vitamines commonly designated as Vitamine A, B, and C.

Vitamine A is abundantly distributed in the green leaves of plants and vegetables, in glandular organs of animals, such as liver and kidney, in liver oils, such as cod liver and pork liver, in animal fats, such as butter and beef fat (especially oleo oil) and in the yolk of eggs.

In the absence of vitamine A a specific disease known as xerophthalmia occurs in man and animal. No cases of xerophthalmia have been reported in North America, in spite of the fact that diets vary from exclusively carnarian to nearly vegetarian.

Vitamine B is abundant in green leaves, in the glandular organs of animals such as liver and kidney, in yeast, in eggs and to a lesser extent in milk, cereal grains and roots.

In the absence of Vitamine B a specific disease known as beriberi results and other disorders such as loss in weight of the glandular and sexual organs.

Vitamine C is abundant in fresh fruits; less in fresh vegetables and tubers. Cow's milk is frequently deficient in Vitamine C.

It has been shown that the animal body is not capable of synthesizing vitamins and in order for vitamins to occur in animal products they must first have been present in the foods consumed.

Functions of the Different Vitamines

Vitamine A is present in butter and oleomargarine made from oleo oil. It was first discovered in butter and this fact has been exploited by dairy propagandists to the extent of claiming that dairy products were the only source of vitamine A and that the human race could not survive without them. Time has shown that vitamine A is very widely distributed occurring in sixty or more common articles of food, consequently, dairy products are by no means indispensable as a source of this essential.

It has been definitely shown by a number of investigators that the vitamine content of butter is a very variable quantity. Steenbock and Dutcher have shown that the vitamine content of butter varies with the breed and feed of the cow. June grass butter contains the maximum quantity of Vitamine A which gradually diminishes as the season progresses and winter butter is, usually, deficient in this essential.

The vitamine content of butter is also rendered uncertain owing to the general practice of using lime or washing soda to renovate the cream in the manufacture of so called creamery butter. Further the vitamine content of butter rapidly deteriorates in storage and renovated butter is very deficient. Obviously, more accurate scientific information must be procured before it is possible to make even an approximate statement concerning the quantitative vitamine content of butter on the market.

Oleomargarine made from oleo oil contains vitamine A and according to Halliburton and Drummond is nutritively the equivalent of butter.

Oleomargarine has been attacked on the ground of deficiency in vitamine A and one of the most extravagant statements dealing with this phase of the question was quoted from Prof. E. V. McColl-

lum's book "The Newer Knowledge of Nutrition" published 1919, by Mr. Warner, member for Strathcona, in the recent debate on this subject in the House of Commons,—

Other Phases of the Question

"With this diet the interesting observation was made that growth could be secured when the fat in the food mixture was butter fat, where no growth could be secured when the butter fat was replaced by lard, olive oil, or vegetable oils. Under these conditions, why should ignorant parents be permitted to give oleo instead of butter to helpless little children merely because it may be a few cents cheaper when butter is an essential to the health of the child and the welfare of the Nation."

Dealing with the first sentence of the quotation, it must be borne in mind that the reference is to a restricted diet of purified foods used merely for experimental purposes and not to a mixed diet as is generally adopted for daily use. The experiment merely demonstrates that, with the restricted diet under observation, that the addition of vegetable oils or lard did not promote growth. It

The Parliament of Canada has legislated for five years that oleomargarine is a wholesome article of food and a legitimate article of trade. Every civilized country in the world recognizes oleomargarine as a legitimate commodity in trade.

would be preposterous, however, to draw the conclusion from such an experiment that oleomargarine is not a wholesome or nutritious food, because it is equally possible to construct a diet containing butter and secure no growth. Such a case is cited on page 27 of Prof. McCollum's book "The Newer Knowledge of Nutrition."

"Animals fed on wheat, plus protein, plus a growth promoting fat (butter fat) exhibited no growth and lived only a short time." This citation merely demonstrates the fact that Vitamine A contained in butter fat is not any more important than other essential factors in nutrition and that common sense must be exercised in discussing the subject of Vitamines.

Further, it is very significant that Prof. McCollum in his revised edition of "The Newer Knowledge of Nutrition" has omitted the reference to "ignorant parents and helpless little children, etc." This fact alone should be sufficient refutation of the inaccuracy of the statement, but in addition it may be stated positively, without fear of contradiction, that butter is not an essential to the health of the child.

Future of the Food Now an Issue

The question whether oleomargarine shall be manufactured in Canada or imported into Canada is one which must be decided by the Canadian consumer.

The Government's position was stated by Premier King in concluding his speech on this subject in the following words—"I feel it is the duty of this Parliament to see that that pledge is carried out. Once it is carried out I think Parliament should be perfectly free to take whatever subsequent action it may deem fit with respect to the continued importation and manufacture of oleomargarine."

Premier King felt shackled and bound last session by an alleged pledge of a former Government and consequently could not deal with the respective merits of prohibition or permission to manufacture or import oleomargarine into Canada.

Now that he is free, the consumers of Canada will expect him to be as solicitous in implementing his pledge to reduce the cost of living as he was to implement an alleged pledge of a former Government. Oleomargarine is a factor in the cost of living with a large number of consumers and the Prime Minister will probably find on a recount that the consumers greatly outnumber the dairymen, the butter manufacturers, the milk manufacturers, the ice cream manufacturers, and the various manufacturers of all dairy machinery.

Wholesome Foods Without Vitamines

As stated, oleomargarine as made in Canada from oleo oil contains sufficient vitamine A to promote growth. Assuming, however, that oleomargarine contained no vitamine A whatever, it would be a perfectly wholesome and nutritious food. The healthfulness or wholesomeness of a food does not depend on its vitamine content alone as illustrated by the animals which failed to grow or live when fed wheat plus portein plus butter fat, which, according to the dairy interests is chock-full of vitamine A the supposedly growth producing substance.

Vitamine deficiency in a food is of the same consequence as a deficiency in any other essential in nutrition such as complete proteins or calcium, and no more. The importance of vitamines in nutrition has been greatly exaggerated for propaganda purposes. No one doubts the importance of vitamine but they are no more important than carbohydrates, fats proteins and mineral salts.

Foods may contain one, two or three vitamins and some foods contain no vitamins at all. Are the foods which contain no vitamins to be black-listed and prohibited from being manufactured or grown? Such foods as starch, polished rice, white flour, sugar, syrups, degerminated and decorticated cereals, vegetable oils and vegetable margarine contain no vitamins.

No one has suggested that the manufacture of white bread should be prohibited because it does not contain vitamine A. Not even a word from the dairy politician whose heart is bleeding for the poor little children who might spread a little oleo over the decorticated and degerminated corpse of a wheat kernel. No, the health propaganda is merely eye wash to obscure the real and only reason for opposition to oleomargarine and that is to secure 100 per cent protection for the dairy industry.

Stands as Wholesome Article of Food

The dairy interests make the charge that oleomargarine imitates butter in color, taste and flavor; therefore, it is axle grease, soap, a fraud, a counterfeit, a rank imitation and its manufacture should be prohibited.

Sticks and stones are always found under the good apple tree, and so it is with oleomargarine.

The Parliament of Canada has legislated for five years that oleomargarine is a wholesome article of food and a legitimate article of trade. Every other civilized country in the world recognizes oleomargarine as a legitimate commodity in trade, so how can oleomargarine be legitimate and at the same time a fraud?

A moment's reflection will disclose how ridiculous are charges of imitation when used as grounds for prohibiting the manufacture of oleomargarine.

There are innumerable imitations of various woods, imitation leather, rubber, furs, wool, china, pearls, diamonds, dyes, perfumes, essences, eyes, arms, legs, hair, color, teeth, glands, stone, marble, flowers, cereals, poultry, sheep, dual purpose cows and so on ad infinitum. In the face of innumerable imitations which are in daily use, why is oleomargarine the only article of commerce which is libelled and scandalized and must be banned?

Space does not permit the discussion of imitation dairy products but a few may be mentioned just to call attention to the fact that natural dairy products have undergone some marvelous transformations in recent years and that the modern dairy products are imitations:

- (1) Butter other than June is artificially colored to imitate June butter.
- (2) Rancid Cream, unfit for human consumption, is renovated with lime or washing soda and is sold as creamery butter in imitation of legal butter made from sweet or ripened cream.
- (3) Cream is manufactured from milk and butter in imitation of natural cream.
- (4) Cream (18 per cent butter fat) is viscolized so that it imitates a natural cream containing 28 per cent butter fat.
- (5) What is commonly sold as milk is a partially skimmed milk containing the minimum fat content required by law and is an imitation of natural milk. The old fashioned lacteal fluid of the dairy cow is now called "whole milk" or "full cream milk" but what is generally sold is just milk.
- (6) Skimmed milk is made to imitate buttermilk.

Apparently, the dairy interests specialize in imitations and there would be no objection to the imitation products if they were manufactured under proper sanitary conditions, all pasteurized, standardized, labelled, and sold on their merits.

Legislation Regarding Oleomargarine

The manufacture, importation and sale of oleomargarine was first permitted in Canada in 1917 by order in council as a war measure. In 1919 "An act to permit the temporary importation, manufacture and sale of oleomargarine" was enacted. Amendments were made each succeeding year extending the time of manufacture and importation which now expires on August 31st., 1923, and the sale on March 1st., 1924.

At the last session of Parliament, permanent legislation for the manufacture of oleomargarine in Canada was sought but the members of the cabinet were divided on the question and refused to bring in a government measure either in favor of or against oleomargarine. If the government had any policy it was to stand pat and do nothing, thus permitting the legislation to expire. However, Mr. Carroll, member for Cape Breton South, placed the following resolution on the order proper March 2nd.

Carroll Resolution Amending the Act

"Resolved, that it is expedient to bring in a measure to amend the Oleomargarine Act, Chapter twenty-four of the Statutes of 1919 (second session), and the amending acts, by providing that notwithstanding anything contained in the

Dairy Industry Act 1914, or in any other statute or law, the manufacture in, and importation of oleomargarine into Canada, and the offering for sale, the sale and the having in possession for sale, of oleomargarine, shall henceforth be permitted, subject to the provisions of the said Oleomargarine Act and to such regulations as are now or may hereafter be established by the Governor-in-Council."

The dairy interests devised ways and means of preventing the question being discussed in the House until June 6th. Every effort having been made previously to evade the question, the final coup was made by Mr. W. F. Kay, member for Missisquoi, who moved the following amendment to the Carroll resolution:

"That all the words after the word 'that' in the first line thereof be struck out and the following substituted therefore,—In view of the distinct assurances given at the time that the prohibition of the importation, manufacture

and sale of oleomargarine was suspended by order in council in 1917 under the war measures act in 1914, such suspension being but temporarily and a war measure only, should now be removed and the question left, without prejudice as to its merits, in the same position as before the enactment of the said temporary suspension."

Objection was taken that the amendment was a direct negative and not an amendment at all.

The Speaker ruled the amendment in order quoting in part from May "such amendments only will be mentioned as are intended to evade an expression of opinion upon the main question by entirely altering its meaning and object."

The alleged pledge was debated and the amendment carried by a large majority and as a consequence, the manufacture in and the importation of oleomargarine into Canada ceased on August 31 st., 1923.

Speeding Up the Old Surfacer

Practical Result of Changes That Increased the Output and Put a Sizable Margin on the Credit Side of the Mill Ledger

By M. N. Wright

It was my luck some years ago to take charge of a small up-country sawmill then in financial difficulties. This mill had been operated for some time at a loss. Logs were plenty and at a reasonable cost and two railway lines ran through the mill yard, affording convenient shipping of carload lots. The mill was operating up to 75 per cent. of its cut on shiplap, 2 x 4 and 2 x 6. The 24" x 6" four-sided planer, feeding at about 30 feet per minute, had to be run night and day in an endeavor to take care of the mill's cut.

The first thing done was a complete overhaul of the planer, re-babbitting all bearings with best babbit obtainable. A pair of the modern shiplap heads were purchased and fitted to the side spindles. The top cylinder was fitted with four 2 in. x 14 in. thin high speed knives, well backed with suitable caps. An attachment was designed and assembled by which it was possible to satisfactorily joint these new knives. A new set of leather belts were put on, and larger cone pulleys were placed on the counter-shaft driving the feed gear. The speed of the heads was increased from 32,00 r.p.m. to 37,00 r.p.m. The feed speed after the change was 65 and 90 feet per minute. For the side heads to stand up to this feed, more power was applied by placing jack pulleys under the planer quite near the countershaft and having the side belts run up over these pulleys, so that the belt running back from the side head ran practically parallel with the top or forward part of belt. This permitted of the use of a belt 1 in. wider than formerly and gave an even and full belt contact on the small side head pulley. This, together with the method of hinging and weighting the idler pulleys permitting the maintaining of a constant tension on the side head belts in all kinds of weather, resulted in the side heads standing up to the 90 ft. feed without any trouble.

For edging up the 2" x 4" and the 2" x 6", the four-sided side heads were each fitted with four 4" x 3" x 7/16" knives faced with high speed steel. As there was little call for double-dressed material, no change was made in the lower head.

When the planer was started up again it ran, depending on the width of the stock, from 20,000 to 25,000 feet per day and stood up to the work. This output was fully three times greater than formerly. To get more power to carry the extra load involved by the change, the mill engine was speeded up from 160 to 190 revolutions per minute. This was permitted by placing a larger drive pulley on the main shaft. The greatly increased quantity of shavings from the planer when fed into the dutch oven of boiler resulted in the boiler giving more than sufficient steam for all purposes. Thus the power was increased 25 per cent.

The sketch herewith shows the method of making and attaching the jointing frame to planer. This consisted of two cast iron brackets, A, (made a pair, right and left) and two pieces of 2" x 2" x 1/2" steel angles, B,B, 28 in. long. These were bolted at the ends to the brackets, A,A, through slotted holes allowing adjustment up and down. The angles were surfaced or planed straight at C, permitting the abrasive block D to slide from side to side parallel with the planer bed. This emery block was 5 in. x 2 1/2 in. x 1 in. and was of about the same grade as a free-cutting emery wheel. To place this jointing frame in the planer the two hinge bolts at, H, holding the shavings hood in position were removed and the hood lifted off and the new attachment put in its place, the same two bolts holding it in its proper position. The bolts H, the wheel E, and threaded

rod F, gave the necessary adjustment up or down. The removal of hood, placing of jointing attachment and putting back of hood in position can be all done in about five minutes' time.

No doubt many planer men would object to using of this block by hand, but to anyone willing to try anything once after the first trial it was as easy as rolling off a log. With lots of money and

Showing the method of making and attaching the jointing frame to planer

plenty of power perhaps the placing of a high speed planer might be considered but in this case neither were available. A planer running 75,000 feet per day in a mill cutting 30,000 feet would be somewhat out of balance.

The practical result of the changes here described was that the increase in the first week's run paid for the cost of all these improvements, and the mill has since run with a sizable margin on the credit side of the ledger.

Big Pulp Plant for Ancient Colony

The most notable legislation of the recent session of the Newfoundland legislature, which ended on Aug. 18, was that which legalized an agreement between the executive government and the Armstrong-Whitworth Co., of England, for the establishment of a \$20,000,000 pulp and paper industry in the Humber River Valley on the west coast of Newfoundland. Half of this capital has been raised under a twenty-five-year guarantee from the Newfoundland Government, the other half being guaranteed by the British treasury.

When completed, the new development will form a valuable addition to Newfoundland's pulp industry, the chief plants operating to date being the Northcliffe mills at Grand Falls. It is expected that the new plants will be a big factor in enabling the Dominion to pay off the burdensome debts which accumulated during and after the war.

Another feature of the session was the passage of an act to authorize the Government to purchase from the Reid Brothers all their railroad property in that country. This concern has been operating the Newfoundland road since 1898. The Government now takes over the road and pays the Reids the sum of \$2,000,000 as a complete quit-claim.

Some Signals Used by Sawyers and Setters

Signs Which Indicate the Various Sizes to be Sawn—The Different Fingers and the Use of the Hand Imparts Information on Many Points to Crew on the Carriage

In all avenues of business as well as along the highways of life there are signs. They convey a great deal of meaning and afford a fund of information. In baseball the signals exchanged between the pitcher and catcher when a certain player is up, often determine the number of strike-outs.

On all leading roads there are signs and on every street corner their presence is noticed. There are also signals in transportation circles, military movements, navigation, aerial surveys and other pursuits. The "signs of the times" tell us which way trade is heading; whether business is expanding or receding; whether the people are thrifty and how the revenue is being maintained.

Thus there are signs on all sides. When one enters the yard of a sawmill he is faced with "No Smoking" and in the corridors of a public building, he is greeted by "No Loafing," while in a city park it is "Keep Off the Grass."

It might be well to refer to some other signs, such as pass between the head sawyer and the men on the carriage. Signals are always interesting and to watch the manipulation of the sawyer's fingers or hand and observe how closely every digital movement is followed by the setter, is evidence that there are more things in this world that speak than the tongue. It demonstrates that talking with the hands is industrially not a lost art. Upon the interpretation of the sawyers' signals, depend the quality and quantity of the lumber cut.

It is stated that the signs exchanged between the sawyer and setter are not always uniform but vary in mills according to custom and experience. However, in the main they are not so widely divergent and any code may be mutually agreed upon. When a carriage crew becomes accustomed to a sawyer, sizes can quickly be read by a motion of the lips and hand, and other signals are frequently not necessary.

One lumberman in the Middle-West gives the following signals as being very simple and those most generally used:—

Size in inches

Sawyer's Sign

- 1 Extend first finger out on hand.
- 1¼ Extend first finger and thumb out on hand.
- 1½ Extend first finger and little finger out on hand.
- 1¾ Extend first finger and thumb and little finger.
- 2 Extend first and second finger upward on hand.
- 2¼ Extend first finger, second finger and thumb out on hand.
- 2½ Extend first and second finger and little finger upward on hand.
- 3 Extend last three fingers on hand.
- 3¼ Extend last three fingers up and then thumb.
- 3½ Extend last three fingers upward and then little finger.
- 4 Extend four fingers upward on hand.
- 4¼ Extend four fingers and then thumb.
- 4½ Extend four fingers upward, then thumb and little finger.
- 5 Extend five fingers upward on hand.
- 5¼ Extend five fingers and then thumb.
- 5½ Extend five fingers upward and then little finger.
- 6 Extend hand with fist closed.
- 7 Extend fist with first finger partly closed in shape 7.
- 8 Extend hand out with thumb and first finger together, forming circle.
- 9 Place hand over nose.
- 10 Cross first two fingers.
- 11 Extend first two fingers downward.
- 11½ Extend first two fingers downward and then little finger.
- 12 Extend fist closed with thumb extended outwards.
- 14 Draw hand across breast.
- 16 Extend hand to tip of ear.
- 18 Extend elbow outward.

- 20 Extend hand outward same as for 10-inch but signal twice. When you want to turn log throw up hand.

Some Signs in Southern Mills

The signs used in southern mills are given by R. C. Leive in a recent edition of the "American Lumberman" as follows:—

To start the mill for the day's work the engineer signals the sawyer by means of a small steam whistle, blowing two short blasts. After assuring himself that everything is ready the sawyer answers with two short blasts produced by pulling on a whistle cord which is handy to his reach. The same thing happens at noon and at any time when the mill is started. When the sawyer wants to change saws he blows one short blast. If a belt comes off any of the wheels about the mill, the sawyer blows three blasts. The following summary gives the whistle signals used:

Number of short blasts: 2—Start up engine; 1—Stop; 3—Slow up; 4—Foreman wanted by sawyer; 5—Filer wanted by sawyer; 6—Superintendent wanted by sawyer; a great number, (quick)—Fire in plant.

The hand signals between the sawyer and carriage crew are as follows:

Size in inches Sawyer's Sign

- 1 Extend forefinger.
- ¼ Extend thumb.
- ½ Extend little finger.

Therefore, if the sawyer wants to cut a 1-inch board he holds up his hand with forefinger extended; for a 1½-inch board, the forefinger and little finger are extended. To cut a 2-inch board, the first two fingers are flashed before the ratchet setter. To cut a 1¼-inch board, the forefinger and thumb are extended. If any board seems too thin for the size called for, the sawyer rubs his forefinger against his thumb and the setter makes the necessary adjustment. When about to turn the log unexpectedly, the sawyer signals to the setter by lifting his hand, palm upwards; this means, lift all carriage dogs when the carriage stops. When the sawyer desires to turn or dog a log edgewise, he holds his hand sideways; when the log is desired face down on the blocks, the hand is extended with the palm down; when the sawyer wants drinking water, he imitates the act of drinking; when he wants relief, the signal is given by placing the hand on the belt buckle.

Some Signs Generally Accepted

Another well-known authority, speaking on the subject of signals, between sawyer and carriage crew, says:—There is no uniform code of signals between sawyer and setter in a mill, but such a code as is satisfactory to them is usually agreed upon. Some things, however, are generally accepted as common, such, for instance, as showing one finger above the hand that is on the nigger lever to indicate 1 inch; a finger and thumb, to indicate 1¼-inch; the first finger and little finger to indicate 1½-inch; two fingers, for 2-inch; three, for 3-inch, etc.; open hand with thumb turned down, for 6-inch; clenched fist on top of the lever, for 8-inch; the elbow of that arm raised, for 10-inch, and clenched fist with a downward motion, for 12-inch cant—but there are other motions to indicate the same thing. Also, after cant is turned down, if you want a 2-inch piece left off the last piece, you show two fingers with a downward motion, meaning 2 inches to turn down at the last. You will readily realize how much any of this can be varied and is, to suit the individual preference of a crew that works together any considerable length of time.

Certain Signals Used in West

A western Pacific Coast man gives the following signals which are employed in many mills in that great timber area.

- 1 Extend index finger.
- 2 Extend first and second fingers.
- 3 Hold the index finger with thumb showing the three remaining fingers.
- 4 Extend four fingers.
- 5 Show the thumb and four fingers.

Half inch is always indicated by extending the little finger. Thus if the sawyer desires to cut 2½-inch stock the sawyer extends the first two fingers and the little finger; to cut 6-inch stock, double the hand and hold it with the back showing in front of the breast. If 6½-inch is to be cut, make the same motion with the little finger held straight out. The signal for 7-inch is the same as for 6-inch, except that the index finger is extended. To cut 12-inch, the hand is formed as for the 6-inch signal but is drawn across the breast twice. To cut ¾-inch stock, the index finger and the little finger straight up; to cut 1¾-inch stock, the thumb and forefinger are extended and the hand swept across the breast. To cut 12, 14, 16-inch etc., the signals are combined to indicate the desired dimension;

thus to signal the cutting of a 16-inch cant or timber first raise the forefinger and then drop the hand across the breast, giving the sign for 6-inch. Other dimensions are signaled the same way.

To signal to turn the log, the hand is held out toward the log deck. If the hand doing the signaling is turned half way in each direction, it means the log will be turned up against the knee; while if the palm of the hand is turned toward the floor, the log will be laid with the flat side on the knee. If the heavy dog is wanted, the hand is held down flat in front of the sawyer; while if the boss dog is desired, the same signal is employed, except that the index finger is crooked like a chicken's beak. If the dog does not suit the sawyer he points his finger straight at the dog, which signifies that it must be moved. If the sawyer wants to know the size of a log or the stand of the knee on the head block, he points to the dial; the setter then signals by holding up his fingers. If the setter holds up two fingers and then three fingers, the dimension is 23-inch; but if he then also holds up the little finger, it means 23½-inch. If the setter holds out two fingers, then three fingers and then the thumb and index finger held horizontally, it means 23¾-inch.

Every Fire Ranger is Real Son of the North

Forest Rangers in northwestern Quebec have learned that mining and lumbering can go hand in hand, and that the preservation of timber is desired almost as much by prospectors as it is by the owners of timber limits.

In moving about from place to place over the length and breadth of Northern Ontario and northwestern Quebec, it has been possible during the past several years to secure a good idea of what is being done toward saving the great and valuable timberlands from fire devastation, says J. A. McRae in Toronto "Saturday Night."

One outstanding fact presents itself, namely, that forest protection under government jurisdiction is not so efficient as where forest patrol is maintained by individual owners of timber limits. Indeed, so pronounced is this difference, that it raises the startling question if it would not be better if every solitary acre of timber in Northern Ontario and Northwestern Quebec were owned by private individuals.

The Ontario government maintains a big organization of fire rangers. Among them are highly capable men—but, alas, their strength is weakened through the employment of many others who know little or nothing about forests, let alone the serious business of enforcing law or fighting burning timber.

Early in the present summer when great bush fires were threatening many parts of Northern Ontario and also causing havoc among the transcontinental railway in northern Quebec, your correspondent traversed the area along the Upper Ottawa and the Kinojevis Rivers on the trail to the Rouyn gold fields. In the entire stretch of 100 miles from Des Quinze Dam to Rouyn Lake the great timberlands spread out on all sides as far as the eye could see—and not a sign of a solitary fire, and scarcely a tell-tale mark of any destruction in recent years.

Here was a forest that had stood through all those years when forests and towns and human lives just a few miles away in Northern Ontario had gone down as terrific toll in conflagrations at intervals throughout the years. The contrast was so great as to invite investigation and here is what I found:

A number of private owners of timber limits along the Upper Ottawa, the Kinojevis Rivers and elsewhere, have formed themselves into The Ottawa River Forest Protective Association, Ltd. The area of territory covered in the membership of this association is approximately 17,300,000 acres, or actually comprising over 30,000 square miles. This area consists of about 40 per cent. of the total leased Crown lands in the province of Quebec. In protecting this vast territory, the association finds it necessary to patrol about 4,000,000 acres of unleased Crown lands as well as a considerable area occupied by settlers.

This organization has functioned for approximately ten years with such great success as to give it the distinction of being among the best in the Dominion—showing in many ways a marked superiority over any other forest patrol coming to the attention of "Saturday Night's" representative in the new lands of the north.

Expenditure annually amounts to around \$180,000, the members being assessed according to territory. The Quebec government contributes a comparatively small sum toward the expense, this being to cover the cost of patrol maintained on unleased Crown Lands.

While cruising through the territory, your representative learned that Arthur H. Graham, Chief Fire Inspector for the Association, was in the district, but lack of time, and the uncertainty of what one of the far-flung ranger's cabins might house this official on any given

date were the unfortunate causes contributing to failure to get in touch and possibly secure details that would probably have been instructive.

One fact that stood out conspicuously was the calibre of the rangers met with from time to time. Every man of them bears the stamp of real sons of the north. They are reliable and disciplined. Once report a fire, and but few moments elapse—let it be night or day—before their canoes are afloat and skimming along to the rhythmic dip-and-swish of their plying paddles.

In some instances, telephone lines are strung from point to point. Also, a small motor boat is maintained on Lake Des Quinze and Lake Expanse.

There is no traveller but who instantly feels a sense of responsibility and shares the desire to co-operate with these earnest men. Mr. William Fogarty impressed us as being one of the most capable and courteous men ever met on the trail. Himself of a type that would not hesitate to paddle half a hundred miles in a night in an effort to prevent the spread of flames by the winds that so often rise with the dawn, Mr. Fogarty enjoys the goodwill and commands the loyalty of the sturdy men of his patrol.

Since the rush of prospectors started in the Rouyn gold area, the Quebec government has taken over patrol work in that area lying north of Sturgeon Rapids and north of the Upper Ottawa River. Prospectors are hoping that equal efficiency and care will be established as that marking the activities of the Lumberman's Association, and that the green of the forests will be preserved, because they realize that the products of the forest are greater in value than all the other combined new wealth being taken as yet from northern Quebec.

Laurentide Company Makes Good Showing

The annual report of the Laurentide Co., whose mills are at Grand Mere, Que., has been sent to shareholders. Business is on the whole, very satisfactory.

The report shows 6.9 per cent earned on the capital stock during the twelve months ended June 30th 1923 and also a reduction of over a million dollars in bank loans and an improvement in working capital of well over half a million. The operating profits also show a decided gain and the report is certainly one which will be received with a large measure of satisfaction.

The report showing profit of \$2,732,455 as compared with \$2,266,254. Miscellaneous profits amounted to \$49,435, as compared with \$94,386, while income from investments amounted to \$386,107, as compared with \$332,513, bringing total income to \$3,167,998, as compared with \$2,693,154. Interest charges amounted to \$424,998, as compared with \$440,631, leaving a balance of \$2,743,000, as compared with \$2,252,523. Allowance for depreciation, taxes, etc., was \$753,896 as compared with \$458,461, leaving a net profit of \$1,989,103, as against \$1,794,061. The usual dividends required \$1,728,000, leaving a surplus of \$261,103, as compared with a surplus of \$66,061, the preceding year. With the previous balance of \$1,489,528, this leaves a credit of \$1,750,632 at profit and loss account.

The working capital position of the company has improved to the extent of over a million dollars. This is accounted for by the reduction of the loan from the Bank of Montreal from \$3,572,960 to \$2,507,723. The inventories are also down by over a million dollars.

Scarcity of Labor Checks Pulpwood Cutting

Production in Ontario Above North Bay Has Been Considerably Lessened Owing to Available Help Being Engaged in Railway, Mining and Other Work

Owing to the large amount of construction work going on in Northern Ontario in connection with railways, power development schemes, mining operations, etc., there has been a great scarcity of labor during the past season in the production of pulpwood. Every able-bodied man has joined the ranks of the well-paid workers on these outside jobs and the cutting of pulpwood has been neglected. All the grown-up sons of the settler, his relatives and all other active laborers have been temporarily weaned from the soil and the bush to laying tracks, building dams or delving for gold and silver. The extension of the T. & N. O. Railway 40 miles north of Cochrane on its projected route to Moose Factory, the big power development project at Quinze Falls and the boom in mining have cleared the country of axemen who formerly felled spruce, balsam and poplar trees during the months of May, June, July and August. This observation applies particularly to the district around Cochrane but in other parts of Ontario about the same quantity of pulpwood as last season has been taken out.

Speaking of the probable amount of wood that has been cut in the vicinity of Cochrane, a leading operator stated recently that it would be only about one-quarter of what it was last year, while in other districts the output will be about the same.

One of the largest contracting companies who specialize in pulpwood is the Thompson & Heyland organization, of Toronto, who have been handling the product for the last eight years. During the past season this company bought and distributed about 50,000 cords and for 1923-24 will handle about 60,000 cords. Contracts were made in April last for 5,000 cords in the section around Cochrane and 15,000 cords in the territory between North Bay and Orillia, and 15,000 cords along the Central Ontario Railway in the vicinity of Maynooth, Haliburton and Coboconk. The contract prices paid are about the same as last year and depend very much upon quantity, freight rates, etc.

All wood bought by the Thompson & Heyland Lumber Co. must be peeled and this year fully one-third of the stock will be poplar for which there is a growing demand. Last season the quantity of poplar bought was small. North of North Bay the prevailing price for peeled spruce and balsam, f.o.b. cars, is \$8 to \$10 per cord and for peeled poplar \$5 to \$7 per cord. North Bay is some 227 miles north of Toronto, while Cochrane is 480 miles. \$11 to \$13 has been the prevailing figure for spruce and balsam south of North Bay, while poplar runs from \$8 to \$9 and peeled hemlock about the same figure. The higher figures are due to the shorter haul and lower freight rates.

James Thompson and A. J. Bailey, who look after the pulpwood end, have the buyers out in various parts of the country.

Contracts with settlers are generally made early in April for so many cords and cutting starts in May and continues until about the middle of August after which date it is not possible to peel the wood with any degree of ease. The settler cuts the wood in pole length and, along with members of the family, strips the bark off the fallen trees. The wood is then cut with a cross-cut saw into 4-foot lengths and piled up ready for transportation to the railway siding as soon as the snow appears. Roads are generally cleared at this season so that advantage may be taken of the first sleighing. As soon as the wood is felled and peeled the settler is advanced 50 per cent. on the contract price, and when the product is taken out to the railway track and piled, he is given the full figure with the exception of \$1.00, which is held back until the wood is loaded on the cars, for all contracts regarding price read "F.O.B. Cars." Most of the settlers load the wood into the car and receive the balance when their measurements are confirmed by the mill.

Considerable wood is brought by the Thompson & Heyland Co. through other buyers, such as storekeepers, who carry on a sort of trade or barter system with settlers. The latter may be getting out so many cords of pulpwood to be delivered to the merchant and on the strength of this the settler secures a supply of food, clothing, etc., which is charged against his pulpwood account. A number of Northern Ontario merchants have worked up a large trade on this basis and they, in turn, transfer the pulpwood to contractors.

Most of the wood purchased by the Thompson & Heyland Lumber Co. is shipped to Ontario points but a portion of it goes to Ohio and some to New York.

Whether the proposed embargo on freehold pulpwood goes into effect or not as a result of the investigations which will be conducted by the Royal Commission, there is one thing certain, and that is the wood of farmers and settlers will be excluded from the provisions of the proposed Act. This statement has been made particularly clear by Hon. Mackenzie King, Prime Minister. The settler, therefore, is not particularly concerned about the embargo. He knows that he will be able to get rid of his wood at a fair price in any event and with the growing development of the paper industry, the number of new mills in course of erection, the extensions that are being made to others and the general activity of the trade, there may be some increase in price before next season.

The Thompson & Heyland Co. are at present shipping to six mills and have contracts with seven mills in the U. S., five in Ontario and one in Quebec, shipments to which will commence October 1st.

Prominent lumber and paper men who are on the new board of the reorganized Riordon Co., Montreal

Big Output is the Watchword

Waste is Reduced to Minimum

Adams River Lumber Co. of Chase Have Met and Overcome Many Difficulties and To-day Turn Out Enough Lumber to Send Out Full Trainload Every Second Day—For Speed One Will Travel Far to See Anything Surpassing the Operation of Sawing Logs At Adams River.

By George M. Murray

In early August the fields are yellow with the harvests at Chase, B. C. As the train from the coast slows down at the station, to the left a vast field of ripe wheat delights the eye. Beyond this field, blending in with the precious yellow of the grain, are orderly piles of the golden hued fresh sawn lumber, the product which has made the name of the tiny town of Chase well known throughout America.

In developing the industry at Chase, the Adams River Lumber Company, met and overcame many difficulties. Today they carry their logs forty miles to the big mill and cut up enough lumber to send to the farming areas of Eastern Canada and of the Middle States a full trainload every second day. While they employed a double shift in the mills this summer the output was 7,500,000 feet per month.

It is altogether in keeping that a great wheat field should bound the premises of the company to the West. For wheat and lumber are good companions, and the output of this interior mill goes chiefly overland to furnish material for barns and houses for the toilers of the land in the wheat and corn areas of America, and when all the demands for barns and houses and corncribs are met, they have the soft, lovely, straight grained, inviting white pine for making seed drill boxes, tops for hay racks and for tight wagon boxes. Perhaps the people who buy it may think white pine too good for the outside needs and if so they can use it inside in the form of tubs and churns and kitchen table tops or shelves for the full pantries of the Middle Western farmer.

Largest Remaining Stand of Pine

Few mills can offer a better variety of woods than the Adams River Lumber Company. They have perhaps the largest remaining stand of white pine in the interior of British Columbia, and they take from the steep slopes, high above Shuswap Lake, spruce and yellow pine, fir and cedar. Only a few years ago men trained in the logging business, said that much of the timber the

company is now marketing, had little commercial value.

Experts shook their heads and said that the job of cutting out the logs was too difficult, but the men behind the Adams River enterprise have found a way. They navigate the Adams River, Little Shuswap, and Shuswap Lake proper, with powerful towboats. They have along these interior waters a coast line of some hundreds of miles in length. There is a single flume five miles long, built at a cost of \$80,000, which conveys logs down a mountainside 2,500 feet high, where the drop is 500 feet to the mile. Powerful motor trucks are now used in the woods along with horses. The logs are drawn over trails and costly motor roads, and are dropped in this flume. They take their lightning plunge down the flume to the waters of Shuswap; they are hauled 25 miles to Adams Lake, up 7 miles of river into Little Shuswap and are then towed 5 miles to the mill.

In the interior of British Columbia the atmosphere is bracing and men and women and children have real vitality and energy. This is perhaps one reason why the industrial town of Chase is the scene of much activity. For speed one will travel far to see anything surpassing the operation of sawing logs at Adams River. The small, but straight and beautiful timber is shot from both sides onto the carriage. At a terrific speed the saws receive their prey. Working on these timbers which seem so small to the man familiar with the mammoth logs sawn at the Coast, the action is sufficiently rapid to turn out about 250,000 feet each day, when the two shifts are working. An expert like Tom Gehan, mechanical superintendent, will tell you that at the speed set for the sawing of a single log at Adams River, it would be impossible to handle the Coast giants. The big fellows cannot be jerked about as can the mountain timbers; their immense weight would smash to pieces the mightiest saw carriages, were they to be given the cyclone rush common at the Adams River plant.

Safety Precautions are in Evidence

Up in the interior of British Columbia the people move rapidly and speak rapidly. At the big mill the main thought is for the safety and comfort of the employees. W. F. Lammers, managing director, and his associates, insist that every possible care be taken to save the men from accident and to preserve health.

There is an artist somewhere in the mill who has caught the spirit of the place, for he has painted above a danger place in the

mill, where the low shafting and belting might interfere with the safety of an unusually tall person, this warning:

"duck yer nut"

"This sign may not be couched in elegant words," R. R. Mason, secretary-treasurer of the Company observes, "but it accomplishes the end desired."

Mechanically the Adams River Lumber Company's mill is one of the most modern in the province of British Columbia. Waste is reduced to a minimum, sawdust being the fuel used in a power plant which never fails and which is always capable of bearing a greater load than is placed upon it.

From the mountains the mill receives a bountiful supply of water. About the premises, like machine guns trained on an enemy, are mounted great monitors and should fire break out, streams of water under tremendous pressure may be shot upon any part of the mill. Within, a complete sprinkler system, further helps to make the property almost fire-proof.

The Adams River people have provided for the safety of their men along modern lines. They have at the plant, a first aid ward and dispensary, such as one might find in a modern hospital. There every provision is made for the care of men who may be injured.

The Awakening Prairie Market

Few mills turn out a more diversified assortment of woods. Orders for cedar, fir, yellow pine, spruce, hemlock and white pine, in almost any quantity, can be quickly filled by the Adams River Lumber Co. They produce more white pine than any other mill in that part of British Columbia. This wood so popular in interior finishing, forms 10 per cent. of their output. The awakening prairie market has recently created a big demand for fir, and the amount of elevator cribbing being shipped by the company, tells in eloquent words of the bountiful harvest which the Canadian prairies are producing for 1923. Cedar leaves the mill chiefly in the form of shiplap, and for this product of the interior forests, an ever increasing market is offering beyond the mountains on the American and Canadian sides of the international boundary.

In developing their limits, the Adams River Lumber Co. has kept abreast with the latest features in logging equipment. Where the company used horses exclusively some years ago, they are today introducing motor trucks. On the steeper slopes they have so far put into operation two big motor trucks with trailers. Mr. Lammers believes that the motor truck is bound to simplify many of their problems, pointing out, however, the need for improved braking devices, which will make for safety on the very steep grades in that part of the country. Trackage must be built for the motors, and those who have observed closely the experiments at the company's operation, state that the

Attractive and admirably laid out yards of the Adams River Lumber Co., at Chase, B. C.

experience there definitely proves the efficiency of the motor truck. Three miles of trackage was recently built of the usual small timbers, hewn flat and placed end to end, a system of road construction which is stated to be most economical at the Adams River operation. The Company is introducing automotive equipment in the woods following lengthy experience at the mills, where a fleet of cars is engaged in trailing lumber about the yards and in general hauling.

Some idea of the value of intelligent development of the lumber industry in British Columbia, to the entire community may be gained from a visit to Chase, one of the most attractive and best groomed of the smaller towns of interior British Columbia. In its development the Adams River Lum-

ber Co. has played a big part. The company has financed the water system and is interested in the electrical development. It owns its own store at the mill, a store which compares favorably with many mercantile establishments in the large cities. Despite the large business carried on by the company's store, there are many other shops in the town of Chase, which do a thriving business. A conspicuous building there, is a model hotel, one of the best hotels in all the interior of British Columbia, capably conducted by Mr. Underwood, a highly respected citizen, who came to the town some 14 years ago, with his wife and family. The lumber company brought prosperity to the valley, and its officers take a keen personal interest in everything making for the welfare of that part of British Columbia.

forest material—remnants of a much larger stand, two thirds of which have been destroyed by fire. The real forest wealth of the forest, however, is not in the three and a half billion feet now standing, but in the growing capacity of the soil and climate, which on many parts of the coast is capable of producing one thousand board feet per acre per year. If the forest areas of the province are kept productive they are capable of maintaining an industry two or three times the size of the present development, in perpetuity. Lumbering would become a permanent institution, not a passing phase of development as, to such a large extent, it was in the east.

The world's needs for forest products are greater today than ever before, even though in the last fifty years coal, concrete and iron have replaced wood in a great many instances. The per capita consumption of wood in the world is approximately thirty-five cubic feet per year, and varies from probably three feet in India to two hundred and fifty feet in the United States, fifteen feet in England and forty-three feet in Germany.

Problem of Wood Supply Vitally Concerns Every Resident of Dominion

As The March of Science Progresses Forest Products Play a More and More Intimate Part in the Every-Day Life of Man—The Issue as it Confronts the West and Affects Future Generations.

By Jerome B. Eberts

Forest conservation solidly supported by public opinion is an absolute essential if Canadians are to retain their position of prominence in the lumber business of the world. British Columbia contains 350,000,000,000 feet of coniferous timber. At the present rate of wood consumption in the United States alone, this apparently great quantity would not supply that country's lumber demands for more than ten years. British Columbia's forests are vast but, compared to the tremendous and ever growing demand, the potency of its mass shrinks and in place thereof, in the minds of those who are in touch with world conditions as they effect wood and wood products, there comes a picture of a time when Canada's timber wealth will go the way of the buffalo.

Not only forestry men of Canada are concerned with the outlook. The forests of British Columbia constitute one of the last great stands of coniferous woods in the world. The forests of the tropics cannot take the place in commerce of the forests of pine. The annual cutting in the forests of Oregon, Washington and California has had its effect on the great Pacific Coast stands of the United States. The vast forests of the southern states and of the Great Lake states, Michigan, Wisconsin and Minnesota, have been depleted to an extent that has more and more forced consumers to look to the Pacific coast and to exploit the Pacific Coast forests. Siberia, the only other temperate zone in the world where grows coniferous wood in great quantity, cannot supply more than the demands of the east.

Speaking of the urgent need for strict conservation P. Z. Caverhill, chief forester of British Columbia, lately asserted that the people of Canada had not yet realized the seriousness of the situation, and he thought the principal reason for this was lack of knowledge. The public must be educated since in a democratic country any public question moved only as fast as public opinion. If Canada waited for actual need to

arouse public opinion sufficient time would not be available to meet the need as it takes seventy-five to one hundred years to produce a crop of wood.

It has only been in comparatively recent years that the general public has taken any interest whatever in forestry and very few today are acquainted with more than a fraction of the multitudinous phases it covers. Yet forestry is hoary with age. It owes its origin to human necessity and its history goes back to the day when Adam plucked the wild fig-leaf. Two great contra emotions have had a material bearing on its development through the years.

What Led up to Indifference

With the gradual enlargement of the scope of agriculture a struggle arose between man in his effort to clear his land, and the encumbering forest. Fire was man's chief agent, even though it often reached out and destroyed the fertility of the soil as well. This struggle, coupled with the belief that the unexplored land 'beyond' held unlimited supplies of timber to serve all his needs, has tended to the development of a feeling of indifference, if not of open hostility, and has led to wholesale forest destruction.

Embedded deeper down, however, in man's nature—it may be a throw-back to days when man's ancestors were dwellers in the forests, and is especially marked in the northern white races—is a sentiment for the trees. It is illustrated by man's love for the chase, the open fire that man insists upon having in his modern home. It is a sentiment of kinship with the trees and has been instrumental in the creation of parks, hunting grounds, and the planting of trees. In fact the beginning of scientific forestry can be directly traced to it.

What Forestry Asks of Agriculture

Forestry and agriculture are not in conflict, but on the contrary each is a complement of the other. Forestry only requires land unsuited for tillage and it benefits agriculture through its equalizing influence on climate and control of water supply. It gives an opportunity for labor not required on the farm, and provides a market for farm products. All forestry asks is that agriculture be confined to land where there are some prospects of an economic return for money and time spent on tillage.

British Columbia has vast reserves of

Evolution of Pioneer Industry

During the past fifty years the population of England has increased fifty per cent but wood consumption has increased one hundred and eighty per cent. One hundred years ago the chief products of the forest were rough planks, fuel and pitch. The great demands from the railways, telegraph and transmission lines, pulp and paper industry, had not arisen. Today there are three quarters of a million miles of railway in operation requiring ten billion feet of timber annually for tie replacement. No substitute has yet been devised to take the place of wooden ties. One and a half million miles of telegraph lines mostly strung on wood poles. Add to this the transmission lines now used and reckon replacements needed.

Forty years ago paper was made almost entirely of rags. The per capita consumption in the United States was about three pounds per year. Now it is one hundred and forty-nine pounds, requiring eleven cubic feet of wood to produce. Requirements of paper in other countries are: China, one-quarter pound; Siberia, six pounds; Japan, eleven pounds; Germany, forty pounds; England, seventy-five pounds.

Think for a moment what the awakening of the East, the three hundred millions of people in China, and the three and a half millions in India, will mean in extra requirements.

How Motor Cars Use up Wood

The production of motor cars requires more wood than the former vehicles used—approximately five hundred feet per car. The Ford plants alone require half a billion feet annually. Mr. Ford is so concerned about his timber supply that he recently purchased some four hundred thousand acres of forest land which he is managing on a sustained yield plan. He is not depending on wood substitutes. Crates for shipping citrus fruits require annually one hundred and fifty million feet.

As the march of science progresses, wood and wood products play a more and more intimate part in the every-day life of man. The ties we wear, our newest silk socks are perhaps made of cellulose, a wood product. The linoleum on the floor, the paint on the wall are dependent on wood products. Sanitary drinking cups and towels we use, and perhaps the skins on the

sausages we eat are those made from cellulose.

The motion picture industry is dependent on wood alcohol. The gramophone record is sixty per cent. wood flour. Even the cream in our coffee may be the result of hydrolized stock food. Recent discoveries by chemists have made it possible to produce a very nourishing stock food from a substance whose main ingredient is saw-dust. Leached chips of the Western larch, put through a chemical process will produce a substance equivalent to baking powder. During the war it was discovered that wood cellulose was quite suitable as a substance for cotton fibre in the manufacture of nitro cellulose.

No Great Unexplored "Beyond"

If, therefore, coal, concrete and iron have replaced wood in some instances, wood

products are supplying an ever widening range of wants. Knowledge obtained during the past fifty years has shown that there is no great unexplored "beyond" on which reliance can be made for a future wood supply. We of today have not only our present requirements to think of but that of the population fifty or a hundred years hence.

British Columbia has a population considerably under the half million mark. Dean Brock of the University of British Columbia, recently estimated that British Columbia would easily support twenty millions of people.

The United States grew from nine and a half million to one hundred millions in a century. Mr. Griffiths Taylor, of the University of Sydney, predicts that North America, at point of satiation, will have a

population of seven hundred million of which Canada's share will be in the neighborhood of two hundred million. He further estimates that this point will be reached in one hundred years if the present growth of United States is maintained. If it is not and the continent's population grows at the world rate, the time of satiation will be reached in two hundred and forty years. In either case there will be a vastly larger population with an ever-growing rate of consumption.

The question of wood supply is one that concerns every individual and one of the chief steps to be taken at present is fire prevention, not only in the present standing forests but in the brush lands which contain the germ of a new crop, which, if allowed to develop, will supply the timber requirements of the race one hundred years hence.

Recent Returns Show That Business is Most Promising

Business is looking up in Canada. An increase of \$1,096,274 is shown in customs and excise revenue over August of last year. Customs import duties have increased \$136,659; excise taxes, \$758,446, and excise duties, \$208,426. Customs and excise revenue for the first five months of the fiscal year total \$125,967,740, an increase over a like period last year of \$18,721,585.

Building construction—Residential accounted for 30% of the total construction during July.

Bank clearings for July increased 4% compared with July, 1922.

Failures—No. and per cent. shows smallest monthly number of failures since June, 1922.

Failure liabilities for July increased 22% compared with the month previous.

Immigration shows largest number immigrant arrivals in any May since 1920.

Employment index increased to 97.3 due principally to increased employment in con-

struction and manufacturing industries. Unemployment Index continues lowest since October, 1922.

Bank statement—June statement shows moderate advance in nearly all principal items compared with previous month.

Exports of merchandise for year ending June 1923, shows increase of 31% compared with same period a year ago.

Imports of merchandise for year ending June 1923, increased 18%, compared with corresponding period a year ago.

Balance of trade for June shows monthly excess of exports since December, 1922.

Canadian exchange at N. Y. shows usual tendency.

Commodity prices—Canadian Commodity Price Index shows a small decrease compared with previous month. Decline in nearly all groups. Steep decline in fresh fish. Raw cotton and wool show increases.

Bond sales and bond yield—Bond sales

for first 7 months 1923, decreased 22% compared to same period a year ago.

Twenty industrial stocks—14 points higher than year ago.

Crops—Crop conditions end of July continue to be generally favorable. Percentage condition of wheat and oats in Saskatchewan and Alberta considerably above average.

Newsprint continues to show record production.

Pig iron production for May shows largest output since October, 1920. More than four times greater than production a year ago.

Steel production for May increased 12% compared with previous month. May production heaviest since 1920.

Railroad earnings—Gross earnings for June increased 8% compared with June previous year.

Losses by fire for July shows lightest month since August 1922.—Babson.

Effective Rules For Preventing Fires in Mill and Yard

Saw Mill or Planer

Hang up your clothing before leaving the mill.

Under no circumstances should you use fire pails or hose, except for fire.

Steam pipes must be kept clear from combustible material.

Do not set oil cans on woodwork; a metal tray should be provided.

Do not leave old waste about the floor or wall lines; provide waste cans.

Close the windows before leaving the mill; it keeps the sparks out.

Keep your closet clean and clothing hung up.

Be sure that the barrel near you is full of water and the pail ready.

Do not pile or hang anything about the fire fighting apparatus. If the oil is dripping from the bearings, place a metal can at this point.

Do not hang electrical drop cords over wood or nails; use belt lacing.

Do not use burlap for winnow shades.

Keep everything clean in the vicinity of your work.

If the hose is not neatly racked, connected and nozzled, arrange it yourself.

Keep the benches and corners clean.

Dry sawdust is as inflammable as gun powder; keep the mill free from it.

If the chemical extinguishers have not been recharged recently, they should be.

See that all belts and pulleys are free from friction contacts. Do not repair belts inside; belt cement should be applied outside of mill.

See that trash is removed from under and about all machines each day.

If you do not understand the fire fighting apparatus, ask the Boss.

For the Yard

Don't throw old clothing or any other hazardous material under lumber stacks.

Remove all dry weeds and other burnable accumulations.

If you see a bucket on the ground, pick it up and place it with the barrel.

Keep trams clear so there will be no obstructions at the time of fire.

By all means do not violate the clear space warranty.

For the Commissary

Matches should be stored in a metal covered box.

Close all windows before leaving at night.

Do not pile burnable material near unprotected flue.

Remove all rubbish daily.

Keep outside premises clean and free from trash.

Do not permit electrical drop cords to come in contact with wood or metal.

If sawdust is used in cuspidors they should be emptied every night, because a lighted cigar stump might ignite the sawdust.

The Religion of Salesmanship--

By Philosopher

Integrity—Service,—are the two prominent ideas emphasized by the current advertising copy and the orthodox theoretical salesmanship—and rightly so. Commerce is carried on largely on credit, based on faith in our fellowman's honesty—the belief that he will act on the square in fulfilling his obligations; while Service in its fullest meaning covers all the physical facts of distribution, including the personal relations between seller and buyer. Such are the considerations underlying the claim of salesmanship to be called a Religion. Founded on integrity, it operates through service. Right principles are its base, and "To do good" its motto.

These inspiring sentiments, which no one will question while they remain general and abstract are, unfortunately, more or less lost sight of when the consideration becomes individual and concrete. Too often the near-by profit shuts out the vision of future relations; a customer's confidence is discounted; and our betrayal of the faith reflects in a contraction of credit. For, after all, credit stands on character; and while the number of our dollars may have increased, there has been a corresponding loss in the finer qualities of manhood.

Looked at from this viewpoint, it readily appears that both salesmanship and the distribution of commodities of which it is a part, can only be rightly contemplated against the wider background of life itself. What is the meaning of life? What is its purpose? How shall we proceed in order to get out of it the most possible?—these are the questions that confront us. Unfortunately, by the time we are aware of the problem, we are usually committed to a certain line of action in securing the necessary means of subsistence, and cannot turn back; but we can, at least, arrive at definite conclusions regarding what we want and the price we are willing to pay.

Building Character of High Degree

One of the wise men of old said that "The sum of a man's life is arrived at by multiplying its length into its breadth, and computing its degree of fineness;" and, while to a large extent, the conditions are predetermined for us, if we are willing to pay the price of necessary effort, there is much that we can do to develop the talents with which we are fitted out at the start; much that we can do to build character of a high degree of fineness that will manifest the true beauty of the human spirit, and win for us the reverence and love of our fellow-men. And what is it that we really want from life but just that?—friendship and love—the treasures beyond price, which money cannot buy; which come to us not on account of what we have, but on account of what we are.

From the centre of the real man within radiates all lines of influence, reaching out to the minds of those with whom he comes in contact, and creating their inevitable impression. Like attracts like by a law of spiritual affinity. He who is animated by a spirit of good-will and desire for service will not want for friends; while the self-seeking man intent on securing his own ends, despite the rights or interests of others, may, indeed, amass material wealth through sharp practices, but inevitably fails to make a success of life, for "there are no pockets in a shroud."

To the salesman and to his silent partner, the advertiser, these things are of the

highest importance. Integrity and sincerity are blood-relations; and he who, possessing these, enters his field motivated by a strong desire to be of service to his customers, will not want for orders.

Turning now from the ideal to the actual, we meet at once with compromise. Human nature is not perfect. We have to do the best we can under its limitations; and while we feel that much is to be desired in our business relations, competition sets the pace and custom governs the adaption of means to end.

The young salesman goes forth to sell, his mind under the perplexing sway of mixed motives. Dimly he comprehends the rightness of his profession,—the essential part which he is to play in the distribution of commodities. He feels, surging warmly within his breast, a spirit of good-will towards all those wonderful men who are to give him orders for his goods, thereby not only benefiting themselves, but enhancing his own position in the regard of that arbitrary power which resides in the sales man-

Hank says:

Life's dividend isn't calculated by what you hope to receive—but that it will be paid, without you knowin' it maybe, accordin' to your honest-to-gosh endeavor to bring sunshine and moonshine with you wherever you go.

ager. There is the continual prospective adventure of meeting people, of studying their needs, and of doing good unto them. Fair and rosy are the vistas which life spreads before him, and the breath of existence is sweet, as he sets forth on his maiden trip. Let us offer up a silent prayer that his faith may be increased and accompany him on his journey.

Sends in His Card to the Buyer

Duly arrived at the first town on his route, he presents himself without delay at the Jones & Co., and sends in his card to the buyer—Mr. Thompson. Mr. Thompson is engaged, temporarily, and a very superior switch-board girl waves him to the seat of torture, which he spends some eternal minutes groping for a decision as to what he will say. Furiously, ideas in swift succession flit before his consciousness. He fidgets on the seat of torture almost entertaining a desire to flee—almost, for when he has died a dozen deaths and the ultimate point of desperation has been reached, Mr. Thompson appears on the scene and greets him gruffly,—

A Human Story that Brings us
Back to the Fundamentals of
good Selling

"Well, young man, what can we do for you?" uttered in a tone that definitely implies that he is busy and that the appearance of our young friend is not the most important thing that may conceivably transpire before noon.

Now the fact that our young salesman is where he is, implies that he is possessed of a certain amount of common sense, wherefore he reacts to the situation and gets down to business, leaving the correspondence school theory for application at a more convenient season. He shows his samples or otherwise says his little say. The Jones Co., are old customers of the firm and Mr. Thompson gives him an order and wishes him "Good Morning" all in the space of a bewildering five minutes. He leaves the office in a daze; it was all so different from what he had anticipated.

Prying into his thoughts, we see the central positive idea—the possession of an order; but it is surrounded by a mist of doubt. Being too reasonable to suppose that he "sold" the goods which his order calls for; his enthusiasm dampened by the casual attitude of Mr. Thompson, he concludes that the integrity and service of his firm are to be credited with the success of his first call. He does not know just what to make of Thompson, thinks his cold-blooded and entirely unresponsive to the radiations of good-will which he intends to shoot in his direction. But the overwhelming fact is that he has an order. Perhaps the Gorman Co., will give him a better opportunity to exert the human influence which the correspondence school has told him he possesses.

Shipments Not up to the Mark

At the Gorman Co., he meets trouble. The last shipment of goods, the last two shipments in fact, from his firm have not been up to the mark, and he is sharply told by an irate Mr. Gorman that, if his house cannot ship dependable goods, he need not waste his time and theirs by calling on them. This puts our young friend on his mettle, and he asks to be shown the material complained of. From his experience in the production end, which is an absolute essential for the salesman, he sees that Mr. Gorman's complaint is justified, and he collects detailed information for a report to headquarters. He gets no order from Gorman but does leave him somewhat mollified by the assurance that the firm will "make it right" on the shipment of inferior material.

So much time has been taken up by looking over the stock at Gorman's that it is now time for lunch; and, during the solitary meal at the hotel, he tries to classify the host of new impressions which have been crowding their way into his mind. The idea of the books was to greet the prospective customer with a firm hand-shake; look fairly into his eyes while radiating good-will towards him; get his attention, arouse his interest; create desire; and close the deal. Of course, that was theoretical and general. These two initial experiences did not come just right. Neither Thompson nor Gorman gave him a chance to shake hands with them and—well they both rather dominated the situation during his calls. But still he has an order—though he did not think that the shipping department would be so careless as to let that stuff get away to Gorman. There is just a little less faith in his mind

in the infallibility of the firm as a result of this his first complaint.

Where Nerve Tissues are Worn Thin

His first afternoon call is at Williams & Brown. Mr. Williams does the buying and he is informed that the gentleman is out, but that he wants to see him and he had better wait. So once more he experiences the eternal minutes of the waiter's bench. An hour passes—an hour in which nerve tissues are worn thin and ragged,—when he is informed that Mr. Williams has just phoned saying he will not return till five, and that our salesman might make his other calls and come around again at that time. So off he goes to see Dickson & Black away at the other end of town, only to find that both partners are away at a funeral and will not be back till tomorrow. They have, however, left a list of material on which they want prices, and this is carelessly tossed over to him by a clerk who asks indifferently regarding the old traveller who used to call there.

Plodding wearily back for his appointment with Williams, he reflects that his day's experience has been a good deal short of the triumphant march which he had pictured; but the idea of the order from Thompson persists to cheer him. And he needs it; for on meeting Mr. Williams his preliminary "stuff" is brushed aside by a brisk demand,—"What's your price on so-and-so, and so-and-so?"—a list of a number of items and the reply after he has quoted,—

"You're away up in the air."

"But, Mr. Williams, the quality—"

"Old stuff, son, old stuff. You're young at this game."

"But, Mr. Williams, I know that our firm—"

"Sall right, sonny, you know your own stuff, but I buy from quite a few people and I know there's others just as good as yours, and I'm telling you that I've got your prices beaten a mile. That the best you can do?"

Tried and a good deal discouraged by his cold plunge from the ideal into the actual, our young salesman entertains the idea of calling up the sales-manager; but it is only

for a moment. His instructions are to stick to his price, and he rallies to meet the reverse with a good-natured cheerfulness which, if he but knew it, does him more good with Williams than an offer to try to bring his price down. He gets his first hand-shake of the day on leaving the office, and feels, somehow that he is going to like this Williams.

Learning Much as the Days Pass

And so the days follow each other bringing to the young salesman disillusionment and experience. There is no need that we should follow him further, for we know that he has the right stuff in him and that he will succeed. That, gradually, the ideas with which he started out of applying the correspondence school method to his successive prospects, will be forced into the back ground as his mind fills with personal knowledge of his customers and their require-

ments. He will develop tact in making suggestions that may be of value, and overcome the initial desire to tell others how to run their business. He will learn the lesson of humility and, barring accidents, attain to the estate of a useful citizen. And he will be busy, for his profession calls for all the energy that the average man can command; so that, in all probability, the effects of actual work on the competitive commercial front will suppress the earlier idealistic teaching.

But though that teaching may be submerged, it will not be destroyed, nor will its inherent value diminish; for while all his waking moments may be filled with the multitudinous detail of his work, the eternal principles are still there, forming the foundation of all his possible future achievements. He will be happy if now and then, he is able to escape the din of routine and contemplate the activities which comprise his life, from higher ground. He will then see that the books were right; that his success, such as it has been, came as a result of something which exists within himself—something which he vaguely recognizes as his personality, the outward manifestation of the character of his mind. He will learn that, so far from acting freely on others when it was his conscious desire to make a good impression, his personality has smoothed the way for him most when he was entirely unconscious of it, when his mind was filled with the details of an intention to be of service to others. Service and Integrity will shine with greater clearness every year in the firmament of business as he attains a definite realization of the essential part which confidence, deriving its existence from them, plays in the complex distribution of the commodities produced by present day society.

Success has its Base in Character

That success in life has its firm base in character will be brought home to him perhaps most clearly by the experiences of those who fall by the wayside—the unreliable and the unscrupulous; those who have been content to debase the finer qualities of manhood in order that they might grasp an apparent gain. He will see the man who formed the habit of misrepresenting his goods lose the confidence of his customers, facing himself one day with the realization that he has become an inveterate liar. He will see the man to whom success came easily at the start resting on his laurels while the tide of progress sweeps by, leaving him stranded on the rock of inaction wondering how the bottom came to drop out of the universe.

And he will see the shrewd trader enmeshed in the toils of his own shrewdness, suffering without sympathy the reaction of abused confidence. And from these, perhaps more than from his own experiences, he will learn the lesson of life which says,—“Woe unto him who preaches and does not perform.”

The Religion of Salesmanship is eternally based on integrity and service; integrity of thought, word, act, service that is an animating spirit and not verbal merely. And while this faith has its dangers and its punishments for disobedience perhaps unduly dwelt on, it has also its exceeding great rewards. There are few callings among men that offer so great advantages for the development of character—that “high degree of fineness” which is not the least important standard by which life must be measured. The wide circle of friends and acquaintances

won by him whose integrity of character has left its influence whenever he has visited, will stand not only for profitable business relations, but will be the abiding source of a higher satisfaction in the sphere of sentiment, which in reality, constitutes the richness and the fulness of life.

Sincerity is One of First Requisites

Be not deceived. To get we must give. To have we must be. This is the credo of

the faith of salesmanship. Sincerity is the first requirement; and to be sincere with others we must be sincere with ourselves. This is not difficult for sincerity is an attitude of mind easily acquired when we have summoned the courage to look ourselves in the face. And hand in hand with sincerity comes faith—in ourselves and in others—faith which drives fear out of consciousness—fear which destroys confidence.

And now, in conclusion, what use of all these platitudes? Will they help any man to sell goods? Perhaps not, in the sense that one reading these words may be inspired to go forth and land an order. But, realizing as we must, how prone we are in the rush and struggle of commercial life, to lose sight of the high principles on which all our activities are based, is it not well for us, now and then, to return to the vision of the ideal and refresh ourselves at the spiritual springs which have their source and fountain there? So drinking our strength may be sustained and our courage may be renewed—courage which shall lead us triumphantly forward in the battle of life; and strength to bear the responsibilities which life has committed to our charge.

Fire Rangers Will Stay Longer

Extensive improvements are contemplated in connection with the forest fire protection system of the Ontario Government. Under the direction of Hon. James Lyons, Minister of Lands and Forests, the patrol of the fire rangers in the northern parts of the province will continue this fall until every vestige of fire hazard has passed. There are over 1,000 fire rangers guarding the wooded wealth of Ontario, a number considerably in excess of those at work in previous seasons. The terrible forest fires of last year taught a lesson which the authorities intend not to forget and it is with a view of preventing any repetition of the disaster that the patrol service has been extended. During the period of extreme drought last year many extra rangers were engaged. It is also stated that individual districts will not be permitted to bring about of their own accord the withdrawal of their fire protective forces. The Department of Lands and Forests is also extending as quickly as possible the lookout tower facilities from which a watchman can detect a fire a score of miles away.

How Paul Bunyon Logged off the Prairies

He did it, but if it had not been for the Bullcooks, and His Aunt Johanna's Double-ender Flapjacks it Would Have Resembled Problem from Euclid

By A de H. Smith, Edmonton, Alta.

It was some time after Paul Bunyon had invented logging—to be precise it was the winter of the heavy frost that followed the summer of the million dollar rains, which produced the finest crop the west has ever known—that the celebrated lumberman went west to grow up with and hew down the country.

As a matter of fact he had no desire to leave Ontario, but was forced to do so by circumstances and his Aunt Johanna. The latter lady who had strong views on the uplifting of the lumberjacks had put into action a correspondence school for bullcooks, her mission in life, as she tersely phrased it, being "To have a little less bull and more of the culinary arts." The new installation expounded the best methods for carrying water without buckets and of how to obtain all-day sleeps once the woods gang had hit the tall timber.

So popular was the course that all the bullcooks in the east were studying for their degrees, and Paul was seriously thinking of hiring Chinamen, when he received a piece of news, which for the moment caused him to forget all about the bullcooks.

Some gink was jogging in the west, so a report stated. This person was sawing logs on the upper Saskatchewan, and worst of all he was using homesteaders, which, of course, he had no right to do as these were invented by Paul himself.

Fortunately, just about this time Aunt Johanna discovered that bullcooks were citizens without merit; they absorbed all the free samples of chewing which went with the course, they had perfected themselves in swearing, but instead of studying for their diplomas they liked nothing better than rolling the bones with the cook, and getting the clerk to figure out the shortest way to pay day.

Aunt Johanna quit cold. She sent a rude circular letter to all the students, packed her grip and hiked over to where Paul by this time was logging off the prairies with the big blue ox.

Complications arose, however, as there were not enough Indians to cut hay to keep the bulls going, so Paul invented half-breeds and fed them on a straight diet of buffalo milk and Aunt Johanna's flap-jacks, which agreed with them remarkably well. However, even then they could not put up hay fast enough to keep the blue oxen going, so Paul invented Indian Reserves which must be true as you can see them there still to this day. He invented other things too such as round pegs for square holes, and easy logs for rolling off of etc., all of which proved of much benefit to suffering humanity.

Paul was making a clean sweep of the Prairies; anything that would make a streak of sawdust came out, and as the blue oxen eat up the tops and limbs, this tickled the homesteaders all up the back. When they saw the oxen hauling the timber off a quarter section every time Paul Bunyon made a trip to the landing, they started making ten dollar bets with the government that they could stay there three years without starving to death. Lots of them are there yet too, so this must be true.

Anyhow Paul logged off Manitoba, Saskatchewan and Alberta as clean as a whistle, and didn't pay any stumpage, because he was the man who invented bear traps, strychnine, and machine guns, so of course none of the timber inspectors ever showed up, and everyone was very much pleased.

Then he invented free imports of timber into the United States, but so many of his logs got destroyed down there by the hot air that he gave this up for a bad job. He then took up forestry, and grew square trees, which were shipped

out via Quebec in wind-jammers, and were a popular feature being known as square deals to everybody.

Then he started out to get after the gink who was logging up the river as he figured he was such a crooked son of a gun that he would be a fine scaler and he wanted to hire him. So Paul and Aunt Johanna started off with seventy-three Red River carts loaded down to the Plimsoll mark with double edged flap-jack, prunes and condensed buffalo milk, and they hired every homesteader they met along the trail. The natives had never heard of prunes before so Paul traded these national fruits off—a handful at a time for timber berths—and that's how the berths got their numbers. Berth Number 114—one hundred and fourteen prunes, etc. When he got to where he couldn't get any further he drove the big blue oxen along the river, and every time they fell down off a cut bank, they carried so much sand with them that it formed sand bars, and all the gink's logs got hung up every quarter of a mile, and if you think anyone is lying try to drive the northern Saskatchewan for yourself and see.

Of course, Paul and the gink had a row about this, but the latter gentleman recognized that it was just business robbery or something of the kind, so he hired out to Paul as a scaler, and then Paul bought all the homesteaders' logs, and they didn't cost him anything.

After a while Paul had such a pile of logs that he did not know what to do with them. There was no railway nearer than Calgary, so Paul hitched up the blue bulls, drove them to Calgary, hauled the C. P. R. up to Edmonton, got his timber out and made a lot of money out of it.

Some guys used to try to compliment Paul by recounting the list of things he had invented, and one day one fellow asked him if it was he who invented Progressive Governments. He had a cheap funeral. But Paul did invent lots of things such as the famous non-slipping doughnuts, which are still largely used to seal up the crevices in bunkhouses thus conserving moisture air, and heat. He also invented the custom of putting the grindstone under cover.

Aunt Johanna was right peart too. She used to put Copenhagen snuff instead of pepper in the soup for the Swedes, and she it was too who first thought of imparting the real camp flavor to coffee by boiling it in the cabbage pot. The Army cooks learned this trick from her. When she was making stew she used to wear a gas mask, and she taught the flunkies and bullcooks to use roller skates for keeping out of the lumberjacks way.

It was considered etiquette in Paul's camps to leave nothing on your plate. Prune stones and all had to be eaten, and until Paul took a run over into B. C. and found the Epsom salts lake a special hospital with forty-three doctors was busy all the time sawing off the lumberjacks' appendixes. Some say that Paul invented the appendix too, but there is no official record of this.

Paul, though a kindly man, did not care for pets around the camp; in fact the only one he permitted to remain on the premises was Peterina, the moose-cat. This animal is reported to have been a ringtailed snorter of the highest type. She was half cat and half moose and would eat nothing but corned beef and cabbage. She was utilized mainly to destroy peddlers, made-to-measure tailor's agents and those detestable individuals who head through the camp and announce that "the grub is fine over to Skoochumchuck and they're payin' a dollar more than what youse guys is gettin'."

Paul Bunyon never sat around the camp stove in the evenings telling lies about what they did on the Restigouche. He was always figuring things out and inventing them. After much thought he invented "Truth in Advertising" but

some of the line yard managers pirated the idea and started to make two two-by-fours go where only one went before, and put the whole thing on the blink.

It was after the Christmas dinner and the stag dance that Paul thought up the Lumbermen's Convention idea; he engaged the services of seventy-three skilled bootleggers, and ever since the Moderation Leagues fight to have them come to town as a living example of the rights of the people.

Aunt Johanna was a husky dame; she could swing a seventy-five pound axe and never sat on the saw though the particular weapon she used was constructed to fell a quarter section at a time. Paul used to get fed up with listening to her shooting the bull in the office at night though, and he was always making bets with the lady that she could not cut such and such a patch of timber in a given time. Johanna was game, and whenever a bet was on, she'd take a bag of prunes and a few double-ender flap-jacks and get out in the bush.

Paul then invented the Bullcook's Intelligence Service and he used to have the boys out in the timber to see how his chances were for winning the bet. The bullcooks reported to headquarters at stated intervals, and were always saluted with a phrase which is now historical. This then accounts for the greeting of "Well, old timer, how's she loggin'?"

Teaching Settlers to Play With Fire by the Only Safe Way

G. J. Lonergan, inspector for the typographical surveys branch recently went up to the Peace river country where next spring the government will demonstrate for the benefit of the settlers that it is possible to clear land properly without burning up all the green mill timber in the country.

For the past two seasons (prior to 1923) tremendous damage was done to the spruce stands in the Peace river country due to the fires set out by the settlers in their land clearing operations and the government hopes to impress on them that, if the bush and brule lands are burned over under the controlled system, that they will have many years of axe work and have a better job done, with no hazard to the standing timber.

It is purposed to select several acres along the line of the E.D. and B.C. railway, where brule (burned) country will be experimented with. A series of localities where the fallen timber is piled up in a manner which well nigh defeats the most painstaking homesteader will be selected. On this land Mr. Lonergan purposes to show the settlers that by the use of controlled fires fully eighty per cent. of the mass will be consumed.

The last few disastrous years in Alberta have demonstrated forcibly that something will have to be done, if the remaining spruce stands are to be saved for the use of Canada.

300 Mile Log Drive on Way to Mill

The boom holding the logs at the Chisholm Lumber company's plant, at the mouth of the Pembina river, Alberta, was carried out last spring owing to the sudden floods consequent on the unusually heavy downpours of rain which made their presence generally felt in the west. Chisholm is on the Edmonton, Dunvegan and British Columbia railway, one hundred miles north of Alberta's capital city. From the mill site the logs were taken by the boiling rivers as far north as Fort Chipewyan on Lake Athabasca—approximately a distance of five hundred miles.

Down by the old canoe route of the fur traders, from Athabasca Landing to Fort McMurray the logs hurtled—through the Grand, the Boiler and the Cascade rapids to be strewn on cut bank and flat all along the big river.

Despite this back hander from Old Mother Nature, the Chisholm company people are not sitting down in a corner and wringing their hands. They have made arrangements

Big Ole was Paul's walking boss. He had one short leg and one normal one. He had a dog called "Pooch" who also suffered from the same misfortune. The dog was short on the right side (only twice) and Ole on the left so naturally they walked in circles and after wheeling around in the woods for a while they always met up with one another; then they started off again. This system was a great success in locating swampers. Big Ole didn't like the swampers because they sang a song called "Ten thousand Swedes ran through the weeds, at the Battle of Copenhagen."

Ole was a person of considerable literary attainments. He it was—and not Paul Bunyon, as some authorities have stated—who invented Skinners' Dictionary (A Handbook of Useful Information for Teamsters.) In this compact volume can be found complete instructions for all eventualities, and it is one of the reasons why Sunday School picnics are not held in the woods any more and why tractors are displacing equines on the log haul.

Ole also invented the slogans of "Take yer axe into the office" and "I bane tink so." He was an invaluable man and if it had not been for him and Aunt Johanna helping Paul to log off the Prairies you'd see nothing now-a-days but curybutt slabs and sawdust piles from the Great Lakes to the Pacific.

to drive the river from the mouth of the Pembina to Fort McMurray, a distance of three hundred miles. A portable mill will be used at the site of the old fur post at the confluence of the Clearwater and Athabasca rivers, and there the drive will be pocketed and sawn.

Rivermen state that, from McMurray north to Chipewyan, hundreds of logs line the banks of the Athabasca all the way down. It is understood that the company may also send a portable mill to the Athabasca post, or arrange for the use of the R. C. Mission plant at that point. If this plan is carried out it will mean a drive of about five hundred miles in length, and possibly establish a record for the Dominion.

Indian Saw-Millers Whipsawing Logs

Much lumber is still cut in Mackenzie river territory with whipsaws. With an Indian on either end of the saw this is naturally a slow procedure, while a record cut is still further hindered owing to the fact that about every second

Red men sawing lumber away up north

day is dedicated to one of the Saints and therefore a period of rest, while the thrilling sight of a rabbit or a river boat is justification for an impromptu vacation. The Mackenzie river equally with the Latin countries is the land of "tomorrow."

On the left is an interior view of the Fassett mill. Next is seen the unloading of a barge at the wharf, and on the right are logs in the bush

Busy Sawmill that Operates Year Round

Fassett Lumber Co. is Located in Well-Wooded District and Do Their Logging by Rail—The Company Have Twenty-Eight Miles in Use Including Branch Line and Switches.

The town of Fassett, P.Q., on the C.P.R. line between Montreal and Ottawa, is situated in a very extensive lumbering district. Here is located, at the foot of the Laurentian Mountains, the mill of the Fassett Lumber Company, Limited. The Company was formed in 1905 under the title of the Haskell Lumber Company, Limited, and was re-organized in 1909 with the present title. The limits from part of the Papineau Seigneurie, and cover about 68,000 freehold acres, running from Fassett northwards. The timber consists of hardwoods, spruce, hemlock and pine, the company manufacturing lumber, dimension timber, lath, pulpwood, and dressed lumber. The principal outlet for their products at the present time is in the United States.

The mill is admirably situated from the transportation point, having direct communication with the C.P.R. by means of a spur line and with the Ottawa River for barge shipments, the latter being secured by a line from the mill to a wharf on the River, which is a few hundred yards distant. It is an all year mill. This continuous operation is made possible by the extensive logging railway, running from the mill to the limits and camps, the company usually putting in from four to six camps. The railway and the woods operation were fully described in the "Canada Lumberman" of April 15, 1922, and it will be sufficient to say that the firm have found logging by rail the only practical method having regard to the mixed character of their limits. The system enables special timber bills to be cut and put on to the market very quickly, and other products to be loaded direct on standard cars and shipped to destination without further handling. The company have in use 28 miles including branch lines and switches, the rolling stock including three locomotives, two steam loaders, 55 logging cars and 25 flat cars.

The plant consists of a sawmill and planing mill, constructed of wood with concrete foundations. The main building of the mill is of three storeys, 190 x 60 ft., the lath mill 35 ft. x 50 ft., and the sorting sheds 200 ft. x 40 ft. The structure is in the form of an L. The mill has a capacity of 90,000 to 100,000 feet per day.

From the Hot Pond to the Saws

On arrival at the mill the logs are dumped into the hot pond, which is fed from water pumped through a 6 in. main from the Ottawa river, and which is kept open and warm during the winter months with steam from the exhausts in the sawmill and power house. From the hot pond the logs are conveyed by the log haul chain to the mill, which by the way, was newly equipped in 1914. The two 8 ft. band mill saws (single cut) are of the Clarke type, with heavy steel carriages.

The carriages are fitted with a patent steam dog invented by W. W. Lamb, master mechanic of the company. This has been patented in Canada and patents are pending in the U.S.A. Without going into technical details it may be stated that this dog saves manual labor, substituting a mechanical device for hand power. The dog has been in use for the past two seasons at the Fassett mill, and has increased the output from 10 to 12 per cent., not taking into account the saving of labor—which means money. Having regard to the tendency for operating costs to advance, and, therefore, the necessity of securing the utmost efficiency, a device of this character is worth investigating by other mills.

The band saws are located on either side of the log deck. After being sawn the lumber is conveyed on live rolls to the two 63 in. edgers. The slabs and edgings are diverted to the slasher and then

to the lath mill, where the suitable stock is retained, the balance being sent to the hog. After going through the edgers the lumber is trimmed by an automatic 12 saw trimmer, and then is ready for sorting. The product is loaded on trucks, which are transferred from the sorting platform to the eight docks by means of a chain conveyor. The docks are equipped with 16 pound rails to convey the loaded trucks to the piling ground, which has a capacity of 14 million feet. Each dock has a switch on which cars are placed and loaded, and then switched on to the C.P.R. line without further handling. In this way lumber is taken from the mill, piled and loaded on cars without the use of horses. Cars are loaded in a similar way for barge shipments.

The filing room is located on the third storey; it is fully equipped with machines made by the Covell Manufacturing Co.

The planing mill adjoins the sawmill, and consists of two storeys. The rough lumber is brought on trucks from the sawmill, and sent by a conveyor to the second storey. Here it is dressed according to requirements and placed into box cars ready for shipment. The machinery includes a 72 x 15 heavy duty American surfacer, a rip saw, and trimmer.

The mill is lighted by electricity, the power house being in a separate building. The machinery consists of a 650 h.p. Corliss engine, a 125 h.p. engine, direct connected to a Westinghouse generator, 60 k.w., 440 v.; an underwriters' fire pump with a capacity

The patent steam dog used in the Fassett mill

of 1000 gallons per minute; and a battery of four 100 h.p. boilers with Dutch ovens and equipped with self feeders. The fire pump is connected with a 6 in. water main running through the piling yard, with the necessary hydrants and hose.

System by Which Stores are Checked

Besides the mill proper, the company have a number of accessory buildings. Thus there is a store house where all the oil is measured as it is given out. The company have a system by which the stores are checked and charged to the various departments. Cards showing the goods in stock and the prices are placed above the bins and boxes containing the goods, and when stores are requisitioned the quantity and price are charged to the department ordering the goods. This enables the management to keep tab on the cost of stores required by each department.

The car repair shop is housed in a very large building, necessary on account of the repairs to the logging railway. The blacksmith shop and the machine shop are equipped with lathe, planer, power and electric drills, together with all the tools required for

repair work on the rolling stock and saw mill. The machines are driven by a 25 h.p. motor.

The company have found it desirable to provide housing accommodation for some of their employees and are owners of about 25 houses, in addition to a large boarding house and a school.

View of the Fasset Lumber Co's. mill and sorting shed

The general office is a short distance from the mill. It is a one storey building, well constructed of wood, with concrete base and foundations.

The officers of the company are:—Messrs. J. S. Fasset, President; A. E. Edgcomb, Vice-President; H. S. Thayer, Secretary-Treasurer, and S. J. Staniforth, Managing Director.

Riordon Company Has Big Holdings

In connection with the pending reorganization of the Riordon Co., in Montreal, there has been issued to shareholders an interesting booklet, showing the possessions of the company. It is stated that the publication was prepared to give those who are or may be interested an adequate conception of the industry in which the company is engaged, its place in that industry, the extent and value of the properties and the potentialities of the enterprise.

In connection with the timber holdings of the company, the following facts are given:—Rouge River, area 1,239 square miles; Upper Ottawa, area 2,526 square miles; Gatineau River, area 5,873 square miles; total area, 9,638 square miles.

In regard to timber holdings, the following information is given:—

In 1920, the immense timber holdings and other assets of W. C. Edwards & Co., Limited, and Gilmour & Hughson, Limited, were acquired by the Riordon Co., the stock of which company is owned by the Riordon Co. By this transaction, supplemented by a later purchase from the Dominion Bank, the Riordon Co. secured control of nearly 6,000 square miles of compact limits adjacent and tributary to the Gatineau River, constituting the largest readily accessible supply of timber and pulpwood on one watershed in America.

To appreciate adequately the extent of the vast timberland areas now owned or controlled by the Riordon Co.—nearly 10,000 square miles in all—one must visualize a richly forested area equal in size to the state of Vermont.

One Thousand Feet Daily Per Man

Contrast in Lumber Production of Seventy-five Years Ago and the Present Period—How Far is the Human Element in the Industry Ahead?

By Nathaniel

Seventy-five years ago my father, just of age, settled in a green timber district six miles from the nearest clearing. Here, in his first year, he built a mill dam over a stream and, with the help of a millwright for two months, built a very primitive sawmill, an up and down saw making about fifteen strokes per minute. Practically all the equipment used was of wood, wood cogwheels all through, just a little wrought iron, hand wrought on the spot, was used. With this mill he averaged a cut of 1000 feet per day—doing all the work himself.

By way of contrast I spent some hours last week in a Pacific Coast mill, cutting 300,000 feet per day. In talking with the genial mill manager, I asked him the number of men required to man the mill. He answered three hundred and said that it was usually necessary in modern mills to have one man for every thousand feet of lumber cut.

Now, how much have we advanced in the last seventy-five years. Then my father, without capital, built his mill and cut his thousand per day. To-day with a capital, possibly of \$2,000,000, a modern

sawmill cuts 300,000 feet, employing three hundred men. My father never became rich but, within five years of starting his one-man sawmill, he had fifty acres of his homestead under crop and had built a three-stone grist mill; a carding mill and a shingle mill and had also constructed a ten-roomed home, barns, blacksmith and carpenter shop. All this was accomplished in five years and to do it he borrowed £200 (practically \$1000.00 of our day). Of course he worked hard with his hands.

Now can any of the mill workers of our day show anything like these results? Do they not work hard and when life's evening arrives, have little or nothing to show for manhood's toil? Big business—large capitals—wonderful machinery—world's markets—we have to-day all around us, but what have the years done for the betterment of the workingman? Nothing I think. Better homes, larger wants, but not sufficient earnings to supply them. Certainly recent income tax returns do not trouble him.

Why have all the great inventions—new ideas, wonderful opportunities, built up large capitals and made a few rich men, while the position of the working man has not improved? Someone else will have to answer.

Stimulating Interest in Study of Economics

Early this year, Alvan T. Simonds, President of the Simonds Saw and Steel Company of Fitchburg, Mass., offered prizes of \$1000 and \$500 for the best two essays on the subject,—"The Lack of Economic Intelligence." The contest was open to students in the high schools, trade schools, and normal schools throughout Canada and the United States. Last year Mr. Simonds gave a similar award. These prizes were offered in a sincere effort to stimulate an interest in the study of Economics on the part of those who will lead the thinking of the coming generation.

The first prize of \$1000 was won by John J. Borchardt, of Brooklyn, N. Y., and the second prize of \$500, by Morris Saltzman, of the same city. The winner of the first prize is 18 years old and the capturer of the second is 17. Both boys graduated from the Commercial High schools in Brooklyn last spring.

Sudden Death of William A. Hadley

W. A. Hadley, president and general-manager of the S. Hadley Lumber Co., Chatham, Ont., passed away on September 9th from heart disease. He was one of the most widely known lumber merchants in Ontario and was a former president of the Southwestern Ontario Retail Lumber Dealers' Association. He always took an active part in its proceedings and also those of the Ontario Association.

Mr. Hadley was born in Chatham 55 years ago and upon the death of his father, the late Sylvester Hadley, took charge of exten-

The late W. A. Hadley, Chatham, Ont.

sive interests there which include a large factory on Wellington St., making interior finish, store, office and bank fixtures in which a large business is done and an extensive lumber yard.

A widow and two sons survive Mr. Hadley who was of a genial, kindly disposition and made friends in many circles. He was the only Canadian who ever held the position of president of the Hoo-Hoo, an international body of the lumber and woodworking industries. He took a deep interest in this organization up to the time of his death.

Busy sawmill of Miller & Gordon at Carleton, N. S.

Clarion Call For Restricting Pulpwood Export From Freehold Lands

"We Should All Join Hands and Get Our Government to Look Alive and Do Something" Declares W. E. Miller of Carleton, N.S.—Something Must be Done to Check the Exodus of Easterners and Develop Woodworking Industries

The Miller & Gordon Mfg. Co., of Carleton, Yarmouth County, N. S., are hardwood manufacturers who are placing that town on the map. The industry is as yet comparatively in its infancy and the hardwood is being cleared away from the spruce in order to give the latter a chance to grow. The firm ship everything in its manufactured state to the consumers and have worked up a rapidly developing business both at home and across the border. W. E. Miller is the president of the company, R. D. Miller assistant treasurer, general-manager and vice-president, and Winfield Gordon secretary-treasurer.

President Miller is an ardent conservationist and is one of the old-timers in the lumber line. He has been engaged in the forest products business all his life and has always been interested in the building up and development of Canada. He strongly supports and advocates that an embargo should be placed at once on the export of pulpwood from freehold lands. In a recent interesting letter to the "Canada Lumberman" he shows that he has nailed his colors to the mast and intends to keep flying the flag of conservation and perpetuation of our wooded resources. Mr. Miller says:—

I have cruised lands with some of our best men, such as professors of forestry. We have one of the best timber producing countries in the world, if taken care of. I have made the forest my greatest study and today I like to look at a good growing young forest, not so much for my own benefit but for the coming generation's benefit.

I have been a subscriber to the "Canada Lumberman" for twenty years and have always read the good thoughts of our good-thinking people who contribute articles to your paper, such as that presented in your July 15th number on page 43. There we find a man that has our Dominion at heart. Why should we not all join hands with the writer of that article and get our Government to look alive and do something, or are we going to sit in that lazy chair and let our children go barefooted and hungry and put the dollars in the pockets of those that do not care a snap for us only what they can get out of us.

We see today how much our neighbors across the border think of us. They have practically driven our fishermen from our own waters by placing an exorbitant duty on fish, and we sit still and do nothing. I say let us wake up and show that we are not dead but have just been slumbering. Let us get wide awake for the coming generations' sake and show them that we think of them as the coming generation and try and protect them and not be so selfish.

As one of your subscribers I will in all sincerity put an embargo on all raw material going from our forests so that we can see our able-bodied boys and girls coming back home and sit with us around our own fireplaces. Some of our thin-skinned neighbours are saying "Oh! if we put an embargo on pulpwood" they will retaliate. That is all bosh. They started retaliation on our fishermen long before we began to talk embargo on pulpwood. Concerning a thing they do not want they will retaliate, but never will they on an article they want.

We do business with one of the largest firms in the United States and have talked face to face with them. They look at us with amazement and wonder why we are so easy in the matter of allowing our raw material to go out of our Dominion to be manufactured. I have been working against this for years and have been trying to keep our boys and girls at home. Our neighbors across the border tell us we have one of the best countries on earth; then why not try and protect it and bring factories into the different provinces.

We people of the eastern provinces feel the effects of our young people leaving our shores more than the western provinces do. It is alarming to stand on the dock of our Boston boats and see the able-bodied men leaving our provinces. Then certain neighbors wonder why everything is so dull? We have heard the still small voice through our good thinking Canadians, telling us to wake up before it is too late. Are we going to listen or have we got to have a cyclone strike us before we wake. No, we are intelligent and good

thinkers but we have been slumbering and we are, I hope, waking up.

We, who have lived in Nova Scotia, have seen to our sorrow the works of don't-care-for-your-lands by cutting all the timber they want and then setting fires to what was left and leaving the lands desolate, thus bringing poverty to the inhabitants. We have some of the best waterpowers on earth in Nova Scotia and New Brunswick and I ask, why not make use of them?

We have some information given us by our friend and brother, Mr. Frank Barnjum, of Annapolis, N. S., whose contributions to your columns I have read with much interest and I agreed with all he has written. These are the men who can see things in the right way. Why not heed him? Mr. Barnjum is a gentleman of wide experience. Some people say that he has an axe to grind. Well, let him grind his axe. We know it will be for the good of the country in which he lives. If his axe will only cut down some of the flimsy ideas that several of our country people have, it will be a blessing. Well, I think I have said enough to set people talking; perhaps not much thinking.

Morrisburg Plant is Kept on Move

The Morrisburg Lumber Mills, of Morrisburg, Ont., the proprietors of which are F. Fentiman and W. D. Killins, some months ago purchased the business of A. H. Merkley in that town and are doing a good trade. Rough and dressed lumber, lath, shingles, sash and doors and other lines are handled and general factory work done.

Mr. Fentiman has been in millwork practically all his life and at the age of 18 was employed with James E. Wilson & Son, Limited, of Oshawa, remaining there for seven years. After that he was engaged with the McAuliffe-Davis Lumber Co. for eight years when he came to Morrisburg last spring to locate.

His partner, Mr. Killins was a traveller for the Massey-Harris Co. for 21 years and left there to go with the Department of Labor, Ottawa, as fair wage officer being in the service 11 years.

The firm make a specialty of factory work and builders' supplies and their motto is "Satisfaction Guaranteed."

Mr. Rogers is Extending His Activities

Mark Rogers has purchased the Crockford Planing Mill, Parry Sound, Ont., and will continue the plant as a woodworking industry. He has for a long time been in the lumber line in Parry Sound district and intends to manufacture window sash and frames, door frames, French doors, verandah and stair material, turned work, cabinet work, as well as carry on a general planing mill business.

Since he went to Parry Sound in 1915 Mr. Rogers has improved his sawmill property on Prospect St. in many ways by installing electric power instead of steam and purchasing a new log carriage from the E. Long Co. He also built a storehouse, dry lumber shed, breakwater, etc., and this year installed a 15 x 8 Cowan M-169 planer. The property, which he recently acquired from E. G. Crockford on Marion St., is, as stated, for the manufacture of doors, sash, turned work, etc., and it is Mr. Rogers' intention to cater more largely to the building trade than ever before.

He was just leaving the first tee holding a handful of cigars; approaching his caddie, he asked:

"Do you smoke, sonny?"

"Yes, sir," said the lad eagerly, noticing the cigars.

"Guess I'd better carry them myself, then," said the man walking away.

"My heart is with the ocean," cried the poet rapturously.

"You've gone me one better," said his seasick friend, as he took a firmer grip on the rail.

Ontario Lumber Dealers May Visit the Coast

Executive of the Association Discuss Proposed Western Trip Which will be Definitely Decided Upon at Annual Convention in Toronto—Gathering will be Held on January 16, 17 and 18—Cost Accounting Committee Reports Progress—Many Other Matters Given Consideration.

Ontario retail lumbermen may take a trip to the Pacific Coast next September if the expression of opinion, which prevailed at the recent meeting of the O.R.L.D.A. directors held in the Board of Trade Rooms, Toronto, holds at the annual gathering which will assemble in the King Edward Hotel, Toronto January 16th, 17th and 18th.

The matter of the annual outing was introduced and John B. Reid, honorary president of the Association, stated that the mid-summer excursion of the O.R.L.D.A. was one of the big events in the year, so far as the retail lumbermen were concerned. The trips, that were most enjoyed were those in which they met people who were interested in the same line of business and yard men could visit the mills and factories of leaders of the industry.

Mr. Reid particularly mentioned the success of the past outings to Penetanguishene and Midland, North Bay, Callender and Cache Bay and Byng Inlet. He believed that the dealers had visited most mills in Ontario but a large number of them had never seen the Coast and were anxious to make the trip to British Columbia with their wives. He thought it would be possible for the majority of retailers to get away about the middle of September 1924. They would have the pleasure of seeing harvest operations in the prairie provinces and visiting the Mountain and Coast mills, where he felt sure that they would be well received. Proceeding, Mr. Reid declared that it would not be such a costly jaunt as some imagined. The members could travel in a special car and stop off at various points of interest. The outing would possibly take a couple of weeks or more and would be a trip worth while.

K. J. Shirton, of Dunnville, president of the Association, also spoke along the same lines and said that the suggestion was a worth-while one and would be brought before the annual meeting and thoroughly discussed. He believed that many dealers in Ontario would like to see more of their own country and take a trip across the prairies and witness how the lumber activities were conducted in the Pacific Coast province.

On motion of W. C. Irvin, of Toronto, seconded by A. R. Sanders, of St. Thomas, Horace Boulton, secretary of the O.R.L.D.A., and G. B. Van Blaricom, editor of the "Canada Lumberman," were appointed to secure data with respect to route, cost, time, etc., of the proposed outing and to present the same at the next regular meeting of the directors which will be held in November, previous to the annual gathering. Final decision with respect to the trip to the Coast will be made at the annual convention. In the meantime the members and others will con-

duct propaganda in its behalf. It was also pointed out that several lumber bodies in the United States had taken a trip across their country to the Coast.

In regard to the outing which was held down the St. Lawrence this summer, Secretary Boulton reported that it had been very enjoyable and had netted the Association some \$163 in profits.

Uniform Cost Accounting Progress

Another item brought up was the matter of a uniform cost accounting system. An interim report was presented by George S. Zimmerman, Tavistock, chairman of the committee, who stated that progress was being made, several systems and authorities being consulted. It was hoped to draft a plan by which each member could by means of a special set of books apply the system to his own business. The plan would embrace both yard and factory. After the general principles are agreed upon, it is probable that an expert accountant will be engaged to complete it so that members can avail themselves of the proposition.

Mr. Zimmerman spoke of the importance of knowing costs and cutting out all guesswork. He said an ordinary set of ledgers would tell a man whether he was making or losing but would not give him any specific information as to where he made money or lost or when. This was the kind of data that the members desired so that they could know where they were at in every detail of manufacture as far as material, work, time, turnover, etc., were concerned. The committee will continue its activities and the whole matter will be ready to lay before the annual meeting in January next.

Secretary Boulton reported that the membership of the Association was 198 and it was decided that new members should be allowed the privilege of joining for the remainder of the year for \$5. The secretary outlined the progress that has been made on the new Mechanics' Lien Act which has just gone into effect and also referred to the new sales tax, the interpretation of which was not yet very clear. It was felt that before the tax would be applied on January 1st, 1924 the federal government would issue further explanations.

New District and Trade Mark

Reference was made to the establishment of a district Association in Port Arthur known as the "Northern Ontario Retail Lumber Dealers' District Association," of which M. J. McDonald is chairman. The hope was expressed that this new body would affiliate with the O.R.L.D.A.

The question of issuing a trade mark and the probable cost was also gone into. A design was submitted but was referred back in order that some changes may be made. The

device is in a circular form with "Ontario Retail Lumber Dealers' Association" just inside the periphery and a monogram in the centre. It was stated that if these trademarks were ordered in quantities, electros could be furnished to the members for their printed matter at about 60 cents each, including postage.

It was also decided that there should be a "Lost and Found" list published in the "Bulletin" which will cover, as far as possible, the movements of debtors, men whose custom it is to escape payment and move from one community to another without settling for their supplies. It was thought that this might help out a number of retailers in getting payment from dead-beats and act as a warning to other dealers who might be approached by certain parties for credit.

Next Convention Will be in Toronto

It was stated that the annual meeting of the O.R.L.D.A. will be held at the King Edward Hotel on January 16th, 17th, and 18th. The annual banquet will take place on January 17th. Every preparation will be made for the success of the gathering.

Another matter which came up was the advisability of taking out a group membership in the Canadian Association of Building and Construction Industries. The matter was referred to President Shirton, Secretary Boulton, J. B. Reid and W. C. Irvin to report on at the next gathering. The fee for a group membership was \$25. It was thought by some of the directors present that it would be well for the O.R.L.D.A. to ally itself with the larger Association in the hope of encouraging building, by having special facilities afforded for the formation of local building and loan Associations, the same as prevail in many of the smaller and also larger centres in the United States and do much to stimulate home construction.

Another matter touched upon was the redivision of the province into smaller districts for retail lumbermen. At present it was felt that many of the areas were too large. If the men in a couple of counties would come together and discuss local problems, it was believed that more interest could be aroused and, on the basis of friendship and mutual co-operation, much would be gained. This matter will be taken up further at a later date. The secretary submitted maps of Ontario showing the proposed redivision of districts.

A financial statement was submitted by the secretary and it was shown that the affairs of the Association were in splendid shape.

It was reported in connection with the house plan service that 69 members had availed themselves of its privileges and the service had resulted in a profit of about \$754 to the Association. Several other matters of minor importance were discussed.

Among those present at the directors' meeting were,—K. J. Shirton, Dunnville, president; M. R. Bogart, Chatham; A. R. Sanders, St. Thomas; J. H. Rodgers, Barrie; J. B. Mackenzie, Georgetown; W. M. Tupling, Orillia; W. C. Irvin, Toronto; W. E. S. Savage, Mimico; John B. Reid, Toronto, honorary president; and H. Boulton, secretary.

Nova Scotia Will Get Out Large Lumber Cut

By Colin C. Tyrer

Colin C. Tyrer, Halifax, N. S.

As regards the export situation in Nova Scotia there has been quite a large quantity of lumber shipped to the English market. We have all been very glad to avail ourselves of this outlet as it simply meant sawing stock into random widths and lengths and shipping it as fast as it is manufactured. For some reason the people in England are insisting on having fresh sawn lumber in both hardwood and spruce and, from our own experience, any seasoned lumber which has been shipped over there, has not met with such a good market as fresh sawn

stock has among most purchasers during the last few months.

Then again with regard to specification we find that we have been able to dispose of 3 x 5, 6, 7 and 8 to much better advantage than 3 x 9 and up and small scantling. By this, I don't mean we cannot get as good a price for 3 x 9 and up as 3 x 5 to 8 but the increased price for 3 x 9 and up is not by any means what it should be, taking the specification into consideration. The Irish market has been the best for the wide stock and the Miramichi people have done pretty well in this market. The English field is more attractive for the average operator here for the above reasons, as purchasers are not so strict with regard to the manufacture and do not make as many culls and shortages as in American. The price too has been just as good in dollars and cents, if not a trifle better, than in America; and then they will take the stock sawn chiefly into 3 inch and will take it as fast as manufactured. This again means \$1.00 or possibly \$2.00 per M. on to the price.

With regard to the freight rate situation the ruling rate

of 70S on spruce and 80S on hardwood by liners has, of course, helped to restrict business to some extent, but not to any serious extent as the market on the other side is not in a position to absorb large quantities of lumber which perhaps would have been shipped if the liners were down to 50S and tramps could have been chartered at a similar rate.

Individuals charters of steamers have been effected at to 65S from Restigouche, Miramichi and Nova Scotia ports which, of course helps out, as these steamers can go to out-ports where a better price is obtainable than to regular liner ports in the Clyde, Mersey, Bristol Channel and London.

Local trade in Halifax has been dead. There have been a large number of buildings torn down, which were in connection with the Halifax disaster and the war. This lumber is being peddled around at very low figures and seems to answer the present limited building requirements and repair work around here.

With respect to trade in Nova Scotia generally it has been better in the other principal towns but not by any means active.

As regards the quantity of lumber manufactured this year it has fallen considerably short on account of the hard winter we had. All operations were more or less curtailed and I think it is just as well as it keeps the whole situation in better shape, as the result is that stocks at the mills are limited.

Referring to the future we think that people are planning on carrying on logging and sawing operations this fall and winter on a larger scale than last and, with favorable conditions, the output will be considerably increased.

As regards the supply of men people are finding it difficult at the time of writing to get enough men to do their haying, which means many lumber operations are at a standstill for the time being. We believe however, that in the fall a lot of people, who left Nova Scotia for the United States will return and we hope to be able to secure the annual quantity of men required to carry on the operations that are planned ahead.

In the matter of wages we expect them to rule not less than last year and, if anything, a little higher, and the same applies to producing costs.

Wages Higher and Help Scarce in New Brunswick

By J. W. Brankley

J. W. Brankley, Chatham, N. B.

The lumber situation in New Brunswick during the past season has on the whole been fairly satisfactory. While our sales in the United States have been small because there was little demand for forest products from this district, the English market was very good. If it had not been for the overseas requisitions in the spring of the year, we would have been in a rather bad shape in this province. All our cut, about 25,000,000 feet of 1919-23 stock, was sold early in the season and good prices were realized. The British market has been a splendid outlet as we

have not been able to do much with our lumber across the

border. So far as overseas freight rates are concerned, we do not think they have been very high this year. We have known some freight to be accepted at 60 and 65 shillings, so that the carrying charges have not had much to do with the export business. Local trade has been about normal this year and mill stocks on the Miramichi when navigation closes will be pretty well cleared up.

With respect to logging operations for the coming winter, it would appear as if they are going to be lively as there has been so much standing timber burned along the Restigouche and the Miramichi that the Government is insisting that the lumbermen should cut all that is possible. If we ourselves do not cut, the provincial administration says it will lease the lands to other parties. We think there will be quite a lot cut but some of our woods superintendents have brought down from the bush specimens of the timber damaged by the borer which has already started working on the trees that were burned this spring. The saying goes that where a forest fire has been previous to July 1st, the moth or bug lays the egg right after and then the borer gets busy before the end of the year. This evidently is true.

It looks as if men are going to be scarce this season and consequently wages a little higher than last winter and we can ill afford to pay more. This will, of course, make the finished product cost more money.

Budget of News Briefs from Busy East

That the lumber cut in the province of New Brunswick during the fall and winter will be exceptionally large is a statement made to a representative of the "Canada Lumberman" by one of the leading operators. The terrible ravages of the forest fires during the summer has decided this question and in order to save the millions of feet of damaged timber still standing an earlier start than usual is being made. Already the large operators have crews in the woods cutting and it is expected that they will keep on until next spring. It is felt that the sooner the timber can be cut and manufactured the larger will be the saving, and, with this end in view, every effort is being made to make a steady and rapid strides to offset the tremendous loss already entailed by the fires. Just how much lumber will be sawn depends entirely on conditions. If they are favorable the cut should be the largest in many years, but at this early date it is impossible for even the best informed to give a rough estimate of the amount.

The work of salvaging the damaged timber is so urgent that the most experienced men are being secured. The average lumberman is receiving \$40.00 a month with board. This is \$10 higher than was paid last season, but conditions then were different and the extra expense must be secondary consideration this year when so much is at stake. The cost of the lumber camp, aside from wages, should not be any higher than last season as the price of food stuffs are about the same. Equipment should not be any higher and if anything a little lower, but just what comparison there will be is not definitely known by the operators until pay day comes around.

Taken on the whole lumbering operations in the New Brunswick woods this year and next spring should be a record breaker, but time alone can tell just what the size of the cut will be. Today it is a question of save as much as possible and keep right on until conditions force a cessation of activities.

* * *

The St. John River this summer reached the lowest level recorded in years and as a result rafting has been held up. Just what this means to the trade is evinced from the fact that the extreme low water caused a feed-pump at the Victoria mill, operated by the Fraser Companies, Ltd., to fail for the first time in the history of the mill. Rafting operations of the Nashwaak Pulp & Paper Company at the mouth of the Nashwaak have been suspended indefinitely awaiting a rise of the water. Several million feet of logs have yet to be rafted and as a result from present indications there will be a fall rafting season, which is quite unusual.

* * *

A fine new lumber plant of the St. Croix Paper Company at Woodland Junction was practically destroyed by fire recently, causing a loss of \$150,000. The saw mill, box mill, dry kiln box, and shook mill were burned together with four shingle machines, steam operated band saw and much new machinery. This plant was only constructed two years ago. A pile of lumber standing near the mill and totaling approximately 1,250,000 feet was saved. There were about 125 men employed in the mills.

* * *

At a recent conference of the advisory board of the department of Lands and Mines many important questions in connection with the lumber trade was taken up and given serious consideration. One of the matters decided on was the adoption of the Quebec scale for all logs under ten inches in diameter. It was also recommended that the New Brunswick Scalers Act be in effect in regard to all Crown Lands, which will mean that all scalers on Crown Lands must be qualified provincial scalers. This act is to go into effect on October 1. The action of the department in taking steps to provide for the cutting of burned timber while still fit for manufacture was also approved, the idea being that holders of large areas of Crown Lands release to other operators the lands, which they cannot take care of. The board also discussed section 5 of the Crown Lands Timber Act, 1923, which is meant to provide for the setting aside of certain areas for twelve years with a view toward extension of lease. Hon. Mr. Robinson, Minister of Lands and Mines, announced that reports on the quantities of burned timber has been sent out to the licensees. The largest areas burned were on limits of the Stetson, Cutler Company, the Shives Lumber Company and the Richards Manufacturing Company. It is understood that considerable areas of green timber lands, which have not been burned exist within the

outer limits of the burned areas and that in them the timber has not been damaged. In view of this it is possible that the estimate of damaged timber may be larger than it should be.

* * *

Six timber berths were recently sold at the Crown Lands office. The Fraser Companies, Limited, bought two and a half miles on Big Shohomoc Lake and two miles on Rockwell Branch of Oromocto at the upset price of \$20 per mile. William J. Scott bought two miles on New Canaan River, and W. S. Anderson & Company bought ten miles at the head of Cain's River at the upset price. R. B. Hanson bought five and a half miles on Cain's River and another block of ten miles in the same district for \$21.00.

* * *

The register of the steam tug Lily Glasier has been returned to the Customs House in St. John. This famous old side wheeler operated on the St. John river since 1880. Millions upon millions of feet of logs were towed to the booms by the old towboat and her passing will be noted with interest by lumbermen all over the province.

* * *

C. J. Armstrong of St. John, N.B., who graduated from the University of New Brunswick and was later appointed on the staff of the Forestry Department of British Columbia, has become a partner in the firm of Bremner, Danielt & Armstrong Ltd., timber specialists and forestry enquirers of Vancouver.

* * *

The following is a list giving the value of lumber shipped to the United States through the U. S. Consulate office in St. John, N.B.

First Quarter 1923

Spruce pulpwood (rough)	\$ 1,512.00
Spruce pulpwood (rossed)	1,470.00
Spruce pulpwood (peeled)	6,566.00
Poplar pulpwood (peeled)	1,180.00
Soft woods	191,320.45
Hemlock	697.14
Pine	14,553.49
Laths	389,829.64
Cedar	175.20
Fir	461.45
Wood pulp	431,150.40
Oak
Shingles (cedar)
Spruce piling
Spruce poles
Cedar Telephone poles

Second Quarter 1923

Spruce pulpwood (rough)	\$ 5,006.00
Spruce pulpwood (rossed)	32,900.00
Spruce pulpwood (peeled)	6,000.10
Poplar pulpwood (peeled)	12,326.00
Soft woods	549,620.07
Hemlock	5,743.65
Pine	28,586.63
Laths	514,814.22
Cedar
Fir
Wood pulp	421,806.37
Oak	249.00
Shingles (cedar)	2,162.87
Spruce piling	4,680.36
Spruce poles	2,475.00
Cedar Telephone poles	1272.69

* * *

A large quantity of the lumber, which was shipped to ports in the United States in sailing vessels went forward under the charter of the well known shipping brokers Nagle & Wigmore. A compilation of their figures show that since the first of the year they handled 3,116,309 sup. feet of spruce, and 33,189,600 laths in addition to 1,934 sticks of piling and 1,650 spruce poles.

Recently this company had a vessel under charter to take a cargo of pine, consisting of 287,000 sup. feet, to the Canary Islands. This was the first shipment from this port to the Islands for some time.

Getting at the Cost of Motor Operation

Retail Lumberman and His Delivery Problem

By L. G. Jackson

In preceding articles we have endeavored to point out some of the various means of delivering lumber by motor trucks, tractor trucks and tractors. The success of lumber delivery lies not so much in the equipment which you own and operate but rather upon the person who directs the loading and preparation of your products for delivery.

Every yard should have within its organization one man, who alone is responsible for the handling of orders and proper direction of the persons getting ready the orders for delivery. He alone should be liable for errors in orders received and his verdict should be final as to their routing through the yard or mill. A business is no stronger than the morale of its staff and, whenever one man's judgment or decision is vetoed by another, you lose just that much prestige with your customer.

When a patron can have his order superseded by another which is prior in date of receipt, you have made the wheels of your business system drag and work becomes irksome to someone in your organization. How often have we heard it said around various mills and yards. "Oh, well, I'll see Bill, he will rush it through for me!" The customer who says this, should be made to understand that, while it is your desire to oblige and give efficient service, you cannot be permitting each and every order to be held up while his is receiving special attention.

Getting Out the Rush Orders

If need be you should have a man whose duty it is to attain to special rush orders. Then other shippers are not being taken away from half-filled orders and forced to change their work, as laid out by your traffic man, to adjust a schedule to the liking of some client who has forgotten to place his order until his men are out of a job.

By earnest co-operation on the part of the lumberman and his customer he can give, and they can receive, a much more improved service and each will benefit financially; the retailer in that his costs will be lessened and the purchaser will receive benefit thereby and obtain much quicker delivery.

In order to compare operating costs relative to delivering lumber, it is necessary to go over each individual problem separately but the accompanying figures being general, will serve as a guide rather than an actual basis of costs.

The ordinary yard would in all probability possess a small truck and a team or single horse wagon. The larger will in addition to wagons, have several trucks in service and possibly a tractor and trailer. The investment required to handle a medium sized yard and care for the incoming lumber would possibly be represented by a truck of some two or two and one-half tons' capacity, a smaller truck of one ton rating and a couple of teams and a single wagon. With this equipment the retailer should be in a position to handle his incoming cars and also deliver finished products without recourse to renting, except during the very busy periods, and it would not be profitable to purchase more equipment to care for an added rush of business during a period of a few weeks.

For a basis of our figures we have used certain investment amounts, which will, of course, be correspondingly higher or lower in different sections of the country and will vary according to just what is purchased but that would remain a purely local question and might not be satisfactory to many other places.

Our investment represented in a team delivery outfit for both summer and winter delivery is placed at \$800.00, the small truck equipment representing a capital outlay of the same amount, while the average allowed for a truck of two or two and one-half tons capacity has been placed at \$3,500.00. We are allowing a fair investment value for a tractor and trailer equipment of \$1,500.00.

Referring to the table, we can trace very easily the relative amounts allowed for original purchase of equipment. We must take care of depreciation and maintenance on each vehicle used for delivery, and again we can only approximate as these items will vary according to the locality and conditions under which they work.

Knowing How to Route Deliveries

As outlined at first, the main essential to a good delivery system is not an abundance of equipment but rather a brainy executive, who knows how to route his deliveries in order to deliver the greatest amount in the least possible time and at a minimum of expense, and understands the preparation of orders so that when an empty vehicle

comes to the yard, it can be loaded and despatched with a minimum of standing time; a systematic handling of stock so that orders can be completely filled at one time in order to eliminate unnecessary delivery trips to the same job with small portions of the same order.

The chart presented is used to make clear what can be done and what must be taken care of if a retailer is to know what it costs him to handle his lumber and, while not perfect or acceptable to each individual lumberman, a similar chart, kept with actual local figures, would assist materially in reducing unnecessary overhead and permit of an improved delivery system.

By referring to the charts we have in "A", a partial cost of operation on a mile basis is arrived at by knowing the total costs of the various items under the headings used in this table and dividing by the number of miles operated during the period usually a month or in some cases twice yearly. These figures are known as variable costs.

Chart "B" gives us the daily costs of the five headings used with the chart and they cover practically everything necessary to arrive at the operating costs.

These two charts are really a result of a carefully kept record of the items of which they are composed and it is not really necessary to show a chart which would be used in arriving at these results as that is merely a matter of bookkeeping records and can very easily be tabulated in whatever form is most easily kept by the bookkeeper.

Actual Cost Per Mile to Deliver

Chart "C" is really our basis of comparison as it shows in concrete form the actual cost per mile for each method of delivery. As for instance, on a basis of 50 miles per day, we find it costs nearly 23 cents per mile to deliver with the two, two and one-half ton trucks,

Tractor at work in retail yard hauling lumber from cars on railway siding to the piles and planing mill

and if 20,000 feet of lumber is delivered we have a cost per thousand of 57 cents, whereas, if the same truck is sent on a much longer delivery radius and can only handle 10,000 feet per day while covering the same number of miles, it has increased the cost to \$1.14 per thousand. Then we can see that, if we can deliver the same quantity of lumber over the same mileage with the lighter truck, we would be cutting our costs from \$1.14 to 89c. per thousand feet of lumber.

The comparisons, which can be arrived at are many and are purely local as also are the various items making up the charts. It is not intended that these figures will be taken literally but serve as a guide to assist in learning what it costs us to deliver our lumber. They may also be used on a basis of the value of goods delivered per day at a definite cost and the percentage then taken, as, for instance, a yard which delivers today goods worth \$1,000, finds that it has cost with a one-ton truck, a two-ton truck and single horse wagon the sum of \$25.63 or \$2.56 per \$100, which gives the percentage for delivery costs. This method is often used where large amounts of finished products, as doors and mouldings, are delivered and where it would be hard to arrive at a per thousand cost.

In conclusion, it is necessary to know first of all a few fundamentals before arriving at costs of operation and these are very simple.

You have first your investment, then the period over which the vehicle is worked your basis of depreciation which can be arrived at very easily. The interest on the investment is usually figured over a period of years on the following schedule.

$$\frac{Y \times 1}{Y} \times \frac{\text{Rate} \times \text{Investment}}{2}$$

Where Y is the number of years over which the vehicle is depreciated.

The rate is usually figured at 7%. This table will give the same amount for each year, of course, but will be lower for the first year than straight interest, yet much higher the last year. This will allow for an even return of money invested and permit accurate figures in your cost chart.

A little study will enable anyone to evolve an accurate basis for his costs and also permit the lumberman to know definitely what he can deliver lumber from his yard for and this is one thing which many yards do not know today.

Newsy Happenings in the Lumber Arena

It is understood that plans are under way for the Forest Mills Co., of Nelson, B. C., to reopen a sawmill at Cascade.

T. G. Torrance, of Williamson & Crombie, Kingsbury, Que., transacted business in Toronto during the past few days.

L. B. Christie, manager of the Marshay Lumber Co., Milnet and Laforest, Ont., and wife spent a few days in Toronto recently.

The steamer J. C. Ford arrived at Sarnia, Ont., recently, with a cargo of lumber and discharged the same for McGibbon, Limited.

George H. Mell, of George H. Mell & Son, wholesale lumber dealers, Philadelphia, was among the recent callers on the trade in Toronto.

Wm. Barclay, of Winnipeg, sales manager of the U.G.G. Sawmills, Limited, Hutton, B. C., was in Toronto recently calling upon the lumber trade.

The Westminster Paper Mills, of New Westminster, B. C., recently established a record by shipping a consignment of their product to New Zealand.

H. G. McCleary, of Philadelphia, representative of the Union Lumber Co., Toronto, in Pennsylvania, was in Ontario recently visiting various operations in Northern Ontario.

Fire broke out recently on a scow loaded with box shooks ready for export at the plant of the Westminster Shook Mills, New Westminster, B. C. The damage was estimated at \$5,000, which was covered by insurance.

The sawmill formerly operated by the Foundation Co. at Port Alberni, B. C., and subsequently by the Lefroy Lumber Co., has been purchased by the Stamp River Lumber Co. and has commenced operations under the new management.

The sawmill at Carmel, Northumberland County, Ont., belonging to N. Janes, of Millbrook, was totally destroyed by fire recently. A quantity of lumber ready for shipment was also consumed. The origin of the fire is unknown and the loss is partly covered by insurance.

M. E. Crouch, O.L.S., was recently appointed manager of the Porcupine Pulp & Lumber Co., Limited, whose plant is located at Hoyle, Ont., on the T. & N. O. Railway, some fifteen miles south of Timmins. The company cuts from its own limits from 8,000 to

10,000 cords of spruce a year and this is rossed at the mill at Hoyle and shipped to the Cliff Paper Co. at Niagara Falls, N. Y.

C. G. Anderson, of the C. G. Anderson Lumber Co., Ltd., Toronto, was elected D.D.G.M. of Toronto District "D" at the recent meeting of the Masonic Grand Lodge. Mr. Anderson is a Past Master of Alpha Lodge No. 384, Toronto, and has long been an enthusiastic worker in the ranks of the craft.

W. P. Dutton, head of the Great West Mills, Limited, Winnipeg, and also of the Dutton-Wall Lumber Co., of the same city, has been appointed a member of the Provincial License Board of Manitoba, in connection with the government sale and control of liquor which was recently endorsed by the people.

The Hage Timber & Investment Co., of Port Coquitlam, B. C., continues to break records of production every once in a while. Recently another record was shattered when 1,150,000 feet of logs were dumped in the bay in one week. The best day in the week was 250,000 feet.

William J. Stewart, of the Union Lumber Co., Toronto, who has been spending the past four months in Liverpool in the interests of the overseas trade of the firm, has returned home. Mr. Stewart's many friends are extending sympathy to him in the recent loss of his father who passed away while he was abroad.

B. A. Hussey, president of the Sault Ste. Marie Board of Trade and a member of the executive of the Ontario Associated Boards of Trade, was in Toronto recently attending a meeting of the executive and resolutions committee. Mr. Hussey is sponsor of a resolution urging the provincial administration to make a study of conditions with a view to placing an export duty on hardwood logs.

Hon. James Lyons, Minister of Lands and Forests, had an important conference recently with the Crown timber agents of Ontario in which many matters of interest regarding scaling, scope of their work, duties, etc., were discussed and outlined. Hon. Mr. Lyons announced that the department is likely to appoint a supervisor of Crown lands and timber agents and bush operating. The idea he said, is to avoid, if possible, a good deal of waste in the cutting of lumber and pulpwood.

Prof. Elton R. Darling, of Milliken University, Bloomington, Ill., recently made some remarkable experiments by converting corn cobs into blocks of solid wood. This "synthetic wood" as it is technically called is to have all the properties of any hardwood. It can be whittled, glued, nailed, shaved or turned on a lathe without chipping. It will withstand a pressure of 10,000 lbs. to the square inch. Screws may be passed through it without any more injury to the fibre than is done to ordinary wood. Besides discovering a substitute for forest products, Prof. Darling obtains valuable by-products which may help to put the "synthetic wood" on a commercial basis.

Lieut. Gov. H. Cockshutt, Premier Ferguson, George W. Lee, chairman of the T. & N. O. Railway Commission, E. J. Zavitz, provincial forester, L. E. Bliss, Continental Wood Products Co., Elsas, Rev. Dr. Cody and others left recently on an extended trip through Northern Ontario. They will travel by canoe to the Abitibi River from the head of steel, north of Cochrane and the return journey will be made by one of the other northern streams. The trip is one of observation regarding the natural resources of the region and to obtain firsthand information regarding the possibilities along the route of the T. & N. O. Railway extension to Moose Factory on Hudson Bay.

R. G. Chesbro, wholesale lumber dealer, Toronto, returned recently from a five weeks' trip to the Pacific Coast. Mr. Chesbro reports that all the Coast mills are busy, particularly with export and offshore trade, and that stocks of common lumber are rather scarce owing to the steady demand across the border. So far as clears or shed stocks are concerned, these are more plentiful. Some of the Mountain mills have recently sold considerable 2 x 4 and 2 x 6 and shiplap for the construction of granaries on the prairies but there has been no great demand as yet from the western farmers for lumber. The outlook on the whole is good, and a confident spirit prevails in the ranks of manufacturers and distributors.

Several widely known and representative men in the pulp and paper line will be members of the directorate of the reorganized Riordon Co., Montreal. Among these will be Sir William Price, president of Price Bros. & Co., Quebec; Archibald Fraser, president of the Fraser Companies, Edmunston, N. B., and George M. McKee, former general-manager of the Donnacona Paper Co., Donnacona, Que., and past president of the Canadian Pulp and Paper Association. All these gentlemen have extensive interests in the lumber and pulp line, and in view of the great success they have met with in the development of their own industries, their collective experience, broad insight and wide grasp of the industry, will go far toward ensuring the success of the reorganized Riordon Co.

LUMBER TRADE CONDITIONS

Fair Volume of Trade in Montreal

Reports by Montreal wholesalers are by no means uniform. Some firms state that business is good while others declare that it is dull. On the whole, a fair volume of trade is passing. Prices of spruce, which showed a tendency to soften, are firmer, wholesalers affirming that the mills are maintaining a stiff attitude as to values and that no bargains are available. Besides this, the stocks on offer are by no means heavy.

The general opinion is that wholesalers and retailers may expect a steady business during the balance of the year and that values will not fluctuate to any great extent. While building in the province is keeping up, in Montreal there is a slight set-back. In August the permits totalled \$1,839,367, as compared with \$2,080,270 in August 1922. Construction figures for the year, however, still show a considerable increase on those of 1922.

The spruce lath market has picked up under the stimulus of a better demand. Only a small amount of lumber is being shipped to the U. K. Exporters state that the call so far has been disappointing, due to the general industrial conditions in Great Britain.

The cost of woods operations in the 1923-24 season will be considerably higher. Wages for men engaged in improvements run from \$45 to \$55 per month, while jobbers are offering \$90 per month for choppers. The former rate is about 25 to 30 per cent above that of last season. Men are being freely advertised for and the supply is not large. The higher wages offered by the jobbers and by some companies have set a standard which must be followed by others, if they want to get and retain the men, who will go from one camp to another in the event of better wages. The St. Maurice Pulp & Paper Companies are making preparations for very extensive cuts of pulpwood.

The exports of pulpwood continue to increase, due to some extent to American pulp and paper companies with Canadian affiliations drawing upon their resources on this side. Some American concerns have shut down pulpwood operations in the United States and are relying almost entirely on Canadian wood. During July 151,794 cords, valued at \$1,557,946, were exported as compared with 90,765 cords and \$946,946 in July of 1922. The exports for the four months of the fiscal year totalled 537,305 cords, valued at \$5,082,393, compared with 291,640 cords, valued at \$2,978,732 in the corresponding months of 1922. The exports in July represented an increase of 84 per cent. Evidently the threat of an embargo has caused this greater call upon Canadian wood.

Quebec Exporters Are Doing Moderate Business

Owing to the dockers' strike at the various seaports of Great Britain, the export of timber and sawn lumber from the port of Quebec did not meet with expectations during the month of August. The strike that tied up all shipping, including lumber-laden vessels, lasted over seven weeks which caused the British importers to request all Canadian shippers to wait until the trouble had come to an end before making any more shipments in the completion of orders, with the result that only two shipments of wood were made from Quebec apart from parcels carried on the Canadian Pacific Steamship lines during the month of August. The total quantity of wood shipped was 85,142 feet, b.m., timber and 1,205,681 feet, b.m., sawn lumber. In the meantime, very few inquiries were received by the Quebec shippers until the latter part of the month when there began to arrive offers which the Quebec exporters were studying at the time of writing.

The Quebec firm of H. R. Goodday & Co., whose mill interests are centered in the Baie de Chaleur and carry on their shipping activities through the port of Campbellton, N.B., are looking forward to a busy fall season. In the early part of the summer this firm was handicapped by the excessive drought which had dried up the rivers and stopped the logs from reaching the mills. This situation, however, has now been overcome and there are three ships at Campbellton to load with this enterprising firm's lumber who are looking forward to a busy fall season. In the meantime, the reports received by the Quebec export firms from their United Kingdom agents, are, to say the least, not encouraging, altogether due to the dockers' strike which in the end aroused the attention of the lumber interests of England.

Describing the seriousness of the strike, the reports received go on to state that in the location of the Surrey docks the port of London

and the largest in England where from fifty to sixty lumber-laden ships were tied up, it was almost possible to step from one ship to the other separated by idle empty lighters. When this strike was inaugurated against the advice of the Union leaders who insisted on non-violation of contract agreement, it was thought the difficulty could not last long as the dockers' Unions were without funds but the Relief Guardians, principally controlled by elected labor men, illegally distributed relief equal to the wages earned by the dockers who were in no hurry to go back to work so long as they could live in idleness and receive support from the Guardians. This encouragement of a Bolsheviki mentality does not alone exist among the dockers of England but in all avenues of labor to the demoralization of commerce and industry due to the political conditions of Europe and causing great anxiety to the British Government.

But there is a silver lining in the dark clouds which overhang the European sky, especially in England where industry is assuming an aspect of more stability. Building of houses is progressing favorably as well as other construction and the British lumber merchants, who were well stocked before the advent of the dockers' strike, are selling out their old as well as new stock to meet the demands of construction. This denotes that now, with the end of the dockers' strike and uninterrupted discharge and distribution of the lumber cargoes, the British lumber business will begin to recover. It will take some months, however, before the situation will be sufficiently ameliorated to allow the importers to recover their serenity and count their losses and again build up their business. In the meantime, the Canadian wood export trade will have to wait their opportunity which is not likely to occur as far as the St. Lawrence shipping trade is concerned in accordance with expectations this season of navigation.

There is one redeeming feature left the Quebec wood exporters, the trade with the United States market, which is steady, and the books of the Quebec mill owners are well filled with orders. Apart from this, the Quebec firms encouraged by the cable and mail advices of their United Kingdom agents, look forward to fall shipments and are more optimistic of the future in anticipation of an European political settlement, to be followed by a recovery in the rates of exchange that will herald a good business in 1924.

Ontario Trade Seasonably Quiet in Lumber Line

Business in the lumber market during the past few weeks has been on the whole, rather quiet although varying reports are received from a number of sources. Few firms seem to agree identically in the matter of how the situation is shaping up at the present time. Retailers state that the decline in building operations has resulted in decreased orders for rough lumber although several firms are busy on interior trim. Stocks on the whole are low and there is no desire to buy other than for pressing needs or sorting-up purposes. There seems to be a feeling that values will not go any higher. However, stocks are not heavy in many lines and those who profess ability to read the signs of the times aright, maintain that existing values will hold in general. There has been a slight recession in a few widths and thicknesses with which the market was well supplied but in the ordinary run no change has taken place.

Hemlock, which seemed to be a little off during the past couple of weeks, has firmed up again and spruce is on the whole holding its own although a number of the smaller manufacturers who were in need of money were apparently willing to sell at lower prices. The biggest producers, however, are keeping away from the market, until they get their price. Latest reports are that spruce is a little scarcer and present quotations are likely to govern for fall.

The shingle market is decidedly awry at the present time and a number of western plants have closed down rather than endeavor to turn out the product which they claim is only marketed at a loss.

The demand for B.C. Coast stock is not brisk and considerable quantities of Southern pine and Michigan hemlock are being brought in and laid down in Southwestern Ontario. Most of the Coast mills are still busy on export and stocks of No. 2 common are not heavy.

In Ontario men for the woods are not plentiful and wages have jumped to such an extent that the cost of producing long lumber will be considerably increased. It is stated that a number of the pulp and paper companies have offered higher pay to workers in the

bush and this has compelled the lumber companies to meet the competition.

So far as hardwoods are concerned, most wholesalers and mills are busy shipping and prices hold relatively high. It is believed that more buying will be done within the next few weeks. Oak remains rather weak but may be expected to firm up soon as a result of the greater demand now developing. Flooring manufacturers are pretty busy and buying plain white and red oak a little more freely, while there is also a fair call from other building trade groups. It is expected that the furniture industry will soon revive after a long period of inactivity.

Taking the trade as a whole, the general view is that there will be a steady business during the balance of the year with little change in present quotations. Trade may be pretty spotty in certain districts in particular lines but, when volume is taken into consideration, both wholesale and retail firms acknowledge that they have done considerably more business than they did for the corresponding period last year. Collections are reported as being rather slow.

St. John Dealers Look for Trade Revival

A recent report from across the border said that the market had further declined and is now \$6 to \$8 per thousand below the peak. One local dealer commenting on this said that his firm are not making contracts at present because it is not possible, in view of existing conditions, to name a price with the surety of a satisfactory market for the producer.

Other manufacturers are not so pessimistic and are looking forward to a good demand in the near future. Laths are finding some strength and the demand is already starting to pick up. This leads some to believe that building operations are soon to be resumed and as the stocks over the line are said to be low they will have to be replenished. Although somewhat disappointed with the present demand certain dealers believe in the probability of a revival this month.

The call for boards is not very great at the present time as the surroundings apparently have a tendency to make purchasers cautious.

Laths continue to attract attention. The prices are still advancing in some localities but in St. John the figure remains as previously published \$6.50.

1 5/8 laths are scarce and as a result the price for this particular size is soaring.

The demand for shingles is quiet at the present time but during the next two months this line is expected to pick up and show marked strength. The prices at present remain unchanged, but it would not be surprising if they start a fluctuation in the near future.

Ottawa Business Remains About the Same

Conditions in the Ottawa lumber market showed no marked improvement during the opening period of September. Business on the whole was slow, slower in fact than had been anticipated by dealers during the latter part of July and the opening period of August.

Orders and inquiries from United States yards could only be considered as fair even considering the season of the year. Word reached local dealers that American western lumber operators had put into effect another price reduction that amounted to anywhere up to \$10 per M, and that several U.S. eastern yards were buying the western stocks, instead of taking Ottawa Valley stock.

Another phase of the situation, according to local dealers was that special quotations were given on sizes and stock suitable for dressing by the western operatives. Local sellers did not make any attempt to alter their grades or specifications, but preferred to stand on the old standard of stock lines.

Notwithstanding the reported cut by the western dealers and their attempt to undersell the eastern dealers, the prices of the Valley manufacturers remained firm and there was no indication of weakening in any grades. Production costs, it was represented to the correspondent of the "Canada Lumberman," did not warrant a slashing of existing quotations to compete in the eastern United States market with those of the western dealers. "It appears the western manufacturers have been cutting their heads off, and have got out more stock than they can dispose of in their own territory. Let them cut their heads off for a while, their forests cannot last forever," was the comment of one of the leading Ottawa Valley manufacturers in regard to the existing situation.

The labor situation in regard to the wood camps did not show any improvement, the number of men offering to go to the camps

being very small, and in several cases not up to the standard. There was no further advance in wages put into effect.

Conditions with the woodworking plants and factories did not show any change. Other factors relating to the market, remained the same.

How Will Japanese Disaster Affect Lumber

There is considerable interest aroused in lumber circles over what effect the recent earthquake in Japan, with its heavy toll of life and property, will have upon the Canadian lumber situation. The horrors of the Japanese disaster are not yet fully revealed. While much of Tokio remains, Yokohama no longer exists and many other towns were destroyed.

Of late years a large trade has been done by British Columbia with the Japanese Empire and if the recovery in economic conditions is rapid in Japan, the immediate effect upon the forest products industry may not be seriously felt, but if reconstruction and realignment are slow, then it is difficult to tell what will result.

The timber trade may receive a temporary setback as large quantities of cedar logs and square timber suitable for piling was disposed of by British Columbia mills to the residents of the Flowery Kingdom.

There are various rumors heard in respect to the Canadian Government presenting several million feet to Japan for reconstruction purposes but such rumors at the time of writing lack confirmation.

In the twelve months ended March 31 last Canada shipped 30,000 M. bd. ft. of cedar logs, valued at \$725,000; 2,000 cords of shingles, valued at \$40,000; 18,000 M. bd. ft. of fir planks and boards, valued at \$532,000; 4,000 M. bd. ft. of hemlock planks and boards, valued at \$98,000; six M. bd. ft. of spruce planks and boards, valued at \$560, and 2,900 M. bd. ft. of other planks and boards valued at \$74,000. There was also shipped to Japan from Canada 13,000 M. bd. ft. of Douglas fir square timbers, valued at \$292,000; and 3,400 M. bd. ft. of other square timbers, valued at \$86,000. This represents a substantial source of revenue to the Canadian timber industry, and the effect of the earthquake on this trade will be watched with interest.

Production About Equal to Demand

In spite of the seasonal quietness there has been no serious drop in prices. There have been recessions at certain points but, on the whole, the mill averages register little change, says the Vancouver Lumber Co. The Fall holds out possibilities of fairly active business, and it is reasonable to believe that the present levels will be maintained. The mills have no heavy stocks. To-day's production seems about equal to the demand. Instead of overproduction as a possibility, with subsequent price re-action, the prospect is for the establishment of an equilibrium at approximately present levels.

Export business has fallen slightly in the West. Coast mills look with reasonable confidence to the prairie provinces to come into the market. Speculation on the wheat crop is rife. It is generally agreed that the crop will be large. The price for which it sells, however, is of more importance. Should the yield equal moderate expectation, and the price not weaken seriously, the Prairie farmer should have a net return that will take care of his debts and leave a surplus. No wave of heavy buying from the West is expected, but there are sound grounds for good business.

The question of industry in Europe resuming normal conditions with the customary demand for wheat, copper, etc., from this country, depends upon settlement of the reparation problem. It seems unlikely that any immediate agreement will be reached. Primarily, France wants the submission of Germany rather than reparations. At present France owes the U.S.A. about three billion dollars. Provided she can retain permanent hold upon the Ruhr, with its vast coal resources, France will remain a first class political power. To surrender control of the Ruhr would mean a serious set-back, and as long as Poincare can resist English diplomacy, he will do so. The odds at stake are large. Outside of the Ruhr the continent of Europe has not enough coal to support Germany or any enemy of France in war. Possession, therefore, of the Ruhr coal mines, means power to France for many years. Poincare may never overcome the disapproval of England, but if he gains his objective the political power of France will be on a basis stronger than Napoleon was able to establish.

Boss: "Well, Sambo, I hear you have been dealing at that bucket shop; what were you, a bull or a bear?"

Sambo: "Well suh, boss, it 'pears lak ah was jest de goat."

Edgings

J. and W. Duncan Limited, Montreal, are rebuilding their sawmill at Weir, Que., recently destroyed by fire.

Thomas N. Phillips has removed his office from the Royal Bank Bldg., to St. James Chambers, 79 Adelaide St. East, Toronto.

Excelsior Products, Limited, 1554 St. Patrick St., Montreal, is a new company recently formed to manufacture and deal in lumber and all kinds of wood products. Capital \$25,000.

Hall Bros. Limited, have removed their offices from the Crown Life Building, to Suite 318, Continental Life Building, corner Bay and Richmond Sts., Toronto.

International Hardwood Co., Limited, St. Remi d'Amherst, P.Q., is a new organization recently formed to manufacture and distribute all classes of lumber and pulpwood. Capital \$48,000.

The portable sawmill of R. Richard located at Portapique Mountain, N.S., was destroyed by fire recently causing a damage loss to machinery of about \$1,000.

Hugh J. Chisholm, president of the Nashwaak Pulp & Paper Co., St. John, N.B., was in Nova Scotia recently. It is said that his visit was in connection with a deal in which the Nashwaak interests are involved.

A dowel mill at Diligent River, near Parrsboro, N.S., was burned recently. The plant was owned by G. B. and E. S. Hatfield, of Parrsboro, and the loss on machinery and lumber was about \$8,000, being partially covered by insurance.

Official notice has been given by the Hull Electric Co., of Hull, Que., to the effect that it intends to apply for authorization to have constructed a dam on the Gatineau River which is in the townships of Aylwin and Delholm. The plans have been deposited with the Minister of Lands and Forests for Quebec.

At the big fall fair which was held recently at Fort William, there was an interesting exhibit by the Fort William Paper Co. which revealed the progress of the wood from its native state until it emerges in a neat roll of newsprint paper.

L. M. Dougherty, of Toronto, who is widely known in lumber circles, has rejoined the staff of Terry-Nicholson-Cates, Ltd., and is now covering his old ground in Tonawanda, Buffalo and New York State as well as looking after a part of Toronto.

The annual meeting of W. Rutherford & Sons Co., Limited, Montreal, was held recently. It is understood that the liquidator presented a favorable report indicating that substantial profits were made during the year. The indebtedness to the bank has been largely reduced and the position of the company generally improved.

The new school of forestry was recently opened at the Government Nurseries, Berthierville, Que. Only 25 pupils have been admitted this year. There were a very large number of applications but room was available for only a limited number. The director of the school is Henry Roy. The course, including several months of practice and actual field work, will last two years.

Logging, as practiced in British Columbia is a wasteful operation. Thirty per cent of the stand of timber remains to rot in the woods as a result of present logging methods. These contentions were emphasized in a special memorandum prepared by Hon. T. D. Pattullo, Minister of Lands, and P. Z. Caverhill, chief forester of the province before the delegates of the Empire Forestry Conference.

The Whalen Pulp & Paper Co. are making a rock cut from the sulphite mill at Swanson Bay, B.C., to the lake in order to assure that there will be no future shortage of water at the plant. There is plenty of water in the lake but there is no channel through which to bring it to the mill and in order to insure precaution against a dry season or a shut down, the work now in hand was started.

J. D. Gilmour, woods manager and director of the Anglo-Newfoundland Development Co., Limited, was a recent visitor to Montreal. Referring to the embargo on pulpwood, he stated that the Newfoundland Government prohibited the export of wood although two exceptions had been made in instances where the situation of the wood rendered it impossible to be used for domestic manufacture.

A new company is being organized for the purpose of taking over the properties of Clarke Bros., Ltd., of Bear River, N.S. American interests with successful experience in the pulp industry are

behind the project and the proposal entails an exchange of new bonds for the first mortgage bonds outstanding and preferred stock for the holders of junior bonds.

Two hydroplanes are now engaged in the work of surveying the territory between Thunder River and Natsaquam on the north shore in Quebec province on an area of about 3,000 square miles. The Government of Quebec is seeking to ascertain the value of the forests in that territory. If sufficient quantity of timber is found to be available, that section of the province will be divided into limits which will be sold by auction as is customary by the Department of Lands and Forests.

One of the largest sales of pulp timber ever made involving about 3,340,000 cords, is announced by the forest service which has awarded conditionally the pulp timber in the Cascade creek unit, Alaska, to Hutton, McNear & Dougherty of San Francisco. The sale was made on the perpetual timber supply plan by which enough seed trees are left to insure complete natural reproduction and under which, it is believed at least 1,500,000 tons of paper ultimately can be produced annually from Alaskan pulpwood.

A leading timber valuator chosen by three B.C. bank managers at the request of Curator Barker, of the Home Bank, is now estimating the value of the timber limits at Howe Island and Vancouver, held by the Home Bank as security against loans to the Western Canada Pulp and Paper Co., of which H. J. Daly, president of the bank was president, and S. Cosey Wood, a bank director, was a director. Collapse of the market put the company in financial difficulty, and in April, 1922, the bank interest was defaulted.

The Long-Bell Lumber Co. recently made its formal bow to the other lumber interests of the North West at Longview, when it was host to about 125 members of the West Coast Lumbermen's Association who gathered there for the mid-year convention of the organization. Lumbermen representing over 200 mills or 85 per cent. of the lumber cut in the States of Washington and Oregon, were present. The visitors were shown over the vast project of Longview where miles of streets are being paved, hundreds of residences erected and business houses rising.

The Dominion Government Forestry Branch seed extraction plant in New Westminster, B.C., which operated during the winter of 1921-22, will be re-opened during the coming winter, states Ed. Walmsley, Dominion Timber Agent. Orders have been received from the British Government for 3,000 lbs. of Douglas fir and 1,000 lbs. of Sitka spruce, and New Zealand has placed an order for 1,000 lbs. of fir. The cone crop this year is not nearly equal to the season of 1921, and Mr. Walmsley anticipates considerable difficulty in securing sufficient fir cones in the Fraser Valley to meet the demands. Picking will commence this month.

The log output of British Columbia last year showed an increase of 164,000,000 feet over the total for 1921, according to returns completed and made public by the Hon. T. D. Pattullo, Minister of Lands for British Columbia. The 1922 returns show a scale of 1,645,000,000 feet of saw logs. The total for the year previous was 1,481,000,000 feet. Of the total for last year 1,400,000,000 feet was produced on the coast and 245,000,000 in the interior of the province. Besides the saw log total, Mr. Pattullo announced that there was a production of 10,700,000 lineal feet of poles and piling, 240,000 cords of shingle bolts, staves and wood and 2,544,000 ties. The tie production in 1921 was 3,856,000 feet.

A fire loss of \$500,000 was suffered by the B.C. Fir and Cedar Co., False Creek, Vancouver, B.C., recently when fire destroyed the mill, drying sheds, engine house and a large quantity finished material. Considerable damage was also done to the property of the Alberta Lumber Co. The fire was fanned by a strong southwest wind and a fire wall, erected two years ago, was responsible for the comparatively small damage to the latter firm who are neighbors of the B.C. Fir and Cedar Co. The origin of the blaze is not yet known, but as far as can be learned it started in the mill probably under the log carriage. This was the second time the B.C. Fir and Cedar Co. has suffered from fire. Four years ago the plant was totally destroyed with a loss of \$250,00.

Tabulated building reports covering the entire Dominion for the month of July, made available recently, indicated a decline of about 12 per cent. in building activity, as against the records of June, while a decrease of 18 per cent. in construction work is recorded over the corresponding period last month. So far as Toronto is concerned, a decrease of over \$1,000,000 was noted, but building in the suburban districts, while it remained less than during July of 1922, was greater than the month of June by several thousand dollars. Building undertaken in Toronto during the month under review this year was valued at \$2,980,105. In June it was \$4,032,530, and in July of 1922 it was \$3,760,035.

Edgings

Pitt River Shingle Mill Co., at Port Coquitlam, B.C., has shut down and will not reopen until the shingle market strengthens.

The Whalen Pulp & Paper Mills in British Columbia are all operating to capacity. In the plant at Port Alice a complete oil-burning system has been installed.

The Canadian Axe & Harvest Tool Mfg. Co., Limited, 1464 St. Patrick St., Montreal, will start work shortly on a new factory at a cost of about \$6,000.

A. S. Nicholson, of Terry-Nicholson-Cates, Limited, and wife, have been spending a pleasant holiday in Winnipeg and other points West.

The report also shows that the situation continues to be improved over that of last year, there being 954 fires for the week ending Aug. 18, as against 2021 for the same period last year.

The sawmill of W. E. Owens at Richards Landing, Algoma, Ont., was burned to the ground recently. The total loss was about \$25,000 and there was no insurance. The cause of the fire is unknown.

The Brunton Lumber Co., of Ottawa, Ont., in addition to their yard and operations in that city, have started a bush operation in the vicinity of Douglas, Ont., and have at the present time a gang of men taking out material.

Stuart Lake Shingle Company's sawmill at Squamish, B.C., with the exception of the boiler house, was totally destroyed by fire recently. The mill was located at the head of Howe Sound. The loss is a heavy one and only partially covered by insurance.

The tug "Butterfield" recently left Port Arthur with a raft containing 7,500 cords of Canadian pulpwood. This constitutes the largest single raft on record at the head of the lakes. The wood was consigned to the Newago Company, Wisconsin Rapids, Wis.

A decrease in the cost of fighting forest fires this year as compared to last year is recorded in the weekly forest fire report issued by Hon. T. D. Pattullo, minister of lands for British Columbia. The cost this year, approximately \$20,000, is but one-seventeenth of that of last year, which was \$324,000.

Frank Hawkins of Ottawa and Mrs. Hawkins left Montreal on the "Regina" on September 1st for an extended trip to the Old Country. They will visit both England and Scotland. Prior to sailing, Mr. Hawkins called on several of his Montreal lumber friends who wished him bon voyage and a complete recovery to health.

The sawmill of the Nolan Lumber Co. at Flagstone, B.C., was destroyed by fire recently. The loss was \$10,000, partially covered by insurance. The plant had been put in operation recently the mill being completed at the end of July. It is expected that rebuilding operations will start soon.

The will of the late E. S. R. Murray, who died recently at his home in St. John, N.B., at the age of 70 years, was lately admitted to probate. The value of the estate which goes to his five daughters and two sons is \$154,826. Mr. Murray was for many years connected with the firm of Murray & Gregory and about sixteen years ago retired from active participation in the business.

It is said that the Barnett-McQueen Co., Limited, have been given a contract for the construction of the plant of the Great Lakes Pulp & Paper Co. at Fort William, Ont. The by-law which Fort William submits to the ratepayers under the recent agreement, fixing the assessment of the new concern, will be voted upon in the near future.

Harry Towne, of Cobalt, Ont., who has been on the staff of the A. E. Gordon Lumber Co., Toronto, looking after their interests in Northern Ontario, is removing to Toronto. He is now covering New York, Ohio and other States for the firm, succeeding L. M. Dougherty. Mr. Towne has had many years' practical acquaintance with the lumber industry.

The members of the British Empire Forestry Conference who have been making an interview study of the whole forestry situation in Canada, recently made an inspection of the large sawmill plants and logging camps in British Columbia. The visitors were warmly welcomed to the Pacific Coast province by Hon. T. D. Pattullo, Minister of Lands. The party also witnessed the stands of green timber and lumber manufacturing plants on the Fraser River and

were tendered a banquet by the Timber Industries Council. The last week of the tour of the British Empire Forestry Conference was spent on an inspection of the timber resources and operations in Vancouver Island and the conference came to a conclusion at the business meeting at Victoria where a formal dinner was tendered by the Provincial Government to the travelling foresters.

Acute labor shortage is holding up construction work in Northern Ontario and the lumbermen are also being hampered in their operations according to Hon. J. Lyons, Minister of Lands and Forests for Ontario. He estimates that some ten thousand men could be readily absorbed for the winter season. Mr. Lyons attributes the situation largely to so many men going West to assist in the harvesting.

In establishing a new industry, companies are sometimes faced with the problem of house accommodation for the employees, it being obviously useless to build a large plant without making provision for the housing of the workpeople. The Armstrong-Whitworth Co., of England, have decided to build a small town in connection with the pulp and paper mills to be erected in Newfoundland. The plans include 800 houses, two schools, a church and theatre.

J. J. McFadden, Limited, Spragge, Ont., who was in Toronto recently on business, states that so far as labor is concerned, it is scarce and inefficient at the present time, resulting in the production of lumber at a higher cost than the market justifies. He says that, owing to the prevailing rate of wages which are in some cases \$10 more than last year, it is reported that a number of lumbermen in the north are thinking seriously of curtailing their annual cut.

F. J. Bannister recently resigned as president and treasurer of the Long-Bell Lumber Co., Kansas City, Mo. M. B. Nelson, its president and general sales manager, has been elected to succeed him. R. T. Demsey, secretary of the company, has been elected vice-president; R. W. Stith, comptroller, has been elected secretary, but will continue his duties as comptroller, and R. P. Combs, director, has been elected president.

A despatch from Paris says:—Eugene Turpin, the universally known inventor of melinite, has supplied the French Government with a chemical formula to fight forest fires by aeroplane. M. Turpin suggested that an aviator be supplied with liquid carbonic acid, liquid sulphuric acid, or liquid ammonia in tubes, fitted with bombs to shatter them and spread the contents over a wide area. He also suggested that packets of sulphur extinguisher or blasting powder might be used to advantage.

A Fire Prevention League of the Province of Quebec was recently incorporated. Among the incorporators are G. C. Piche, chief forester of the province. The main purpose of the League are the prevention of fires either in a public or private property and to spread propaganda and circulate literature, etc., having in view the suppression of fires of all kinds. The League is also given authority to establish clubs in towns and districts which will assist in the work of educating the public on this important question of protection.

The largest train of newsprint that ever arrived in Toronto was that which came in recently containing 42 cars in all. The consignment consisted of over 1100 tons and the train was drawn by one of the latest type passenger locomotives which the Canadian Pacific Railway recently built at its Angus shop, Montreal. The newsprint included consignments to publishers in both Canada and the United States and was shipped by the Abitibi Power & Paper Co., Iroquois Falls, Ont. The trainload represented the cut made on more than 200 acres of pulpwood.

The old Rat Portage sawmill at Harrison Mills, B.C., is being dismantled by the A. R. Williams Machinery Co. who have purchased the equipment. The mill was built about twelve years ago and, after being in operation for two years, was closed down. The reason that operations at Harrison Mills have been discontinued is because the company is largely interested in the export business which they are better able to handle at the Coast. The Vancouver mill is producing between 60,000,000 and 70,000,000 feet of lumber per year and is running night and day to keep up with the orders.

Recently at the Board of Trade Council at Sault Ste. Marie a committee was appointed to investigate the advisability of the Board passing a resolution to the effect that the Provincial Government be asked to prohibit the export of hardwood logs and that the Federal Government place an export duty on partly manufactured hardwood. If the committee's report is favorable this matter will be further discussed at a general meeting of the Board which has brought up the subject on several occasions. The question was introduced some time ago by Hon. James Lyons, Minister of Lands and Forests for Ontario, at the time he retired from the presidency of the Soo Board of Trade.

President Mead Sounds a Warning Note

A plea for closer co-operation between Canada and the United States in regard to the necessity for the elimination of waste in the development of pulpwood resources of North America is made by George H. Mead, president of the Spanish River Pulp and Paper Mills, Ltd., in the current issue of the "Spur." Mr. Mead tells the readers of the "Spur" that, next to foodstuffs, paper is probably the most necessary commodity of today's civilization from the point of view of consumption.

"In this line of industrial development," writes Mr. Mead, "Canada realizes her natural good fortune, and with that soundness of judgment and steadiness of mind that has characterized the history of her development as a nation, combined with the intimacy and real friendliness she feels toward her neighbor, the United States will be properly and well secured in the position of consumer so long as Canada can provide the product."

The concern of America, according to Mr. Mead, should not be Canada's possible control of newsprint supply but the fact of a diminishing supply upon the continent of the basic raw material—pulpwood.

"It is inconceivable," continues Mr. Mead, "that a condition should arise between the two great English-speaking nations that is not mutually advantageous and agreeable, but unless there develops a greater understanding of the fundamentals in the paper industry and the necessity for allowing for conservation and the replenishment of woodlands and the elimination of waste, the United States will find itself dependent not upon a most friendly and interested next-door neighbor for its supply of paper but on overseas and foreign producers that may very well materially affect stability of an otherwise sound situation."

Riordon Reorganization is Almost Complete

It is understood that the Riordon reorganization plan which provides \$10,000,000 of new capital for this enterprise, has been underwritten by a syndicate of banking houses, including Parkinson and Burr, Coffin and Burr, Inc., and E. H. Rollins & Sons, all of Boston, Mass., and Royal Securities Corporation, Limited, of Montreal, and associated underwriters, to the extent of \$8,000,000. Underwriters are understood to include many of the most prominent pulp and paper and lumber operators in Canada, and a considerable amount of English capital has been forthcoming in support of the reorganization.

It is further understood that negotiations which have been taking place during the last few months between the various banking houses interested in the reorganization committees of bondholders representing the eight per cent. first mortgage and six per cent. general mortgage bonds, and creditors of the company, have reached a point where, within a few days' time, a definite reorganization plan will be announced.

Riordon has over 5,000 shareholders in Canada, the United States and Great Britain, most of whom still retain their original investment in the company's securities, so that it will be readily understood that the announcement of the reorganization plan is looked forward to with more than usual interest.

Northern Ontario Resources at the Exhibition

An interesting exhibit at the Canadian National Exhibition Toronto, and one which attracted a great deal of attention, was made in the Government Building by the Department of Lands and Forests under the personal direction of Hon. James Lyons, Minister of Lands and Forests. Two separate log Cabins covered with moss and situated beside a running brook, marked the centre of the exhibit. Immediately in front of the building was a complete fire rangers' camp manned by members of the Forest Fire Fighting Service of the province.

Another thing which possessed special appeal consisted of a dam and ten beavers surrounded by conditions similar to those which

obtain in the native haunts of the animals. There was also an exhibit of pulpwood in various stages of preparation for the market, while a group of Indians from a Northern reserve were shown engaged in the fabrication of birch bark canoes. Particular attention was also paid to the Natural History Section where wild life of animals were shown.

Empire Foresters Saw Black Spruce

The members of the Empire Forestry Conference recently visited Iroquois Falls and were much interested in the different operations at the plant of the Mattagami Pulp & Paper Co. One of the visitors was A. C. Forbes, of the Forestry Branch, Department of Agriculture, Dublin, Ireland, who is the first official representative of the new Irish Government to pay a visit to Canada.

The travelling foresters had seen white spruce and balsam in the Maritime provinces, white pine at Temagami, hardwoods at Algonquin Park and they were very anxious to see a virgin stand of black spruce. On the run up on the railway they were taken over the new spur to Edwards Lake, passing through an excellent type of black spruce bush in which they were much interested.

Pacific Coast Expects More Pulp Mills

If the Canadian Government brings into effect an embargo on the export of pulpwood, one of the first results, it is predicted, will be establishment of more pulp and paper mills in British Columbia. These have been under consideration but the men behind them have hesitated to order actual construction for one reason or another.

That is the belief of many business men, government experts and others who have given the subject close study in the western part of Canada. American capital is already heavily interested in B. C. pulp and paper enterprises and, within the last few months there has been talk of American money establishing several other mills. It is held that an embargo on pulpwood exports would be the decisive factor in bringing matters to a head.

Ontario Paper Co. is Branching Out

The Ontario Paper Co., of Thorold, Ont., which is owned by the Chicago Tribune, has developed a subsidiary organization under the name of the Daily News Paper Corporation. This has a Delaware charter and plans to erect a \$3,000,000 newsprint mill on the New York side at Little Island, North Tonawanda. The island contains 13 acres and has been bought for \$500,000 from Carlton M. Smith, owner of Smith-Fassett Lumber Co. The report of the transaction was confirmed recently by Warren Curtis, general manager of the Ontario company, who will supervise the construction of the new plant, plans for which have already been completed and contracts let, it is rumored. Work will be begun within a fortnight. It is further understood that announcement may be made shortly of the acquisition of extensive pulp limits in Quebec by the Ontario Paper Co.

Will Put Big Limit on Market

The Quebec provincial government will develop a North Shore region and establish definitely there the pulp industry which would help in giving the residents of that coast, in addition to fisheries, permanent means of earning their living.

As far as Quebec is concerned, it was learned this morning that the lease of those limits will be preliminary to the establishment of a lumber mill as forecast several months ago by Premier Taschereau.

The exact location of the new mill has not yet been divulged, but it is stated that it will be one of the most important constructed in the province and will give employment to a large number of men. Coincident with this report it is also reported in semi-official circles that a large pulp and paper mill is to be built early next spring in Chicoutimi and Lake St. John district.

“On Time” Delivery

Getting the goods delivered ON TIME is just as important as being able to produce them—and we make a specialty of both. Ask any retailer or woodworking establishment who has been using our A 1 NORWAY or WHITE PINE LUMBER.

We also make a specialty of heavy timbers, cut to order any length up to 60 feet from Pine or B.C. Fir. Quotations will be gladly forwarded upon request.

Ascending Value of White Pine Lumber and Why?

In connection with lumber, the question arises in the minds of some consumers of white pine, why prices on this particular kind of wood goods should be so much higher than they were in 1913. Of course, the quotations on all lines of forest products have ascended owing to higher wages, greater overhead, increased freight rates, sales tax, larger salaries, etc., but it is argued that white pine is considerably in excess or out of proportion to the advances that have taken place in other softwoods.

One large firm, which have been heavy distributors, stated recently that, on an exhaustive inquiry, they found that 90 per cent of the purchasers who buy large quantities were for lower prices, a few for stationary values while those who favored higher figures could be counted on the fingers of two hands. Two-thirds of those entering the market were purchasing for pressing requirements only and the number who were stocking up for some months ahead was really very small.

It is contended that the desire to stock up in large quantities has been taken away and the outcome has been a decreased demand for white pine lumber.

One inquirer declares white pine lumber is much higher than it was in 1913 just before the war. Is it not a fact that prices are from 50 to 60 per cent in advance?" he asks "and why is it?"

Concerning white pine quotations of ten years ago and today, the "Canada Lumberman" would be pleased to receive and publish information on any one of the subjoined questions and believes that the proper way to get at the facts is that figures should be applied to the operations of 1,000 feet of white pine in 1913 and then apply the same item of cost to 1,000 feet of white pine lumber in 1923, together with information as to the cost of the coming season's cut as compared with that of last season.

Here are some of the queries which will be found both pertinent and instructive:—

1. The cost of standing white pine timber in 1913 compared with the cost today of a given area.
2. The approximate labor cost of skidding logs in 1913 and the approximate cost of today.
3. The cost of camp supplies figured in the cost of boarding a man per day in 1913 and the approximate cost of today.
4. The cost of hauling logs to the water in 1913 and the cost today.
5. The cost of driving logs to the mill in 1913 and the cost today per M plus loss in towing which might be estimated as the same as far as percentage is concerned.
6. The labor cost of manufacturing into lumber in 1913 and the cost today.
7. The cost of mill repairs per M feet in 1913 and the cost today.
8. The overhead cost in 1913 as compared with the cost today.

In connection with white pine prices a leading lumberman stated that while purchasers might be looking for a drop, it certainly appeared as if the wish was the father to the thought. An inquiry made among the trade carries the conviction that the present values of white pine are at rock bottom and that increased figures are bound to come for next year's stock. One reason for this is that men now being hired for the bush are demanding and getting from 10 to 20 per cent more money than last year. Mill wages have been raised; men are scarce and restless and are far from being efficient. There are many other contributing causes which will be referred to in later editions of the "Canada Lumberman."

Loading Logs is Greatest Hazard in Lumber Line

A very interesting study of the dangers, mild and acute, attendant upon lumbering operations has been made by the Bureau of Standards of the Department of Commerce and has been issued under the title of Logging and Sawmill Safety Code. It deals with the felling of timber, transportation of logs by skidding, river driving, roads, railroads, etc. The use of donkey engines and boilers, storage and use of explosives, making of dimensioned lumber and operations of dry kilns are also discussed.

It develops the fact that the loading and unloading of logs is one of the most prolific sources of accidents in the industry. Heavy logs are apt to start unexpectedly. This danger may be largely removed by the use of mechanical loading and unloading devices and their use is recommended. Handling the logs across skids of sufficient height so as to permit a man to dodge beneath is a safety factor of prime importance.

Next in point of danger is the felling of standing timber

and the kick-back of the butt. This danger may be eliminated by the use of what is known as the "V notch" method of cutting. In this, two notches are cut instead of one, and they are sloped steeply downward meeting near the roots. This leaves a solid core of wood to prevent the butt from kicking back.

Dynamite is something that commands the respect of those who value life and its vicissitudes. Unfortunately the "shooter" is not always impressed with thoughts of this sort and his neglect to give proper regard to the amenities of handling dynamite oft-times results disastrously. Other dangers include the rolling down hill of logs, the breaking of tools in use, unexpected falling of "hung up" trees and last but not least that of forest fires. The application of a little good, common sense at all times will do more toward mitigating the hazards of lumbering than any other one thing. It is worth bringing to the attention of your men and it is desirable that a supply of these booklets be ordered and distributed where they will do the most good.

Lawyer Who Runs Northern Lumber Mill

At Fort Simpson, N.W.T., 1135 miles north of Edmonton by rail and river steamer the federal government operates a sawmill for the benefit of the river settlements. It is managed by W. T. Harris, who in addition to being a lumberman is a full fledged lawyer, Indian agent, government experimental farm manager, mining recorder, magistrate, and a few other things.

The logs shown are sawn on the Liard river and floated down to the mill which is at the junction of that stream with the Mackenzie. Logging is distinctly of the hand variety; the trees are sawn on the edge of the bank and the logs when sawn flopped in, and rafted down.

The only animals available for logging are the oxen be-

longing to the mission, and to obtain these the lumberjack must have a "stand in," while he is forbidden to "cuss." No one can drive oxen under such stringent regulations, so hand logging is the vogue.

Repairs to the engine or mill are all made at home, and though some of these would shock the righteous millwright, the little rig keeps going and is a boon to the fur trade settlements.

"Somebody's stenog." wants to know when is a knot whole, anyway. A knot hole, dear, is not a knot, neither is it a whole knot, but it is more like a knot that is not whole, or a knot that is not there any more, but was there once; if a knot is not wholly whole, it is not a knot.

Life and the Problem of Home Owning

A leading lumber firm in recent advertising pointed out the fallacy of confusing the unessential things with the necessities of present-day life and not to mistake the urgency of what is worth while. The fact was stressed that coming under the latter category is the suggestion of owning a home. The remarks upon the urgency of present-day living are worth perusing and a general observation on the lumber industry and its outlook cannot be more fittingly concluded than with the following:—

Life today is an urgent thing.

We are supposedly a practical people, but are we? Do we not confuse the unessential with the necessities?

For instance, our eyes have bothered us, we can not see as well as we should to write, read, and sew, we consult an oculist, he recommends glasses.

Do we obey?

Some times we do.

Most times we don't.

We begin to count the cost, to our pockets (not to our sight), because getting glasses is not the simple thing it used to be in days gone by.

We first must see the doctor. He needs to live also. Then we are examined and tested and re-examined, and then told what sort of glasses we need to see straight and we ultimately decide that to part with a week's salary is too much, and we put off the evil day, as a non-essential. We confound the urgency and fool ourselves into a quiescent state, by telling our wide-awake conscience that there's time enough to put on glasses when we get older and all because we do not find it convenient to pay out the money. In our foolishness of trivial urge, we forget real necessities.

But when we were last at the automobile show, and saw that wonderful car that pleased us so much, did not our minds work overtime to make of it a practical want?

Mary and Sadie would derive so much benefit by being in the open air. Father would certainly make more money, by being earlier to business. Mother could save money, in household efficiency, by going to market herself, and who knows, since we can not see the inner workings of the mind, that the neighbors would not be jarred stiff when they saw this car backing up to the door. This sort of snobbery plays a great part in some minds, although they miss the fact that folks in general have no time to be jealous of their neighbors' good, for they are planning to make their neighbors jealous in their turn, and so whilst the urgency of real life is overlooked, the trivial and inconsequential gets its innings.

It is really hard to define the thing that is urgent and the thing that is not, as we are living in an age that is not original but imitative, therefore we confound the unreal with the real. But we know one thing that has the real urge—that is a home of one's own.

From there emanates all that is real—it is the place from whence history is written. The man or woman who owns a home of his or her own, is an asset to country and state. Too many essentials in the home for one to go wrong, or to mistake the urgency of what is worth while.

Do not fail to recognize the urgency and constructive force that surrounds a home of your own.

Must Provide for Upkeep of Limits

Although not of direct concern to many of our readers, the price of newsprint is of great interest to those who are connected with the

pulpwood industry. The lumber and pulpwood trades are very close together and the expansion of the pulp and paper sections has had a marked influence on the lumber business, especially where companies are engaged in lumbering and in manufacturing pulp and paper. The present price of newsprint is \$75 per ton, under contract, and about \$80 per ton for spot lots. The time is not far off for settling the quotation for 1924 and the question arises as to whether or not there will be an increase.

There are three main considerations which will probably influence those who are responsible for the price—the price of pulpwood, competition and the possibility of a decrease in the demand should the price be increased. It may be taken for granted that there will be no embargo on the export of pulpwood for many months, and possibly not during the existence of the present government. The demand for our supplies has indicated a strong upward tendency and it is probable that there will be a still further advance in price. The value of other raw materials entering into the manufacture of newsprint is also rising. The United States is the chief customer for Canadian paper which has to meet in that market the competition of European countries and also, of course, American mills. The chances are that Europe will send little, if any, more than at present, while Canadian mills, with the advantage of proximity to the sources of pulpwood supply and cheap electrical power, have proved their ability to more than hold their own in competition with American mills, particularly those who are dependent upon Canadian wood.

The other point has relation to the demand. Canadian mills have always considered that it is a sound policy to charge a price which will stimulate production as the mills are only profitable when a certain percentage of output is attained. In view, however, of the rise in costs, it is likely that the companies will find it necessary to advance their price. The view is that the companies must obtain a price which will not only give a fair return on the capital invested but must enable them to set aside an appreciable amount for the upkeep of the limits. Unless this is done, the present forest resources will be rapidly depleted with the result that the future price will, of necessity, be raised to a point far exceeding that now ruling. The forest fires have made considerable inroads on the limits of the pulp and paper companies, and provision must be made for this depreciation.

It is understood that some of the American publishers will not oppose an advance in the price of newsprint, recognizing that a dependable source of supply is the first consideration and that this cannot be assured unless money is available for keeping up the sources of the raw material and that, consequently, the producing companies must obtain such a price for the finished article as will enable them to pay a moderate dividend and to take measures for the conservation of the limits.

The circumstances favor a higher price for newsprint in 1924, although it must not be overlooked that the policy of the big American mills exercises a strong influence in this connection. Having regard to the advance in operating costs and to the fact that pulpwood is almost certain to go up next season, the probabilities are that American and Canadian mills will fall in line as far as the new price is concerned. Many companies across the border are working on a small margin and would welcome a higher price.

Release by auction of a large area of timber limits located on the north shore of the province of Quebec where surveying is now being carried on by hydroplane for the Lands and Forests Department, will take place next fall.

Situations Wanted

Experienced lumber salesman, at present covering Montreal to Toronto and New York State, open for engagement at once. Box 329, Canada Lumberman, Toronto. 15-T.f.

Experienced lumber salesman has thorough knowledge of hard and soft woods. Best of references. Box No. 368, Canada Lumberman, Toronto. 18

WANTED—Position as manager or superintendent of lumber company. Eighteen years practical experience. Six years as manager. Best of references, both languages. Thirty-seven years old, married. Box 369, Canada Lumberman, Toronto. 18-19

EXPERIENCED ACCOUNTANT and thoroughly competent office manager with 20 years' experience, capable of handling books, financing, collections, financial statements, etc., at present employed but desirous of advancement, seeks responsible position. Apply Box 302, Canada Lumberman, Toronto. 17-21

WANTED A POSITION as accountant in Logging operations understand thoroughly, buying of supplies and paying men and system of keeping camp books, in present position fifteen years, reason of changing, limits cut over. Can furnish satisfactory references. Address Box 299, Canada Lumberman, Toronto. 13-18

EXPERIENCED ACCOUNTANT—15 years' experience. At present has full charge of office, credits, collections, costs, financing, etc., of manufacturing firm. Has had several years lumber manufacturing experience. Banking and employers references available. Apply Box 351, Canada Lumberman, Toronto. 16-T.f.

POSITION IN YOUR Sales Department is what I want. Six years' experience with sales, orders, correspondence and accounting has given me a good knowledge of the lumber business, particularly hardwoods. Am young, ambitious, aggressive and of unquestioned integrity. Naturally, I have a position and can furnish references, but am open to consider something better. Could invest \$1,000.00. Would also consider taking charge of camp office at woods operations if given positive assurance of something better in Spring. Give full information about your proposition, which will be held in strictest confidence. Box 374, Canada Lumberman, Toronto. 18

Situations Vacant

Man wanted for town retail yard. Must know grading, shipping and estimating. Aggressive man can grow into a good thing. State experience. Box 373, Canada Lumberman, Toronto. 18

WANTED—Practical man to head lumbering and logging operations. Only men with long, practical experience need apply. First class references required. Box No. 348, Canada Lumberman, Toronto. 16-17-18-19

WE WANT A GOOD BRIGHT YOUNG MAN with experience in forest product and farm produce, with a little money and standard reputation. Good salary and profit percentage in an established concern. Broker dealers, manufacturers and wholesalers, local and export market. Apply Box No. 376, Canada Lumberman, Toronto. 18-21

WANTED: Young man about 24 or 25 for sales department of lumber office. Must have thorough knowledge of lumber business and be able to assist in other departments if necessary. Give full particulars concerning where you have worked, lengths of time, what you did and salary desired. Enclose copy of references. All information confidential. Box 371, Canada Lumberman, Toronto. 18-19

Business Chances

We Have Timber in British Columbia Crown Granted Many Years Ago

Must be manufactured correctly and carefully graded stock of high class established trade who pay good prices. Apply Box 355, Canada Lumberman, Toronto. 16-20

Sale of Timber

Tenders will be received by the undersigned up to and including Monday, the 1st day of October next, for the right to cut the timber on Limit E. and small area bordering on northwest part thereof, said Limit lying west of the Walsh Tie Company's Limit, south of Township 22, District of Kenora, having an approximate area of 16 square miles, more or less.

Tenderers will tender for the green timber and for the burnt and down timber separately, but all tenderers must tender for both classes. The burned area comprises all that portion of Limit lying north of Belmore and Elbow Lakes; creek and portage connecting these lakes.

Maps and further particulars may be obtained upon application to the undersigned, or James D. C. Smith, Acting Crown Timber Agent, Kenora, Ont.

JAMES LYONS,

Minister of Lands and Forests.

N.B.—No unauthorized publication of this notice will be paid for.
Toronto, September 6, 1923. 18

Sale of Timber

Tenders will be received by the undersigned up to and including Monday, the 1st day of October next, for the right to cut the timber on that part of the southerly portion of Timber Berth K., lying north of what is now known as Timber Berth G.L., in the vicinity of Clearwater Lake, south of Ignace, District of Kenora, having an approximate area of 29 square miles, more or less.

Maps and further particulars may be obtained from the undersigned, or James D. C. Smith, Acting Crown Timber Agent, Kenora, Ont.

JAMES LYONS,

Minister of Lands and Forests.

N.B.—No unauthorized publication of this notice will be paid for.
Toronto, September 6, 1923. 18

"PRINTED SALESMANSHIP"

Send for your copy today

A little book profusely illustrated with photos, drawings, all kinds of engravings of printing and advertising in all its forms. Tells of printing. Shows you how to advertise better and for less money. Produced regardless of cost as an educational medium. Address: "Printed Salesmanship," Dept. H., 349 Adelaide Street West, Toronto.

The Fire Situation Must Be Faced

A campaign will extend over three months, in the interests of fire prevention in Northern Ontario, has been arranged by Robson Black, manager of the Canadian Forestry Association. Mr. Black was recently in Port Arthur in connection with the work, and says that forest fires in Ontario during the past summer had destroyed five or ten times the amount of timber put to use by all the mills in Ontario. Mr. Black added that he had the report of one company that lost 500,000 cords of pulpwood due directly to carelessness of prospectors setting out fires in the woods. One other company lost 50,000,000 feet of pine. Perhaps the most serious was that in which an Ontario firm lost in one week's time enough pine to keep the company's mill going for fifty-six years.

"We have come to the point where we have got to face the cold facts with regard to forest fire prevention. At the present rate of waste the forests of Ontario will be depleted in twenty years," said Mr. Black. "If fires continue at the pace of this summer, Ontario is going to face a large exodus of population attached to the wood users. It will mean that scores of towns in the province will cease to exist as towns which are now dependent on the produce of the forest for existence."

Interesting Display of Lumber Products at Fair

A miniature bungalow, unique and attractive in design, provided the centre of interest at the display made by the British Columbia Lumber Commission at the Canadian National Exhibition, Toronto. The interior of the bungalow was attractively furnished and finished in various British Columbia woods such as fir, cedar, hemlock and larch. The outside of the structure was covered with shingles made from British Columbia red cedar. In addition to that various articles the products of British Columbia Lumber were shown. These included boxes of various kinds, paper and pulp products, panelling, furniture, staves, and other articles to which British Columbia woods are well adapted. Educational literature was freely exhibited with an idea of showing the adaptability of Western woods, and also giving information of both a technical and a practical nature, with regard to their use and the various ways in which they can be finished.

Splendid and attractive exhibits were made by a number of enterprising firms whose products are well known to the retail and building trades. Among the exhibitors were Seaman-Kent Co., Toronto, hardwood flooring; Satin Finish Hardwood Flooring, Limited, Weston; Seaman-Eaton Flooring Co., Limited, Toronto; Buyer's Door & Mfg. Co., Toronto; R. Laidlaw Lumber Co., Toronto; Kent Ockley, Limited, Toronto, and Pannill Door Co., Toronto. The booths of these firms were all in the Process Building and aroused much interest.

The Larger Vision in Lumber Line

With each succeeding year the lumber business is going through several changes. There are improvements in methods of production, distribution and uses, credits, collections and conceptions. Men are coming closer together and co-operating in the affairs of the industry. The association spirit is stronger to-day than it was and friendship holds a larger place among the exponents of this far-flung calling. In the rank and file there is now a disposition to do business in the open and on the square, to be fairminded and straight-forward. The days of trying to put something over on the other fellow or giving him the double cross are passing. As like begets like, so do firms which achieve and maintain a certain standard of ethics and service continue to expand and develop, while those concerns, which are mere self-seekers, fall by the wayside. They may, apparently, flourish for a time but in the end they are forced to give up the struggle. The community spirit is growing also and the lumber industry has played its share in this development. It is recognized that knocking competitors and institutions has never paid. It is a practice which is expiring amid the evergrowing spirit of tolerance and wood-will. It is the same, too, in knocking an industry or the general market situation.

Confidence and co-operation are the basis of all transactions and, if those who want to see everything turn out for the best, only come together and use their earnest efforts to set matters aright and steer the industry over the present period there is no doubt that the coming year will witness another step toward returning to normal conditions after the cataclysm of five years' hostilities abroad.

The world's supplies of wood are diminishing and the uses of it

gradually being displaced by other materials and is consequently becoming less important. Such a conception constitutes an economic error. The purposes to which woods are being continually put more than counteract the substitution of other offerings.

The chief danger in the lumber industry to-day lies not so much in lack of demand or supply, the present level of prices or means of distribution but the fact that Canadians are only awakening to the impending danger of a dearth in timber resources and are only beginning to realize what this fully means.

A national survey of all the wooded resources of the Dominion, a concerted and systematic plan of reforestation, more rigid regulations in regard to the cutting and clearing of limits, improved methods in fighting forest fires, more scientific logging operations and other issues are calling for greater consideration and more exhaustive enquiry. The claims of the future are insistent and it is only by giving thought to vast national problems that Canada will retain her premier place and her people remain a conspicuously component part of the great British Empire.

Many municipal, provincial, national and other bodies are doing a worthy work in bringing about a better understanding of the real situation relating to Canadian forests and a more complete co-operation between the public and those whose duty it is to protect the national domain. This is a job in which all classes can take a hand. It is an enterprise which affects practically every avenue of the commercial, industrial, social and educational life of the Dominion.

The present is no time either for undue optimism or sordid pessimism but one in which an aggressive course should be mapped out and adhered to.

New times demand new measures: the world advances, and in time outgrows the laws that in our fathers' day were best.

James Russell Lowell

A half century ago the fathers and grandfathers of the LUMBERMEN of today knew of no way to protect their properties against FIRE WASTE except through the purchase—at double and triple the RATES now available—of the necessary FIRE INDEMNITY. What would have been the surprise of the pioneers in the lumber-making industry to have found in their mail a dividend cheque, such as is quoted in the following letter, representing a substantial saving on their FIRE INSURANCE PREMIUM?

*"The Lumbermens Underwriting Alliance
546 Confederation Life Bldg.
Toronto, Ontario*

June 20, 1923

*For attention of L. D. Payette,
Chief Agent for Canada*

Gentlemen:

We have just received your cheque for \$1,381.07 in full liquidation of the saving on insurance premium deposits paid to you during the time we were operating the Little Current Lumber Co., Little Current, Ontario.

I find we paid you gross premium deposits of \$5,732.15 and in addition to the surplus saving cheque of \$1,381.07 just received, you previously returned us dividends amounting to \$581.91, which makes the very substantial saving of 34.24%.

When we were operating the mill at Little Current we always welcomed the visits of your inspectors because we found that they were able to make a great many valuable suggestions for the improvement of our property from a fire prevention standpoint.

Again thanking you for the substantial saving effected for us and for the service you were able to render us while we were operating, we are

Yours very truly

LITTLE CURRENT LUMBER COMPANY,

*Max G. Witthauer,
President."*

The progressive lumberman of today has turned from the old-time costly fire indemnity sources just as he has discarded the methods of heating, lighting, communication and transportation which served the needs of fifty years ago. Growing necessity led to study, experimentation, SUCCESS. Ways were devised to reduce the fire loss ratio on lumber properties and a decrease in the cost of fire insurance followed automatically. A pioneer in the work of fire prevention and rate reduction.

The Cream of the Roofing business goes to Brantford!

First—because the Brantford Roofing Co. is alive to demands of the customers.

Next—because proper appreciation is shown Brantford dealers for their co-operation.

And also because the manufacturers of Brantford Roofs back up their products to the fullest extent assuring satisfaction for the consumer.

And finally—because they advertise in a way that brings business to the dealer and makes it easy for the dealer to land the roofing business he goes after.

The Chain Mark of Quality

That's good **LOOKING** chain—you've often heard it said.

But—what about its **PERFORMANCE** after months of service?

All chains **LOOK** somewhat alike — but they don't all **ACT** alike.

There's a difference in chains—and it isn't always apparent on the surface.

Chain is really good when it gives good service. Performance, long life, reliable trouble-free service—that's good chain.

And what makes "good" chain? Inbuilt values!

Skilled workmen, the proper use of raw materials, the correct design, expert molding, annealing, rigid tests and inspections—a few steps in chain making which must be conscientiously applied.

It is these "inbuilt values" that result in reliable chain performance.

Link-Belt has had fifty years' experience in chain making. This trademark  appears on every link of genuine Link-Belt chain. It is the standard by which chain values are measured the world over.

Send for new book No. 660, showing the complete line of Link-Belt equipment for saw mills.

LINK-BELT LIMITED

(FORMERLY CANADIAN LINK-BELT COMPANY, LIMITED)

TORONTO—WELLINGTON AND PETER STREETS

MONTREAL—10 GAUVIN LANE

LINK-BELT

The Ross Holds all Records for Economy

Guaranteed Production of 4 Sticks per Minute of Average Wood

The principle of the machine is a planer head riding on the revolving stick, with the depth of cut controlled by an adjustable rolling gauge. The stick is firmly held and the head rises and falls with the variations of the stick being peeled. Crooked sticks can be peeled as well as straight, which is in itself a considerable advantage.

Actual Test of September 20th, 1920

In a recent demonstration at Colby in the presence of G. F. Higgins of Presque Isle, representing the Stebbins Lumber Co., of Boston, and G. B. Burr of Bangor, Me., 40 pieces of wood, which made one-half a cord, ranging in size from 4 to 13 inches in diameter. Girting them before rossing, they measured 998 inches, and after rossing, they measured 920 in circumference. This was well knotted wood, some of which was quite out of round. Piling this in a rack it measured 52 inches high before rossing, as the State laws require, and after rossing it measured 46 inches, a net loss of only 2 inches, as the wood is sold four feet high.

Prices and full particulars gladly forwarded upon request.

Canada Wire & Iron Goods Company

Hamilton - Canada

SPARK ARRESTERS

A spark arrester eliminates one of the greatest fire hazards in the woodworking and lumbering industries.

Its cost is nothing, compared to the protection it offers woodworking plants, saw and planing mills.

Our refuse burners are also noted fire preventers. Write for prices of both these devices.

Our other lines of Manufacture are Wire Cloth for all uses, Perforated Metals, Wire Pulp Mats, Clothes Lockers, Machinery and Window Guards, Pulp Mats. Inquiries solicited.

WIRE ROPE

Lumbering operations call for steel wire rope of the greatest dependability—a fact which is kept constantly uppermost throughout every stage of the construction of our Rope.

The contributing factors in making good Wire Rope are:
Men who know how
The best grade of materials
The most modern machinery
We have all 3 and are producing the goods. Give us a trial.

Carson "Quality" Harness

CARSON Harness is made better to fit better, consequently horses can do a harder day's work with less exertion and the danger of breaking is minimized.

The best quality Oak Tanned leather is used exclusively and every section of harness thoroughly tested before leaving our factory. In short, it is a "Real" Harness with a reputation in the lumber industry that proclaims its worth. We also manufacture and carry in stock all kinds of Horse Goods and Equipment, such as, Saddlery Hardware, Horse Blankets, Horse Collars, Oiled Duck Covers, etc.

Carson Quality

What they think of Toronto Blower Systems

HERE are some of the advantages of a Toronto Blower System with which the Pembroke Shook Mills are well acquainted:

Economy, efficiency, the saving of time and labor, the promotion of better working conditions and the minimized risk of fire from combustible materials.

These advantages cannot reasonably be expected from a system which is not planned by experts—so why take chances?

Let Toronto Blower experts take care of your problem—they'll guarantee satisfaction.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

Waterous

BRANTFORD, ONTARIO, CANADA

A Record of Achievement

The history of Waterous Sawmill equipment and the part it has played in the development of Canada's second basic industry is a record of achievement without parallel in this great field.

Beginning more than three-quarters of a century ago, Waterous equipment has consistently shown the way with new improvements in design and construction. "Efficiency with economy" has been the watchword of Waterous engineers, and their success in this direction can be found in practically every mill in Canada.

And, not only in this country, but in the far corners of the globe—India, Australia, New Zealand, Straits Settlements, South America—Waterous equipment is the popular choice.

PIONEERS IN BANDMILL CONSTRUCTION

From the time Waterous introduced the first satisfactory Bandmill into Canada in 1890, successive models have maintained their supremacy by reason of the continuous improvements in their design and construction. The "New Model" Bandmill combines many exclusive features, such as the tilting device, improved guides and columns, specially built lower wheel and, again the tensioning device. These prolong the life of both machines and saws, speed up the work and cut operating costs. They are some of the reasons why 255 Waterous Bandmills have been purchased.

WATEROUS EDGERS

Probably the most convincing proof we can put forward in support of our claim that Waterous Edgers produce better lumber at lower cost is this: "More than three hundred of these machines are now at work in mills throughout Canada, many of which are repeat orders." Performance counts. Why take chances on anything but **proven** machinery?

Waterous

BRANTFORD, ONTARIO, CANADA

BELOW we illustrate another Waterous product that is used and approved from coast to coast—the Waterous Side Crank Sawmill Engine. It is designed and constructed to meet every requirement. An occasional oiling and wipe-down is all the attention this engine requires to stay on the job from whistle to whistle. Built in our

own shops, of the very best materials, this type comes in both Single and Twin Engines, in sizes up to 600 H. P. When you want a sturdy reliable engine, get data on this direct from us or your nearest branch. They are fully equipped to render instant service on all orders and enquiries.

Boiler and Furnace Efficiency

KNOX Bros. Ltd., who are specialists in British Columbia forest products, and handle the very best, in and from, the West have decided that the best equipments for handling their products economically (is none too good) for their first unit of their new re-inforced Concrete Mill which they are erecting on the Bickerdike Pier, Montreal, Quebec.

With boiler and furnace efficiency in view, and lowest maintenance cost being a factor as well, they have awarded the contract for the Boiler Brick Setting and the supplying of three Gates Engineering Co. Ltd's. special Dutch Ovens with incline grates and Flat Arch Suspension Harness of the Air Cooled type, for taking care of all their mill refuse. This type of furnace will burn economically, tan bark, hog fuel, and sawdust efficiently, with up to 60% moisture content and 150% to 200% Boiler Rating.

We specialize in Boiler Settings and Furnace Brickwork and give the benefit of (30) thirty years' experience. Ready to go anywhere to build new Boiler Settings and overhaul and Reset old Boilers and build Furnaces.

A DOUBLE SURFACER YOU CAN DEPEND ON

We believe there are more Yates 177 Double Surfacers in operation than any other machine of this type. So successful has been their performance that practically all users of the machine, when in the market for additional surfacers of this type, have re-ordered 177's. This is a gratifying fact.

Here is an important detail of its construction. Eight inch feed rolls, exceptionally large for a surfacer of this type, are furnished on the 177 and make possible a very powerful feed. These rolls successfully will feed to any cut which the machine might be called upon to take.

Then too, Yates 177 has various other exclusive features which make it exceedingly accessible and easy to operate. We suggest that you request full particulars of the machine.

P. PAYETTE COMPANY

J. T. PAYETTE, Proprietor PENETANG, ONT.

Why not have the best?

This machine
holds the record
for rapid lath cutting

There are a number of lath bolters on the market—many of them excellent machines. How is the buyer to know which is the very best? Mere claims tell nothing. What the buyer wants is facts.

Here is a fact that conveys more than bookful of indefinite claims. "The Payette holds the record for cutting, counting, tying and piling." This was established during a recent ten hour test when 128,350 laths passed through the machine.

It is this remarkable capacity for turning our quality-plus-quantity production that has established the Payette as favorite in over 450 mills throughout Canada and the United States.

Saves Time and Money

THE ADAMS GASOLINE ALLIGATOR POINTER

Of the various types of craft developed for lumbering purposes, the Adams Pointer has unquestionably proved the most valuable.

Superior in many respects to alligators and tugs.

Adams Pointers are built to last. Their construction is the best throughout. And the motor is powerful and remarkably efficient.

We shall be pleased to forward prices and full details.

CRANE EQUIPMENT GIVES THE ASSURANCE OF UNFAILING SERVICE FROM THESE
PIPE-LINES OF A LARGE FURNACE PLANT

WHEN DEPENDABLE STEAM PIPING COUNTS

Steam pipe-lines located in tunnels or basements or buried in the ground must give dependable service at all times. Crane valves, fittings and pipe bends for such installations are designed and produced to stand up under the most extreme conditions.

Only selected materials are used in the manufacture of Crane equipment. Production operations are checked by rigid inspections, and searching factory tests guard uniform quality in the finished units. This careful factory practice gives exceptional endurance to Crane piping equipment.

Efficiency Wash Sink with Pedal Valve

Train of saw logs at the dump, on the operation of the International Land & Lumber Co. Limited, near St. Felicien, Que.
The Linn Logging Tractor can be seen at the extreme right

LINN LOGGING TRACTOR

When a Linn Logging Tractor commences operation with a new user, our instructor goes in with it, and remains, without further charge for a period of two weeks, and thoroughly instructs the designated operator in the operation, care, maintenance and repair of the Linn Logging Tractor.

Our instructors are experienced men in the log haul as well as mechanically—they are the operator's assurance of success, and we cannot afford, any more than can the user, to have an operation, where a Linn Logging Tractor is in operation, other than a complete success.

The writer of this advertisement was talking to a large operator, who is a Linn Logging Tractor user, and this gentleman was relating an experience he had at a recent meeting of Lumbermen that was held in Toronto—this operator in question told the writer of some discussions regarding the Linn Logging Tractor, by these gentlemen, and of his telling them what he had accomplished last season with his machine—and he said to the writer, "Do you know I rather had the feeling that they thought I was exaggerating"—and the writer took occasion to remind this operator of the time, when the writer was telling him what the Linn Logging Tractor would do for him, that he thought the writer was telling fairy tales.

The performance of the Linn Logging Tractor is the same wherever you find it—a success beyond the expectation of the man who owns it.

Philips Place Building

Montreal

The illustration appearing above shows a Linn Logging Tractor equipped with Pulp wood rack, having a capacity for four cords of four foot wood

LINN LOGGING TRACTOR

Where the operator is hauling logs, we supply double bolsters, 10' long, inside, and having a capacity of 1750', or about 3½ cords.

The Linn Logging Tractor comes equipped with both sled and wheel steerage—the wheel steerage enables the operator to utilize his Linn Logging Tractor, also, for partaging—the Linn Logging Tractor with a platform mounted on bolsters or pulp wood rack, has a carrying capacity of itself, of ten tons, entirely in addition to the trailer loads it hauls behind it.

The Linn Logging Tractor has Electric Lights, with generator and storage batteries as well as closed and heated cab over the driver's seat.

Every detail of the design and construction of the Linn Logging Tractor has been developed with the thought for convenience and usefulness in logging—it was designed exclusively for log hauling—it was developed on actual logging operations—and its unparalleled success in this work is one of the rewards for the thought devoted to its development.

The writer of this advertisement was recently in a city in the Maritimes, just leaving the hotel to visit one of the largest operators in New Brunswick—he met two Linn users who had just arrived from the States and one of these gentlemen asked what he was doing there—upon receiving his reply the American user said, "I've been using Linn for five years—tell your man to ask me—I'll tell him."

"Ask the logger who uses one"

Relieve the Box Shook Shortage

By the use of

Gerlach Box Board Mills

For the cutting of

BOX, CRATE, CHAIR, FURNITURE, CABINET and other dimension stock, LATH, HANDLE MATERIAL, Etc.

These machines are built in three sizes:—

CHAMPION for stock 10" to 24" Long
SPECIAL " " 10" to 36" Long
JUMBO " " 10" to 48" Long

All cut any required thickness from 1/4" to 3" and from 3" to 20" wide.

Cut either plain or quarter sawn, through the side or with the grain of wood, hence saw dust is like excelsior. Saw kerf 1/8". Round or quartered bolts may be utilized, as well as slabs and mill waste. Will cut 3000 feet of lumber per man per day. Turns 80% of standing trees into finished product against 40% for the saw mill.

Average net cost of producing finished box lumber from small timber delivered at mill:

TIMBER	\$ 8.00	per M ft.
SAWING & OVERHEAD	2.00	" "
NET COST	10.00	" "

The Strongest Harness for the Drive Is **ALLIGATOR BRAND**

No other harness will stand up so well under the terrific strain the lumber drive and its heavy loads impose.

Alligator Brand Harness is made with the requirements of the lumber industry in mind.

The toughest leather obtainable is used in its manufacture together with a special tanning process.

Careful workmanship and the strongest of stitching make Alligator Harness wear longest.

Horse Blankets

We also specialize in horse blankets for the lumber industry and in length of service they are fit companions to Alligator Brand Harness.

Now is the time to get your equipment in shape for a winter in the bush. Make up your list of requirements in harness and blankets and send it in.

We'll be glad to quote prices by return.

Pink's Lumbering and Driving Tools

Lumbermen of the World Look to "Pink"

Swedes Iron
Piling Hook

No. 34

To lumbermen the world over, the name Pink has stood for the best in Peaveys, Cant Hooks and other logging Tools.

What makes Pink Tools superior? The fact that we use only the finest materials procurable—but more especially because of our longer experience, dating 'way back to 1866. Our Cant Hook and Peavey Handles are manufactured entirely from the best quality hand split (not sawn) air-seasoned Rock Maple and Hickory. Hooks are made from hammered crucible cast steel or wrought steel and special steel bolts used. The various models are fashioned to serve every purpose.

Price lists and catalogs of our complete line are yours for the asking. Why not get in touch with us to-day?

SAINT JOHN (West), N.B.

They averaged 17 cords per load

After exhaustively testing their first Northern "Caterpillar"* Logger last winter, making closest comparisons in costs and results with other methods and machines, the Mt. Murray Woodlands Corporation of Mt. Murray, Quebec, has now standardized on "Holt" and purchased four more of these powerful tractors for next winter's operations.

Hauling day and night over common snow roads with many bad grades, each load averaged around 17 cords of green unbarked spruce, a remarkable record over those roads. By the end of last season the total cordage, the continuous operation, number of trips, low costs and the ability of the "Caterpillar" to meet every situation, convinced the Mt. Murray officials that no other machine or method can successfully compete with the "Caterpillar."

Let us give you further facts about remarkable "Caterpillar" records on this, as well as on other Canadian pulpwood and lumber operations.

**There is but one "Caterpillar"—Holt builds it*

ENTERPRISE

CAMP RANGES AND HEATERS

In the bush, as well as in the cities, the name Enterprise stands for dependable service in stoves and ranges. Say "Enterprise" and be done with it. The article you buy will outlast any other camp range or heater that is made. If the initial cost is anything more, and likely it is not, you will save it many times over. The Enterprise prices are the lowest you can get consistent with goods that can be depended upon under all conditions.

The Enterprise Camp Heater
Made in two sizes
No. 38 and 50

A powerful heater, designed specially for lumber and mining camp boarding houses. Burns 38 and 50 inch sticks of rough, heavy wood. Built not for one season, but of rust resisting steel, for year-after-year use and abuse.

The Enterprise Woodsman
Made in one size

For the Drive or Small Camp

The Woodsman might have been patterned after your own plans. Everything has been thought of, even to wrought iron rings for easy moving. Oven 21 inches. Takes a 22 inch stick of wood. In this range extra quality steel takes the place of weight. Though light and easily handled, it will wear as long as other makes of ranges twice as heavy.

The Enterprise Camper

Here is the range for the heavy work—the medium or large sized camp or boarding house—a dependable baker, an excellent cooker—built by Enterprise workers on Enterprise principles—a range to delight the cook's heart and please your workers with better cooked food.

LUMBERMEN'S

EQUIPMENT

A Money-Making Machine

ALTHOUGH a familiar sight in the lumber industry of Canada, there are still a number of mills in which we are sure this machine should find a place. First, because it can improve the output of those mills, and, second, because it can increase the profits of the owners of those mills.

We can readily prove this statement to any interested mill owner—at no obligation, of course.

In the meantime let us forward our descriptive catalogue.

Figure it out Yourself

What Per cent of Your
Overhead is Due to Faulty Belting ?

Stop The Leaks With

GOODHUE BELTING

"Extra" "Standard" "Acme" "Waterproof"

Poor belts are a constant expense, because they grow slack, waste power and finally have to be "taken up", which means a shut-down. Goodhue Belting eliminates this needless waste of time and money because the stretch is taken out before the belt leaves us. In addition, only the toughest hides and the most modern tanning process, are used in their manufacture, which lengthens the life. All stretcher ends are cut off, leaving a belt which will work under the most difficult conditions. Ask our belting experts to prescribe the proper belt for your transmission troubles. No obligation at all.

HANDLING HARDWOOD LUMBER WITH "INDUSTRIAL" LOCOMOTIVE CRANES

at plant of
Voth Hardwood Company
Voth, Texas

Two eighteen ton overhanging boom cranes handle from 225,000 to 250,000 feet of lumber daily, using but six men.

From 75,000 to 100,000 feet of lumber is handled daily from sorter to stacker.

From 15,000 to 30,000 feet of timbers and ties from timber dock to loading dock.

From 50,000 to 75,000 feet of lumber from stacker to yard.

From 15,000 to 30,000 feet from kiln to loading shed.

From 50,000 to 75,000 feet from yard to loading shed.

(Figures supplied by Voth Hardwood Co., Voth, Texas)

See Article Pages 137-8

Submit Your Requirements to Industrial Works Engineers

Steam, gasoline or electrically operated Locomotive Cranes for bucket, dipper or magnet operation; yard service and construction work; with capacities ranging from five tons to sixty tons; booms to suit, varying from 40 ft. to 140 ft. in length.

"INDUSTRIAL" Locomotive Cranes are built so as to be really convertible for various operations. The same Crane may be used for handling lumber and logs, building logging railroads, pile driving, automatic bucket operation and for handling heavy loads with hook and block. Booms may be built in sections so that the length may be quickly changed to meet various conditions. The propelling mechanism is of a powerful, sturdy type that makes the Crane efficient in switching and hauling heavily loaded cars.

Your requirements, when submitted to Industrial Works engineers, will receive the benefit of 50 years' experience in the designing and building of lumber and log handling equipment.

Our Golden Anniversary catalogue will be mailed you on request.

Locomotive, Erection and Wrecking Cranes, 5 to 200 tons capacity. Pile Drivers, Pillar Cranes, Transfer Cranes, Gantry Cranes, Crawling Tractor Cranes, Rail Saws, Grab Buckets. Double-Acting Steam Pile Hammers, Wood Grapples.

Prompt deliveries can be made on any type of Crane.

Equipment for Sale

We offer for immediate delivery the following equipment, some of which is unused:

Power Plant.

1—750 K.W. Westinghouse Turbo Generator, 3 phase, 60 cycle, 550 volts, 3600 R. P. M. direct driven by Westinghouse Turbine and complete with LeBlanc condenser (has never been used).

1—400 H. P. Babcock and Wilcox horizontal water tube boiler 200 lbs. working pressure (never used).

1—100 foot steel stack, self supporting 6' diameter.

Locomotives.

2—American Saddle Tank Locomotives, standard gauge, cylinders 10 x 16.

Hoists.

1—Single drum hoist direct, connected by Foot gear reducer to 30 H.P. Westinghouse motor, 3 phase, 60 cycle, 550 volts, 720 R. P. M. complete with grids and automatic brake.

Pumps.

1—6" DeLaval Belt driven pump 1200 U. S. gals., 100' head single stage, bronze fitted, 1450 R. P. M.

1—3 $\frac{1}{4}$ " x 5 Aldrich vertical triplex 35 gal. per minute, 175 lbs. pressure.

1—2 $\frac{1}{2}$ " 6 stage Allis Chalmers Turbine pump, 405 ft. head, 160 U. S. gal., direct driven by 40 H. P. C.G.E. motor, 3 phase, 60 cycle, 550 volts, 1800 R.P.M.

2—Single stage Mather & Platt vertical pumps, 700 U.S. gal., 100' head driven by vertical C.G.E. motors, 3 phase, 60 cycle, 550 volts, 1800 R.P.M.

Cranes and Buckets.

1—Brown Hoist Locomotive Crane, standard gauge, 4 ton capacity, 23' boom operated by 3 phase, 60 cycle, 22 H.P. C.G.E. crane motor.

1—1 yard enclosed type Brown Hoist clam bucket (never used).

1— $\frac{3}{4}$ yard Owen Bucket.

Cars.

5—Standard gauge cars, wooden truss, length 28' 4, wheels 30".

Motors.

1—225 H.P. C.G.E. 3 phase, 60 cycle, 550 volts, 360 R.P.M. complete with controller and grids.

1—150 H.P. Westinghouse, 3 phase, 60 cycle, 550 volts, 600 R.P.M. complete with controller and grids.

1—75 H.P. Crocker Wheeler 3 phase, 60 cycle, 550 volts, 900 R.P.M. complete with controller and grids.

1—50 H.P. C.G.E. 3 phase, 60 cycle 550 volts, 514 R.P.M. complete with controller and grids.

Also a large number of smaller motors all 3 phase, 60 cycle, 550 volts.

The above equipment is located at the plant of Moose Mountain Ltd., Sellwood, Ont.

In addition to the above we have a large amount of equipment consisting of rails, hoists, belting, elevators, etc.

New Brunswick's great forest industry depends on the Spruce Trees.

FOREST FIRES threaten the collapse of this great industry through destruction of the spruce forests.

Because

Some Individuals are **CARELESS** of fire in and about the woods.

Help prevent Forest Fires and thus perpetuate this great industry.

EXTINGUISH

your matches,
cigarettes,
cigar stubs
and
pipe ashes
before
throwing away.

Build your
camp fire
in a safe place
where it can
be totally
extinguished
with water.
Then use
lots of water.

Be as Careful of FIRE in the WOODS as you would in a Powder Factory.

FOREST SERVICE—Dept. of Lands & Mines

Hon. C. W. Robinson, Minister of Lands and Mines

Guard Your Profits with This Machine

**LOST time often
means lost business.**

**LOST time always
means lost profits.**

MOUNTING production costs and keener competition require that a check be placed on all time and money leakages. The initial step should always be the installation of a time recording system. Such a system is a constant guard on your profits—it lowers the production costs and increases the efficiency, permitting competing bids to be successfully met.

The expense as a factor should be considered in relation to the saving effected. Records in our possession show that International Time Recorders have saved individual operators hundreds and sometimes thousands of dollars annually.

An International system as outlined by us will clear **your** decks for action and permit you to meet changing conditions with a safe margin of profit.

Your Request for Money Saving Particulars is Solicited

"HAMILTON" EDGERS

Dependable Accurate Saw Mill Machinery

*Used In
Scores Of
Mills All
Over Canada*

LEADERSHIP, after all, ascends to the fittest. Economy, service and value are the qualities which count.

The "Hamilton" imprint has been known for years as a sufficient testimonial for these merits.

"Hamilton" Garland Gang Edgers are especially recognized for their worth. They are strong, accurate and easily operated, made in all widths with necessary number of saws to suit requirements.

Let us get together when you are in need of anything for the sawmill.

We manufacture a complete line of sawmill machinery for either band or circular mills.

"RED DEER" BRAND FLOORING IS AN ALL-CANADIAN PRODUCT

Lumber Dealers!

If you're interested in increasing your flooring sales, read the following facts concerning "Red Deer" Brand Flooring. Manufactured in Birch, Maple and Oak.

1. The grooves are perfect, providing a faultless fit to tongues.
2. End tongues uniform to the finest measurement. Ensures perfect, snug joints.
3. Groove on bottom prevents cupping or buckling when exposed to moisture or extreme heat, and provides resilience, also reduces weight of flooring when shipping.
4. Red Deer Birch is milled to give clearance at the bottom, making sure of a close fit on the surface.
5. The rounded tongues fit into the smooth grooves. No banging or forcing when "matching-up" Red Deer Birch.
6. Strips of Red Deer Birch Flooring fit so closely the joints are barely discernible. Once laid, this Flooring never opens up.
7. The colors blend beautifully, producing a fine toning that will not be found in other woods.
8. Clean, smooth workmanship. The ends fit "like a glove" on all Red Deer Birch.
9. Nicely-rounded tongues; no knife marks, "brooms" or rough places.

A Permanent Lumber Service

AFTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually
6,000,000 ft. birch annually
2,500,000 ft. beech annually
2,500,000 ft. elm annually
900,000 ft. basswood annually
200,000 ft. ash annually
6,000,000 ft. hemlock annually
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

SIMONDS SAWS

The thousands of Simonds Saws (Band, Circular, Cross-Cut and Drag) which are being used throughout the United States, Canada and in fact all over the world, testify as to their popularity in the lumber industry. This is due to their exceptionally high grade steel and accurate construction. Simonds Saws hold their edge and retain their tension on all kinds of cutting jobs.

All kinds of saws for Mill, timber operation or woodworking shop are manufactured by Simonds and guaranteed.

President of Canadian Lumbermen's Association Extends Felicitations and Reviews Outlook in the Industry

By Angus McLean, Bathurst, N. B.

At the last annual meeting of the Canadian Lumbermen's Association my fellow-members conferred upon me the highest gift in their power in placing me at the head of the organization. I am deeply grateful for the confidence reposed in me and trust that my year of office may be marked by progress on the part of the industry and advancement in the membership and strength of the Association.

Of the work and worth of the Canadian Lumbermen's Association, what it has accomplished during the fifteen years of its existence, its growing status and prestige, it is not necessary to deal. The membership today is the largest in its history. There are still many firms who should be within our ranks, keeping step to step in the march of events and co-operating with us for the weal and uplift of forest products activities and we hope they will come in and augment our number.

All lumbermen will deeply regret the circumstances which have led up to the resignation of our veteran Secretary, Mr. Frank Hawkins, Ottawa, who has left on an extended trip to the Old Country in search of health. We trust that he may return greatly benefited from his outing and that many years may yet be spared to him. Mr. Hawkins was a capable, faithful and courteous official and to him is due a great deal of the credit for the expansion and prosperity of the C. L. A. He was ever watchful of the interests of the lumbermen and anything that pertained to our great pioneer calling. In his successor, Mr. R. L. Sargent, we have an energetic and active young man, who is thoroughly familiar, not only with transportation problems and general routine work of the office, but who has also managed to get a splendid grasp of secretarial duties. I am sure that he will prove a worthy successor to our late secretary.

The Next Convention in Buffalo

The Canadian Lumbermen's Association is broad in its outlook and wide in its vision. It is no narrow, secretarian body but has become international in character and standing. Two years ago, at the annual gathering in Toronto, two American directors were elected and today we have about thirty representative firms in leading cities in the United States who belong to our body. These concerns are large buyers of Canadian lumber and a number of them market their product in this country. In recognition of the friendly relations which have always existed between Canada and the United States,

it is gratifying to see the lumbermen keep pace with the times.

Another evidence of the tolerant, friendly spirit which prevails, is evidenced by the fact that a hearty invitation was extended to us, at our last convention in Montreal, to assemble in Buffalo in January 1924 for our sixteenth annual gathering. This invitation came from representative lumber and commercial Associations and was unanimously accepted by the Board of Directors and concurred in by the membership. The date of the next annual meeting is January 30-31.

Possibly it may be thought by some shortsighted and prejudiced persons that Canadian lumbermen, holding their big session in a United States city, were overlooking the claims of their own convention centres, but, when it is remembered that the C. L. A. has met several times in Ottawa, Montreal, Quebec, St. John and Toronto, no objection can be offered to accepting the invitation of the Buffalo Chamber of Commerce, the Buffalo Lumber Exchange, White Pine Association of North Tonawanda and other bodies.

Importance of Lumber Trade

These influential organizations of America have paid a distinct compliment to Canada in inviting the Canadian lumber parliament to meet in the border city. The sessions will be held in the new Statler Hotel, which is one of the finest in America. In passing it might be stated that Canada has at different times welcomed American conventions who have taken advantage of the beauty and attractions of the Dominion to gather here for their deliberations. The mingling and intermingling of our business men and citizens evidences the cordiality existing between the people of Canada and those of the United States and it is, when representative bodies ignore boundary lines, that brotherhood has its widest sweep and co-operation its strongest expression and there is real reciprocity of sentiment, thought and outlook.

The sale of wood products in the shape of lumber, pulp and paper, to the United States is growing every year and showing constantly heavy increases. It is not my intention to go into statistics which are available to all, but I desire to state that it is the export of the products of the forest which is doing more than any other agency to preserve our trade equilibrium, keep down the rate of exchange and uphold the dignity and the value of our Canadian dollar.

There is, in my opinion, too much disposition today to criticize the lumberman and to imagine that he is a "timber baron" or a "millionaire operator." These terms are too freely bandied about by the people who give little thought or heed to the vast undertakings which the lumbermen have in hand. The latter must all be men of vision and strong faith, not only in their own ability but in facing the various elements which play so large a part in the success of logging activities. Lumbering is the most hazardous of all undertakings and the profits are the longest in arriving. The lumberman must be a man of far-flung vision. The logs that he cuts this fall may not be converted into the finished product for two years and until the dry lumber is sold, no money comes into the treasury of the operator.

But it is not my intention to talk shop. I have been asked by the editor of the "Canada Lumberman" to say something regarding the general situation and outlook. What are the hampering features of business today? Now and then it is asked "what is wrong with the lumber industry?" Prima facie, there is nothing wrong with it at all but there are several contributing causes which might be ameliorated, in the sales tax, levies by the Workmen's Compensation Board, heavy freight rates, increasing timber dues, the demands of labor, inefficiency of lumber-jacks, the wide destruction of limits by the budworm and other pests and, last but not least, the menace and devastation of forest fires.

Urgency of Better Fire Protection

To deal specifically with each of these would take up too much of your valuable space, but on certain points outlined I feel very strongly, particularly with respect to fire protection. When it is considered that the most expert information shows that ten trees have been wasted by human-set fires to every tree that has been utilized in the service of the Canadian people, it is time that our governments and other public bodies were aroused to action.

What the upkeep of our forests and their perpetuation mean, not only to the present but succeeding generations, is almost beyond human ken. The consumption of wood is increasing all the time but supplies are growing scarcer and more remote and the day of cheap lumber has passed. New conditions have to be faced and new methods employed. We can no longer be prodigal or indifferent in this matter as the days

(Continued on page 59)

The Days of Cheap Lumber Have Passed

Old Timers in the Ottawa Valley District Declare Lumber Will be Prized Product in Another Decade or Two

By Everett Andrew

Lower priced lumber—that much talked of and visionary commodity, which, of late years and particularly today, is occupying a foremost place in the eye of the general public, is as far distant as ever, so far as can be ascertained by preparations which are under way for the logging and camp operations of Ottawa Valley lumber companies for the woods season of 1923-24.

A survey of the situation shows that there is little or no chance of operating costs in the woods coming down, and the likelihood is that they may be higher than a year ago. If the latter through time proves correct, lumber values cannot go down and may have to go higher. If they do not, it will be time for the lumbermen to go out of business, or function as benevolent martyrs to a consuming public, whose general refrain, regardless of actual conditions, has been "give us cheaper lumber."

The lumberman are quite content and prepared to take a fair profit, and provide cheaper lumber, if their critics can show them in actuality, how it can be done. In other words, if the public knows more about the trials, hardships, and ups and downs, of a lumber manufacturer, than he knows himself, let the public come up and provide the remedy, and the lumberman will deliver the cure.

The outlook in the Ottawa Valley for cheap lumber, unless some unexpected miracle arrives, and it has got to be a "really truly" miracle, is that lumber costs to the public will never get back to old days. In short, veteran lumbermen with all their years of operating experience and knowledge are at a loss to re-establish the old order of things. The old order has first got to be established, before costs permitting cheaper lumber can even be dreamed of.

Combination of Factors Exist

Notwithstanding an outlook which is none too favorable, the Ottawa Valley Lumber manufacturers are going back into the woods this season with the purpose, it generally seems, of getting out as many, if not more, logs than they did twelve months ago. Some companies have not as yet got their money back, or even their logs in the mill-pond, for an expenditure which they made on similar operations twelve or more months ago.

"It would make a very nice story if you could follow a lumberman's dollar around from the time it leaves his pocket till the time he gets it back," was the comment of one manufacturer.

The chief feature of this year's camp operations as the lumbermen see it is the upkeep in the cost of camp supplies and the apparent advance in wages, part of which has already evidenced itself and the extent of which is not yet fully known. Wages for the bush have jumped five dollars per month over last year. Men as is usual at this time of year are scarce, but the prospect seems that there may be still a further advance in pay before the camps are filled.

The wages already offered for bushmen for this season's operations while on a striking average the lowest since 1916, are considerably higher than those paid in 1914 and are much higher than those of 1915. To go back even further they are higher than those paid for the season of 1912-13.

The advance in wages alone is not the serious part of the bush operations or what is taking up the secret spare time of lumbermen. Production and efficiency in the woods are the two chief calls, if profits are to be made and the cost of lumber kept where it is or only slightly higher.

Only Fifty Percent Efficient

The efficiency of labor offering for the woods camps and engaged at existing wages, since 1916, is estimated as one half or fifty per cent of old time efficiency, from a production standpoint, of the woodsmen of ten, fifteen, or twenty years ago. The names of companies agreeing to this statement are withheld. It is however a generally recognized fact.

Taking such an affirmation to be correct the wages of from thirty-five to forty-five dollars per month, with board, (and board nowadays in lumber camps is no mean item), represent only one half of what an old woodsman should have received considering his efficiency and production. Therefore, today it is evident lumbermen expend from \$70 to \$90 per month and board two, instead of one man, with better fare than old woodsmen ever thought of, to get as much work done as a good woodsman did ten or more years ago. Is it any wonder that the price of lumber has gone up? The end fortunately for the lumber operator is not yet.

Ever since the beginning of the European war real old time lumbermen, who knew their game, have been growing remarkably scarce. So scarce in fact are they becoming that they are looked upon in some camps as modern curiosities, some are really old, but when it comes to production they are there, and the scoffers about old age, are woefully behind when the log count for the day is made.

Replacement squadrons of alleged woodsmen are being shipped into the camps this

year the same as they have been since 1916. The lumber companies cannot apparently do anything else, and while they know beforehand they are not going to get the production they want as compared with the money expended, they have simply got to put up with it. There is perhaps no other industry in Canada that has been hit as hard by the war, as the lumber industry.

While good woods management has prevailed in the majority of instances, the production of the class of men, who are performing the work is not there. This, in a large measure, is shown by log production and if one wants to look further open the chapter of 15 or 20 years ago and find quality log production. Volume in a measure is coming from the woods today, but is a long way from being the old time quality stuff,

The time and effort of many scores of men in the woods this winter will be utilized in sawing and felling trees according to new governmental regulations, which all operators are well acquainted. In the new order of things trees have to be felled according to certain standards. This in brief results in poorer quality lumber having to be taken out by the operator, whereas in the old days he took the good stuff and left the poor behind. It is going to cost the lumbermen this year thousands of dollars in wages to get out poor quality stock, which, after it is manufactured, they can only hope to collect a small margin of profit. Still the government says this has to be done and the lumbermen have no alternative but to put up with it. Aside from newer regulations as to cutting, etc., the operation of the Workmen's Compensation Act, is another piece of legislation that is certainly not tending to make lumber any cheaper to the consumer.

New Standard Cutting Regulations

The cost of operating the camps this year will be about the same as last season so far as supplies go. Flour, hay, and pork, three of the principal commodities, show indications of being slightly cheaper than a year ago. During the last 12 months the action of the Canadian Government in regard to prohibiting the use of oleomargarine will mean that for this season's operations the companies will have to furnish butter at a cost of from 30 to 33 cents per pound. Some companies last season used from three to four tons of oleomargarine which they were able to obtain at from 18 to 20 cents per pound.

The following table showing the cost of some of the principal commodities entering into the costs of camp operations gives some idea of the increased cost of lumber production of Ottawa Valley Companies.

In addition to these commodities there are also a variety of other foods, prunes, jams, honey, syrup, molasses, etc., which have to be supplied to meet the present day desires of workers. For this year's operation the prices of these have not showed a great deal of change, and the amount involved by it will scarcely effect the major cost of the operations. Chains, axe handles,

				8.00- 9.00	
				26- 30	

peavies, etc., are also higher than before the war.

Bush Wages During the Last Decade

A summary of the wages paid for woods workers from 1913-14, also reveals that labor costs are still considerably higher than in the pre-war days. The wages which have been paid since the season of 1913-14 are as follows:

1913-14	\$18 to \$26 per month and board
1914-15	26 to 35 per month and board
1915-16	35 to 42 per month and board
1916-17	50 to 60 per month and board
1917-18	50 to 60 per month and board
1918-19	55 to 65 per month and board
1919-20	65 to 75 per month and board
1920-21	26 to 32 per month and board
1921-22	30 to 35 per month and board
1922-23	35 to 45 per month and board

Big Sawmill at Cutler is Burned

The large and well-equipped sawmill of the Spanish River Lumber Co., Limited at Cutler, Ont., was burned to the ground recently. The blaze originated from a hot box on the lower pulley of a band mill early in the morning and the flames spread rapidly to other parts of the structure. Cutler is about midway between Sault Ste. Marie and Sudbury and a progressive lumbering centre in the Algoma district. The mill which was operated both day and night this season was built in 1915, the former one having been destroyed in the spring of that year.

A unique feature of the Cutler mill was that the entire foundation was constructed of concrete. The mill was equipped exclusively with band saws, making it one of the most modern and up-to-date plants on the north shore. It had excellent shipping facilities both by rail and vessel and had two single-cutting Waterous 8-foot band mills, with Prescott carriage, two 11-inch gun shot steam feeds and lumber sorting table, furnished by the Waterous Company; a Mershon 7-foot vertical resaw and a Diamond Iron Works 6-foot horizontal resaw. The plant had a capacity of 125,000 feet in ten hours. The mill was a frame building, 56 feet x 216 feet, with an addition for a lath department 36 feet x 80 feet, and a sorting shed and table 30 feet x 224 feet. There was also a complete filing room equipment and a miscellaneous assortment of live assortment rolls, transfers, etc.

The company also own another plant at Spanish Mills, situated at the eastern end of Aird Island, about eight miles distant from Cutler. This mill, which will be put in operation at once to complete the season's sawing was built many years ago and at different times has been extensively remodelled. The capacity of the plant is about 190,000 feet in ten hours and the equipment includes a Waterous single-cutting band mill, a Diamond Iron Works twin band, Wickes gang, Prescott rift edger and Diamond Iron Works horizontal resaw.

The officers of the company are B. W. Arnold, of Albany, N.Y., president; W. J. Bell, of Sudbury, vice-president and general manager, and M. T. Raymond, Albany, N. Y., sales-manager. A. J. McDonald is the secretary-treasurer of the company, and J. A. Ferguson, of Massey, where the logging headquarters of the organization are located, is in charge of the entire woods activities.

The loss on the mill is about \$150,000, and is covered by insurance.

B. F. Rogers, of Burk's Falls, who was head filer in the mill, lost his life in the fire. He was a returned veteran.

Northern Sawmill Destroyed by Fire

The sawmill belonging to the Fesserton Timber Co., Toronto, and located at Krugersdorf in the Temiskaming district, a few miles north of Englehart, was burned to the ground recently. The blaze broke out at midnight from some unknown cause and the structure was completely destroyed. The lumber, which was piled some distance away, escaped. The loss is about \$35,000, and partly covered by insurance. The mill was a circular one, built three years ago by the Fesserton Timber Co., and had a cutting capacity of 40,000 feet a day and its destruction came at a particularly inopportune time as the company had about a million and a half feet of jack pine and spruce logs in the water yet to be sawn this season. It will be impossible to get them attended to elsewhere owing to the distance from other mills.

It is understood that the Fesserton Timber Co. will shortly erect a new sawmill at Timmins, Ont., and negotiations for a suitable railway siding have been going on for some time.

Hoo-Hoo Holds Annual at New Orleans

A notable meeting was the Hoo-Hoo annual which took place recently in New Orleans, La. There was a representative attendance from all sections of the country and of all branches of the industry. The sessions were marked by much enjoyment and enthusiasm.

During the convention a telegram arrived announcing the death of W. A. Hadley, of Chatham, Ont., a former snark of the universe, and one of the most beloved members of the Order. Mr. Hadley had a short time before his death referred to the Concatenated Order of Hoo-Hoo, a subject which was very dear to his heart.

Snark of the universe Dickason could not conceal his emotion as he read the death message. The meeting was instantly thrown into mourning and various delegates arose and paid brief and touching tributes to the memory of Mr. Hadley. A prayer was offered for the deceased member and Mr. Dickason appointed a committee to make arrangements for paying respects to Mr. Hadley's memory.

Minneapolis was chosen as the convention city for 1924 and the following officers were elected for the coming year:—

C. D. LeMaster, of Fresno, Calif., snark of the universe; George

J. Osgood, Tacoma, Wash., senior Hoo Hoo; A. J. Hager, Lansing, Mich., junior Hoo Hoo; J. H. Allen, St. Louis, Mo., bojum; T. T. Jones, Minneapolis, Minn., scrivener; J. A. Mahlstedt, New York, jabberwock; C. B. Harmon, Atlanta, custocatian; J. H. Kurth, Jr., New Orleans, La., arcanoper; G. C. Hemmingway, Colorado Springs, Colo., gurdon.

Resolutions adopted placed the Order squarely behind law enforcement, one of these being obviously aimed at violations of the eighteenth amendment, as follows: "Whereas we stand for loftiest citizenship and most unquestioned obedience to law of land, and being conscious of growing lawlessness and contempt of authority, therefore, be it resolved that our entire membership be called on to pledge itself to the fullest maintenance of all laws and regulations—for this is the essence and safeguard of true citizenship."

An amendment was adopted to the by-laws prohibiting the serving of liquors at any session of the Order or any meeting under its auspices and forbidding the initiation of the presence of any candidate or member while under the perceptible influence of liquor.

Another resolution provided for the order's fostering of reforestation by setting aside 160-acre tracts in each of the nine jurisdictions throughout the country for experimental purposes. A resolution provided a contribution of \$99.99 for the Japanese earthquake relief.

Other resolutions expressed warm gratitude to the trade press for its efforts on behalf of the Order and the industry, to New Orleans committees for providing such splendid entertainment and to various officers for distinguished services.

The secretary, H. R. Isherwood, of St. Louis, Mo., presented an encouraging report. He expressed the gratitude over the growth of the Order and predicted that the time would come when the lumber industry would be 90 per cent. Hoo-Hoo and Hoo-Hoo would be 90 per cent. lumbermen. During the past year 1,240 new members were initiated, while about 500 members were reinstated. The present membership consists of over 7,000,—65 honorary members, 180 honorary life members, 76 life members and the remainder ordinary membership.

More Timberlands are Disposed of

The Shevlin-Clarke Lumber Company, Fort Frances, were recently the successful tenderers on nine square miles of timber lands between Clear Water, and Trout Lakes, Rainy River. For red and white pine they will pay \$3.05 per thousand; jack pine, \$2.50; spruce logs, \$2; spruce pulp, 80 cents a cord; other pulp, 40 cents; fuel wood, 25 cents, all prices inclusive of usual Crown dues.

The Pigeon River Lumber Company Port Arthur, was successful bidder on 13 square miles of burnt-over area in McGregor township, Thunder Bay, receiving cutting rights for \$9.50 per thousand on pine timber; \$7 on spruce timber; \$1.65 a cord on spruce pulp, and 80 cents a cord on other pulp.

Marked cheques were received from each of the successful bidders.

Quebec Restores Old Rate of Stumpage

The 1920 tariff of stumpage which is the highest enforced in Quebec and has been suspended for the past two seasons, will be in operation again this year, in the Province of Quebec. The regions affected by forest fires which, however can still be exploited, will benefit by a reduction of 50 per cent. on the tariff. Renewed activity in the lumber business and a general improvement in conditions are said to have warranted this move on the part of the Government which will bring in increased revenues.

The 1920 tariff was only enforced for the season of 1920-21, its enforcement having been suspended successively in 1921-22 and 1922-23 at the request of the lumbermen, who pointed out that the industry was in such a condition that the new tariff would prevent the operation of many camps and that the 1918 tariff would still bring sufficient revenues with possibilities of exploitation on a larger scale. Last year, there was talk of closing the lumber camps at first, and the Government decided to offer to maintain the lower tariff under the understanding that the camps would be kept in full activity to relieve unemployment. This agreement was carried out and a record year was finally recorded.

By granting a reduction of nearly 50 per cent. on the 1920 tariff on burnt timber, the Government expects to encourage timber limit holders to exploit these affected reserves more than the whole forestry limits and thus preserve a large area of timber.

Forecasts are that notwithstanding the fact that the cutting of timber has begun earlier than usual this year and that great activity is reported in the lumber camps the cutting will not be much over the average. Wages of lumberjacks are said to be taking a serious rise, which may reduce the activity in some camps.

Montreal Wholesalers Adopt Grading Rules

Idea is to Obtain More Uniform Method and to Secure Definite Understanding Regarding Grades of Spruce, Hemlock and Other Forest Products

The Montreal Wholesale Lumber Dealers' Association, at its monthly meeting on September 20th, adopted grading rules for rough spruce, balsam, jack pine, red pine, merchantable and cull hemlock, 4 in. and up and 6 ft. and up. The rules were drawn up by a committee consisting of Messrs. J. S. Bock, C. Villiers, W. B. Blair, G. M. Strong and O. Page. Although they are primarily intended for the use of the Association's Arbitration Committee, it is hoped that they will be adopted by the Quebec mills. The rules will be printed in book form in English and French.

The meeting discussed the rules in detail and made slight alterations to the report of the committee. The following took part in the discussion:—Messrs. Bock (who presided); W. B. Blair; F. W. Hutcheson; C. McDonald; J. Bennett; A. Beaudette and G. Church.

Mr. Bock pointed out that the rules did not change the present practise, the report simply reduced them to a written form. The idea was to obtain a uniform method of grading and also to secure, when making a contract, a definite understanding as to the grades. As they were aware, the Canadian trade had adopted the National hardwood rules because there was a necessity for it. The Association rules, when put into book form, could be sent to the mills and to customers and he believed that they would tend to the elimination of friction and expense. The grading in some of the larger mills varied and the rules might advantageously be used by these producers.

For Rough Spruce and Other Woods

The following are the rules for rough spruce, balsam, jack pine and red pine, Deals,—Planks and boards, 4 in. and up, 6 ft. and up.

1st Quality—To be sound, good grained and of a good appearance, a few solid knots on one edge, $\frac{1}{2}$ " to $\frac{3}{4}$ " diameter, one to three in number allowed. Four to six solid knots of the same size could be allowed on one face provided these knots are so situated that they will appear only on one side of a 3 in. piece. Moderate wane shall not prevent a good piece to be classified a 1st. qual. say $\frac{1}{2}$ in. if running both sides of the piece for about one third of the length, and $\frac{3}{4}$ in. if the wane is running on only one side. If clear firsts are requested, pieces with knots of $\frac{1}{2}$ in. to $\frac{3}{4}$ in. are generally eliminated but knots of $\frac{1}{4}$ in. and $\frac{3}{8}$ in. are allowed. Pieces of 12 ft. and up by 9 in. and up will carry more than pieces under these sizes.

2nd Quality—To be sound and of a good appearance, same as 1st quality. A few solid knots $\frac{1}{2}$ in. to $\frac{3}{4}$ in., two to four, could be allowed on both edges, also four to six solid knots $\frac{5}{8}$ to 1 in. could be allowed on both faces. It all depends on the knots, their peculiar position and the size of the piece. Moderate wane is also allowed, say $\frac{1}{2}$ in. to $\frac{5}{8}$ in. if its runs on both sides for half the length of piece, 1 in. if it runs on only one side.

3rd Quality—To be sound and strong, several good knots varying in number and sizes allowed, slight heart shakes on one face of a piece allowed, both ends to be free from splits and shakes. Moderate wane according to size and quality allowed, few worm holes could be allowed provided they do not cross a piece entirely, red discoloration, if sound, is no defect and is allowed.

4th Quality—To be sound, same as 3rds and better, numerous large and solid knots on both faces and edges allowed, slight gum seams and moderate heart shakes on both faces of a piece allowed, but both ends of the piece to be solid, red discoloration, if sound, is no defect and is allowed, a few worm holes could be allowed on both sides, provided a piece would have been better than 4th Qual. without them.

5th Quality—Shall be pieces not coming within the definition of the 4th and better and which, in the opinion and judgment of the culler, are good and strong pieces. Any amount of solid and sound knots of all sizes allowed. Hard red and the end of a rot allowed. Moderate gum seams from one end to the other and heart shakes allowed, several worm holes can be allowed but they must not affect the solidness of the piece. Hard red, if solid can be allowed on both faces and full length. Wane to be allowed in proportion, consideration being given to quality, providing the wane will not prevent the piece from matching equal edges.

6th Quality—Although being of inferior quality these 3 in. pcs. require more attention than the others on account of having to bear all the defects excluded from the other grades and yet have to be

presentable as a good merchandise. However, this quality is a valuable one and if attended to carefully, will be praised in consideration of being cheaper. 6th quality should be a good piece, soft, red, the end of a rot allowed, real rot at the ends to be butted off, gum seams and heart shakes allowed from one end to the other, rotten knots of all kinds and unlimited number allowed, numerous worm holes allowed, more wane is generally allowed for 6ths than for the other qualities, but if a piece is just good enough for a 6th without wane, same proportion in allowing for wane must be taken into consideration. Although defects of all kinds such as soft red, gum seams, wind shakes, worm holes, bark, etc., can be allowed to a certain extent none of these, defects to be so detrimental as to render the piece useless.

Same rules to be observed for lumber under 3 in. always keeping proportion for each thickness, each width and the peculiar nature of the wood.

Hemlock Grading Rules

Rules for Merchantable and Cull Hemlock 4 in. and up—6 ft. and up.

Merchantable Hemlock. To be sound, numerous large and solid knots on both sides and edges, slight gum seams and moderate heart shakes on both faces of the piece allowed, but both ends of the piece must be solid, discoloration if sound, is no defect and shall be allowed. Wane—twenty-five per cent of the thickness one-third of the length on two edges or the full length of the piece if only on one edge allowed.

Cull Hemlock shall permit of soft red (the end of a rot) allowed, real rot at the ends to be butted off, gum seams and heart shakes allowed from one end to the other, rotten knots of all kinds and unlimited in number allowed, defects of all kinds, such as soft red, gum seams, wind shakes, wane and bark can be allowed to a certain extent, none of these defects however to be so detrimental as to render the piece useless.

May Form an Export Section

The question of the formation of an export section was discussed. The idea is to interest overseas exporters in the Association, and, with that view, to form a small section which could deal with questions of special interest to those shippers. Some exporters are already members of the Association. Messrs. P. O. O'Brien, Bennett and Stearns were appointed a committee to consider the desirability of such a section and to interview the representatives of export firms.

Attention was again called to the desirability of all members of the Association enforcing the credit terms recently adopted.

C. A. Labrecque, Montreal. Newly appointed Secretary of the Province of Quebec Retail Lumber Dealers' Association.

Inspector Milne is Doing Good Work

Robert Milne, Ottawa, Ont.,

It is a very isolated settlement in Northern Ontario where they do not know "big Bob Milne," inspector of the Lumbermen's Safety Association, whose headquarters are in Ottawa. Mr. Milne has a smile and a cheerful word for everybody and his visits are always welcomed in the lumber camps and the sawmills. He is a practical man and is well known in the lumber business, having held several important positions which he faithfully filled. In the manufacture of lumber and the operating of plants he is regarded as an expert.

A Canadian by birth, R. F. Milne first saw the light of day in Chelsea, Que., and obtained his education in that village and in the Ottawa Collegiate Institute then known as the

Grammar School. He served an apprenticeship with Gilmour & Co., Gatineau Mills, Que., and was with them for fifteen years, working up to the position of general superintendent and, after eight years' service in that position, he resigned in 1890 and went with McLachlin Bros., Arnprior, with whom he remained nineteen years. He was for several years mechanical superintendent for the firm. In the fall of 1909 Mr. Milne journeyed to Waldo, B.C., where he was general superintendent of the Baker Lumber Co. When war broke out he resigned and came East. This was in 1915 when he was immediately appointed inspector of the Lumbermen's Safety Association covering the province of Ontario. Mr. Milne is in the field practically all the year round. In the summer months he is inspecting sawmills and during the winter he visits the lumber camps and inspects the sanitary conditions, etc. He is, possibly, the only industrial inspector giving instructions in First Aid work. This was started as an experiment and has proved to be of inestimable value to employers and employees in both camps and mills. Mr. Milne's many friends will wish him many years of active service in the effective work in which he is engaged.

Pitwood from Canada for South Wales

As a result of a recent visit to Canada of two managing directors of an important Cardiff firm of colliery owners who in addition control a fleet of 39 vessels, a shipment of 3,000 tons of pitwood from Nova Scotia is about to be sent from Halifax to South Wales, says Acting Canadian Trade Commissioner, Douglas S. Cole, in a recent communication to the Department of Trade and Commerce, Ottawa.

Some few shipments were made during the war, but this is believed to be the first delivery under normal conditions of Canadian pitwood to South Wales, and provided supplies and prices can be maintained, marks the beginning of what may develop into an important trade. It is anticipated that the firm above referred to will themselves be able to utilize in their own mines as much pitwood as can be exported from Nova Scotia.

This cargo of 3,000 tons was purchased at \$8 per long ton c.i.f. Cardiff, and consists of wood ranging in size from 6½ feet to 9 feet with a small amount of 11 feet and 13 feet, diameter ranging from 2½ inches for the shorter lengths to 9 inches for the 11 feet and 13 feet lengths. In view of the low ocean freight rates ruling between Bristol Channel ports and Canada, and the fact that this pitwood will be return cargo for Welsh coal shipped to the Dominion, an opportunity to compete with Continental countries presents itself which did not heretofore exist. As was pointed out in a report from this office published recently, the pitwood must be of good straight larch or fir cut in sizes of 6½ feet, 9 feet, 11 feet and 13 feet lengths with the diameter at the small end from 3 inches in the smaller wood to about 7 inches in the longest. Prices should not exceed \$6.50 per long ton free on board, stowed at Montreal, Quebec or similar port. It will be useless for shippers to attempt to bring wood from places necessitating a long rail haul, as this would kill the business.

Scandinavia is the source from which South Wales in the past has obtained the best of its supplies. The wood which is imported into Cardiff, Newport and Swansea from the Bay of Biscay and Portugal is for rougher and less important work: when the price of Canadian wood becomes proportionately as cheap for the work done, the firm referred to will not hesitate to use it in preference to French

and Portuguese wood, especially in view of their developing trade for Welsh coal with Canada.

There are two classes of timber used in the South Wales coal fields. First, pitwood is timber with the bark on in sizes already given. (This timber is sold by weight per long ton.) Second, pit props, as known to South Wales, is free of bark and sold by measurement, per fathom, according to the top diameter. Suitable lengths are 4 1/2 feet, 5 1/2 feet, and 6 1/2 feet.

The following are the returns of the registered quantity of pit props and pitwood imported into Cardiff, Newport, Port Talbot and Swansea during the years 1920, 1921, and 1922:

1920	1921	1922
Loads	Loads	Loads
1,054,283	775,283	1,550,226

Note.—To bring loads into tons deduct one-fifth. Thus 100 loads is equivalent to 80 tons.

The imports during 1922, it will be noted, show a heavy increase over the previous years, although any comparison between 1921 and 1922 is inconclusive, owing to prolonged colliery strikes in the former year. France maintains a very strong lead, and Portugal is in the second position, Newfoundland's shipments were just under 30,000 loads in 1922. Russia is no longer a competitor.

The average price for last year was approximately 31s. 6d. (\$7.43 at \$4.72 exchange to the pound sterling) per long ton ex ship. This average compares unfavourably from the exporter's view with an average price of 60s. (14.16) ex ship in 1920 and 45s. (\$10.62) in 1921. The reduction in the price of mining timber has been a big factor in lowering the cost of coal produced at the mines. Freights on pitwood cargoes varied between 8s. (1.89) and 12s. \$2.36 per ton from Bordeaux to the Bristol Channel during the last calendar year.

Canadian firms or individuals may obtain a general list of Welsh importers of pit props and pitwood as well as the names of the Welsh colliery owners at present importing Canadian pitwood on application to the Director of the Commercial Intelligence Service (file No. 21971). Quotations in Canadian currency f.o.b. Canadian port forwarded to the Bristol office will be placed before the South Wales trade.

New Lumber Concern Operating in Thorold

The McCleary Lumber & Coal Co., Limited, of Thorold, Ont., was recently granted a provincial charter to deal in lumber and coal, both wholesale and retail. The company has taken over the coal business of A. Martin & Son, of Thorold, Mr. Adam Martin, Sr., being on the board of directors of the new organization. The firm will handle lumber, millwork, fuel, building materials and has the agency in the Niagara district for the Sterling Roofing and Paint Products Co. It is the intention in the near future to erect a planing mill. A. E. Kaiser, of Park Falls, Wis., is the president of the organization; F. W. Moore, Thorold, Ont., vice-president, and L. B. E. McCleary, of Thorold, secretary-treasurer.

Mr. Kaiser, the head of the concern, was for many years office manager for McCleary & McLean, who were lumber manufacturers with mills and yards at Thorold. Some years ago Mr. Kaiser went to Wisconsin and engaged in the manufacture of lumber. He has built up an extensive business, at the present time owning large holdings and having a well equipped sawmill for the manufacture of his timber. He has also a line of retail yards in Wisconsin with headquarters at Park Falls.

Mr. Moore, the vice-president of the company, is also vice-president of Exolon Co., with plants at Thorold and Blaisdale, N.Y.

Mr. McCleary, secretary of the McCleary Lumber & Coal Co., is a son of the late William McCleary of McCleary & McLean already referred to. He was brought up in the lumber business in his father's firm and, after the death of the latter, conducted the business for some years, later going to Minnesota where he engaged in the manufacture of lumber. Mr. McCleary returned to Ontario in 1915 enlisting in the Canadian army. He will have charge of the company's activities at Thorold.

One of the real old-timers of the city and district visited New Westminster, B. C., recently in the person of Robt. T. Williams, Victoria, who spent some time with friends recalling old scenes in the city and vicinity, of the days when the present site of Vancouver was not much more than a logging camp. Mr. Williams first settled in Delta on the land which is now held by the Kitson family, having drained and ditched the farm. He had for his hired man the present prime minister, Hon. John Oliver. Until recently, Mr. Williams was the owner of 108 acres in East Delta and Surrey adjoining the old Morgan property, on which land is still one of the best stands of timber left remaining close to New Westminster. It was for the conveyance of this land, which, by the way, was crown granted to him in 1868, that he came here.

Proposed Regulations Under New Sales Tax

Minister of Customs and Excise Requests Conditions be Studied and Any Suggestions Promptly Made—Comment of Those Interested Asked

The federal government has issued a draft of the proposed regulations under the new Sales Tax Act; which will come into operation on January 1st next. These regulations, signed by R. R. Farrow, Commissioner of Customs, are not final and are issued for the purpose of securing the comment of those interested. The Minister of Customs and Excise asks that any suggestions should be promptly made.

It will be noted that there are in these tentative regulations no clauses which will meet the former criticisms of representatives of the lumber trade to the effect that the Act was cumbersome, complicated and a burden to industry, especially in the method of collecting the tax. As the regulations stand, they will entail considerable expense and labor on the part of those engaged in Canadian commerce.

The following regulations are hereby established, under authority of Subsection 7, Section 19, of the Special War Revenue Act, 1915:

Licenses

(a) The annual fee for a license required under this Act shall be \$2, payable on the 1st day of April in each fiscal year.

(b) The Collector of Customs and Excise of the Port where the Head Office of a licensee is situated may, upon application therefor, issue certified copies of the license, for the branches situated in other Ports. Such certified copies shall be forwarded by the Collector of Customs and Excise at the Port where the license was issued to the Collector at the Port where the branch is situated there to be recorded and delivered by him to the branch office of the firm.

(c) Every licensed manufacturer, when purchasing or importing goods, to be used in, wrought into or attached to articles manufactured or produced by him for sale, and which are goods subject to the consumption or sales tax, shall quote his license number and certify on the order or entry that such goods are to be used in, wrought into or attached to taxable articles manufactured or produced by him for sale. A licensed wholesaler purchasing or importing goods for resale shall quote his license number and certify on the order or entry that such goods are for resale.

(d) Licensees shall not quote their license number nor give a certificate as above when purchasing or importing plant equipment, articles or goods for their own use and not for resale. Licensed manufacturers, when purchasing or importing goods for resale only in condition as purchased, shall not quote their license number nor give the above mentioned certificate.

Licensed manufacturers shall not quote their license number nor give a certificate as above when purchasing or importing goods to

be used in, wrought into or attached to articles specified as exempt from the Consumption or Sales Tax.

Returns and Payment of Tax

(a) Every one subject to license under Section 19 BBB of the Special War Revenue Act shall make a monthly return showing the total amount of his taxable sales, and the tax payable thereon.

(b) Each such return shall be delivered to the Collector of Customs and Excise with an accepted cheque or cash, covering the amount of the tax, on or before the last day of the month next succeeding the month covered by the return. Cheques shall be made payable to "The Collector of Customs and Excise."

(c) The monthly return shall be made on a form prescribed by the Commissioner of Customs and Excise and shall be sworn to before a proper Officer, of Customs, Justice of the Peace or Commissioner for taking affidavits. Certificates in the following prescribed from Chartered Accountants or independent Auditors, endorsed on the face of the return may be accepted in lieu of the declaration of the licensee; and a person, firm or corporation located at a point where no Officer of Customs and Excise is situated may, if the return is for an amount of \$10 or under, likewise endorse on the face thereof a certificate in the following terms in lieu of the statutory declaration:—

"I do hereby certify that the above amount truly represents all the tax accrued upon sales of merchandise, as imposed by law."

(d) Return shall be delivered to the Collector or Sub-Collector of Customs and Excise at the Port or Outport where the licensee is located.

(e) Persons, firms or corporations operating with Offices or Branches in more than one locality shall deliver the return covering the sales by the Head Office at the Port or Outport where such Office is located, but the returns covering the sales by the branches shall be delivered at the Port or Outport where each branch is located.

(f) Returns delivered to Ports shall be in triplicate and to Outports in quadruplicate. A copy of the return is to be stamped by the Cashier and returned to the licensee, who shall keep such copy on file for a period of not less than three years: one copy of the return is to be retained at each Port and Outport, the original to be forwarded to the Department with the Excise Tax Cash Sheet.

(g) Returns shall be signed by the proprietor or a partner of the business, President or Secretary-Treasurer, of a company, or by any person duly authorized by Power of Attorney to sign on their behalf. When the return is to be signed by a person other than the proprietor, partner, President or Secretary-Treasurer, Power of

On the right and left are interior views of rooms in the British Columbia bungalow shown at the Canadian National Exhibition, Toronto. In the centre is seen the exterior of the attractive dwelling and several lines of forest products. Practically every western wood is represented in the various panels, flooring, ceiling and trim of the bungalow

Attorney executed in due form shall be filed with the Collector of Customs and Excise.

(j) The return delivered by a licensed wholesaler shall show the amounts of the non-taxable sales and the taxable sales separately and the amount of the tax payable.

Dominion of Canada Bonds given as security provided for in section 19-BBB, subsection 7.

When Dominion of Canada Bonds are tendered as security by a licensed wholesaler, they shall be accompanied by a written assignment to the Commissioner of Customs and Excise.

Definition of "Substantial Portion" of Goods

When the portion of goods exempt from the tax exceeds 1/3 of the value of all of the materials used in the manufacture or production of goods as referred to in Subsection 3 of Section 19-BBB, the manufacturer shall take out a license and pay the consumption or sales tax on his sales.

Refunds and Deductions

(a) Licensed manufacturers or wholesalers who desire to make application for deduction of the sales tax paid on materials on hand on the 1st day of January, 1924, as provided for in Section 19-BBB, Subsection 8, in respect of goods which have been or are to be used in, wrought into or attached to articles to be manufactured or produced for sale, which articles are subject to sales tax, shall signify their intention of so doing in writing, to the Collector of Customs and Excise on or before the 1st of December, 1923, and shall submit an inventory in duplicate to the Collector of Customs and Excise at the Port in which the business is located, not later than the 31st March, 1924.

Such inventory shall show a description of the goods and trade number, if any, and the quantity and value of each kind of goods, such value being the value upon which tax was actually paid. Each item shall be serially numbered. Goods in transit on January 1, 1924, upon which the tax was paid or payable, shall be regarded as goods on hand.

An exact copy of such inventory shall be kept on file in the office of the licensee. The inventory shall be certified to as true and correct by an authorized official of the manufacturer or wholesaler.

Must Submit Claims Before June

Licensed manufacturers or producers or licensed wholesalers or jobbers who desire the deduction, are required by law to submit their claim for the total amount of the deduction, together with complete evidence, on or before the 30th June, 1924. The claim shall be made in the form prescribed by the Department, viz.: Form No. The total amount of deduction claimed shall be established to the satisfaction of the Department of Customs and Excise, as not being more than the amount of tax actually paid by the manufacturers or producers, wholesalers or jobbers.

The deductions may be made from the tax returns of licensed manufacturers or producers for tax paid on materials used in the manufacture of goods sold during the period covered by the return. The deductions from licensed wholesalers' or jobbers' tax returns may be made as the goods are sold.

(b) When consumption or sales tax has been paid on goods to be used in wrought into or attached to articles manufactured or produced for sale, and which articles are subject to consumption or sales tax, a refund or deduction of the amount of the tax may be made as follows:—

Routine in Deduction Claims

When the claim for deduction or refund is made by licensed manufacturer or producer it shall be accompanied by—

1. The written consent of the wholesaler, jobber or other dealers;

2. The invoice for the purchase of the goods showing the tax as a separate item.

3. A certificate that the goods are to be used in, wrought into or attached to articles for sale, which articles are subject to consumption or sales tax.

When the claim for deduction or refund is made by a licensed wholesaler or jobber, the claim shall be accompanied by:

1. The invoice for the purchase of the goods showing the tax as a separate item;

2. The purchase order bearing the certificate of the licensed manufacturer or producer as to use and his license number;

3. Proof of the delivery of the goods in fulfilment of the order.

When Made by Unlicensed Jobber

When the claim for refund is made by an unlicensed wholesaler or jobber or other dealer, it shall be accompanied by the invoice showing the tax as a separate item and,—

1. The purchase order bearing the certificate of the licensed

wholesaler or jobber that the goods are for resale and his license number;

2. The order bearing the certificate of the manufacturer as to use in manufacture and his license number;

3. Proof of the delivery of the goods in fulfilment of the order.

Claims for deduction shall be made on form No. and Claims for refund on Form No. 15.

(c) Claims for refund of the tax paid on domestic goods exported shall be accompanied by a certified copy of Customs Export Entry and proof of payment of the tax. Claims shall not be allowed on goods sold and used for domestic consumption and subsequently exported.

On Sales Made Prior to May

(d) Claims for deduction in respect of goods sold at a price fixed by bona fide contract of sale made prior to May 12, 1923, shall be accompanied by a certified copy of the contract of sale. Such claims shall show the date upon which the contract was drawn, the quantity, trade number, value of goods deductions allowed or applied for in respect of tax paid on raw materials covered by the contract, dates and quantities of goods delivered on the contract previous to the 1st January, 1924, and between the dates of 1st January, 1924, and 31st March, 1924, inclusive. Claims shall be presented on Form No. to the Collector of Customs and Excise, with complete evidence attached on or before the 30th June, 1924.

The total amount of deduction claimed shall be established to the satisfaction of the Department of Customs and Excise, not being more than the difference between the amount of the sales tax calculated at the rate in force on the eleventh day of May, 1923, and the amount of the consumption or sales tax paid or to be payable on or after the 1st January, 1924.

The deductions may be made from tax returns of licensees as the goods are sold.

Claims for refund under Section 19-G shall be accompanied by satisfactory evidence of payment of the tax and a certified invoice of the sale to the Provincial Government or department bearing a certificate from an authorized official that the goods are not for resale.

Books and Records

(a) Each licensee shall be furnished with a copy of these Regulations and a notice in writing from the Collector of Customs and Excise that by direction of The Honorable The Minister he is required to keep adequate books and accounts in English or French at his place of business in Canada, for the purposes of this Act.

(b) Such books or accounts shall show the details of every transaction of the licensee and shall be preserved by him available for inspection for a period of three years.

(c) Licensed manufacturers or producers, or licensed wholesalers or jobbers who also conduct a retail branch or branches shall keep separate records for each of their branches and the license of such manufacturers, producers, wholesalers or jobbers shall not be used in connection with purchases or importations by the retail branch or branches.

Computation of Tax

In respect of goods subject to consumption or sales tax sold by retail by the manufacturer or producer thereof in Canada, the value of the goods for purposes of the tax will be determined by the Minister of Customs and Excise in each class of cases.

In respect of goods subject to consumption or sales tax sold or transferred by the manufacturer or producer thereof in Canada, to his own wholesale houses, the value for purposes of the tax shall not be less than the wholesale price.

Returnable Containers

Licensed manufacturers and licensed wholesalers, dealing in goods shipped in returnable packages, may make to the Government not later than the end of March in each year an annual consumption or sales tax return as to such packages instead of monthly returns, and the tax so payable to the Government by the manufacturer shall be paid on the difference between the amount charged for the returnable containers shipped during the year and the equivalent amount rebated for containers returned during the same period.

Returned Goods

Where goods are returned as unsatisfactory or damaged in transit and goods of the same value are supplied, in exchange, no charge being made for the goods so supplied, no tax is applicable on the goods supplied in exchange.

Where the articles supplied in exchange for those returned as unsatisfactory or damaged in transit are of greater value, sales tax is collectable on the difference in value as payable by the purchaser.

Where the goods supplied in exchange for those returned unsatisfactory or damaged in transit are of a less value, the amount of tax on such difference may be refunded or credited to the purchaser, if the original amount of tax was charged to him or paid by him.

Wholesalers' Association Resumes After Holidays

"I am glad to see all you gentlemen looking so pleasant and happy after the summer holiday season and I hope now that our meetings have been resumed, you will see that every effort is made to bring out a good attendance," said Chairman A. C. Gordon at the first of the fall monthly gatherings of the Wholesale Lumber Dealers' Association, Inc., held on September 21st.

Following the usual dinner at the Albany club, Toronto, there was considerable business taken up and an interesting and edifying address delivered by Dr. G. W. Ross, of Toronto, on "Medical and Scientific Research, Its Progress and What It has Done for Humanity."

L. D. Barclay, chairman of the Picnic Committee, reported on the recent successful gathering held at Clarkson. A surplus of \$57.28 was reported and the committee was authorized to make arrangements for a dance to be held about the middle of November.

A feeling reference was made by the chairman to the illness of W. E. Bigwood. A resolution of sympathy was passed, on motion of D. C. Johnston and Roy Campbell, and will be forwarded to Mrs. Bigwood. Warm tributes were paid to Mr. Bigwood as one of the most beloved, upright and highly esteemed men in the Canadian lumber trade and the hope was fervently expressed that he might recover to take his place again in the ranks of the industry.

On motion of Hugh A. Rose and F. H. Bigwood, the secretary was instructed to send a letter of sympathy to Mrs. W. A. Hadley and family, of Chatham, Ont., in the death of Mr. Hadley who was widely known in the retail arena and particularly as a former head of the Hoo Hoo organization.

Members Will Discuss Sales Tax

It was decided that at the next meeting which will be held on October 19th, the sales tax should be discussed. The various regulations in regard to license returns and payment of tax, refunds and deductions, computation of tax, returned goods, etc., will be reviewed. This was suggested by A. E. Eckardt, former chairman of the Association, who read a letter from the Tariff Department of the Canadian Manufacturers' Association, stating that the Department of Trade and Customs had been drafting proposed regulations for the administration of the new sales tax which goes into effect on January 1st. The regulations are now coming up for consideration

and it was thought that the lumbermen could profitably devote some time to a discussion of them.

Chairman Gordon brought up the matter of U. S. legislation with respect to the Marking Act as it applies to shingles, requiring the country of origin to be stamped or stenciled on each bunch. The regulation, however, did not apply to lath. Secretary Boulton stated the matter had been referred to Chester W. Martin, U. S. Consular Agent, at Toronto who, in a recent letter, stated that he was enclosing a copy of a communication from the Assistant Collector of Customs at Buffalo, N. Y., quoting a letter from the secretary of the Treasury, dated July 24th 1923, which fully covers the question of marking so far as the law applies to shingles and lath. The letter received by Mr. Martin from H. W. Smith, assistant collector of Customs, Buffalo, N. Y., was as follows:—

"Replying to your letter of Sept. 8th 1923, relative to marking of shingles, I will quote a letter from the secretary of the Treasury, dated July 24th. You are advised that the Department has ruled in a number of recent cases that shingles imported in bunches are required to be marked to indicate the country of origin. Each bunch of shingles is to be regarded as an article within the meaning of section 304 of the Tariff Act, and subject to the 10 per cent. additional duty specified in said section, if not marked at time of importation.

"As to lath, the Department holds that they should be regarded as material and as such are not subject to the requirements of the marking statute."

The evening closed with a splendid address from Dr. Ross who paid high tribute to the members of the medical profession engaged in research work. He briefly but entertainingly traced its extension from the time of Sir William Jenner who discovered vaccine, down to the discovery of insulin by Dr. Banting. He referred to the Foundation Scholarship of a million dollars which it is now sought to establish in Dr. Banting's honor in order that young Canadians might engage in research work. Dr. Ross, who was accorded a hearty vote of thanks, for his able address, by Walter C. Laidlaw and F. H. Bigwood, is a son of Sir George W. Ross, former Premier of Ontario and is widely known in the ranks of the medical men of Canada.

Lumbermen Hold Enjoyable Picnic at Country Club

Enjoyable and enthusiastic was the third annual picnic of the Wholesale Lumber Dealers' Association of Toronto, which was held at the Lake Shore Golf and Country Club, Clarkson, on September 14th. The grounds are ideal for recreative purposes and during the afternoon golf, tennis, baseball and other sports were engaged in. The attendance was large and the competition in the various events exceptionally keen.

The success of the picnic is due in a large measure to the members of the Entertainment Committee of the Wholesale Lumber Dealers' Association, composed of L. D. Barclay, chairman; J. R. Carter, R. G. Chesbro, J. E. Wachter and R. S. Plant, all of whom worked diligently and had the reward of seeing their efforts appreciated.

After spending some hours on the fairways, greens and tennis courts, the company gathered at 7 o'clock for dinner, a large number from Toronto, who were not able to get away in the early afternoon, motored out. A. C. Gordon, chairman of the Wholesale Lumber Dealers' Association, presided and at his right was Frank Oliver, through whose courtesy and kindness the outing was held on the grounds of the Lake Shore Club, of which he is past president. After short addresses from Mr. Gordon and Mr. Barclay, the program for the evening was handed over to Mr. Oliver who proved to be an adept in keeping things on the move.

Several prizes were presented in the golf competition. Miss T. Dunster, of the Canfield-Wilmot, Limited, Woodstock, won the prize in clock golf with a score of 30. Frank H. Harris captured the trophy in the gentlemen's golf competition with a tally of 86 for 18 holes, while Mrs. Boulton, wife of Secretary Boulton, was the victor in the ladies contest with a score of 112 for the course. It was stated that these records set a new high water mark and it will be up to the members of the Lake Shore Club to equal them. Another prize in the shape of a miniature silver cup, gold-lined, was presented to G. B. Van Blaricom, editor, "Canada Lumberman," for remarkable agility and all-round fitness in the baseball contest of the afternoon.

Several songs were sung during the prandial proceedings and the flow of raillery was incessant. Everything passed off smoothly and the evening was spent in a jolly dance. Excellent music was furnish-

ed, the floor was in splendid shape and an exhibition of legerdemain was cleverly presented by Thomas Bowyer, assistant secretary of the Wholesale Lumber Dealers' Association. All the members motored home at a late hour, voting the picnic one of the most outstanding social successes of the season.

Some Traitors in our Midst

Comrades, we have some traitors in our midst,

Poor purblind fools, of reasoning power bereft,
Who'll fan the flame that accident has lit
or nurse the fire that carelessness has left.

Ay, even in their green-distorted minds

They'll frame the plan of kindling it anew,
And sacrifice a Forest to the flames

To get themselves a job upon a crew!

In blackened valleys, fire-scarred mountain sides,

Now barren wastes where nothing grows, nor can,
We see the traces of this Devil's brood

Of reckless wasters of God's gifts to man.

Traitors are they, cruel selfishness their creed,

They trade your birthright for their paltry stake!

A nation's wealth goes billowing up in smoke!

Come! Help us crush them—for your children's sake!

W. H. C.

Of the total area of forests in the British Empire, Canada holds over 50 per cent. India has 14 per cent., and Australia and New Zealand about 8 per cent.

Seventy-five per cent. of the forest area of the Empire belongs to the people and only 25 per cent. to corporate bodies and private individuals. In Canada alone more than 85 per cent. of the forest area is public owned.

Niagara District Lumbermen Hold Fine Rally

Enthusiastic Meeting Convenes at Welland and New Officers Elected—Vigorous Campaign for Larger Membership—Value of Organization

James Harriman, Niagara Falls, Ont., is the new head of the Niagara Peninsula Retail Lumbermen's Association, and Andrew M. Wise, of St. Catharines, is the new secretary-treasurer. A reorganization meeting was held at the Hotel Reeta, Welland, on Saturday September 22nd, and was well attended. The visiting lumbermen were entertained to dinner by the Association and afterwards a business session was conducted at which S. L. Lambert, of Welland, presided. He expressed pleasure at seeing such a representative gathering and hoped that now that the fall months were here, more interest would be taken in the proceedings and more frequent gatherings held.

O. W. Rice, secretary-treasurer, reported a good balance on hand and stated that he believed in Association work from the standpoint of good fellowship and friendly interest. It was not necessary, he said, to cut prices in order to get business. During the past three years he had made more money than at any previous period in his own business, and he had not slashed prices in order to get trade.

Markus Vaughan, of Welland, who is a newly-elected member of the Ontario Legislature and head of the Vaughan Seed Co., Welland, was introduced by Mr. Lambert and gave a particularly instructive and timely address. He spoke of the benefits of organization and the advisability of getting every lumber dealer in the

resident would not be going many miles away from home to purchase but would secure his material right at his own door. When a man from a neighboring town several miles away was enquiring about lumber, etc., from a district dealer it might be well to watch him and call up the dealers of the town from which he came in order to ascertain his financial standing or record. A man, who was good pay was not generally wandering all over the country in search of stock for building a home.

Horace Boulton, Secretary of the O.R.L.D.A. was called upon to explain the progress that had been made in the Mechanics' Lien Act and gave an outline of what had been accomplished and the benefits of the new Act which went into effect on September 1st. A general discussion then took place regarding certain clauses in the Act and some good suggestions were made.

Addresses of an encouraging character on the value of organization, the outlook for the district and the need for more frequent meetings were given by A. Bailey, of Hagersville, John Davis, of St. Catharines, S. V. House, of Stevensville, K. J. Shirton, president of the O.R.L.D.A., G. B. VanBlaricom, Editor, "Canada Lumberman," Toronto, and others.

Mr. Harriman Becomes Chairman

When the election of officers came up it was unanimously decided that James Harriman, of Niagara Falls, should be made chairman. Mr. Harriman is a veteran retailer, seventy-eight years old, but, is about the youngest man in spirit, thought and action to be found anywhere in the Niagara district. He is always present at every meeting and takes intense interest in the proceedings. For thirty-two years he has been in the retail business in Niagara Falls and previous to that followed his trade as a millwright.

A. M. Wise, the new secretary-treasurer, is a son of the late Henry Wise, of St. Catharines. He is much interested in the work of the Niagara district, and under the new officers everything should proceed smoothly and satisfactorily.

Votes of thanks were tendered Chairman Lambert and Secretary Rice for their services, and it was decided to hold the next meeting of the Association at Dunnville on Saturday, October 27th. Mr. Shirton extended the invitation and promised to see that everyone was accorded a warm welcome to his town.

As an evidence of the interest, that is taken in the affairs of the reorganized Niagara District Association, one member sent in a cheque paying his fees for three years in advance.

Atrophic Tendency of Lumber Business

The tendency towards atrophy of the lumber business is shown in the census report just published by the Department of Commerce. This tendency is largely due to the dwindling forests and growing remoteness of supply, says the New York State College of Forestry, Syracuse University.

The total value of lumber and lumber products manufactured in 1921 was \$2,429,500,000 against \$3,070,072,000 in 1919. Much of this might be accounted for by the temporary decline of prices from the peak that was reached in 1919 and 1920 but the number of establishments and the number of employees engaged in the business also showed marked reductions which under lower prices and an active demand would normally increase.

In 1919 there were 839,000 persons in the manufacture of lumber and lumber products. In 1921 there were only 675,000 which is below the figures of 1914 when there were 833,000. The number of establishments turning out lumber and lumber products in 1921, 20,273, shows a decrease of nearly fifty per cent. in two years, there having been 39,955 in 1919. In 1914 more than twice as many plants were in operation with about a third more wage earners in 1921.

There have been many consolidations of establishments but not enough to account for this loss in the number of plants doing business nor the decrease in employees during these brief periods. Other records show that in seven years before 1919 New York lost 35 per cent. of her secondary woodworking industries—plants using planed lumber. This is an indication of what is going on in the depleted forest areas of the east.

district within the ranks. This could be done by each man seeing all those in his own town or vicinity and inducing them to come in. As Mr. Rice had stated, there was no necessity of cutting prices in order to get business either in the lumber or any other line, and very few men, Mr. Vaughan said, would be found doing so if they went according to their own conscience. All dealers paid about the same price for the raw material and should know the cost of doing business and what constituted a fair profit. Every man, who is doing business to-day and delivers the goods, was entitled to pay for each thousand feet of lumber that he handled, plus a legitimate profit. The man who was cutting prices was only fooling himself in the long run. He may have thought he was fooling or beating the other fellow but in the end he only cheated himself. It was necessary in association that men should have confidence one in another. This was stronger than bonds or any other agreement.

Necessity for Fellow Confidence

Mr. Vaughan went on to speak of the necessity of prompt collection and how there should be real co-operation among members in order to save one another from poor-pay customers who made the rounds to secure material. If there was freely exchanged information on the matter of credit, the result would be that heavy losses would be eliminated and there would be evidence of real co-operation. It stood to reason that if prices were equal and quality equal, a local

Who Pays for Lumber Delivery?

The delivery problem is one which is always perplexing and is handled in divers ways. Some retailers say they give free delivery, others say they make a separate charge and show it on the bill, and still others include the cartage cost in selling price. Of course, different communities are accustomed to dissimilar practices and retail merchants have widely varying opinions on this problem. Lumber is not an easy commodity to handle. It is bulky and heavy and in order to move it from place to place, it is necessary to maintain expensive motor trucks, trailers, wagons, horses, etc. This equipment all costs a great deal, requiring skilled help to manage it and considerable overhead to maintain it.

It may be stated at the outset there is absolutely no such a thing as free delivery of lumber and that like everything else in this world the purchaser gets exactly what he pays for. There is a law of compensation and, if a customer proceeds on the assumption of getting the most that he can without rendering an adequate return, he will find that in the end he has only cheated himself. If the retail lumberman does not take proper care of his costs, he too will find at the close of the year's operation that his balance is on the wrong side of the ledger.

Free delivery of lumber is a mockery and unless the dealer gets from his customers the full cost of cartage or hauling either as a direct charge or includes a certain percentage in the selling price to cover this service, he is really out of pocket on this department of his business. Of course, times have changed and are changing and in a few years perhaps retail firms will get rid of the bugaboo of delivery troubles by abolishing the system altogether.

Nearly everyone now has special facilities for conveying his own material home. The cash and carry plan has developed in the grocery, meat, produce and other lines and who knows but what it may spread to include lumber. If such a day should dawn, the retail lumberman will be able to sit back much more contentedly and happy and regard himself as well rid of the vexatious delivery proposition. Up to the present, as one authority said, he has played the role of the good-natured errand boy to the community and also for the surrounding country. He has been cajoled and imposed upon, asked to deliver small jags, to take back certain unused stock and generally to cover the ground many times which he would not have to do if a fair price was charged for delivery service.

Some dealers are so obliging that they will deliver any quantity, anywhere, at any time or, just when and where and how the customer wants the material. They make no charge and then wonder why,

after disposing of so much stock in their yard and mill, their profits at the end of the year are nil. Many retailers deliver free within civic limits but this feature of the service is being extended and now farmers are requesting that the trucks be sent out to their places, several miles from town. Farmers find that one yardman will do it and then naturally use this information when approaching others and thus get the long haul thrown in. One cannot blame a farmer for driving as effective a bargain as possible. So long as others are willing to cater to his comfort and convenience, he will gladly accept these services. He naturally does not want to stop work in the fields to haul lumber from town and his horses are probably not shod for travelling on the hard roads.

The situation in this respect to so-called free delivery has become almost amusing and it is interesting to find out how it is viewed by different retailers. The increasing number of good roads and the ability of motor trucks to eliminate distance are influences which have naturally led to the farmer getting his lumber delivered at his door without any cartage charges and the yardman in the towns and cities is the "goat." He is having something put over on him and it is high time he awoke to a realization that so called "free features" or "service" cost some one something. The outlay comes out of the profit of the retail lumber merchant.

Grave and Gay in Lumber Line

Times and customs change. Business is not as serious a game as it used to be and not the soulless, mercenary procedure. The man who takes himself or his calling too gravely, fails to extract the most enjoyment out of life. This does not mean that he is not to be watchful, thoughtful and earnest, but if he can brighten routine with a little levity or diversion, he feels that he is, after all, pursuing a career worth while, and is more fit and efficient. All business ventures are, to a certain extent, hazardous but their uncertainty and speculative nature calls forth a fighting spirit and aggressive action which makes the game worth while.

In leading newspapers, the strip cartoon has come to occupy a rather unique place and solemn-minded men, in all lines of activity, look for quaint humor, rare philosophy or human nature and parodies on pride, avarice, egotism, aggressiveness, optimism and other qualities. After all, whether engaged in lumber business or any other line, there is back of these sayings more truth than poetry, more earnest than jest, more common sense than hilarity.

An ostentatious character who is rather fond of flaunting his abilities, stated in a recent interview, that while other men were talking things over, he was putting them over. This is a fine policy to pursue for the world is today doing too much talking and not enough producing. The man, who accomplishes things, who achieves something and really gets there, is he who translates thought into decision and action and not mere speech. The one, who is declaring that he is going to do this and that, who is thinking and talking about it, seldom executes or completes his task. There is always some barrier in the way, some flimsy excuse or subtle subterfuge which he offers as a palliation for his failure or neglect. In plain prose, he trots out the banal plea of having had it in mind but never being quite able to get to it or to take it up.

On the other hand, there are men who rush headlong into matters with no well-conceived idea of what they intend to do or what route they will take. They see only the horizon and do not peer beyond the distant hills. They try this and that and swing from one thing to another in rapid succession and, in the end are frequently worse off than when they began.

The man who starts in business, after giving due thought and heed to the opening, the demand, the service he can render, the customers he will have, etc., is worthy of honor. If he uses his own cash in the venture he is backing his own ability or, in other words, financing himself. He shows that he has faith in his powers, in human nature and in the possibility of success.

A recent cartoon illustrates the attitude of many people in reference to a young man launching a business. One lady adviser of uncertain years and doleful disposition tells him that he will lose all his money; that nine out of every ten business concerns fail in a few months; that the present is a bad time to embark in a venture; that business reverses are numerous, the future very uncertain and demand falling off; that over-confidence is the ruin of many and it takes years of experience for a man to succeed in business, and all retail lines are woefully overcrowded, etc. All these gruesome prophecies and many more are uttered with the result that the individual in question goes merrily along, stating that if such counsellors held their way, all flags would be flying at half mast and if an ascension was made into Heaven, an effort would be made by them to convince St. Peter that even he had not a steady job.

This all leads up to a consideration of the lumber business, and, as has been frequently pointed out in these columns, it is the most hazardous of all undertakings. It challenges the innate nature of

man in his combat with the elements and mother nature brings out the dominant spirit within his bosom. As one eloquent speaker at a recent conference said,—“It has been a somewhat popular indulgence in uninformed circles to proclaim the lumberman a wanton destroyer of the forest obsessed in wringing a fortune out of immediate circumstance with no vision nor concern for the future. This proposition I emphatically dissent. Pecuniary interests he unquestionably seeks; otherwise he could not persist. But large fortunes, while occasional, are not his common experience. His consolations are more in the enjoyment of robust and virile employment than large competence. No commercial activity wrestles more with unrestrained competition and fortuitous conditions. No natural product comes to a more fickle and inconstant market. Today it will buy, tomorrow it will abstain. Operations run in long cycles; a year or eighteen months from stump to purchaser. But ever and always the lumberman must bring to market only what it will buy. Must he not, therefore, seek the shortest road and declare a thing to be true only as it works?”

There is certainly no business today that is so little understood and regarding which more misrepresentations are made than the lumber vocation. The public little comprehends its trials, difficulties, hazards, immensity and speculative character, and no great effort has been made to acquaint the people with what manufacturers, wholesalers and retailers are doing for the public welfare.

When a man enters business in the lumber line today he must banish the idea of a cheaper commodity. It is well-known that costs are ascending all the time, that raw material is becoming scarcer and farther removed, that selling expenses, wages, levies of sales tax, timber dues, Workmen's Compensation, assessments, etc., are all advancing and higher prices must be obtained in view of rising costs and the amount of money invested in equipment, yards, limits, etc.

And yet, as the “Canada Lumberman” stated in its last issue, the exponents of this great national industry have faith in its future and believe that conditions, fundamentally and basically, are sound and sane. They are convinced that, out of the present period of uncertainty and apprehension, matters will come to a definite head and stabilization will again characterize the market and business be placed on a normal plane as far as production demand and consumption are concerned.

How Business Will Manifest Itself

It is always interesting to cast a horoscope over the future, or to descry what the coming days have in store. In business circles such a study might be termed opportunities, forecasts or barometer of conditions. In private life and in the female world, it would be classed as fortune-telling or finding out one's fate by reading the palm of the hand, the number of dregs in a teacup, gazing into a crystal, or shuffling a pack of cards.

All persons love to learn what is likely to happen. They would tear aside the veil that shuts out the future and have what is ahead disclosed, but such is not possible as a merciful Providence reveals only from day to day the duties, cares and pleasures along the pathway of life. The speculative will, however, always appeal to men. It is an inborn, innate quality that seems to force its way to the front on every occasion. To-day the statements of concerns, which study closely present conditions, review the past, size up certain basic commodities, trade tendencies, exchange situation, peace or war outlook, etc., are eagerly perused.

One of these exponents, Babson, in a recent chart on prospects for fall, reveals some things that are of pertinent interest in the lumber line. He states that statistics to-day strongly indicate that the building of city offices, apartments and possibly homes has reached and passed the peak for this period. There has been a sharp decline during the past few weeks and records show that more than fifty per cent. of the current new building is taking place in the suburbs and that the proportion of suburban to urban activity is growing. This is largely due to the automobile moving people from the cities to the suburbs, and persons, especially interested in materials which go into new homes—and this includes the lumbermen,—should make a special drive on the suburban district.

Some current advice from Mr. Babson is so terse that it might well be taken to heart and carefully studied by everyone. He states that when business declines money becomes easy and rates drop and when money is cheap municipalities, large corporations and railroads find it much easier to borrow. The banks at such times seek bond issues to sell and this means more construction and larger building programmes by counties, states, provinces, municipalities, transportation concerns and other corporations. The same authority goes on to state that it is foolish to portend that the tide is coming in when it is going out; to do so is merely putting one's head against a stone wall and does not do anyone any good. On the other hand, because the tide turns it is no reason why we should moor our ship to the

wharf and refuse to go fishing. There are just as many fish in the ocean whether the tide is coming in or going out. The important thing is to hoist sail, put out to sea and fish.

This is the message which should be convincing to every department head and salesman. If some lines of business decline during the next year, other lines will increase. If some things are harder to sell next year, other lines will be easier to dispose of. Analyze yourself, your lines and your selling talk. Change what is necessary to fit the new conditions. Always keep in mind, however, that there will be opportunities as there always have been; that there will be more people to shelter, feed and clothe than there ever have been and that a decline in business does not mean that people do not buy; rather, they buy different things.

Get Together on Fire Protection

During what may be described as the annual forest fire period, attention is naturally directed to the enormous destruction of the fires and hundreds of columns are written emphasizing the waste of our natural resources. The subject is then practically forgotten until the next season arrives when there is a repetition of the same arguments and appeals to the public to take precautions.

Notwithstanding the admittedly very serious losses of past years, comparative little real progress has been made in preventing fires. The position is such as to call for more drastic methods and for greater co-operation between the Federal and Provincial Governments and the protective associations. To this end the Governments should get together with a view of co-ordinating their plans and of developing schemes which will result in a diminution of conflagrations. The Quebec Government last season took a step in the direction of securing the co-operation of other Governments at boundary points so that the forces could unite in the case of fires occurring at places near these points. The prevention of forest fires is of national importance and no question of provincial rights should interfere with the work. Now is the time to take action.

The Federal Government is as much concerned with the conservation of natural resources as any Provincial Government and should take the initiative in calling at once a conference with the object of considering what further can be done to prevent this annual waste. The conference should not end with mere discussion. What is wanted is some practical scheme which can surely be devised by men who have had long experience in the work. Let the Government call in the heads of the forest protective associations and receive the benefit of their advice. While the extension of protective work would involve a heavier cost, the outlay will mean a good investment if it results in saving the resources on which the lumber and pulp and paper industries depend for their continuance.

It is significant that the Maritime Board of Trade has passed a resolution calling upon provincial governments to appoint chief fire rangers with a technical knowledge of fire prevention and control and to pursue a more aggressive policy of reforestation.

The Secret of Getting

Every manager wants to get the largest possible cash return from his work—his job. He wants to get all the business he can. He wants to make friends. He wants to learn all he can from others.

There is a secret to getting this. It lies in giving—giving to get.

The amount of money he gets at the end of the month depends, as he knows, upon his usefulness to the firm; upon the amount of goods he sells for his employer during the weeks and months. He who gives of himself most liberally to the service of his employer thereby puts himself in the way of getting more.

He who is most liberal in giving time and attention and service to customers is qualifying for getting business from these same people.

He who tries to help others finds that he is receiving more help than he gives. He who is friendly, finds that all are his friends.

The man who is liberal in giving money and time to good causes seems to prosper in proportion to his giving, while the man who is penurious and “tight” seems never to have anything, in spite of his parsimony.

It is hard to explain or express this seeming paradox, but we can serve our own interests no better than by being entirely unselfish in our motives and actions.

Reorganization of Riordon Co. Under Way

Some Interesting Figures Regarding Timber Holdings of the Company and Annual Production of Lumber—Earning Power of Gatineau Properties

The plan of the reorganization of the Riordon Co. was recently completed. The new capital provided amounts to \$10,000,000 and the capital and debt are now cut in half.

The reorganization of the Riordon Co. will mean a big saving in interest and overhead charges. The plan calls for the reduction of total indebtedness from \$33,000,000 to \$18,000,000 and a reduction in preferred capitalization from \$20,000,000 to approximately \$15,000,000 and the combined totals from \$53,000,000 to about \$34,000,000. This will mean that the annual interest charges, including interest on current bank loans, will be cut from about \$2,000,000 to approximately \$1,250,000 and the total of such charges plus full annual dividend requirements on preferred stocks from \$3,500,000 to \$2,335,000.

After all new financing has been completed the company will have in the neighborhood of \$4,500,000 in net working capital and in addition will have a substantial amount of saleable assets not required for the conduct of their business, including about 475 square miles of outlying timber limits.

There are several points in the reorganized Riordon plan which are of special interest to readers of the "Canada Lumberman." These relate to the timber properties of the company and the annual production of lumber. It should be stated that the assets and liabilities of the Riordon Co. include those of the Riordon Sales Corporation and the Riordon Pulp Corporation, whose assets and business will be consolidated with those of the Riordon Co. in the reorganization.

The Character of Timber Supply

In describing the properties it is pointed out that the timber limits tributary to the Kipawa will, include the Bronson and O'Brien purchases, cover over 2,500 square miles on the Upper Ottawa watershed and are estimated to contain nearly 7,000,000 cords of pulpwood as well as 100,000,000 feet, board measure, of pine timber. The Rouge River limits tributary to the Hawkesbury mill, cover over 1,200 square miles, with an estimated 2,000,000 cords of pulpwood. The Calumet sawmill situated across the Ottawa River from Hawkesbury, was wholly rebuilt a few years ago and is a very efficient mill with a capacity of over 15,000,000 feet of rough lumber per annum.

The Gatineau Company will have, with the addition of the Dominion Bank limits which will be transferred to it by the Riordon Company, about 5,800 square miles of timber limits in the Gatineau valley, and saw mills at Hull and Rockland having an annual capacity of 75,000,000 feet of lumber, the current product being about 80% pine and 20% spruce. The estimated amount of timber on the Gatineau limits is about 12,500,000 cords of pulpwood and over 700,000,000 feet of pine.

Although, the Riordon and Gatineau Companies' timber limits (practically all held under Government licenses) aggregate about 9,500 square miles on three watersheds, and these limits are estimated to contain a total of over 20,000,000 cords of pulpwood against an annual consumption by the present Riordon pulp mills of about 200,000 cords.

The transportation of all pulpwood and saw logs from the limits to the mills is by river, and as the Gatineau River empties into the Ottawa about 60 miles above Hawkesbury, Gatineau wood is available for economical delivery not only at any point near the mouth of the Gatineau River where a new mill might be constructed, but also at Hawkesbury and Calumet.

The Output of Manufactured Lumber

The lumber production is:—

Plant	Location	Product	Annual Capacity ft. b.m.
Rockland No. 1	Rockland, Ont.....	Pine and Spruce....	35,000,000
Rockland No. 2	Rockland, Ont.....	Pine and Spruce....	15,000,000
Hull	Hull, Que.....	Pine and Spruce....	25,000,000
Calumet	Calumet, Que.....	Pine and Spruce....	15,000,000

Total Lumber Capacity 90,000,000

The above figures include only sawn lumber, to which should be added for the Hull and Rockland mills the following items.

Pickets, f.b.m.	Lath, pieces	Ties, pieces	Posts, pieces	Shingles, pieces
2,600,000	28,000,000	150,000	7,500	17,000,000

Timber Holdings

	Area, sq. mls	Pine f.b.m.	Pulpwood cords	Hardwoods f.b.m.	Cedar Ties to mills	Tributary
Water shed Rouge River	1,239	3,688,000	2,263,179	363,851,000	918,663	Hawkesbury & Calumet
Upper Ottawa ...	2,526	105,523,936	6,880,298	240,906,676	870,000	Kipawa
Total Riordon Co..	3,765	109,211,936	9,143,468	604,757,676	1,788,663	
Gatineau River ..	5,873	749,644,000	12,518,500	432,740,000	1,625,500	Rockland & Hull
(including Dominion Bank)						
Grand total ..	9,638	858,855,936	21,661,968	1,037,497,676	3,414,163	

Estimate of Earning Power

In estimating the earning power, it is remarked that the Gatineau properties are a recent acquisition, having been taken over in 1920, and their operations also were affected by the depression of 1921. No logging at all was done during the winter of 1921-22, so that the present season is the first full season of active operation under reasonably normal business conditions since the acquisition of the properties. On the basis of careful studies and competent opinions from many sources, it is believed that an estimate of \$500,000 average annual earnings from the Gatineau Company as now developed, before interest and depreciation, or about \$250,000 over its own interest charges (after the new financing) is thoroughly conservative. Operating profits for the current year are expected to run considerably above this figure.

The Gatineau Company is presently developed only as a lumber enterprise. With a sound capital structure designed to lend itself to future financing, an admirable site for the construction of a mill (to produce either groundwood, newsprint or sulphite pulp as a study of market conditions and probable future demands may indicate), economical power, ample wood supply, and a ready and growing market for commercial power only a few miles away, it is obvious that the real earning power of the company is yet to be developed.

The secured indebtedness (other than the bonded indebtedness and the accrued interest on the General Mortgage 6% Bonds, to be taken care of) including claims in any way privileged or preferred and certain claims against subsidiary and affiliated companies, is as follows:—

(a) Purchase money obligations and small mortgages	
(1) O'Brien timber limits (Riordon Company) ...	\$1,200,000.00
(2) Bronson properties (Riordon Company)	650,000.00
(3) Edwards properties (Gatineau Company)	1,413,796.54
(4) Gilmour & Hughson properties (Gatineau Co.	1,944,405.74
(5) Dominion Bank timber limits (to be transferred to Gatineau Company)	323,375.63
(6) Miscellaneous small mortgages (Riordon Company and subsidiaries)	206,750.04
	\$5,738,327.95

In a letter to the shareholders of the Riordon Co., the Board of Directors refer to the plan for financing the 1923 operations for the supply of pulpwood and lumber. Credits for over \$3,000,000 were arranged, and to provide securities for these advances, the Company's plants were leased, with the right to operate, to a new company incorporated under the name of "Riordon Pulp Corporation Limited." This corporation also purchased the Company's working assets. Both the lease and purchase are subject to the condition that the Company may at any time terminate the arrangement and reclaim its properties upon payment to the Pulp Corporation of the liabilities incurred by it in carrying the operations of the Company. As a result of the new credits thus obtained the mills are assured a sufficient supply of pulpwood and logs for the current year at a cost that will allow profitable operation.

The Ford taxi came to a sudden halt in the middle of the street. "What's the matter?" called the man from the rear seat. "I thought the young lady said 'stop'" answered the driver. "Well, she wasn't speaking to you, was she?"

Lumberman is Accorded High Honor

C. G. Anderson, Toronto

C. G. Anderson, who was recently elected District Deputy Grand Master of Toronto District D., A. F. & A. M., is widely known in lumber and Masonic circles. He is the head of the C. G. Anderson Lumber Co. and the Anderson-Miller Lumber Co., Limited, Toronto, wholesale dealers in soft and hardwoods. Mr. Anderson has been in the wholesale lumber line for some fifteen years and in that time has built up a wide connection. Previous to becoming identified with forest products, he was for several years engaged in the bridge building department of the Minneapolis & St. Louis Railway at Minneapolis, Minnesota. He was born in Dufferin County near Orangeville, in 1876 and as a youth took much interest in lacrosse and other sports. He is

a life member of the Weston Golf and Country Club and also a member of the Oakwood Lawn Bowling Club. Mr. Anderson has been a Kiwanian for several years and in 1922 did faithful work as chairman of the Entertainment Committee. He is a P.M. of Alpha Lodge, No. 384 and was honored by being made an I.P.M. of Dufferin Lodge, No. 570, on its formation. He is also a member of the Scottish Rite and Toronto Chapter, R.A.M., No. 185. His recent selection as one of the District Deputy Grand Masters of Toronto, is a tribute to his zeal and energy in upholding and promoting the ideals and principles of the craft.

Death of Veteran Hewer of Timber

John Stoughton died recently at Port Arthur at the home of his son. He was 82 years of age and one of the old-time wood hewers, being an expert in an art that has largely passed away in Canada with the introduction of the sawmill with its modern equipment. Mr. Stoughton had lived in Western Canada some twenty-five years. Half a century ago he hewed square timbers on the banks of the Ottawa and its tributaries and was such an adept in the use of the broad axe that a piece of timber hewed by him had every appearance of being planed by modern machinery. About five years ago he suffered an injury to his hip and was practically an invalid to his death. Mr. Stoughton was born near Perth, Ont., and is survived by one son and a daughter. His wife predeceased him in 1921.

Costly Western Sawmill is Scrapped

The Rat Portage Lumber Co.'s mill at Harrison Mills, B.C., into which the late Sir Douglas Cameron, former lieutenant-governor of Manitoba, put \$450,000, has been dismantled. This well-known plant was operating for only two short seasons and then stood idle for eleven years. The valuable equipment was bought by a Vancouver firm and constituted 47 carloads. The band wheel of the mill was one of the largest ever installed. It weighed 62,000 lbs. and required two freight cars to carry it.

The original mill on the site of the Rat Portage Lumber company plant was owned by the Martin Brothers, cousins of the late Joseph Martin. This enterprise was succeeded by the Harrison Mills Timber and Trading company, in which Arthur and James Tretheway, of Vancouver, T. H. Jackson, of Minnedosa, T. A. Cuddy, of Winnipeg, and J. Boyd, of Vancouver were interested, the capitalization of the company being \$250,000. The new mill had a capacity of 75,000 feet per day and was operated day and night for several seasons. In this company Sir Douglas Cameron bought a half interest for \$125,000. The cheque in payment was made out but before the deal was consummated the mill was burned. Sir Douglas then bought the property outright and erected the last mill at a cost of \$450,000 at stated. Due to a variety of causes, including the outbreak of the war and the disruption of business in other ways the mill soon suspended and did not resume operations.

Virgin Timber Exhausted in Ten Years

Dr. Carlton C. Curtis, associate professor of botany at Columbia University, New York, who has sailed for Havre on the first leg of a trip to the Mediterranean and the West Indies, predicted that the virgin timber resources of the United States will be virtually

exhausted in about ten years. He deprecated the lack of activity on the part of the Government and the small appropriations made for reforestation.

Professor Curtis cited the fact that several centuries ago the United States had more than 832,000,000 acres of timberland, while at present it has less than 140,000,000 acres. He predicted that in 25 years the American colleges would be sending their graduates to the older timber tracts throughout the country to restore the forests, and that the students would find this work of greater interest than indulging in professional activities in the cities.

More Lumber Sold and at Higher Price

Statement of lumber manufactured, sales and prices realized by the Canadian Western Lumber Company, Limited (which includes the Columbia River Lumber Company, Limited) Fraser Mills, B.C., for the month of July, 1923, compared with the corresponding period last year and from January 1st to end of July, 1922 and 1923 is given here:

	1922—Feet	1923—Feet
Lumber manufactured	11,493,441	11,535,900
Lumber sold	11,192,094	11,093,369
Price realized	\$273,589	\$312,934
Aggregate lumber manufactured 1st Jan. to end of July	60,490,283	68,238,130
Aggregate lumber sold 1st Jan. to end of July	67,681,745	71,631,152
Aggregate price realized from 1st Jan. to end of July	\$1,549,854	\$2,033,173

How is This for a Fish Narrative?

The prize fish story comes from a mining man of Seattle, Wash., who recently declared that fish climbed trees in British Columbia when the rivers start to rise. The name of the narrator is Hal Dramm. He lately got back from visiting his gold properties at the foot of Salmon Glacier in British Columbia twenty miles from Hyder, Alaska, and states that he saw fish hanging from the trees. The river had been swollen and when it receded many salmon four to six feet long were left suspended from limbs, so he avers. Mr. Dramm evidently had a dram or two in excess when he saw those piscatorial prodigies amid the sylvan surroundings.

Lack of Co-operation in Retail Yard

Editor, Canada Lumberman:

Sir, I should like to bring to your attention an incident which happened during the last few weeks, and shall appreciate anything you can do to remedy this kind of thing. Evidently there is lack of co-operation among the various departments of the lumber trade, and this kind of treatment is not conducive to improving business, but quite the contrary.

During the month of July I ordered a quantity of ready cut window and door sash from a Toronto firm. This order was confirmed on July 27th and delivery was to take place within two or three weeks. When delivery was made, within the specified time, it was found that fully two-thirds of the order had to be returned owing to details not having been carried out correctly.

It is now a month since the first delivery was made, and still the correct sash has not been delivered. But in the interval several bills have been sent in. At each request for payment, I have phoned and advised that I am still waiting for completion of the order, but the only effect this has was seen in the receipt of a curt demand for payment made within the last few days, and a threat of dire consequences of same if not forthcoming.

This time I got in direct touch with the book-keeper and also mailed the offensive statement back with the remark that payment would be made immediately goods were delivered.

For my own part, I am almost inclined to sue them for breach of contract, and if there is any more unpleasantness coming from them, shall undoubtedly do so. The four weeks which have elapsed would have been more than enough for me to complete the job on hand, if the goods had been delivered. But now I am called to the far side of the city and must needs lose hours each day in getting to and from the unfinished job, when the necessary materials are received.

This is enough to disgruntle a man without having the offending firm call on him in such a rude manner for payment for goods that have not yet been delivered. A little closer co-operation between shipping and book-keeping departments is all that is needed to put an end to such mistakes. Cannot you do something to bring about this state of affairs?

Very truly yours,
Customer.

First Sitting of Pulpwood Commission

The first public hearing of the Royal Commission appointed to investigate the pulpwood resources of Canada will be held in Halifax on October 2nd. This is the only date which has yet been decided on by the commission, but hearings in other Maritime Province cities will follow the Halifax one. At the headquarters of the commission here, it was stated that ample notice of the sittings of the commission would be given to the public, so that those persons desiring to make representations would have an opportunity to make preparations. In the meantime, the organization work of the commission is proceeding. It is probable that hearings will be held from coast to coast.

Good Progress on New Kenora Mill

It is expected that the new newsprint mill of the Backus-Brooks Co. at Kenora, Ont., will be in operation by January next. Good progress is being made on the structure. The groundwood pulp plant, capable of turning out 80 tons of pulp daily, was put into operation last fall. The capacity of the newsprint mill, now under way, will be 100 tons daily. The output will be increased by 100 tons additional each year through enlargements to the plant until a maximum of 1,000 tons a day will have been reached. The plant will then be the largest of its kind in the world. The Backus interests intend to build a railroad about 80 miles in length from Kenora to the English River timber limits.

Building Good Dwellings for Their Men

The Spruce Falls Co., of Kapuskasing, Ont., are building 52 houses this year for their employees in the sulphite pulp plant. All of these houses are of the four-roomed type with modern conveniences, neat in design. Siding is used for a half storey and above that shingles. The average cost of these houses is about \$3,000 each. E. J. Jones, general-manager, states that the company are not making any improvements to their plant this season but are busy so far as pulpwood operations are concerned. The Spruce Falls Co. expect to get in between 50,000 and 60,000 cords during the coming season, possibly half of which come from settlers.

Van Horne Favored Pulpwood Embargo

The late Sir William Van Horne, builder of the Canadian Pacific and creator of numerous other important and successful Canadian enterprises, always maintained that Canada should not allow the export of pulpwood. He waged a strenuous fight with the government of the day to protect Canadian forests and the Canadian paper-making industry by prohibiting the export of unfinished pulpwood.

"Stumps and holes in the ground; that is all we have to show for our exports," declared Van Horne one day. "One cord of pulpwood exported from Canada yields to Canada and all her interests less than six dollars, but the same cord of pulpwood manufactured into paper yields thirty-six dollars." The figures would be higher today but the principle and the proportion would remain the same. Van Horne also remarked, "No sane individual would waste his raw materials in such a way when he could do so much better with them, and I can see no good reason why a government should do so any more than an individual."

Laurentide Co. Expects Good Year

At a recent meeting of the Laurentide Co., Montreal, it was declared that the outlook for the coming year was good. President Chahoon expects a steady demand for paper at a fair price. The old board of directors was re-elected and stands as follows:—George Chahoon, jun., president; Charles R. Hosmer, vice-president; Sir Thomas Skinner, Edwin Hanson, F. A. Sabbaton, J. K. L. Ross, George H. Montgomery, K.C., Sir Lomer Gouin and Sir Vincent Meredith.

With regard to the prospects of the company for the future,

President Chahoon, in moving the adoption of the annual report, stated that the indications are for as satisfactory a year as that just passed by the company. He expects a demand for the entire output of the company's mills at a fair price. Mr. Chahoon in his remarks to shareholders stated that he had really nothing new to tell them—that it was the same old story from year to year. The company was prospering and he wished that a greater number of shareholders would come down and see their property for themselves. He further stated that the two paper machines, which were now in operation about two and one-half years, and which were designed by themselves and manufactured by a concern which had never before produced machines of this kind, were giving very satisfactory results. The machines were designed with a view to producing 75 tons of newsprint each per day, or 150 tons in all, and he was very proud to state that their operation exceeded this figure and that for some time past the machines in question had been producing at the average daily rate of 171 tons.

Pulpwood Cut in Quebec Will be Heavy

A feature of the coming winter's operations in the Quebec forests, especially the fire-swept areas, will be the abnormal cut of pulpwood which will necessitate the large demand for labor, and as a natural result, a demand for increased wages which will affect general lumber operations in the Canadian woods. There are many essential phases of a serious nature in this connection which are worthy of consideration. There is no gainsaying the fact that this class of wood will have to be cut to save same from worm destruction, but the vast quantities of pulpwood estimated to be cut are bound to react against the operators and dealers who have not the independent means and will have to look to the banks for their financing.

It is interesting to note that a large cut of pulpwood was made last year by the pulp and paper mill interests who have not used up in manufacturing production more than sixty per cent. of their stock. Another thing to be considered is that sixty-seven per cent. more pulpwood was exported from the province of Quebec to the American mills this summer up to date than in the spring and summer of 1922, the American mills, taking advantage of the delay in the embargo proposition to obtain all the wood they possibly can before the Commission on investigation submits its recommendations to the Federal Government.

A more serious aspect, however, is anticipated by the Quebec pulpwood dealers who contend that with the prospects of an abnormal cut this winter, it means in prospective a dangerous reduction in the price of wood to the detriment of the operator and broker dependent on the banks for financial aid. It is true that pulpwood cut in the fire devastated areas, can be preserved for two years or more after being cut by placing the wood in water storage, but in order to do this financial assistance from the banks will be required and the interest on the money thus borrowed will have to be met. Consequently the pulpwood interests with little or practically no capital, must be prepared to meet the situation; if not, they will be unable to meet their notes and the banks will be likely to insist on sales to recover their advances. Should such a situation occur, as is very likely, the small wood holders and brokers embodied, will be obliged to part with their holdings at a sacrifice to meet their banking obligations which will be the forerunner of a very unfavorable reaction in the price of pulpwood to affect the whole market except the big solvent interests who will eventually profit by the outcome.

This is rather a serious aspect to put on the prospective situation in the event of a large cut of pulpwood by the speculator this coming winter; nevertheless it is the visualized opinion of the old and more experienced lumbermen of Quebec who feel that in the event of such a happening, the creation of an opportunity for the American pulp and paper interests, who with their business minds constantly concentrated on the wood situation in Canada, will be quick to take advantage thereof. There are conditions which justify the embargo on the exportation of Canadian pulpwood to the United States as proposed by the Dominion Government.

It is pleasing to note that the pulpwood interests in the city and

district of Quebec, who viewed with alarm the government embargo proposal and sent a deputation to Ottawa to oppose the embargo, have come, after mature consideration, to change their minds. They still persist in their opposition to an immediate placing of the embargo, saying they realized the wisdom of the government in the interest of the protection of Canada's forests and sacrifice of its raw material, but pray that the embargo be only put into effect after they have completed all their present contracts with the United States.

In the meantime the Pulpwood Commission appointed by the Federal Government, has entered upon its duties of investigations and should have no difficulty in coming to a decision to meet the views of the Canadian lumber interests and the general public. It is engaged on a work which requires its serious consideration for the benefit of Canada's entire forest resources and the disposition of the country's raw material for manufactured production in the country which should be studied purely on a business basis without any sentiment or feeling for the friendship of the United States.

The importance of Canada's export trade in wood and wood products and paper can easily be gauged and judged by the Commission from the fact that in four months ending with July last, the total value of these exports amounted to \$90,876,789, of which sum \$77,229,717 is accounted for by shipment to the United States. Authentic statistics show that the Dominion exports of merchandise of all varieties in this same period was \$306,205,390; goods worth \$136,522,190 going to the United States, which means that wood, wood products and paper made up roughly thirty per cent. of Canada's total exports to all countries during the four months mentioned. About eighty-four per cent. of the total exports of wood and wood products went to the United States which subtracted from Canada's total exports of \$136,522,190 places the value of all other products exported by Canada to the United States at \$59,292,473 for four months ending July last.

The value added to the raw material by manufacture in Canada by Canadian labor would be enormous, the benefit of which is reaped by the manufacturing interests and labor of the United States without taking into consideration the exploitation of Canada's forest resources of raw material, while the American forest resources are being preserved and added to by reforestation.

Must Augment Growth of Softwoods

In the formal report of the activities of the Empire Forestry Conference which concluded its sessions recently in Victoria, B.C., fire protection and silviculture were dealt with. The importance of every part of the Empire conserving and augmenting its own resources of growing coniferous timber, in view of the great and increasing drain on the softwood forests of the world, was emphasized in a resolution submitted by Roland Craig, Ottawa, and seconded by Owen Jones, Australia.

Mr. Craig said that, according to Col. Greely, of the United States Forestry Department, the consumption of softwoods in the United States exceeds by four times the estimated annual growth.

Mr. James said that the hardwood supplies were sufficient, but the softwood supplies deserved very serious thought.

The members of the conference were greatly impressed by the extensive waste prevalent in most of the logging operations and sawmills which they visited. It was the opinion that while this waste is doubtless due in large measure to the local economic conditions of the industry, it is responsible for the loss of much national wealth, and in the interests of both Canada and the Empire's timber supply, should be reduced to a minimum.

Royal Commission on Pulpwood Organizing

The Royal Commission which was appointed some time ago to investigate the pulpwood resources of Canada, held the first of its sittings to effect the organization, in the office of Hon. W. S. Fielding, Minister of Finance, at Ottawa lately. There were present Joseph Picard, of Quebec, chairman of the Commission, and its members—A. B. Kerr, Toronto; R. W. McLellan, Fredericton; Joseph G. Sutherland, Clyde River, N.S., and W. A. Anstie, of Vancouver. Hon. W. S. Fielding, Minister of Finance, was also in attendance. It was stated at the close of the session that no itinerary has as yet been mapped out and that further meetings will be held in the capital for organization purposes before public hearings in leading centres are proceeded with.

With the commission preparing to get down to business, there are many rumors afloat with respect to the proposed embargo on freehold pulpwood. Many of these, however, are groundless or are evidently being spread for political purposes. Several to the effect that the federal government has decided to place an embargo on the export of wood and that the restriction will go into effect within twelve months. It is declared that a certain amount of latitude will

be allowed in respect to the rigid regulations. For one thing it is understood that existing contracts will be respected for a period of ten years, and furthermore the restrictions are likely to be lightened or lifted from time to time in respect to wood cut in certain areas yet to be specified, but understood to be in districts where conditions are not favorable for the establishment of mills at the present time.

It will be remembered that during the last session of Parliament Hon. Mr. Fielding introduced a resolution for an amendment to the Export Act giving the Government power by Order-in-Council to prohibit the exportation of pulpwood. The subject was discussed at length and given its second reading and opinion as to the advisability of taking this action was very divided. The attitude of the Government then and subsequently when it was decided to appoint a commission of inquiry, was that it viewed the matter of conservation as being much more important than the mere matter of an embargo.

Premier King eventually made a statement, in response to an inquiry by Mr. Cahill of Pontiac, that any action the Government might take under the legislation would provide that wood grown by farmers on their property would be exempt from provisions prohibiting export. Subsequently it was announced that a Royal Commission would be appointed to inquire into the whole question before action of any kind was taken. It is this commission which began its labors recently.

Merely Move to Shelve the Issue

Frank J. D. Barnjum, of Montreal, who is a valiant champion of Forest conservation, in a recent interview declares that there is no necessity for the study of prohibition of unmanufactured wood exports, and that the announcement of Hon. Mr. Fielding lacks the ring of sincerity and is evidently a move to shelve the issue. Mr. Barnjum asserts that if the government is sincere in its announced desire to investigate the question, it can find plenty of convincing evidence to warrant such a policy at very little expenditure of time and money. He urges the necessity of the situation, and appended is his convincing climax:—

"In the face of these conditions, and having all the facts before them, the Dominion Government deliberately trifles with the situation and tries to humbug the people with the announcement that a commission will be appointed to 'investigate.' There can be only one conclusion, and that is that the Government is recreant to its trust and indifferent to the public welfare.

"To my mind, this is a bigger issue than any other now before the country, and it will become still greater as the days go by. There is still time for the Government, at this session of Parliament, to disregard its feeble attempt to deal with the situation and put on the statute books a law that will protect Canada's forests from the ruthless exploitation to which they are now being subjected and to conserve one of our greatest national assets for the country's own benefit. If it fails to do so, I, for one, shall conclude that it and the party behind it are no longer worthy of support, and I fully believe that the great mass of the voters of Canada will take the same view. I have no hesitation in predicting that the flagrant disregard of Canada's interest, as displayed in their dealings with this question, if persisted in, will bring about the ignominious defeat of Mr. King's Government and of the Liberal party at no very distant day."

Many articles have appeared in the "Canada Lumberman" from time to time as to why the export of Canadian pulpwood from private lands should be checked. Any country, which exports its raw materials, has never grown great or strong. This fact is amply demonstrated by a study of the history of all civilized nations. There are so many arguments in favor of a prohibitive measure that they far outweigh any reasons which may be put forth in support of the free and open method of sale and distribution.

Logging Railway for Abitibi Company

Now that the company's railroad into its timber limits is running, and with it some thirteen mile of branch lines, the Abitibi Power and Paper Company will be able to effect several savings.

The railway will make it possible to get wood to the mill all Winter, thereby rendering unnecessary a big wood pile. All now required will be a reserve to provide against costly shut-downs in case of temporary accidents to the railroad. Smaller wood pile means hundreds of thousands of dollars free which would otherwise be locked up in wood. Also the smaller wood pile means reduced insurance charges. The company railroad brings other savings, since the logs can be loaded and brought to camp more quickly than they can be logged to the river from distant parts of the limits. These savings are important parts as offsetting the increased labor charges resulting from the increase of about 5 cents an hour given in May.

LUMBER TRADE CONDITIONS

Montreal Trade is Quiet with Prices Firm

On the whole business in Montreal is quiet. While some wholesalers are doing a fair trade, others state that orders are few and far between. There is a decline in inquiries and in actual business with American houses, due, no doubt, to some extent to the fact that stocks bought some time ago have not yet been disposed of. The position generally is satisfactory as prices of spruce are holding firm, with indications that this will continue for some time. In one or two directions the supply is by no means abundant.

The retail line is keeping up pretty well. There is still considerable activity in building although the tendency is towards a decline in new construction as compared with the same period in 1922. Retailers are buying in moderate lots and are continuing the policy of not keeping large stocks.

Exports to the U. K. are slow and unless there is an unusual rush at the end of the season, the figures this year will show a substantial decrease as compared with 1922. The prices of Canadian lumber are not sufficiently attractive for the Old Country market, in addition to which industrial conditions, especially in shipbuilding, are against any large demand for our lumber.

The arrival in the port of the SS "Peter Keve" from Vancouver with a large cargo of timber marks a still further stage in the West Coast lumber trade via the Panama Canal. This is the eighth vessel to arrive this season and brings the total of the shipments up to a very large figure. The trade has been developed by Knox Bros., Limited, who specialize in B. C. forest products.

Woods operations in the province of Quebec are proceeding at a good pace. The pulp and paper companies in particular are very active and will take out all the wood they can, while those concerns with American affiliations have extensive cutting programmes, in spite of the fact that some of the principals aver that the proposed embargo on pulpwood is more or less bluff. In the meantime, they will get all the supplies possible from this side of the line. Many men have been sent from Montreal to the Quebec and Ontario camps but there is a demand for many more.

Quebec Exporters Look for Bigger Business

The cessation of the dockers' strike at British seaports towards the latter part of August has caused a renewal in shipment of timber and deals from the port of Quebec. This applies to the completion of the orders received by the Quebec timber and sawn lumber export firms last winter and spring and does not apply to any new orders as very few, if any, are being received owing to the demoralization of the British lumber market caused by the dockers' strike.

The total quantities of sawn lumber and timber shipped from the port of Quebec this season of navigation up to August 31, was 8,361,281 feet, b.m. Since that date there have been three steamer shipments up to September 15th. The SS "Kenbane Head," sailing for Belfast, took on board 40 loads of birch, 175 loads of elm and 600 loads of waney pine shipped by John Burstall & Co.; 50 loads of waney pine and 25 standards of spruce deals shipped by W. & J. Sharples Co., Limited. The SS "Manchester Division," sailed for Manchester with 150 loads of waney pine, shipped by W. & J. Sharples Co., Limited, and the SS "Manchester Skipper," also bound for Manchester, carried 150 loads of waney pine shipped by John Burstall & Co. and 150 loads of waney pine shipped by W. & J. Sharples Co., Limited, with several other shipments booked for the month of September.

In the meantime a number of inquiries have been made by cables from United Kingdom importers who have offered prices which cannot be entertained, and judging from present appearances, very few orders will be booked during the remaining months of this season of navigation for shipment this fall. The prospects for 1924 are, however, bright but the Quebec lumber firms and limit holders are awaiting further advices before they prepare their estimates for logging in the woods this coming winter.

It is generally conceded by the older and more experienced Quebec lumbermen that there will be an unusually big demand for Canadian wood in 1924. They base their calculation on a settlement of the European political difficulties in the near future and easier money circulation in England by a restoration of confidence in financial circles, to be followed by activities in construction and imports to European continental countries. Another factor considered is the result of the general elections in Southern Ireland, which has placed the Free State Government on a firm basis and eventually will in-

fluence the economic interests with confidence. Ireland is known to be very much in need of reconstruction and it can be safely said that when the new Free State starts its legislation, it will herald the beginning of a new era of business activity in that country to assure a demand for Canadian lumber.

Another factor being considered is the Japanese catastrophe which will require an unlimited quantity of material for reconstruction which will include wood. It is realized that the Canadian wood demanded will be largely exported from British Columbia and not at all from the far removed Eastern Canada. But the East will benefit from the fact that British Columbia will have all it can do to supply the demand from the Orient and, in consequence, cease to compete with the Eastern Canada lumber trade in the New York and middle United States market. In the meantime, the lumber trade between Eastern Canada and the American market leaves nothing to complain of. The Quebec mills are well booked with American orders and the volume in shipments steady without any sign of diminishment.

According to the advices received by the Quebec timber and sawn lumber shippers from their British agents, the wood trade interests in the United Kingdom are heartened and optimistic at the prospects of a new life in business for the year 1924. The willingness of the German Government to enter into an economic agreement with France is now in evidence. The German industrials have for some time past been endeavoring to bring about such a co-operative arrangement, which of late has assumed a more concrete complexion by the German Government's evident willingness to forego passive resistance in the Ruhr. The British business interests, who are watching the situation closely, are impressed with the opinion that Germany has come to understand that she is drifting from bad to worse and on the eve of a revolution if something is not done to relieve the tense situation that has become serious and unbearable.

Poincare, the Premier of France, and one of the most astute politicians in Europe, who well knows the psychology of the German mind and his devious moves on the political chessboard, is in no hurry to come to terms with the wily Germans. The French Premier is determined to have unqualified security before he meets the situation in negotiable co-operation with Stressman. There are positive signs to this end in line with the prognostications made in the columns of the "Canada Lumberman" during the past several months and now the signs are that the political difficulties in Europe will all be regulated and adjusted by Christmas to herald in a happier and more prosperous new year of 1924.

Dilating retrospectively on the past several years of business uncertainty since the war, British experts in the wood business say the seven weeks of the dockers' strike at the British ports have done as much harm as the political difficulties, and it will take until Christmas before the wood market in England will be able to function into a condition of satisfactory activity to help out the Canadian lumber export trade.

In the meantime the rise in prices of Swedish and Finnish wood will eventually aid the Canadian shipper, these continental sellers becoming obsessed with the idea that Canada is no longer a serious competitor. At the present time there is a growing opinion in Great Britain that shippers of wood will eventually give way in prices and that the best policy is to wait. There is no doubt but that this feeling is due to nervousness occasioned by the unsettled condition of Europe, as well as the uncertainties of labor demands, a feeling which will gradually disappear when the business interests of Great Britain begin to realize that the political horizon of Europe gives every evidence of clearing.

It may be said that the financial interests of England, who have had their telescopic vision centred on the political and economic conditions of the European world for the past five years or since the signing of the Armistice in 1918, in study of the aftermath effects of the war, have, at least, become assured that there is a break in the dark hovering clouds to denote the beginning of the end and the promise of a complete ironing out of all European difficulties by Christmas. To insure confidence and a general renewal of the world's commerce and the wheels of industry again in motion before the beginning of the new year.

In due credit to the British business interests it must be admitted that the importers and exporters of the United Kingdom have never lost heart during these years of their economic struggle. They have calmly faced the situation and borne their load of taxation with

Lumber Trade Conditions

(Continued from page 51)

the grace of good sports, obsessed with the confidence that England, the soundest in her financial stability, would ultimately recover with a bound. One of the reasons for this admirable spirit of hopefulness stands out pre-eminently in the recent statistics published in regard to the general trade of the United Kingdom, to show that the trade in every avenue of the business life of England during the past year has under the current circumstances been fairly satisfactory, demonstrating that there is still a considerable amount of buying power left in the nation.

As regards the continent, sales have been small and business retarded by the political uncertainties and fluctuations of exchange but the time is now approaching when the English timber importing interests must take risks. They are beginning to feel that they cannot delay any longer in making purchases on the best possible terms owing to urgent needs for goods, realizing that there is still a buying power on the continental market and good prospects for large quantities of their present stocks at current rates, thereby leaving the market in a firm position for the beginning of the year 1924.

In demonstration of the stability of the wood business in England and cause for the spirit of optimism now prevailing, it may be pointed out that during the month of August, notwithstanding the holiday spirit and taking into consideration the dockers' strike, business in so far as it concerned the timber trade, was fairly good. Orders were and still continue frequent and the supply of railway waggons was found to be inadequate to deal with the volume of trade demands in the various parts of England. The Midlands bought more freely both as to sawn and planed lumber and on the north coast there was continual activity. In London ready goods were largely sought and competed for and higher prices paid. But the confusion at the port in consequence of the dockers' strike and congestion in shipping and unloading was so great as to make business difficult. "However," the advices go on to state, "it is pleasing to report a steady consumption of sawn lumber and a firm tendency in prices. In the Humber district there is plenty of stock and, fortunately, a good demand for consumption, but, as in London, some of the importers are selling their goods cheaply for financial reasons.

House-building is expanding and there is scarcely a limit to the new houses required. But money is tight and a difficulty is being experienced in adjusting accounts and this applies to almost all sections of the country.

Lumber Business in Ontario is Steady

Business in the general lumber line in Ontario does not show much marked change over the past month. Some yards have not worked down the stock they have bought. Building itself has fallen off considerably in a number of localities. Other retailers report that there has been quite an improvement in their sections since the harvest is over, and the outlook for fall is regarded as very good. Prices are holding firm in most all lines although it is reported that some dealers have been offering reductions on spruce, while busin-salers report a number of carload orders believing that the business exists if one will only get out and "dig" for it.

A number of mills are preparing to terminate their season's cut and are getting ready for logging. As soon as outside construction work closes down and men return from the western harvest, it is believed that the labor situation will be considerably relieved. Bushmen are being offered \$40 to \$45, but it is not thought that any higher figure will be paid. This is \$5 to \$10 more than last year, and manufacturers contend that the prices received for their stocks do not justify the existing scale of woods wages.

On the whole the business outlook for fall is fairly steady. At present the market in both hard and softwoods is characterized by conflicting evidence. There are varying reports but the underlying trend continues in a direction which certainly heads for improvement and all ripples of comment and doubt are only surface indications rather than underlying influences. Confidence is being restored and there is improvement of the mental state of business men in general. Augmented assurance is manifested in a decreasing general tendency to push sales when prices soften. It is supported by definite knowledge that available stocks are much below those that are normally on hand at this season of the year.

The lumber situation should continue to get better from this out and with good distribution facilities and steady shipments to the other side of the line, the trade as a whole should have little cause for complaint regarding either volume or value. It will be found that most firms have so far in 1923 done a much bigger business than during the corresponding period of last year.

Earthquake Will Create Demand for Lumber

That the earthquake disaster in Japan will create a great demand for building materials, particularly lumber, is expected as soon as

relief measures are sufficiently far advanced to take care of the immediate needs of the devastated areas. Large orders for lumber and shingles and other materials which British Columbia can supply are expected to be placed with the exporting companies in Vancouver.

A committee of lumbermen, representing the lumber manufacturing interests has already conferred with the Japanese vice-consul in Vancouver and assured him that the mills of the province are prepared to care for all lumber ordered in British Columbia for export to Japan at a lower average cost than before the disaster. One large lumber exporting firm which handled the output of many mills has sent its representative to Japan to ascertain to what extent British Columbia building materials will be required in the progress of reconstruction. The provincial Government's gift of a cargo of lumber is expected to go forward in the near future.

The rebuilding of the devastated districts in Japan is expected to stimulate the lumber industry in British Columbia to a considerable extent. Other lines of industry, it is anticipated, will also feel the impetus of an increased demand for supplies in the opinion of business men.

Orient Orders May Mean Much for West

Millmen and others connected with the British Columbia lumber industry are quite excited over the prospect of an enormous demand from the Orient for reconstruction purposes in the quake-shattered cities of Japan. J. G. Robinson, of Vancouver, recently told the Royal Enquiry Committee that if the flood of orders in sight from the Orient materialized the lumber industry in the province will be stabilized for years to come.

Financial circles of Vancouver are discussing the possibilities of these Oriental orders in a very animated way. The subject has taken precedence over all others. The prairies and even Ontario have been absorbing more B. C. lumber in the past month than during the past year, but the millmen assert this phase of the business has been rather haphazard for several years.

With the prospects of the new field opening, there are suggestions that the price of material shipped east will be advanced almost at once in price. Some factor has unquestionably given firmness to the business tone on the coast recently. Banking circles attributed it to these tentative demands for building material on the other side of the Pacific.

Will Timber be Affected in Quebec

The Quebec limit holders were taken by surprise when the Quebec Government recently passed an Order-in-Council putting in force the former 1920 stumpage dues in the timber-cutting activities in the province of Quebec, in place of the 1918 rates in tariff which had been applied for the years 1921 and 1922 to encourage more work in the lumber camps, especially to give employment to labor.

The Quebec lumber operators were of the opinion that the 1918 tariff on stumpage dues should remain in force for another year, at least. The obvious reasons were the slump in the Canadian export trade to Great Britain due to European political conditions, and competition from the wood-exporting interests of Russia, Sweden and Finland, the continued high rates of ocean freight, and high cost of labor. Two months ago they waited on the Taschereau Government with the request that the 1918 tariff be continued in force for the present, at least, and, fully confident that the Government would accede to their request, naturally feel disappointed.

In the meantime the Quebec limit holders, who have delayed the making of their estimates for this winter's cut until they had learned of the decision of the Quebec Government in regard to their attitude on the tariffs, are reluctant for the present to express their opinions as to what the Order-in-Council will have on their operations. The Limit Holders' Association will shortly hold a meeting in Quebec to discuss the situation and agree upon their attitude in connection with their lumber camp operations this winter. They admit that the Government was within its rights to increase the tariffs on stumpage dues in conformity with the 1920 tariffs but maintain that the same reasons existed in the years 1921-22, still exist to warrant a continuation of the 1918 tariffs.

It is generally admitted that the operators will be obliged to make a large cut of logs in the fire-swept regions in order to salvage the wood from destruction by worms and in the cutting fifty per cent. is likely to be saved for sale as second-class material. In this connection the Government allows fifty per cent. reduction in the tariffs which may compensate for the cutting.

On the other hand the limit holders say there is likely to be a big curtailment in the cut of new timber for foreign exportation. The present state of the United Kingdom market, the competition from European continental countries and the price of labor will naturally influence their operations in the field of new timber production.

Halifax Feels Decline in Export Business

Since the latter part of August the lumber trade has been quiet, due largely to the decline in demand in foreign markets.

Good new stocks of spruce sold readily in the British market at good prices in the spring and early summer, and the steamship companies enjoyed a larger measure of business than for a number of years, but late in August the demand slowed up and prices began to weaken. Since then the situation does not appear to have improved, though advices from the other side held out encouragement that the market would in all probability improve after the summer holidays.

There are various causes advanced to account for the set-back, the principal ones, other than the usual seasonal dullness, being the prolonged Dock strike in Manchester, and the political uncertainty in Europe. No doubt the unemployment situation in England has also had a depressing effect on business, which is reported to have reached an acute stage.

Liner shipments have lately been reduced to almost nothing, but exporters in Nova Scotia were pretty well shipped up while the demand was good, and at present stocks are unusually light. Manufacturers have practically none of this year's cutting on hand, which places them in a particularly advantageous position to meet whatever new development may take place.

For the most part operators are now waiting to see what will happen during the next few weeks, as a guide to next winter's work, and it is difficult to forecast with any degree of accuracy what quantity of lumber will be produced the coming year.

If the British market rallies before the season is too late the usual output will be assured, while many seem disposed to stay out of the woods under present market conditions. Operating costs will be considerably higher than last year, owing to the scarcity of men and the consequent rise in wages while the cost of feed and supplies of all kinds is about 15 per cent. above last year's level.

Shipments of lumber to the American market have dropped off, due to the low prices offered after mid-summer. Western fir shipped in large cargoes through the Panama Canal have been in serious competition with Eastern spruce, and owing to the attractive specifications offered appears to be very satisfactory for that market.

Immense quantities of these stocks from the Pacific Coast have literally been dumped on the New York and Boston markets at low quotations, and the price of spruce suffered accordingly. The price of laths which declined in August owing to an accumulation of unsold cargoes in the New York markets, has recovered considerably. The number of enquiries being sent out at present indicate an active demand.

The general opinion seems to be that the lath market will be good for the remainder of the year.

Why not Give Public Your Prices?

If you want to start an interesting discussion among a group of retail lumbermen, take up the subject of quoting lumber prices to those who may desire them, or the advisability of publishing your prices. This is a question on which you will find some difference of opinion and a discussion of the subject will bring out the arguments says "The Retail Lumberman."

The principal objection of the dealer who is opposed to the quoting or publication of prices is that the customer may take those prices and shop around. A secondary objection is that a competitor will know how much he will have to cut his prices in order to undersell one. Both of which are good arguments in a case where a dealer's competitors are of the breed who do undersell and who generally have to undersell in order to get the business.

Frankly, we are inclined to favor the plan of quoting prices to anyone who wants them and to the publication of prices from time to time. It seems to us there are times when it would be especially desirable to get your prices before your customers. To present our arguments as to why prices should be quoted or given, as the case may be, we would simply ask you to put yourself in the customer's place—get his viewpoint.

Now let's suppose that you are going to a men's clothing store to get a supply of winter wearing apparel. You are going to buy a suit of clothes, a hat, some socks, a shirt or two, some heavy underclothing and a tie. The clerk shows you a number of suits. There is one you like particularly. What is the first thought that comes to your mind? The price. If that suit is more expensive than you had planned to buy, you'll probably decide on one which costs less. You don't care to go over \$5 for a hat but you take a liking to a \$9 one without knowing the price. When you find out how much the hat will cost you, you immediately look for a less expensive one. The purchase of underclothing, socks, ties, etc., is virtually a repetition of your experience in buying a suit or hat.

Now, suppose that the clerk who waited on you refused to give separate prices on the articles in which you are interested for fear

Wake Up, Ottawa!

"In many cases American lumber interests have temporarily suspended operations in the few good limits left while they are hastily denuding Canada of her valuable pulp wood and lumber, thus saving their own at Canada's expense." —From the Montreal Star

you might take those prices to a competitor and endeavor to get him to cut his prices. Suppose that he insisted on your picking out what you wanted and then gave you the total price on the whole purchase. How much would you purchase at a store where such merchandising policies were carried out? We would certainly hate to admit that the lumber business should not be on a par with the merchandising methods of the average run of businesses but when we find a man who is afraid to quote his prices there is nothing else for us to think than that he is not sincere in his dealings with his neighbours.

There are high-priced establishments and cut-rate establishments in virtually every town and city and we've noticed that the so-called high-priced stores keep right on doing business year after year. They evidently have the value in the goods, they must sell something besides merchandise and they probably do. Establishments like these who enjoy a good reputation, do not consider the cut-rate store as a competitor.

How Silk is Made From Wood Pulp

Entering into the manufacturing of all kinds of ribbons, ties, scarfs, hose, jerseys, velvets, satins, braids and trimmings for fancy textures, and woven with natural silk, cotton, and other fibres into numerous fabrics is a cellulose product, known as artificial silk, that has been made in Europe for the last twenty years, and in the United States since 1911. The industry has been remunerative, and has prospered even at a time when other industries were passing through periods of serious depression. Between 1914 and 1921 the world's annual output of artificial silk increased from twenty-six million to forty-four million pounds, and the demand today is so much in excess of supply that the capacity of many mills is being increased.

In the manufacture of artificial silk the viscose is now much used. The raw material is cellulose in the form of wood-pulp, bleached as for paper making; and the chemicals for treating the pulp are caustic soda and carbon bisulphide. The labor, however, is the principal item of cost, some of the large factories employing as many as 3,000 men and women.

Though some Canadian wood-pulp finds its way to French and Italian factories, no artificial silk is at present made in the Dominion; yet imports now reach a value of over \$2,000,000 a year, and these do not include the great quantity of imported fabrics partly made from artificial silk, for which no record is available.

Train of saw logs at the dump, on the operation of the International Land & Lumber Co. Limited, near St. Felicien, Que.
The Linn Logging Tractor can be seen at the extreme right.

LINN LOGGING TRACTOR

When a Linn Logging Tractor commences operation with a new user, our instructor goes in with it, and remains, without further charge for a period of two weeks, and thoroughly instructs the designated operator in the operation, care, maintenance and repair of the Linn Logging Tractor.

Our instructors are experienced men in the log haul as well as mechanically—they are the operator's assurance of success, and we cannot afford, any more than can the user, to have an operation, where a Linn Logging Tractor is in operation, other than a complete success.

The writer of this advertisement was talking to a large operator, who is a Linn Logging Tractor user, and this gentleman was relating an experience he had at a recent meeting of Lumbermen that was held in Toronto—this operator in question told the writer of some discussions regarding the Linn Logging Tractor, by these gentlemen, and of his telling them what he had accomplished last season with his machine—and he said to the writer, "Do you know I rather had the feeling that they thought I was exaggerating"—and the writer took occasion to remind this operator of the time, when the writer was telling him what the Linn Logging Tractor would do for him, that he thought the writer was telling fairy tales.

The performance of the Linn Logging Tractor is the same wherever you find it—a success beyond the expectation of the man who owns it.

Montreal

President of Canadian Lumbermen

(Continued from page 35)

when timber supplies were abundant have long gone by. I am not an alarmist but I feel keenly on this problem.

At the last annual meeting of the Canadian Lumbermen's Association in the discussion, which took place on market conditions, I referred particularly to spruce and made the remark that it was the tree that seemed destined to hold its ground and continue to be the prevailing species for all time to come. There are, of course, other equally important woods. Our white pine is rapidly disappearing and it is necessary that our spruce should be preserved. I asked the question in Montreal of those, who were vitally interested in our forests and our future supply of timber, how long, at the present rate of consumption, was our spruce timber going to last and what can be done to conserve and increase reproduction? One other question was also put by me and that was, what other species, if any, have we that can be utilized as a substitute.

Bringing About Stability in Industry

These are momentous problems at the present time. We can not ignore the future and it should be remembered that the question of supply is not the only one. If the lumberman is to continue in business he must have a market for his product and there must be confidence in the industry and stability to the general economic situation. How can these be brought about?

There have been many ups and downs in values and volume of trade since the war. European conditions are far from being adjusted and the various strikes in the Old Country, along with the wave of discontent, lower freight rates and easy access of the Baltic countries to the ports of the Old Land, have seriously interfered with the Canadian overseas trade. We must have cheaper means of transportation both by rail and water and labor must be moderate in its demands, for the cost of producing lumber has ascended more rapidly than the price obtained for the finished product. Logging is costing more and more all the while and this year men are not only difficult to secure and inefficient in performance but they are commanding \$15.00 to \$20.00 a month higher wages to go to the bush.

In the face of all these barriers, further exactions have been made upon lumber and the lumberman by augmenting the sales tax from 3 to 6 per cent, and by a 100 per cent increase demanded by the Board in connection with the Workmen's Compensation in New Brunswick. Then too, our financial institutions and banks have been restricting their loans and cutting down the borrowing facilities of large firms who must possess ample accommodation in order to carry on.

Looks for Steady Business

We are passing through a rather trying time with much uneasiness manifested in the ranks of labor and in banking institutions and developing a policy of diffidence and distrust that does not tend toward engendering optimism and expansion. As we leave the war farther and farther behind, I believe, if labor will only retain its head and building costs be kept down, that 1924 will be a year of steady business and satisfactory returns. We want no runaway market values, no speculative sorties or fictitious flights. We have gone through the exigencies of high finance and cancellations, or heavy stocks on hand and no de-

mand and all the intervening stages of recovery and readjustment. Business generally during this year was good up until the middle of the summer months when, owing to the excessive demands on the part of labor, structural activities slowed down.

When costs are mounted and pyramided, either in building or manufacturing, a buyer's strike is apt to result and a boomerang effect ensue. One factor starts blaming another. The censure is passed from head to head and everyone is seeking to pin the bouquet on someone else or to attribute the existing state of affairs to causes that are neither relative, sane nor sound. One thing to be remembered is that no matter whose fault it is, all share alike in the resultant disadvantages. We are all patient and tolerant up to a certain point but beyond neither producers, purchasers or public will go.

Sanity and Courage Required

There are great economic questions still to be solved in the lumber industry, and while business is now on the upturn and there is likely to be a larger than average cut taken out in the bush this winter, it must be remembered that our optimism must be tinged with sanity and courage. The price of livestock and wheat and other farm produce is still low and while the yield on the fertile farms in the Prairie Provinces has been satisfactory, much greater quantities of cereals are required to bring in a dollar than in the days before the war. After all our prosperity is based upon the condition of the farmer and, unless he is enjoying a fair return on his work, activity will not be felt in other avenues.

It is too early, however, to say anything authentic regarding fall business and the outlook for 1924 except I am of the opinion that the present seasonable lull is over, that confidence is abroad and that industrial users of lumber are approaching the end of their reserve stock and will be in the market sooner or later for considerable quantities. An auspicious omen is that prices have held firm during the past few months and a runaway market was forestalled by a break in conditions early in the summer. With the realignment of prices for the finished products of lumber, the present level of quotations should bring about a revival in buying. One leading authority has stated that a snag at the present time is the disproportion between wages paid labor and the earnings of the farmer. This, too, must be readjusted and it will probably come about by a gradual lowering of the former.

But why dwell further on the obvious. We must all have faith in the future in spite of disturbing factors which now and then arise. Canada has much to be thankful for and Canadians should not be an ungrateful people. Producers and distributors must work in unity and harmony, never lose confidence in their calling or evidence any disbelief that things are not getting better.

Some Auspicious Omens Outlined

Our railroad earnings are increasing and leading industrial stocks are higher than a year ago. The balance of trade for June showed the first monthly excess of exports since December 1922. Our imports of merchandise for the year ending June 1923 increased 18 per cent compared with the corresponding month a year ago, and immigration shows the largest number of arrivals that has taken place since 1920. The number and per cent of failures are the smallest

since June of 1922 and bank clearings reveal a gratifying gain.

There are many other reliable readings from the business barometer and its statistics which I could present but they would not add weight to my argument or strength to my convictions that everything will adjust itself in the near future and we will be soon going full steam ahead.

The first few months of 1923 were ones of normal production and distribution in the lumber arena and, while conditions have been somewhat disturbed during the past, there is no doubt that with all artificial and speculative elements out of the way, the lumber industry will continue to be the great undertaking that it has in the past. Mill stocks are, on the whole, low and are mostly in the hands of distributors. The cuts of practically all leading operators were sold at a good figure early in the year and operating conditions during the past summer have been favorable. Of course, there are exceptions to all general rules but I am of the opinion that we can look to the future with confidence, and if we preserve a cool head, steady hand and firm faith, we should triumph over all difficulties and come out all right in the end.

Brought Along Two Chickens

A colored man from Kentucky drove to a loose leaf tobacco sales warehouse in one of the Indiana cities on the Ohio with a load of tobacco.

When he received his sales slip and weights he noticed the customary bank check was missing.

Approaching the cashier he said:

"Look here, boss, where is my money for this here tobacco?" The sales sheet was consulted.

"It's like this, the expenses for weighing, unloading and commission for selling your tobacco amounted to more than the tobacco was worth. You see, you still owe us just 59 cents," explained the cashier.

"Well, that's all right, I guess but I ain't got a cent with me."

"Then next time you are coming over the river, just bring a chicken with you and we will call the deal square."

Within a week the colored man appeared in the office with two chickens, one under each arm:

"Here's yo' chickens."

"Sure—but you didn't have to bring two of them, one would have paid the bill."

"Yes, boss, but I'se brought another load of tobacco."

In Danger of Losing Himself

One of the negro immigrants who have been drifting up from the South in such numbers stopped a pedestrian in front of the post office.

"Say, Boss," he inquired, "what's de way to Seneca Street?"

He was given the direction.

"Is dere a place down dere where I can git myself 'mawked?"

"Marked?"

"Ya-as; git my 'nitals stamped on my awm, you know. I got to dis town lass night, an' I had a job engaged, an' a satchel full of clo'es and \$18.62 in money. Fust I loss my way, den I met a guy who was goin' to show me an' when I come to I'd loss my satchel an' my money; now I've juss loss my job. I wants to go and git mawked right away, or nex' thing I knows I'll lose mahself."

Edgings

James Richardson & Co., have just started on a new sawmill at Cap Chat, P. Q., to cost about \$20,000.

S. L. Begg, Crysler, Ont., has bought out the sash, door and lumber business of Jerry Page & Son.

O. Thomson, of the Thomson Lumber Company, New York, was among recent visitors to Montreal.

E. R. Plunkett, of the Plunkett-Webster Lumber Co., Inc., New York, was a visitor to Montreal recently.

Henri Briere, 97 St. James St., Montreal, has started the erection of a new sawmill at a cost of \$4,000 at Duhamel, Que.

The House Mountain Lumber Co., Limited, Edmonton and Whitecourt, Alta., have assigned to the Montreal Trust Co.

Keenan Bros., Owen Sound, Ont., lumber manufacturers, are putting in the foundations for a new warehouse to cost about \$8,000.

The engine room and cooper shop of the Hayne Milling Co., Point Edward, Ont., was recently destroyed by fire to the extent of \$8,000.

Garden City Paper Co., Merritton, Ont., are preparing plans to erect a new paper mill, at a cost of about \$4,000,000, and will consist of four buildings.

The Canadian Match Company, Limited, have been granted supplementary letters patent to increase its capital from \$1,000,000 to the sum of \$2,500,000.

Thomas H. King, of Moncton, N. B., Eastern Canada representative of the A. W. Burritt Co., wholesale lumber dealers, New York, was in Toronto recently on business.

C. A. Labrecque has been appointed secretary of the province of Quebec Retail Lumber Dealer's Association and of the Montreal branch in succession to G. A. Thompson, resigned.

A. S. Gravel managing director of the Gravel Lumber Company, Limited, Etchemin Bridge, P. Q., was a recent visitor to New York. L. G. Gravel, of the Montreal office of the Gravel Lumber Company, Limited, was on a trip to New York.

Manley Chew, of Midland, Ont., has taken a contract to supply the Standard Chemical Co., Toronto, with 12,000 cords of wood this winter. The timber on Hope and Beckwith Islands will be cut into logs and the balance into 4-ft. wood.

During August, 33,000,000 feet of lumber was exported from British Columbia, according to J. G. McConville, manager of the Associated Timber Exporters, representing all the export mills of the Province with the exception of the Dollar, Hastings and Prince Rupert mills.

Quebec Industrial & Timber Company, Limited, Quebec City, P. Q., were recently granted a provincial charter to conduct a business of general merchants in timber, pulpwood, firewood and other wood products. Capital \$99,000. Arthur Lachauce, manufacturer of Quebec City, is one of the incorporators.

Cost of fighting British Columbia forest fires so far this year has amounted to \$20,000 as against \$343,000 this time last year, it was learned at the lands department. So far this year 954 forest fires have occurred in British Columbia. Last year at this time 2,021 fires had broken out.

The mill of the Yellow Fir Lumber Co., Limited, located at Sahtlam, Vancouver Island, was burned to the ground recently. M. B. King and B. M. Farris, of the King-Farris Lumber Co., Newton, B. C., are the owners of the Yellow Fir Lumber Co. The loss, which is heavy, is covered by insurance.

Most of the logging camps on Vancouver Island have closed down to allow the mills to catch up with the supply of logs, now threatened by teredo damage as a result of the long stay in the water. Cowichan Lake, and bays along the island coast used as booming grounds, are now well filled with logs.

Indicative of the general increase in lumber operations in British Columbia this year, Provincial Government statistics show that for the first six months 1,206,936,927 feet of timber was scaled in this Province, as compared with 878,026,789 feet for the first six months of last year, when conditions were described as highly satisfactory.

The logs which escaped from the boom of the Chisolm Lumber Co. at Chisolm, Alta., have been driven down the stream to Fort McMurray where the company has erected a sawmill to manufacture them. From this source it is expected that 1,000,000 feet of lumber will reach Edmonton by the A. & G. W. Railway. It is understood the company intends to load the lumber on barges at McMurray,

about 150,000 feet to a barge, and then have the barges pushed up stream by motor boats to Waterways where the material will be piled on the cars.

Australia is in another bad buying slump and for months has not placed a single full cargo order with British Columbia mills. China has been investigating the tie market, but is not being encouraged, owing to her financial unsettlement. The United Kingdom has been buying timbers and is also in the market for heavy structural material.

Five small sawmills and three logging camps are now operating along the Cowichan Lake line, B. C., of the Canadian National Railways, and practically all these enterprises are the creation of less than a year. They represent the initiative of a score of operators who have not hesitated to break into virgin territory as soon as transportation facilities have been provided. The Canadian National line has opened up a vast new timber area.

Owing to the very material increase in the volume of the Association's business and the consequent need for more room wherein to take care of the details of its work, the National Lumber Association has secured additional office quarters at 1840 McCormick Building, directly across the hall from suite 1864 which it has occupied for the last eleven years. The main office will remain at 1864 as heretofore.

A new concern, known as the Langley Timber Products Limited, was recently organized for the purpose of operating the sawmill, formerly known as Huggard's, in the Fern Ridge district, B. C. The new company, the principals in which it is understood are Messrs. Damaske and Walker of New Westminster, will manufacture principally railroad ties and dimension lumber and will begin operations immediately.

Percy L. Canfield, of the Canfield-Wilmot Lumber Co., Woodstock, Ont., was at a recent meeting of the directors of the Y.M.C.A., of that city, elected president for the coming year. Mr. Canfield has long taken an interest in the work and is deeply concerned in its activities. He has a host of friends among the young men of Woodstock and is an old Toronto Central "Y" man. Under Mr. Canfield's direction the Association in the capital of Oxford County should have a year of prosperity and expansion.

L. G. Gravel, of Montreal, who is in charge of the Montreal office recently established by the Gravel Lumber Company, Limited, of Quebec, was in the city after a fortnight's sojourn at Atlantic City, and left for home the night of the 13th. The Gravel Lumber Company, Limited, are manufacturers and wholesalers, handling Quebec spruce and hardwoods specializing in hard wood flooring, the mills and head office being at Etchemin Bridge, in the Province of Quebec, near the city, and with selling office 501 Drummond Building, Montreal.—Lumber Trade Journal, New York.

The Warton Lumber Co. recently made an assignment to N. L. Martin & Co., of Toronto. The assets amount to about \$53,000 and the liabilities are in the neighborhood of \$78,000. The Warton Lumber Co., Limited, had at its head, Wm. Eldridge, of Warton, and as its secretary-treasurer, O. L. Smith, also of Warton. It owned mills at Tobermory, Southampton and Stokes Bay, and for a time was a thriving organization. At a meeting of creditors it was decided to appoint inspectors to dispose of the assets of the defunct company. This will be proceeded with at once.

Recently several timber berths were disposed of by auction in the Crown land offices at Fredericton, N. B. Timber berth No. 52, located on the St. Nicholas River, Kent County, was the first one offered for sale. This berth consists of three square miles and was sold at the upset price of \$20 per square mile. The purchaser was James M. Burns. Timber Berth No. 53 was next offered for sale. This berth comprises five square miles of woodland. It sold for the upset price of \$20 per square mile. This also was bought by Jas. M. Burns. The first Crown Land lot offered for sale consisted of 33 acres of vacant Crown land located in Sunbury Co., near Juvenile Settlement. This land was purchased by the Fraser Companies, Limited, at \$6.01 per acre. Z. Nathan Oliver bought the second and last Crown Land offered for sale. It consists of 100 acres in York Co., and was sold at \$1.00 per acre.

Between \$300,000 and \$400,000 will be required to construct a new slip and wharves for the Spanish River Pulp & Paper Mills, Limited, at Sault Ste. Marie, Ont. Plans for the work have just been completed. The new slip will be opposite the end of John St. and the mouth of Fort Creek. It will be 200 feet wide and 600 feet long and will run inland to within 100 feet of the Algoma Central Railway track. The Spanish River Co. will bear the cost of construction and the cost of the dredging, which it is estimated will run to about \$100,000 will be borne by the Government in recognition of the importance of the industry and in consideration of the company's undertaking to ship its product in Canadian bottoms. It is figured that 250,000 tons of freight, valued at \$7,500,000 will be handled over the dock annually. It means the widening of the approach to the ship canal.

Canadian Hardwood Market in New England States

Canadian Trade Commissioner Frederic Hudd in a recent letter from New York on the market for Canadian hardwoods in the New England States says: As a result of difficulties experienced by some of the smaller producers in the province of Quebec in finding a permanent market for their hardwood in the New England States, the writer has made an investigation of the actual situation, and it is found that while there is a very large market for Canadian hardwood in that district, many buyers are dissatisfied with the shipments they at present receive and make specific complaint of faulty cutting methods, or lack of care between times of cutting and shipment.

New England is the largest hardwood buying centre in the United States. Great quantities of hardwood—more particularly maple and birch—are used in this region in the manufacture of bobbins and spindles. The demand is emphasized by the fact that as hardwood in Maine and other New England States has been drawn upon in large quantities for a very long period of years, there is a tendency to conserve the remaining supply and purchase elsewhere. The wiser owners of hardwood are not selling their growth. In considering the future possibilities of so large a market the Canadian shipper should also bear in mind that the transportation facilities are in his favor. For instance, the Canadian National line to Portland from points in Quebec touches several of the largest hardwood mills in New England.

The larger users of hardwood are constantly endeavoring to secure permanent sources of supply. As already indicated, however, more than one buyer states that there is ground for serious complaint against some Canadian hardwood received, on account of faulty cutting methods and lack of care after cutting. All these buy-

ers agree that the lumber is excellent in quality, but that the faults mentioned reduce the actual value of the lumber from the buyer's point of view by about 30 per cent. One buyer instanced some accumulated stock he knew of in one Canadian mill which had deteriorated 50 per cent on this account.

This state of affairs could doubtless be remedied if shippers would take greater care of their product or secure instructions from customers as to how they want the lumber cut and cared for. In this connection the writer was in conversation with probably the largest buyer of hardwood in the United States, owning several mills in New England, and he stated that he is already buying Canadian hardwood in large quantities, but that he finds many shipments unsatisfactory for the reasons indicated. He also stated that if he could enter into an arrangement with five or six dependable concerns in Canada for the supply of hardwood, he would undertake to send a group of men up to their mills for a period, in order that advice could be given in the cutting of and caring for the lumber, and his exact requirements thereby be met. He is of opinion that something of this kind should be done if Canadian hardwood is to maintain its reputation and make the most of the expanding market it can find here. Such a proposition as that outlined could be entertained only by those able to fill large orders. In any event Canadian shippers must be prepared to "nurse" the market, and if what the buyers say is the case, some must endeavor to improve both the cut and after-care of their lumber.

It is true that at present, on account of high prices and uncertain labor conditions—and in some cases accumulated stocks—buying is conservative, but from the point of view of maintaining or even securing a still larger market for Canadian hardwood, there is every opportunity for the energetic shipper.

Edgings

H. Lishman has purchased the business of A. J. Grant, dealer in lumber and cement, Cayuga, Ont.

Charles H. Fletcher, president of the Fletcher Pulp & Lumber Co., Limited, Sherbrooke, P. Q., died recently in that city.

It is understood that plans are under way for the Forest Mills Co., of Nelson, B. C. to re-open a sawmill at Cascade.

Talbot & Cie. Limited, Robertsonville, P. Q., is a new company recently formed to deal in timber, lumber and pulpwood. Capital \$49,000.

Through Hon. T. D. Pattullo, Minister of Mines and Forests, British Columbia has offered to the people of Japan, assistance in the form of timber for re-building.

The Central Canada Lumber Co., Limited, have removed their offices from the Excelsior Life Building, Toronto, to the Harland Smith Building, at the corner of Adelaide & Bay Sts.

Fletcher Pulp & Lumber Corporation, Limited, Sherbrooke, P. Q., was recently granted a provincial charter to manufacture and deal in timber, lumber and pulpwood. Capital \$18,000.

Ham Bros., Limited, Elgin Street, Brantford, Ont., are making plans to erect a new lumber shed at a cost of \$3,000. The building will be one storey, 15 x 100.

The Comrie-Grierson Lumber Co., Limited, of Scarboro Junction, Ont., of which Robert Comrie is manager, has become incorporated with an authorized capital of \$40,000, to carry on a general business in the lumber line.

In the lumber camps there is certain to be a great shortage of men in the Ottawa Valley during the coming season and it is reported that some 2,000 of the 12,000 British harvesters now in Western Canada will be used in this connection.

The B. C. Fir & Cedar Co., of Vancouver, whose plant was recently destroyed by fire, are rebuilding. The new plant will be up-to-date in every particular and pains will be taken to comply with the provisions of the smoke by-law.

The sawmill formerly operated by the Foundation Co. at Port Alberni, B. C., and subsequently by the Lefroy Lumber Co., has been purchased by the Stamp River Lumber Co. and has commenced operations under the new management.

Work has begun on the power transmission line from the town hall of Dryden, Ont., to the power house of the Dryden Paper Co. The new poles will support a wire big enough to carry the full load required by the town of Dryden for years to come.

The Laurentian Timber Products Co. Ltd., St. Jerome, Que., have started the erection of a new plant consisting of three buildings. They will all be one storey and the respective dimensions are 40 by 70; 35 by 40 feet and 35 by 35 feet. The work will cost about \$25,000.

Henry J. Borbridge of the firm S. & H. Borbridge, well-known wholesalers and retailers of harness at Ottawa, died recently in that city. The late Mr. Borbridge and his interests are widely known to the lumber industry of Eastern Canada whom he supplied equipment to for many years.

Fire recently broke out in the yard of Walter Turner's sawmill near Port Elgin, N. B. The mill was saved by the strenuous efforts of volunteer flame fighters but about half a million feet of lumber was burned. The loss will reach about \$15,000. It is understood that the lumber was in part owned by C. H. Read, of Amherst, and was partly covered by insurance.

The Summerland Lumber Co. Ltd., of West Summerland, B. C., has assigned to Geo. E. Winter, of Riddell, Stead, Hodges & Winter, chartered accountants of Vancouver. The assignment is said to have been the result of pressure by one of the creditors of the company. Both the mill and box factory will be operated to capacity until the end of the year.

Henry Ford, the automobile manufacturer, has purchased the town of Pequaming, Baraga county, in the upper Michigan peninsula. The purchase includes a short railway, sawmill, timber lands and also the interests of Charles Hebard and Sons in Baraga, Ontonagon, Houghton and Marquette counties, bringing the Ford lumber output to about 50,000,000 feet annually.

At a public meeting of the ratepayers held recently in Fort William to discuss the by-law with respect to fixing the assessment of the Great Lakes Pulp & Paper Co., several questions were asked and everyone present appeared to be in favor of the measure which will be voted upon in the near future.

Several medals won by the school children of the Fraser Valley,

near Langley Prairie, B. C., in an essay competition conducted by the Provincial Forestry Department, were recently distributed by James A Mahood, district forest ranger. The contest which was open to the entire province, called for an essay on "Why Canada Should Protect Her Forests."

It is understood that the Manitoba Pulp & Paper Co. is increasing its preference shares capital from \$2,500,000 to \$2,800,000. B. W. Thompson, vice-president of the J. D. McArthur Co., who are interested in the paper enterprise, returned recently from Montreal and stated that arrangements for financing the enterprise were complete.

Hon. James Lyons, Minister of Lands and Forests, is advertising for tenders for the right to cut the timber on twenty-nine square miles in a berth in the vicinity of Clearwater Lake, and bids will be received up till October 1st. The sale of timber is also being made of fifteen square miles in the district of Kenora on Limit E, and tenders are also being asked for the green timber and for the burned and down timber in the locality north of Belmore and Elbow Lakes.

Belgo-Canadian Paper Co., Limited, is setting new records under its re-organized management and production is now reported to be at the annual rate of 90,000 tons. Only March 1, last, the company was working on a 65,000 tons per year basis, so that an approximate 40 per cent increase in production is shown over seven months. As additional machinery begins operations about November 1, the outlook is for still further expansion in the scale of Belgo-Canadian's output.

A. G. Boland, a widely known timber cruiser, died recently in Ottawa at the age of 61 years. He was one of the most efficient in his line in Eastern Canada and did considerable work for J. R. Booth. Death was due to paralysis and pneumonia. Mr. Boland was well acquainted in Ontario, Quebec and British Columbia. As an estimator of timber his judgment was thoroughly sound and his services were in constant demand when boundary disputes were brought to the court by various lumbermen. He resided at Sturgeon Falls, Ont., until 1913 and is survived by his wife three sons and three daughters.

The Spruce Falls Co., of Kapuskasing, Ont., are building 52 houses this year for their employees in the sulphite pulp plant. All of these houses are of the four-roomed type with modern conveniences, neat in design. Siding is used for a half storey and above that shingles. The average cost of these houses is about \$3,000 each. P. E. J. Jones, general-manager, states that the company are not making any improvements to their plant this season but are busy so far as pulpwood operations are concerned. The Spruce Falls Co. expect to get in between 50,000 and 60,000 cords during the coming season, possibly half of which will come from settlers.

Recent heavy rains throughout Northwestern Ontario have relieved the minds of the Department of Lands and Forests of the possibility of another serious outbreak of forest fires in the north country this fall. While little or no rain fell in the bush from June until late in August, the rainfall for the month of August was heavier than last year immediately prior to the big northern fire. Hon. James Lyons, Minister of Lands and Forests, anticipates that the Department will have little difficulty in the way of fires before the snow flies as long as caution is observed by hunting parties and tourists.

The lumber interests of the late George W. Upham, ex M.L.A. for Carleton, N. B., who built a mill at Juniper on the Transcontinental Division of the C.N.R. a year ago, has been sold by his widow to A. W. Kyle, of Hartland, N. B., the amount involved in the transfer being \$40,000. The late Mr. Upham operated upon limits leased from the New Brunswick Railway Co. on the north branch of the Miramichi River and his mill was located at Juniper, where Hon. J. K. Flemming, directs large lumber operations from the firm of Fleming-Gibson, Ltd. There was considerable competition, it is understood, for the mill and interests of the late Mr. Upham, several others having bid for the property.

On application of the Montreal Trust Co., trustees for the bond and mortgage debenture holders, a receiver has been appointed by the Supreme Court of British Columbia for the Whalen Pulp & Paper Mills, Limited. It is understood that the immediate cause of the assignment was the great disaster in Japan where the company for some years has been selling 50 per cent of its sulphite pulp. Hon. T. W. McGarry, of Toronto, president of the company, stated that the Court had ordered the carrying on of the business as usual until such a scheme could be worked out. It has been a well-known fact for some time that substantial re-financing was necessary. With the Japanese catastrophe an assignment was the only course for the directors. President McGarry stated that they expected to be able to re-finance on such a basis that all concerned would be taken care of. The company is in good shape and for several months past all three mills have been operating at capacity and considerable profits have been shown. He stated that, in round figures, the total liabilities of the company, including bonds, debentures, notes and trade accounts, amount to about \$10,000,000, and the assets to \$20,000,000.

Holt Buyers Repeat

It's the ability of the Northern "Caterpillar"* Logger to outstrip all other methods on a basis of actual performance that makes this powerful tractor the choice of some lumbering concerns. Others choose it on comparisons of cost; and still others because they count dependability the prime consideration.

But no matter what the deciding point may be that leads to selection of the Northern "Caterpillar" Logger, the result is the same: constant, ample power and sure traction. For example, the Mt. Murray Woodlands Corporation took one Logger last year and put it through an arduous test on common snow roads with many bad grades. And they kept close check on costs.

As a result they have bought four more Northern "Caterpillar" Loggers for next winter. What they learned about this tractor is a part of the fund of lumbering experience Holt has accumulated in providing the best machine for pulpwood and other timber operations in Canada. Let us tell you about the "Caterpillar's" proved ability.

**There is but one "Caterpillar"—Holt builds it*

- 1—Gould-Muir Gasoline Engine, 3 H.P.
- 1—Fairbanks Gasoline Engine, 2 H.P., mounted on wood platform and direct connected to a Plunger Pump, 2" Suction and Discharge.

Concrete Mixers; Pumps; Air Compressors in Steam and Belt drive; Stacks, Steam Engines; Motors and Transformers.

WILSON EQUIPMENT COMPANY
117 Wellington St. W., Toronto
Phone Adelaide 8069 19

Situations Wanted

Experienced lumber salesman, at present covering Montreal to Toronto and New York State, open for engagement at once. Box 329, Canada Lumberman, Toronto. 15-T.f.

WANTED—Position as manager or superintendent of lumber company. Eighteen years practical experience. Six years as manager. Best of references, both languages. Thirty-seven years old, married. Box 369, Canada Lumberman, Toronto. 18-19

Position as Superintendent of lumbering operations, to take charge of logging and milling, or would accept charge of either department—18 years' practical experience. Best of references. Box 360, Canada Lumberman, Toronto. 19-T.f.

EXPERIENCED ACCOUNTANT and thoroughly competent office manager with 20 years' experience, capable of handling books, financing, collections, financial statements, etc., at present employed but desirous of advancement, seeks responsible position. Apply Box 302, Canada Lumberman, Toronto. 17-21

EXPERIENCED ACCOUNTANT—15 years' experience. At present has full charge of office, credits, collections, costs, financing, etc., of manufacturing firm. Has had several years lumber manufacturing experience. Banking and employers references available. Apply Box 351, Canada Lumberman, Toronto. 16-T.f.

POSITION IN YOUR Sales Department is what I want. Six years' experience with sales, orders, correspondence and accounting has given me a good knowledge of the lumber business, particularly hardwoods. Am young, ambitious, aggressive and of unquestioned integrity. Naturally, I have a position and can furnish references, but am open to consider something better. Could invest \$1,000.00. Would also consider taking charge of camp office at woods operations if given positive assurance of something better in Spring. Give full information about your proposition, which will be held in strictest confidence. Box 374, Canada Lumberman, Toronto. 18

Situations Vacant

WANTED—Practical man to head lumbering and logging operations. Only men with long, practical experience need apply. First class references required. Box No. 348, Canada Lumberman, Toronto. 16-17-18-19

WANTED: Young man about 24 or 25 for sales department of lumber office. Must have thorough knowledge of lumber business and be able to assist in other departments if necessary. Give full particulars concerning where you have worked, lengths of time, what you did and salary desired. Enclose copy of references. All information confidential. Box 371, Canada Lumberman, Toronto. 18-19

WANTED—INSPECTOR for pine and spruce lumber, speaking French and English, who can ship and buy lumber for large wholesale company. Steady employment. State age, experience and salary. Box No. 384, Canada Lumberman, Toronto. 19-20

Toronto, September 14, 1923.

N.B.—No unauthorized publication of this notice will be paid for. 19

DEPARTMENT OF LANDS AND FORESTS

Province of Quebec

LEASING OF WATER POWERS

Notice is hereby given that on Tuesday, October 16th, 1923, at 10.30 A.M., in the sales room, Parliament Buildings, at Quebec, the Department of Lands and Forests will offer on lease at public auction three different water power sites of the Megiscane river, in the county of Temiscamingue and in the vicinity of the Canadian National Railways.

Interested parties shall be under the obligation to deposit \$10,000.00, by accepted cheque to the order of the Minister of Lands and Forests, at least three days before the auction.

This deposit will be forfeited should the applicant put up no bidding; it shall be refunded after the auction to the unsuccessful bidders, while the grantee's deposit will be retained as a guarantee until the development is completed.

For further information, write to the Department of Lands and Forests, at Quebec.

Elz. MIVILLE-DECHENE,
Deputy Minister.

We Specialize in Milling in Transit

Our mill is situated on the G. T. R. with C. P. R. connections.

We also supply Mixed Cars of sash, doors, frames and house trim.

Any work entrusted to us will receive our careful and prompt attention.

Dominion Lumber & Building Co.

Orillia, Ont.

Newsy Jottings of Mills and Men in Lumber Arena

George C. Haugh, Church St., Windsor, Ont., is contemplating the erection of a planing mill in that city.

The Tourville Lumber Mills, Limited, Louiseville, Que., will take out a considerable quantity of pulpwood this season.

S. B. Nichol, Blenheim, Ont., has started work on a new planing mill. The building will be two storeys, 50 by 26 feet, of concrete block construction.

Laurentian Timber Products, Limited, St. Jerome, P. Q., is a new firm recently incorporated with federal charter to manufacture and deal in timber, lumber and pulpwood. Capital \$25,000.

F. W. Hutcheson, of the Muskoka Wood Mfg. Co., Limited, Huntsville, Ont., has been on a business trip to Montreal. He attended the meeting of the Montreal Wholesale Lumber Dealers' Association on September 20th.

L. L. Brown, B. C., Lumber Commissioner, Victoria, B. C., arrived in Toronto recently and will spend the next few weeks in the East in the interests of forest products of the Pacific Coast province. He will visit the principal consuming centres.

The lumber yard of D. C. Mabey, at Bolton, Ont., was recently visited by fire, causing a loss of \$6,000, partly covered by insurance. A quantity of lumber and shingles in the yard were removed to safety, but some lumber, coal, lath, lime, etc., were consumed.

Edward O'Keefe, engineer of the Great Lakes Co., Fort William, Ont., arrived in that city from Appelton, Wis., to assume charge of the new mill. It is the intention of the Great Lakes Co. to push work as rapidly as possible.

George H. Howie, who recently removed from Fredericton to St. John, where he is now engaged with the Nashwaak Pulp & Paper Co. as construction engineer, disposed of a business block on Queen St. West, Fredericton, in which he was interested.

The Westminster Paper Co., New Westminster, B. C., recently made an attractive display at the Provincial Fair in that city. The exhibit consisted of wrapping, toilet, tissue, sulphite and other papers and was the first showing of its kind ever made in the West.

D. H. McLennan, president of the Montreal Lumber Association, has been appointed a member of a committee of the Montreal Board of Trade which will study the regulations of the new Sales Tax Act with a view to making suggestions to the Government.

The International Fibre Board Co., Limited, expect the taxpayers of Midland, Ont., will authorize the proposed fixed taxation for the company. If the by-law is passed by the taxpayers the company will occupy the property formerly used by the Midland Woodworkers, Ltd.

Lausophe Nault, Limitee, Daveluyville, Que., who recently began operations in the woodworking and planing mill line, have been quite busy doing a milling-in-transit work. While activities have fallen off a little during the past few weeks, trade is reviving and the firm are assured of a large number of orders.

The Provincial Government of British Columbia has arranged with the Timber Industries Council of that province to supply a cargo of lumber at cost to Japan, and is now negotiating with the Federal Government at Ottawa for means of transportation across the Pacific to the stricken cities of Tokio and Yokohama.

An order for the voluntary winding up of the affairs of the Colonial Lumber Company and the Canada Timber Company, of Pembroke, Ont., was granted by Mr. Justice Rose, of the Supreme Court of Ontario at Ottawa, recently. It was explained that the company had some time ago disposed of its assets to the Edwards interests, and was going out of business.

The judgment of Mr. Justice Mowat for \$12,000 damages against the Canadian Northern Ontario Railway in favor of Ernest J. White, lumber manufacturer, Sucker Lake, Ont., has been sustained by the Appellate Division. The appeal was heard at Osgoode Hall, Toronto, recently. The plaintiff had a quantity of lumber stacked beside the tracks of the defendant company at Medora. It was destroyed by fire which had been set out by employees of the railway along the right-of-way.

Eduard Ouellette, member of the Legislative Assembly for Yamaska, has been appointed a member of the Quebec Legislative for the division of Rigaud. Mr. Ouellette is a prominent figure in the Quebec lumber industry, being vice-president and general manager of the Tourville Lumber Mills, Limited, Montreal and Louise-

ville. He has been connected with the Company for forty-two years.

King-Farris Lumber Co., whose mills are at Newton, B. C., and who are owners of the Yellow Fir Lumber Co., Sahtlam, near Duncan, B. C., contemplate erecting a new sawmill to replace the one at the latter place which was recently destroyed by fire. The cost will be \$50,000 and tenders will soon be called for the structure.

R. R. McKay Toronto, was the successful tenderer on the 25½ square miles of pine and spruce in Cassels township, on the T. & N. O., north of North Bay. Prices are remarkably high, the Government receiving for red and white pine a total of \$20.65 per 1,000 feet; spruce, for saw timber, \$13; basswood, \$12; ties, 55 cents; spruce pulp, \$2.85; other pulp, \$1.65.

The city of Port Arthur has entered action at Osgoode Hall, Toronto, against James Whalen and William Scott of Port Arthur, James Playfair of Midland and the executrix of James C. Wallace, to recover \$122,676.19, balance of purchase price claimed due in connection with the purchase of a block of land on St. Paul street and Cumberland avenue, Port Arthur. Suit is also brought upon a bond dated June 2, 1913, to secure payment.

The Continental Wood Products Co., of Elsas, which is on the main line of the C.N.R., West of Sudbury, intend erecting one of the largest kraft pulp mills in the world. The firm have 600 men in the woods at the present time. Herman Elsas, president of the company, accompanied by the chief engineer of that organization is now abroad getting all available data on construction and equipment for the big industry.

For some years lumber and construction companies in Northern Ontario have been complaining of thousands of dollars lost annually through advances for transportation and for board for men who would either not report on the jobs they had hired for or would work a day or two and then jump the job. The Moose Mountain Mining Co., recently brought four men into the police court at Sudbury on charges of jumping board bills and they were each sentenced to a month in jail. The men had worked only one hour.

A strange plant, so far as is known never before seen in Northern Ontario, and growing to a height of over six feet, was discovered by Mr. W. N. Conway, manager of the Hope Lumber Company's camp at Mile 28, A.C.R.R., was brought to Sault Ste. Marie, Ont., and is now planted in a local garden. Several experts in horticulture have seen the plant but are unable to give it a name. It is a tall plant with a beautiful yellow flower, and its leaves are of a similar shape to those of the thistle, but it has no prickles.

A business transaction of considerable importance has taken place in Weymouth, N. S., the large timber holdings of the Stenelin estate having passed into the hands of the New France Lumber Company, a St. John syndicate headed by H. W. Schofield as president. This valuable timber property is considered to be the largest holding of virgin timber in the Lower Provinces, and consists of upward of 10,000 acres on which it is estimated there are from 80,000,000 to 100,000,000 feet of marketable lumber. It has been practically untouched by the axe, and there have been no fires in the limits.

The Canadian Western Lumber Co. recently made an attractive exhibit at the Provincial Exhibition, New Westminster, B. C. The company installed a miniature bungalow complete in every detail and stained in pleasing colors as a demonstration of what can be accomplished in the matter of both exterior and interior decoration when it comes to building a home. There was also exhibited a "Whirligig," a unique contrivance operated by an electric motor on which the various grades of panelling, veneer and doors rotated at slow speed, thus giving patrons an opportunity of seeing at first hand the numerous products in lumber turned out by the Canadian Western Lumber Co.

The Edwards Lumber & Pulp, Limited, Pembroke, Ont., is the name of the new firm recently formed taking over the Colonial Lumber Co., Limited, of Pembroke. The sale includes the mill and all the timber and other holdings, but the amalgamation will involve no change in the local management and that Messrs. J. W. Smith and W. R. Beatty will continue with the company in the same position as they occupied with the Colonial Company. The plans of the new organization contemplate doubling, as soon as possible, the sawing capacity of the plant at Pembroke.

FALL REPAIRS

In spring, drive, etc., keeps you busy. Why not install PLIBRICO Jointless Fire Brick in your furnace linings when you shut-down.

Have you considered using our STORMPROOF Rubber Roofing on Lumber Camps instead of Tarred papers which are only good for about a season.

NO. 7 ANGLE CHECK VALVE, CHECK VALVE AND BRASS GLOBE VALVE

TO RENEW A VALVE DISC IN SIXTY SECONDS

With an extra disc holder at hand, you can put a new disc in any one of these valves in less than a minute. The bonnet ring of malleable iron affords a sure grip for your wrench. The holder slips right off the stem. Another holder and the new disc replaces it. The bonnet goes on again

in a jiffy and the valve is in service. Persistent hard usage will not destroy these valves. The heavy bodies are of non-corroding brass and ring nuts are malleable iron to give extra strength and lasting quality. As with Crane valves for every purpose, each No. 7 valve is tested before shipment.

Efficiency Wash Sink with Pedal Valves

Economize

If Sawdust and Shavings are allowed to accumulate on floors, beams, rafters and shelves **you pay** for your negligence in higher insurance rates.

Furthermore, **you pay** for it through decreased health and efficiency of employees—and accidents, with resulting indemnities.

Again, this wasteful dust hastens deterioration of motors and machinery, and **you pay** for this, together with increased costs of lubrication.

But **you can save** all this needless expense by removing Shavings and Sawdust before they have a chance to settle, by means of the Sturtevant Collecting and Conveying System.

Send for illustrated folder 601.

95TH YEAR

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P. M. S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

Rubber Footwear We make a complete line of Lumbermen's boots. For over 25 years, our Maltese Cross Brand has been the leading line in Canada. Make sure you get this old dependable brand.

McClary's *Algoma Range*

for Camps of all kinds

This is the big friendly range that has so many points of interest for the Chef. The large oven will bake and roast a huge supply with ease. The spacious cooking surface, smooth and even, can hold a surprising number of utensils, its all-cast and carries and holds the heat to the best advantage.

The firebox can stack up a large fire for heavy requirements and burn low when necessary.

Our nearest Branch or Local Dealer will give you full and interesting details of its make-up.

The letter from Mr. Payette reproduced below would seem to need no further comment. A double page advertisement for the Lumbermen's Underwriting Alliance in March last was followed by a full page later in the year. Now, on the strength of the results secured

from these advertisements, supplemented by Mr. Payette's own observation as to the widespread circulation of CANADA LUMBERMAN and of the influence that it exerts upon its readers, he decided to make a contract for six full pages.

TORONTO - CANADA

"CANADA LUMBERMAN",
347 Adelaide Street, West,
Toronto, Ontario.

September 6th. 1923

Dear Sirs:

With this letter we hand you a contract for six full pages of advertising, and in doing so, feel that it is only fair to you to state that this contract is being made only after it has been demonstrated by the occasional use of space in your paper that it has produced very satisfactory results in assisting us in our fire prevention work and in giving fire insurance indemnity to the lumber trade at as close as possible to cost.

We have been very pleased with the response we have had to our previous advertising, because it has brought us in touch with the very best lumber firms in Canada, and as a result of the advertising we have secured a large volume of business. This we know to be a fact as some of our recent business has been directly traceable to our advertisements in your journal.

This is a voluntary tribute to the value of CANADA LUMBERMAN as an advertising medium- a tribute that we are glad to have the opportunity to pay.

Yours very truly,

LUMBERMEN'S UNDERWRITING ALLIANCE

By *S. L. Payette*
Chief Agent for Canada.

Test proved value of the publication

Reaches best lumber firms in Canada

OTTAWA MONTREAL TORONTO NORTH BAY MONCTON WINNIPEG VANCOUVER

Large stocks available for immediate shipment

TO fully comprehend the heating qualities of Woods Arctic, roll yourself up in an all feather bed comforter and try sleeping that way for a night. In ordinary temperature you can't stick it out. Try it and see.

At 55 Below

WOODS "Arctic" Eiderdown Robes are built upon the same system. The illustration below shows All Warm Wool Kersey to sleep upon. A heavy thickness of the eiderdown beneath and the whole covered with waterproof sail silk to keep out dampness. Lay on top of this in ordinary weather, roll up tight in it in real cold weather. It has snaps and fasteners to snap together and a head extension that draws in to provide full protection so that frost cannot penetrate.

If it's not a Woods it is not an "Arctic" and if it is not an "Arctic" you are out of luck.

Woods "Arctic" costs no more—insist upon "Arctic".

FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel,"

"St. Marys," "Keystone" and "M.D. Elk"

Write for copy of our catalogue,

MERSHON

BAND RESAWS
A SPECIALTY - NOT A SIDE LINE

SIMPLEST and BEST

Wm. B. Mershon & Company
Saginaw, Michigan, U.S.A.

Relieve the Box Shook Shortage By the use of Gerlach Box Board Mills

For the cutting of

BOX, CRATE, CHAIR, FURNITURE, CABINET and other dimension stock, LATH, HANDLE MATERIAL, Etc.

These machines are built in three sizes:—

CHAMPION for stock 10" to 24" Long
SPECIAL " " 10" to 36" Long
JUMBO " " 10" to 48" Long

All cut any required thickness from $\frac{1}{4}$ " to 3" and from 3" to 20" wide.

Cut either plain or quarter sawn, through the side or with the grain of wood, hence saw dust is like excelsior. Saw kerf $\frac{1}{8}$ ". Round or quartered bolts may be utilized, as well as slabs and mill waste. Will cut 3000 feet of lumber per man per day. Turns 80% of standing trees into finished product against 40% for the saw mill.

Average net cost of producing finished box lumber from small timber delivered at mill:

TIMBER	\$ 8.00 per M ft.
SAWING & OVERHEAD	2.00 " "
NET COST	10.00 " "

The Peter Gerlach Co.
Builders

SWIFT'S FROZEN BEEF

Camp operators who order their frozen beef from Swift, see Swift's service at its best. With the country's finest beef at its disposal, only the best is selected and this is prepared in modern plants by men who have long experience in meeting camp requirements. A fast refrigerator car service hurries it direct to the camp from our nearest branch and it finds its place on the cookhouse table among Swift's other quality products. This is how operators have learned to take the guess-work out of camp-provisioning—they order from Swift's and make sure of getting the best.

We shall be glad to quote on YOUR requirements.

*Pure, Fresh Milk
Powdered for
Convenience and
to Retain the
Freshness Indef-
initely*

"Trumilk" is milk in its most convenient form. Keeps fresh in the original drum for months. To bring again to liquid form simply mix with water. When re-liquified "Trumilk" has ALL the characteristics of FRESH full-cream liquid milk. You mix only what you need at the moment.

LUMBERMEN'S

EQUIPMENT

The "Long" Lath Bolter

The reputation for exceptional service enjoyed by "Long" equipment is amply upheld by the "Long" Lath Bolter. The frame of this machine is unusually heavy with other parts in keeping, and it embodies many new improvements which permit of greater production at lower cost.

If you are contemplating the installation of a Lath Bolter in your mill, you should have complete data regarding this machine on file. Write for descriptive folder today.

ATKINS

STERLING QUALITY SAWS

A Long Lived Saw and An Easy Running, Fast Cutting Saw—All in One

That is what you get in an Atkins Saw. Atkins Saws are made from the highest grade material—"Sterling Steel"—which is our exclusive formula. This fine steel takes a hard, tough temper, which holds tension and takes a keen cutting edge, permitting the saw to go through hard, knotty lumber with ease and precision.

Atkins Saws are scientifically ground and are absolutely true without lumps and high spots. The easy running, fast cutting qualities of Atkins Saws prove that they are what we claim,

"The Finest on Earth"

We manufacture all types of Saws, also Dado Heads Moulding Knives, Planer Knives, Matcher Bits and Feed Rollers for every wood cutting use.

Write us at nearest point below for copies of our latest editions of "Saws in the Filing Room," also "Atkins Tools for the Filing Room," "Atkins Mill Saws" and "Atkins Machine Knives."

A Permanent Lumber Service

AFTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually
6,000,000 ft. birch annually
2,500,000 ft. beech annually
2,500,000 ft. elm annually
900,000 ft. basswood annually
200,000 ft. ash annually
6,000,000 ft. hemlock annually
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

MONTREAL, P.Q.

For your Pacific LONG

A log train on the way to the mills. Longview has rail connections that make possible the transportation of logs by rail.

KEY TO TIMBER MAP.

 In Western Washington and Oregon there are 610 billion feet log scale, standing timber. (Note Longview's strategic location).

 In Eastern Washington and Oregon, there are 127 billion feet log scale, standing timber. (From West Coast Lumberman).

Water transportation of logs is very economical. Longview's location on the Cowlitz and Columbia Rivers makes this form of cheap transportation of raw materials possible to mills located at Longview.

Coast Mill or Factory VIEW

Washington

The City
Practical
that Vision
Built

Longview offers these advantages:

PROXIMITY TO TIMBER Longview is in the very center of the dense Douglas fir territory of Washington and Oregon. It is an ideal location for lumber manufacturing plants, because logs can be shipped by water down the Cowlitz and Columbia rivers, both of which tap great areas of timber land. Logs can also be shipped by rail.

HEAP FUEL AND POWER Coal is mined close by, in Cowlitz and Lewis Counties. Fuel is shipped in at low tidewater rates. The immense electric power plant at Longview, together with hydro-electric power, will furnish power at economical rates.

LABOR Labor is always attracted by new industries locating in a model, healthful community, such as Longview. Longview is also near the population centers of Seattle, Tacoma and Portland.

RAIL AND WATER TRANSPORTATION Three trans-continental railroads—the Northern Pacific, Union Pacific and Great Northern serve Longview. The Longview, Portland & Northern taps the rich

Cowlitz River valley northward. Ocean-going steamers, reaching all ports of the world, stop at Longview.

MARKETS Every domestic market and all foreign markets are accessible from Longview.

MODERN, HEALTHFUL COMMUNITY Longview is not a mill town—it is an independent American city where all industries will be welcome on an equal footing. It is a modern city with every convenience—it has a six-story, fireproof hotel, many modern business houses and hundreds of beautiful homes—all built on the townsite, planned and zoned by experts.

The Long-Bell Lumber Company, through its engineers and transportation experts, selected as the most efficient site for its greatest lumber mills, a peninsula at the junction of the Cowlitz and Columbia Rivers, halfway between Portland and the Pacific Ocean. To provide adequately for its needs, a large tract of land, topographically suited for buildings of all kinds, was purchased.

Out of this transaction has grown the new city of Longview, Washington, in many ways a city without parallel in the history of municipalities. The same tests by which Long-Bell decided upon Longview can be applied by any other industry seeking a location in the great Pacific Coast Douglas fir region.

A statement of your requirements will bring you a reply, describing in detail the advantages that Longview offers you.

Address
Dept. 101

THE LONGVIEW COMPANY, Longview, Washington

Monticello—a six-story, roof structure with 200 ft. Representative of the character of the buildings already constructed or under construction at Longview.

"I'm Thinking of Twenty-five Years From Now"

Capt. Robert Dollar, 80 years' young
"Some of those guys sit back in their swivel chairs and say, 'Let George do it.'"

said that veteran lumberman, Robert Dollar, in a recent address before a Pacific Coast Service Club. Vision is not denied the man whose faith and confidence is undimmed by years. The lumber industry of British Columbia was not built to its present splendid proportions in a day. With practically the whole world her market, the future is surpassingly bright.

Arm in Arm With this Development

in close touch with the men who are making history in the lumber industry in British Columbia are the advertisers in WESTERN LUMBERMAN. "The authority for 20 years."

SHINGLES

"EDG-GRAIN"

Note the parallel and vertical grain of the wood, which prevents warping.

FLAT-GRAIN SHINGLE

Note the irregular grain of the wood, that causes unequal stresses and strains, which result in warping.

Can't Warp, Cup or Curl

"EDG-GRAIN" SHINGLES can't warp, cup, or curl. The parallel and vertical grain of the wood makes all strains and stresses absolutely equal. A shingle that is not cut with a parallel or vertical grain (the flat-grain shingle) will warp under adverse weather conditions, because the stresses and strains are unequal. Consequently, certain British Columbia shingle manufacturers offer the trade a 100 per cent. "EDG-GRAIN" SHINGLE. This is a very important fact for both the dealer and home-builder to bear in mind, because a roof is only as strong as its weakest shingle.

DEALERS WRITE

SIMONDS SAWS

The thousands of Simonds Saws (Band, Circular, Cross-Cut and Drag) which are being used throughout the United States, Canada and in fact all over the world, testify as to their popularity in the lumber industry. This is due to their exceptionally high grade steel and accurate construction. Simonds Saws hold their edge and retain their tension on all kinds of cutting jobs.

All kinds of saws for Mill, timber operation or woodworking shop are manufactured by Simonds and guaranteed.

LINK-BELT

Chain Drives for Saw Mills

A recent development in sawmill practice has been the application of Link-Belt Silent Chain (with cut wheels) for short-center drives from motor or engine to line shafts, pumps, fans, conveyors, etc.

The saving in power and space through this drive, its flexibility, positiveness, and extremely high efficiency (98.2%) command the attention and interest of all operators.

Send for book No. 660, "Link-Belt Chain and Equipment for Saw Mills", and Link-Belt Silent Chain Data Book No. 125.

10 H. P. Link-Belt Silent Chain and Roller Chain Drive.

Particularly in electrically-operated plants, the combination of Link-Belt silent and roller chain drives, for conveyors and all equipment, offers advantages that should not be overlooked.

Let us tell you more about Link-Belt efficient chain drives.

Pulpwood Resources of Eastern Canada are Now Under Investigation by Recently Appointed Royal Commission

Many lumbermen in Canada are keenly interested in the pulpwood and pulp situation for the pulp and paper business is closely associated with logging and sawing activities. A number of pulp and paper concerns operate sawmills and several lumber organizations have embarked in the production of paper or have established rossing or pulp plants. The co-related interests of all forest product enterprises are being brought out more and more in the expansion of the industry and in the development of the wooded resources of the Dominion. All limit holders, manufacturers of lumber, pulp or paper, and even the consuming public, are concerned in the preservation and perpetuation of the timber resources of the country.

There is much discussion regarding the pulpwood market and supply at the present time, its outlet, trend of prices and probable demand. At the last session of the Federal Parliament an Order-in-Council was adopted to prohibit the export of wood from private lands unless the product was first converted into pulp or paper. Before any sweeping action was taken it was decided that a Royal Commission should be appointed to investigate fully the whole situation and report on the forest resources of Canada.

Royal Commission Gets to Work

The Commission, which was duly appointed, will hold sittings in various parts of Canada and recently began its work in Halifax. It is stated that several months will be required before all the evidence is gathered and that representative centres will be visited and every effort made to ascertain the feeling of lumbermen, pulpwood men, pulp and paper producers, limit owners, etc., regarding the whole situation. The chairman is Joseph Picard, manufacturer, of Quebec, and the other members are A. B. Kerr, of Toronto, R. W. McLellan, of Fredericton, Joseph G. Sutherland, Clyde River, N. S., and William Anstie, of Vancouver. E. H. Finlayson, Acting Director of Forestry for Canada, is the secretary of the Commission.

At Halifax a large number of witnesses came forward and the majority of them were opposed to anything in the nature of an embargo on the export of freehold pulpwood to the United States. Among those who were on the stand were:—

C. W. Anderson M.L.A., Sherbrooke, Guysborough county; Thomas C. Bateman, Annapolis; Ralph Bell, Halifax; Davidson Hill and Alfred Dickie; A. R. Boutilier, Tusket; B. E. MacDonald, Margaree Forks, Cape Breton; Donald MacLeod, Briton Cove, Cape Breton; Ralph Bell, Halifax.

They gave the following as reasons why pulp mills were not erected in Nova Scotia:—Total stand in Nova Scotia was too small; water powers were inadequate; timber was scattered and not enough in definite locality to make operations profitable; it was more profitable to maintain plants close to market than to the woods.

Mr. Bell suggested for conservation purposes a Dominion forestry commission composed of practical men within the industry and similar controlling bodies in each province with wide powers and scope, the industry paying for the conservation and protection, and having a direct voice in the administration.

Should Take Care of Fires

W. J. Lanigan, representing the United States firm of Hollingsworth & Whitney, operating in Nova Scotia and owning 4,000 acres of Crown and freehold land, was among those not favorable to the proposed embargo. Waterpower scarcity prevented establishment of mills in Canada, Mr. Lanigan said, and added that if other conditions were favorable an embargo would not be needed to bring about home manufacture.

If Canadians could keep fire out of the woods there would be enough pulpwood, he thought, for an indefinite time.

Hugh J. Chisholm, president of the Nashwaak Pulp & Paper Co., St. John, N. B., and of the Oxford Paper Co., Murray, C. B., said that if there was an all-year-round port available on his property and waterpowers in Cape Breton, the question of the establishment of a pulp mill would be feasible. Mr. Chisholm added that the interests he represented stood for a \$20,000,000 investment. He declared that in the United States less than 3 per cent. and in Canada about 5 per cent. of the lumber cut was used by paper manufacturers. From the point of view of conservation, he said, if an embargo would result in bringing United States mills here, which it would not, they would use just as much wood here as there. "You must begin conservation by taking care of fire loss," Mr. Chisholm said. He was almost tempted to say this loss was ten times greater in Canada than in the United States—it was certainly five times as great. "If you can reduce fire loss here to even what it is in the United States there would be enough wood to carry both countries indefinitely," he said. If both countries could join together and treat their forests hand-in-hand more would be done than in any other way.

Of the first twenty witnesses heard at Halifax it appears that only two said any-

thing in favor of an embargo on pulpwood. C. P. Blanchard, a lumberman of Truro, N.S., declared that he favored an embargo to shut out Americans who were exploiting Canadian natural resources. He then stated that he did not favor a complete embargo, and on further questioning said that what he meant was not an embargo, but an export duty.

Mr. Dickie Gives His Views

Rufus E. Dickie, of Stewiacke, N.S., president of the Nova Scotia Lumbermen's Association and a director of the Canadian Lumbermen's Association, was against the proposed embargo on pulpwood. He asserted that the lumber industry would develop faster without it. Restriction of export of wood from freehold lands would mean deterioration of the price of the land, and under it three or four pulp mills in the province could get together, divide the territory and set their own price for the pulpwood.

Arthur Dickie, of Halifax, stated that the lumbermen of Nova Scotia had, for the past few years experienced hard times. They had been heavily taxed. There was a provincial tax of two cents per acre, a municipal tax, a poor tax, a school tax and a fire tax. He was in favor of abolishing the government tax. The money collected by this latter tax, he pointed out, went into the general fund and was not used for forest protection. He was against the embargo because, he explained, the big fellow was protected, while the little fellow suffered. "It would not, he declared, 'do the greatest good to the greatest number.'" The enforcing of the provincial tax upon lumbermen of Nova Scotia, Mr. Dickie contended, had a tendency to tempt the owner to cut as fast as he could clear his land. Hon. Robert Irwin, Speaker of the local house, pointed out that the land was subject, whether cleared or not and Mr. Dickie replied to the effect that after it had been cleared, the land could be abandoned. "We do not want the incentive to cut quickly."

Conclusion of the Hearing

Other witnesses at the sittings of the Royal Commission were H. I. Mathers, representing the English firm of Becker & Co.; F. A. Harrison, Deputy Commissioner of Crown Lands, and F. J. Crooks, lumber operator.

Mr. Mathers said he had not a definite opinion as to the advisability of an embargo, but favored a restriction of some kind on the export of pulpwood. Mr. Harrison read a letter from Hon. E. H. Armstrong, Premier of Nova Scotia and Minister of Works

and Mines, pointing out that leases in Cape Breton were specially granted and confirmed by the Government of Nova Scotia, and that, under such circumstances, the imposing of an embargo would question not only the honor and good name of the Government, but also its competency to make binding contracts. He wished to go on record as against an embargo.

This concluded the hearing of the commission in Halifax. Sittings will next take place in St. John and Fredericton.

American Buying is Not Keen

It has been stated that, owing to the threatened embargo, the United States mills were not using their own pulpwood but seeking to obtain as large supplies from Canada as possible before any restriction went into effect. There would appear to be a certain amount of truth in this, as during the six months, ending September, Canada will have exported across the border approximately as much pulpwood as she did during the fiscal year 1916. In that year the exports were 879,734 cords for the five months ending August this year they were 700,716 cords, and at the rate of export maintained during the last three months, they should come very near to the total for the whole fiscal year 1916. In August alone these shipments were 163,411 cords.

Insofar as value is concerned the shipments made during these six months will have quadrupled in value those for the year 1916, for whereas the latter were worth \$5,743,000, those for the six months of this year will, at the present rate of exportation exceed \$24,500,000. All this, of course, went to the United States.

As an indication of the extent to which the United States is dependent on Canada for pulp, newsprint and pulpwood, it may be said that whereas during the fiscal year 1916 she took \$31,000,000 worth, at the present rate her purchases of these during the current fiscal year should total \$150,000,000.

It has been stated that owing to the contemplated embargo on pulpwood cut on private lands, Americans have been buying much more largely and shipping out wood much more freely than they otherwise would. This report, however, is not borne out by eastern advices, and one representative firm in a recent interview with the "Canada Lumberman" said,—"We do not believe that an embargo on freehold wood has induced buyers to put in a larger stock. The general opinion among men seems to be that this embargo will not be put on for, at least, some years to come. Our opinion is that the mill owners in the United States are not over-anxious about this barrier. Possibly the reason is that they feel sure their Government will take care of their interests and that if the embargo was put on, Washington would retaliate in some way."

Another view expressed is that it is a serious move for any country to place embargo on raw material, and it is pointed out by those who understand economics, that the country will only do so when forced to raise larger revenues than it can collect through further taxes so far as its own people are concerned.

There are a great many sides to the question of the proposed embargo on pulpwood and one eastern firm recently expressed their belief that the paper industry was ruinous to the forest and that at the present rate at which mills were multiplying or add-

ing to their facilities, the Dominion would have too many plants altogether turning out newsprint. This conclusion was arrived at by the fact that mills are buying timberlands at very high figures which were operated on before on sawn lumber. There is no doubt that, in the district around Quebec, the production of lumber has decreased considerably due to the fact that these limits and sawmills have been bought up by paper mills, and the fear is expressed that in the near future other investors will suffer on account of the high price and scarcity of sawn lumber.

Speaking to the "Canada Lumberman" a leading operator lately said,—"I do not believe in reforestation at least for slow-growing timber, such as spruce and balsam, though reforestation might be practicable for quick-growing species of trees. To my mind there is only one solution and that would be to curtail the unnecessary use and waste of newsprint paper. This could be done by educating the people and the publishers to save paper by printing smaller issues. An enormous amount of space is taken up by the dailies in printing sensational events which could be greatly condensed and serve the purpose just as well."

Will Be No Weakening of Prices

J. L. White, of Grand Falls, N.B., believes that, on account of the large quantity of wood peeled by the farmers and settlers in that district, there will be no weakening of prices in the latter part of the coming winter. There has been more than the usual quantity of pulpwood peeled in the vicinity of Grand Falls during the past peeling season and this wood is all on hand ready to be shipped during the coming winter. There has been only a small quantity sent out during the past summer. There was no active demand for wood from the main mills to which the bulk of the wood from the Grand Falls section goes.

Mr. White says that he cannot see that the proposed embargo has caused the American mills to buy any more than their requirements for the immediate future. He concludes,—"During the past peeling season our chief competitors in the labor market are the states of Maine and Connecticut. The former paid more for men to work at cutting pulpwood than the prices which we received for the product in this vicinity would warrant."

Very Little Increase in Interest

Speaking of the pulpwood situation in general, another leading eastern firm state that pulpwood shows little, if any, increase either in demand or price since the threatened embargo on freehold wood and adds that it is difficult to place pulpwood today at attractive figures. The Canadian mills are absolutely out of the market and there is very little buying, it is declared, by American mills on account of the low water conditions in the United States and the low prices at which imported sulphite can be furnished. This makes it more favorable for a large number of mills to purchase their sulphite rather than manufacture it. When the embargo news first came out, some American mills placed a few additional orders, but on the whole the threatened prohibition of export has had very little impression on the market.

So far as production in Quebec is concerned, the cut this year will be somewhat larger than last year although it is not

believed there has been any abnormal production of pulpwood owing to the low prevailing prices. The labor situation is not good and high prices are being asked and paid for competent labor. This may have its reflection on the price of pulpwood as the tendency seems to be to ask a higher quotation for future delivery than for spot wood.

Pulpwood Prices are Little Stronger

McGovern Bros., of LaSarre, Que., in regard to the pulpwood situation say they find that prices have increased over last season by about \$1.50 or \$2.00 per cord on sap-peeled and rossed wood. As is usual at this time of the year, there remains very little wood on the sidings and what little there is is held by dealers to complete their contracts. Most of the wood in the section around LaSarre, which is in Pontiac County, has been shipped to Canadian mills. The proposed embargo has had very little effect for most people realize that it will, if enforced, mean lower prices for a time at least. The cut throughout the Pontiac district will be heavier than last year although wages are higher and men much scarcer.

J. B. Moncion, of Cochrane, Ont., says that sap-peeled wood is about 10 per cent higher than last year while rough wood will also be about that much more in quotations this fall. The proposed embargo evidently has not made any change in the situation in and around Cochrane as no American buyers have covered that ground recently in search of larger quantities than usual.

Mr. Moncion is of the opinion that the cut this coming winter in the Cochrane district, on account of construction work on railway extensions, waterpower developments, etc., will not be as large as last season. Wages will be higher than a year ago and help is scarce.

Demand will be About the Same

The Hammermill Paper Co., of Erie, Pa., whose logging headquarters in Ontario are at 412 Whalen Building, Port Arthur, Ont., M. Cochran being the manager, state that there are many rumors regarding the increase in prices for pulpwood. "It appears to me," adds Mr. Cochran, "that the demand will be about the same as last season and although some of the mills will not require as much wood as last season owing to the fact that they have considerable stocks on hand, at the same time the new mills in the district will bring the total requirements up to approximately what it was."

"None of the large jobbers made any money last season owing to the unfavorable driving weather and there is a considerable amount of wood hung up the various rivers." Under the circumstances Mr. Cochran anticipates that the price to the jobber will probably be higher but the price paid to settlers will, he thinks, be about the same.

The proposed embargo has not resulted in American buyers coming and securing or shipping larger quantities than is customary. The American mills were very fortunate in obtaining delivery of a large percentage of their purchases, and while they will not be big buyers in the district around Port Arthur during the coming season, it is not anticipated that there will be any increase in their demands.

The labor situation at the present time appears to be fair. Most of the wood is being cut by small shacker gangs and as yet there has been very little demand for men to go into the bush and cut by the cord.

ILLUSTRATED NEWS OF GREAT INDUSTRY

The new Maclean circular gang saw for small logs invented by John M. Maclean, Campbellton, N.B.

Has Effected Big Saving With Tractors

The Anglo-Newfoundland Development Co., Limited, of Grand Falls, Newfoundland, have for a considerable time been using tractors in their woods operation. J. D. Gilmour, director of the company, states that last winter they operated two, ten ton Holt Caterpillar tractors an average of 110 days each, breaking roads and hauling logs. In that time they hauled 10,984 cords of green pulpwood logs an average of 5.38 miles. The tractors averaged 24.68 cords per trip and the largest load hauled by one machine was 57 cords of green pulpwood on eight sets of sleds.

The roads were not particularly good, being mostly snow roads without much ice. They were never rutted. Mr. Gilmour adds,—“We had up grades of about 3 per cent (estimated) and a down-grade near the dump which we estimate at 10 per cent in places, which were never sanded. We lost practically no time during the whole season of operation and experienced no difficulty through the failures of the machines in any part. No tracklink ever broke during the winter. We do not think that it is practicable to adopt horse sleds for use with tractors with any degree of satisfaction. The

Holt "Caterpillar" tractor hauling pulpwood on Newfoundland operation

tractor is a special machine for hauling and requires a special sort of sled. We use sleds having 6 ft. 10 in. gauge, centre to centre of runners. Bunks are 12 ft. long, 12 in. x 12 in. at centres. Benches are 12 in. x 16 in. We have put on loads which we estimate at over 40,000 lbs. on one set of sleds and have not broken a sled.

"We have found that the best system is the cross reach arrangement for coupling between bobs, and between sleds, and the use of V pole on the tractor. It is desirable, in our opinion, to use a smaller machine to couple and make up trains. The ten-ton is effective at that job but is unnecessarily large and, therefore, expensive. Accordingly we propose using a five-ton to make up trains next winter for the two large machines. We expect to use it for road-making as well. Our bunks are 11 ft. apart, centre to centre, and we find that by the use of stakes we need no binding-chains. Our whole train uses no chains at all, except a short fixed length between the noses of opposite runners, to prevent spreading. We find that method is satisfactory in every respect, being effective, cheap and time-saving.

"We are convinced that tractors are a great economy in this country, and that on hauls from three miles upwards, they will reduce hauling costs approximately 50 per cent. In other regions they might not show any economy on a three mile haul; it depends on local cost of horses, horse feed, etc. If such costs are high, as they are in Newfoundland, the tractor will show a saving on a shorter haul than one would use a tractor on in regions where, for instance, farm horses can be hired at a reasonable rate.

"We are so sure of tractors after four or five seasons' experience with them that we are considerably increasing during the coming season our tractor operations and are correspondingly reducing the number of horses employed," concludes Mr. Gilmour.

Work on New Hydro Electric Plant

The hydro-electric plant which Price Bros. & Co., of Quebec City are building at Chicoutimi is now nearing completion. The development is situated on the Chicoutimi river about two hundred yards above its confluence with the Saguenay and about a quarter of a mile down stream from the tail race of the Chicoutimi Pulp Company's plant which limited the height to which water could be raised in the forebay. The elevation of the tail race was fixed by the tides in the Saguenay which have a maximum variation of twenty feet at this point. The variable head which resulted was one of the interesting features of the design.

The plant is being built to take advantage of the storage dams which the Quebec Streams Commission is building at Lake Kenogami, from which the Chicoutimi river takes its source and which, it

is expected, will increase the minimum flow of the latter to 1200 cubic feet per second. The power will be transmitted to Kenogami—ten miles away—where it will be utilized in Price Bros. pulp and paper mills.

Steel Belts for Transmitting Power

A comparatively new method in transmitting power has recently come to the attention of the wood manufacturing industry in the use of all steel power belts. They are manufactured by the Power Engineering Co. whose Canadian agents are Jones & Glassco, Reg., engineers, Montreal and Toronto.

The new endless belt is made of a superior grade of special steel containing no joints, or welds and is an absolutely continuous steel band. The pulleys upon which the steel belts run are faced with cork which offers great adhesion to the steel belt. Steel belts are said to have no internal friction and may be run at very high or very low speeds. They are free from jar and vibration to machinery due to absence of joints of all kinds and may be run equally well on long drives, very short ones and on vertical drives. Due to higher speeds being desirable in steel belts larger diameter pulleys may be used, which in turn relieves the pull on the bearing. This also permits smaller framed motors to be used, causing a saving in motor cost.

Another advantage, which it is stated that steel belts possess is greater economy of space since these belts are from 25% to 40% as wide as equivalent 2-ply leather belts. It is claimed that the pulleys are narrower and lighter, reducing friction, inertia and expense. Practically no stretch or shrinkage occurs with temperature and moisture changes, and the steel belt requires no adjustment due to itself.

Spanish River Company Conserving Timber

At the annual meeting of the Spanish River Pulp & Paper Mills which was held recently in Toronto, all the officers were re-elected for the ensuing year with George H. Mead, of Dayton, Ohio, as president; Thos. Gibson, Toronto, and P. B. Wilson, of Sault Ste. Marie, vice-presidents; J. G. Gibson, Toronto, secretary, and A. H. Chitty, treasurer. The annual report and balance sheet submitted to the shareholders some time ago were presented and unanimously approved.

In regard to the fire losses of the company during the past season, President Mead stated they had not been of any serious consequence. Even burned wood could be used for the company's purpose so that the actual loss was negligible. He intimated that the Spanish River Co. and the Ontario Government were taking every precaution to guard against forest fires and he paid a tribute to the co-operation afforded by the provincial administration.

Mr. Mead went on to state that the company was expanding efforts to conserve the growing timber to the fullest extent in order that the supplies available for the company's usage might be perpetuated. Surveys conducted indicated that the company could be assured of an abundant supply for all time provided that the present plants for safeguarding wooded resources were carefully worked out and followed.

Say Timber Royalties are Too High

Officials of the lands department in Victoria, B.C., have started to investigate the advisability of making substantial cuts in timber royalties in B.C., following vigorous representations from the lumber industry of the province. The present royalties were fixed largely on the advice of the lumbermen of the province, but they have not worked out as the lumbermen had expected. Now they are much too high, the lumbermen have told Hon. T. D. Pattullo, minister of lands. If the lands department agrees with the lumbermen's contention, legislation lowering the present scale will be introduced at the forth-coming session of the house, Mr. Pattullo said. This would be the most important legislation introduced by the lands department, the minister added.

Too Much Waste of Finished Products

Speaking to the "Canada Lumberman" a leading pulpwood operator lately said,—“I do not believe in reforestation, at least, for slow-growing timber, such as spruce and hardwood, though reforestation might be practicable for quick-growing species of trees. To my mind there is only one solution and that would be to curtail the unnecessary use and waste of newsprint paper. This could be done by educating the people and the publishers to save paper by printing smaller issues. An enormous amount of space is taken up by the dailies in printing sensational events which could be greatly condensed and all the essential features presented in much shorter shape, thus saving the people both time and the publishers a good deal of raw material.

Association Executives Review Sales Tax

Directors of Canadian Lumbermen and Montreal Organizations Consider New Regulations Complicated and Unworkable—Many Objections Raised.

An important meeting of the Executive of the Canadian Lumbermen's Association was held recently at the Mount Royal Hotel, Montreal, to consider several matters of importance particularly in reference to the federal sales tax and the proposed regulations under the measure, which will come into effect on January 1st, 1924. The whole question was thoroughly gone into and John Bain, of Ottawa, who is an expert on tariff and excise, was called into conference.

Every detail of the proposed measure was reviewed and it was decided that it was not applicable or workable in the case of the lumber industry where the product changes form so many times. Frequently a portion of a stock sold goes into a finished article or remanufactured material and the remainder is employed in its original shape.

While the members are fully aware that the sales tax in itself cannot be changed except by act of Parliament, they are of the opinion that the regulations relating to the measure can be amended by Order-in-Council so that the whole tax may be simplified and rendered operative.

At present there are many inequalities and difficulties under the system of licensed and unlicensed wholesale and retail dealers and manufacturers. It was conceded in the views expressed on the various regulations, that the latter were cumbersome and complicated, would prove an unjust burden to the industry and in many ways would lead to numerous misunderstandings.

A committee consisting of E. R. Bremner, of Ottawa, chairman; Dan. McLachlin, Arnprior; Arthur H. Campbell, Montreal; Walter C. Laidlaw and A. E. Clark, Toronto, and others, was appointed to meet at an early date in Ottawa and confer with Mr. Bain in order to place the objections of the lumbermen in concrete form and suggest certain amendments to the present regulations. It was the universal verdict that the present conditions relating to the Act are not feasible. Many of the terms are seemingly contradictory and lack clarity and conciseness, so far as they apply to the lumber industry.

After the discussion of the sales tax, matters relating to the sixteenth annual convention of the C.L.A. which will be held in Buffalo, on January 30th and 31st, were taken up. The boards of trade and lumber bodies of Buffalo and Tonawanda will look after the entertainment of the delegates to the gathering but the banquet will be in the hands of the Executive of the C.L.A., as has been the custom for some years. It is expected that there will be one Canadian and one American speaker at this social function. An effort is being made by the Buffalo bodies to secure Hon. Chauncey M. Depew, the nationally celebrated after-dinner orator.

Several other items of minor importance were attended to and those present at the gathering were:—Angus McLean, president; R. L. Sargent, secretary; D. McLachlin, Arnprior; E. R. Bremner, Ottawa; G. W. Grier, Montreal; J. Fraser Gregory, St. John; W. C. Laidlaw, Toronto; A. E. Clark, Toronto; Arthur H. Campbell, Montreal; R. G. Cameron, Ottawa; J. S. Bock, Montreal; J. B. White, Montreal; and W. Gerard Power, Quebec. D. H. McLennan, president of the Montreal Lumber Association, and other representative lumbermen were also in attendance during the sales tax conference.

Sales Tax Regulations Most Confusing

Various trade associations are now actively engaged in studying sales tax regulations issued by the Government. These are very complex and there is a difference of opinion as to their meaning. For instance, some business men are of the opinion as to whether the tax should be included in the cost of goods or charged separately. Many lumbermen, who have examined the regulations, frankly state that they do not understand the regulations and they are skeptical as to whether the Act can be enforced or whether an attempt will be made to enforce it.

The Montreal Lumber Association, at a meeting held on September 28th, passed the following resolution:—

"Whereas the Special War Revenue Act, 1915, as amended 30th June, 1923, together with the proposed regulations recently drafted by the Department of Customs and

Excise, increase the vexatious complications of the original law and thereby create apparently insuperable difficulties in its fair administration, and are moreover particularly susceptible to inequality in their interpretation by those who pay the tax,—

Whereas the operation of the present Sales Tax is well understood and is fairly satisfactory to most business men,—

Therefore resolved,—That the Council of the Montreal Board of Trade is hereby respectfully requested to pray the Dominion Government to indefinitely postpone the date (1st January 1924) on which the said amendment becomes effective, and further,—

That the Council endeavor to secure similar action on the part of Canadian Boards of Trade and other trade organizations in the Dominion.

This matter was brought before the Council of the Board of Trade on October 3rd, by Mr. D. H. McLennan, president of the Montreal Lumber Association, and it was decided to refer the question to a special committee of which Mr. McLennan is a member.

At a meeting of the directors of the Montreal Wholesale Lumber Dealers' Association, on Oct. 4, the sales tax was discussed. The opinion was that the regulations as they stand will lead to many complications and are in fact unworkable. The directors reaffirmed the resolution passed on June 6, as follows:

"That in the opinion of this meeting of the Montreal Wholesale Lumber Dealers' Association, the operation of the lumber business under the system of licensed and unlicensed wholesale and retail dealers and manufacturers is so full of inequalities and difficulties as to be inoperative, and that we suggest that this feature be eliminated from the Act, and that instead it be made to read that the sales tax decided upon shall be collected from the saw-mill manufacturers by the Government, and be shown by the manufacturers as a separate charge on all invoices for lumber sold for use in Canada."

Spanish River Company Will Rebuild

The Spanish River Lumber Co., whose mill at Cutler was burned down recently, have started sawing at their other plant at Aird Island. W. J. Bell, vice-president and general-manager of the company, says that as the capacity of the Spanish mill, as it is known, is larger than the one at Cutler, they will catch up for the time lost before the close of navigation and saw all the logs that they have on hand. The plant at Cutler was a complete loss with no salvage. The only lumber burned was that in and around the mill at the time of the fire or about 20,000 feet in all.

Mr. Bell states that the company will not start to rebuild their mill at Cutler this fall because it is too near cold weather. The work will, however, be undertaken in the spring when it can be carried out more economically and as the firm have the other mill at Spanish, there will be no inconvenience.

The Spanish River Co. have started a number of camps and will take out about the same amount of logs as they did last season.

Place Thirteen Hundred Men in Bush

The Shevlin-Clarke Co., of Fort Frances, Ont., who recently acquired nine square miles of timber limits between Clearwater and Trout Lakes, in the Rainy River district, state that the holdings acquired are practically all burned timber which was visited by fire last summer and it is necessary to cut this timber this year. The company will put in camps and start logging at once. These camps, including the regular logging, will mean about eleven camps for Shevlin-Clarke this winter. The firm will employ about 1300 men and 500 head of horses in the bush.

The Shevlin-Clarke Co. are just getting started in winter activities and the wages they are paying being \$35.00 a month and board. By November 1st, the company expect to have logging operations going full blast.

Mr. Booth on His Annual Holiday

Mr. J. R. Booth, of Ottawa, Canada's most widely known and most active aged lumberman, has gone to Madawaska where he will enjoy his annual holiday. Mr. Booth is in his usual good health and during his stay in the north country will meet many old friends. He is acquainted with hundreds of employes in all kinds of work there and every year he looks forward to his holiday in the midst of old

John R. Booth, Ottawa

friends. He will make his headquarters in his private car and his staff includes a highly trained chef, and two trained nurses. Although he is 96 years of age, Mr. Booth is in constant touch with the affairs of J. R. Booth, Ltd. His health during the summer was not very good, but he is now fully recovered and is looking forward to enjoying his vacation thoroughly.

Talks on Richness of North Country

His Honor, Harry Cockshutt, Lieutenant-Governor of Ontario, delivered a stirring address recently before the members of the Toronto Board of Trade, on his recent trip to Moose Factory on James Bay under the heading "Impressions of the Far North," dealing with the forest and timber resources and the pulp industry. His Honor expressed unbound confidence in the future of that portion of the country which he had just visited and its unrivalled richness and potentialities. He offered the suggestion that as a means to inspire Torontonians with a true sense of Northern Ontario's importance, it would be an excellent thing for the Board of Trade to send a delegation to travel over much the same territory as was covered by Prime Minister Ferguson and himself upon their recent journey. He added that as sure as the C.P.R. went to the Pacific, so would the T. & N.O. Railway be extended to Hudson.

A resolution was unanimously carried by the Board calling upon the Council of that body to name a standing committee "to give further study and attention to the development of Northern Ontario and of its trading relationship with Southern Ontario and to take such action in their promotion as may be deemed desirable by the Council."

Says Retailers Must Improve Methods

"Several hundred thousand retail merchants in the United States would be better off as bricklayers and plasterers, rather than to continue in their business," Roger Babson, the famous business forecaster and student told the Associated Advertising Clubs of the World at their recent convention at Atlantic City.

He went on to say that there are 1,500,000 retail merchants in the country, of which number 100,000 are prosperous, 400,000 are doing fairly well, and the remaining million are struggling along.

"And," said Mr. Babson, "the solution lies, NOT in eliminating these million inefficient dealers but in educating them to greater efficiency and to the giving of the greatest possible service."

Three cheers for Mr. Babson!

For many, many years, twice every month and many times between times, I've been saying that same thing exactly to the retail lumbermen. And Mr. Babson's statement applies just as directly to the lumber dealer—perhaps on the average just a little more so—as to the dealer in any other line.

The retailer—regardless of what he sells—who operates his business in the self-same way that he did ten years ago—or even FIVE years ago—is a business mossback. He may be getting by, or he may be making money—the facts are the same.

Times are changing, conditions are changing, the needs and demands of the consumer are changing, the necessity for business service in increasing with every single year that passes; and the man who stands still is cheating his trade of one of their rights.

The entire face of the retailing world has been altered in 5 years. Yet we have thousands of retail lumber dealers who are running their business just exactly like they did in stagecoach days, and it looks as though nothing short of a charge of dynamite or some "slow music" can jar them from their path.

The alluring and seductive attractiveness of selling building service instead of shingles and two-by-fours falls unheeded on their ears. "Service" to them means goodly stocks of merchandise, fair prices, square treatment. THAT'S what it meant twenty years ago; just exactly that.

The dealer who operates that way may be a fair and honest man; but he is depriving the people of his town of one of their goodliest privileges—is one of the those concerning whom Babson spoke when he said they should be bricklayers and plasterers.—Jack Dionne

Laurentide Company Acquires More Limits

A large timber limit and lumber transaction affecting a local company was executed in Quebec lately, when the holdings of Messrs. W. and H. Kennedy, known as the Lake St. Joseph limits, including saw mills, property, etc., were sold to the Laurentide Company, Limited.

The limits consist of about 350 square miles, comprising almost all the land surrounding Lake St. Joseph, which has not already been sold for summer residences. Fifty miles of the limits are fee-simple land, the balance under Government lease.

Closer Utilization of Waste Wood

The National Lumber Manufacturers Association, Washington, calls attention to the prize of \$2,000 it offers annually for the best ideas that are developed during the year in the field of waste prevention and closer utilization as related either to logging or sawmill operations. This annual prize is a practical proof of the eagerness of the organized lumber industry of the country to encourage the development of ideas that promise reduction of waste in manufacture. The prize will be divided as follows:

- A first prize of \$1,000
- A second prize of \$500
- Three prizes of \$100, and
- Four prizes of \$50.

"Lumber manufacturers," says the Association's announcement, "have found that the most important ideas come from those closest to the work. For this reason this offer applies only to those actually employed in the lumber industry. It is understood that technical men who derive their income from the industry are included in this group. The competition is open to anyone who can fulfill either of these requirements.

"A lot of ideas have been developed by employees in the sawmills and logging camps. Many of these ideas have never gone beyond the man who originated them. Many more ideas could be developed if the men in the mills concentrated their thought upon some specific sawmill problem. For this reason the Waste Prevention Committee of the National Lumber Manufacturers Association decided to suggest problems for solution. These problems will be presented in a series of announcements such as this which will appear from time to time between now and the end of the year.

"With this present announcement the Committee desires to call attention to the possibilities of reducing waste in the sawmill. The major sawmill units, namely, the Head saw, the Edger, the Gang saw, and the Trimmer, are involved in this problem. Attention is invited to the possibilities for closer utilization which these four sawmill operations suggest.

"The Committee wishes to emphasize the importance of constructive thinking among the men who work in the mills, and it wishes also to emphasize the fact that this competition is free from all formality and from all restrictions.

"If the opportunity to earn one of these prizes has an appeal, establish contact with the Engineering Department of the National Lumber Manufacturers Association, International Building, Washington, D.C., and let your ideas be known.

"Send in your suggestions in rough form. In return you will be given suggestions and advice. The National Lumber Manufacturers Association will make every effort to develop ideas that show a possibility of leading to a prize."

Movement for New and Better Homes Grows

Need to Give the Man Who Has Good Taste and Small Means Chance to Own the Roof Over His Head — How the Project May be Financed Successfully

"Financing the Small Home" is the title of the latest chapter issued by the National Lumber Manufacturers Association in its series on "Lumber and Its Utilization," in connection with the national movement for more homes and better homes.

"The man who owns and loves his home," says the preface, "can usually be depended upon to practice the virtues of citizenship. In spite of the fact that more than one-half the urban population of the United States are tenants, the automobile is moving the down-town population year by year to the suburbs. The demand of the man who can afford to spend \$25,000 or more for a home is being met. There is need to give the man who has good taste and small means a chance to own his home. Individual opportunity to acquire a home must not be denied to any person who is willing to work and save to that end."

With the simplicity, definiteness and conciseness that characterizes all the chapters in this series the problem of financing the small home is dealt with in a most conclusive manner. Comparing the family as tenant or home owner it is pointed out that eighteen years' rent of a \$5,000 cottage at \$50 a month, plus interest on the rental sum calculated at 6 per cent. for an average of nine years, would total \$16,632. On the other hand, with a cash payment of \$500 and amortization payments extending over eighteen years, the total cost of purchasing the cottage would be \$13,024, including eighteen years' interest on an average of \$4,860, interest on interest payments and on the original cash payment.

The three general methods of home financing, namely, (1) membership in a Building and Loan Association, (2) borrowing on first and second mortgages, and (3) paying on contract for deed, are described and discussed at length. This discussion is so clear that the prospective home builder, after reading it, has definite conclusions as to how to proceed to finance his home.

As to the cost of the home, the rule is laid down that it should not be more than one-and-one-half to two-and-one-half times the owner's annual income; and the total sum should be paid in ten to fifteen years. Detailed instructions are given as to how each person may calculate for himself how much he can afford to spend in purchasing a home.

The Methods of Raising Money

On the subject of present costs of dwelling houses it is pointed out that the increased cost in recent years is very largely the higher cost of better construction and more elaborate equipment. People used to build houses that included only the necessities of shelter; now they insist on luxuries and adornments. For example, 95 per cent. of bath-rooms must now have tile floors and expensive fixtures. Every house owner insists on having an instantaneous water heater, adding about \$200 to the total cost of the building. There are many other items which add greatly to the cost of an acceptable house in these times. Nevertheless a lumber-built house costs considerably less now than it did in 1920.

At Delavan, Wisconsin, for example, a house that was actually erected in 1920 for \$5,758 may now be copied for \$5,040. At Waukesha, Wisconsin, the \$8,000 house of 1920 may now be replaced for \$6,500. At Boston, Massachusetts, the \$10,500 house of three years ago costs now \$9,500. At Toledo, Ohio, it was found that a house that cost \$6,314 in 1920 can now be reproduced for \$5,258. A little house at Vivian, Louisiana, costing \$2,734 three years ago can be replaced for \$2,116, and so on.

The prospective builder is advised to check his building costs carefully in advance and to figure the distribution of his outlay among the chief divisions thereof. The lot should cost approximately 20%; labor not more than 31%; materials 29%; contractor's overhead and profit 12%; financing cost 2%; plan service, real estate fees, etc., 6%.

The discussion of Building and Loan Associations will be a surprise to many persons. These associations have now financed more than 1,000,000 homes. There are 10,009 of them in the country, with a membership of 6,864,144, and with assets in excess of \$3,300,000,000. A study of their records for the past 92 years justifies the belief that no man of ordinary health, ability and purpose need long deprive his family of the benefits of home ownership.

Full consideration is given to other ways of placing loans, such as savings banks, co-operative banks, financing with bonds, straight mortgage loans and the contract-for-deed method. It is pointed out that the material dealer ought not to be expected to finance home-building, as is often the expectation. He should be able to devote his energies to seeing that the builder gets sound construction for his money, that the quality of small houses is improved through better planning and designing and that with every house built to sell there goes an abstract of construction showing the kind of materials of which it is built. Notation is made of the sources from which the information used in preparing the pamphlet, has been drawn, which will be very helpful to those who desire to pursue the study of home-financing.

Copies of "Financing the Small Home," may be obtained gratis on application to the National Lumber Manufacturers Association, Washington, D.C. Many thousand copies are being distributed by retail lumbermen's associations. The booklet contains no advertising matter of any sort, and is purely educational and informative, being a further contribution to the general home-owning movement.

Breezy Jottings From Busy East

Alfred Bennett, of Tracadie, N. B., established what is considered a new lath sawing record recently at the Flemming mills at Jupiter when he sawed 71,000 laths. The previous highest record was 66,000. There were three other men on the shift besides Mr. Bennett. They started at 9 a.m. and worked until 6 p.m.—an eight hour day.

Hon. C. W. Robinson, Minister of Lands and Mines for New Brunswick, announced recently that the majority of those at present holding leases on Crown Lands, which had been damaged by fire or the budworm, had commenced operations to salvage the damaged timber. In two cases, he explained, operators were not in a position to cut, one of which is the Miramichi Lumber Company.

With reference to the season's cut, he said, it is impossible as yet to make any estimate, but the belief is that as large a proportion as possible of the damaged timber will be removed. He also reported that receipts from stumpage are coming in steadily to the Provincial treasury.

The Royal Commission, who are investigating the pulpwood resources of the Dominion, held sessions in Halifax, N. S., during the week of October 1. Opposition to the suggested embargo on export of Canadian pulpwood developed immediately the Royal Commission opened its sessions.

Complaints have been received by the New Brunswick Legislature that large holders of timber limits in that province are not in a position to carry on operations on areas burned over by forest fires during the past season on account of not being ready to operate on the limits as provided by Order-in-Council passed some time ago.

Saw mill licenses for three timber berth applications were recently offered for sale by the Department of Lands and Mines and sold at the upset price of \$20 per square mile in each case to the applicant. They are as follows:—

Col. T. G. Loggie, of Fredericton, Deputy Minister of Lands and Forests for New Brunswick, has been granted a two months' leave of absence. Col. Loggie will take an extended trip to the Canadian West and will probably visit California before returning.

No. 60, containing two square miles west of the Madawaska river bounded on the northerly side by the New Brunswick—Quebec Interprovincial border, to the Fraser Companies, Ltd.

No. 61, containing two square miles on the headwaters of Sand Brook northeast of Loon Lake, Crawford Settlement, to the Fraser Companies, Ltd.

An old negro woman standing by the grave of her husband said mournfully: "Poor Rastus! I hope he's gone where I spec he ain't."

Reducing the Time in Unloading Timber

Reducing the time element in labor is equivalent to reducing the number of men employed, by reason of the fact that more work is accomplished by the same number of men.

Formerly the National Lumber Company, 6501 Elston Avenue, Chicago, Illinois, unloaded their cars of lumber by hand. Under this method it required the time and effort of three men for fully eight hours to complete this unloading of one car. In other words, three men could unload one car a day.

Now, they employ a Link-Belt crawler crane which, although it does not reduce the number of men on the payroll, it does reduce

Crawler crane handling heavy dimension stock

the time element from eight hours to three and one-half hours—a reduction of over fifty per cent. With the gasoline crawler crane, therefore, these same three men can unload considerably more than two cars per day.

Mr. Behan, the General Manager of the National Lumber Company, expects to still further reduce the unloading time, he believing that it will not be long before the men will be able to complete the unloading of a car in two hours. And at such a time, he thinks it will be possible to release a few men thus employed to other and more profitable labor around the yard, thus not only effecting a time saving but an actual labor economy as well.

The big advantage of this crane, aside from its ability to handle heavy material easily and speedily, is that it is not restricted to railroad tracks—that it lays its own track and goes anywhere, at the will of the operator. The illustration shows the crane at work handling heavy dimension stock.

Newsy Jottings From Far and Near

Bondholders of Clarke Bros., Limited, Bear River, N. S., met in Toronto recently to consider an offer of purchase of the company's property arranged by a Chicago syndicate of pulp and paper interests, but owing to a confusion in the proxies many were voided and a full quorum was not available. It was, therefore, decided to postpone official consideration of the matter until later. Col. E. C. Phinney, of Halifax, spoke of the legal difficulties encountered in the course of determining priority of certain mortgages. The bondholders' committee urged the acceptance of the offer of the Chicago group in order that the legal obstacles could be effectively surmounted. Ernest Eversz, representing the Chicago interests, was prepared to submit his proposal. He presented a short sketch of the personnel of the group of interests backing the offering.

A recent despatch from New Westminster says SS. Margaret Coughlan is expected in the river to load the first shipment of export lumber from the new Brunette mills, which is now in commission. The company has an excellent waterfrontage and it is well within the possibilities that a wharf will be constructed for direct loading of its overseas shipments. The Coughlan will take a comparatively small parcel from the Brunette and half a million feet from the Timber and Lumber Co. at South Westminster. At the Fraser Mills the Canadian Western Lumber Co. is stowing a million feet on the British steamer "Heathfield" for Japan. The next steamer that is expected up the river to Fraser Mills is the "Steel Age," also loading for Japan.

The H. J. Brett Shingle Mill, Vancouver, B. C., was recently destroyed by fire. The total damage is estimated at about \$21,000.

1,000,000 shingles were consumed. The daily output of the plant was 200,000 shingles, and some 30 men were employed. The mill was formerly owned by Edgcombe & Newham but was taken over by Mr. Brett in May 1921.

The site of the Great Lakes Paper Company's new pulp mill at Fort William, Ont., is the scene of great activity these days. Hacquail Bros. have a large force of men on the construction of the tracks leading down to the plant while at the plant itself excavation is going on quickly and the work of pouring concrete for the footings and foundation will be under way in the near future.

An interesting case was tried recently in Toronto in the Appellate Division of the High Court when Fred Little appealed from the judgment at the trial awarding him \$1,612 for pulpwood supplied under contract to the St. Maurice Lumber Co. The appeal was dismissed with costs. A feature of the case is that before judgment was given at the trial the defendants had agreed to settle the case of \$2,000 and costs.

The Sault Ste. Marie Board of Trade has received word from Hon. James Lyons, Minister of Lands and Forests for Ontario, that no decision in regard to opening up the Mississauga Forest Reserve will be made until the report of the Department surveyors has been received. The surveyors are now at work going over the reserve to determine the condition of the timber thereon.

C. R. Stewart, who has been in charge of the local bureau of the Government Employment Service at Pembroke, Ont., for the past four years has resigned and taken a position with the Abitibi Power & Paper at Iroquois Falls where he will be senior assistant in the Employment Department of that organization.

It is understood that the import duty on piece lumber has been lifted by Japan until March 31st 1924. All grades are affected. This move, it is understood, has been taken by the Japanese Government in order to facilitate the importation of forest products for rebuilding purposes after the recent disaster.

Max Jasspon of Savannah, Ga., a well-known southern lumber and timber operator, accompanied by Howard White, leading lumberman of Raleigh, N. C., and S. Brown Shepherd, an attorney of the latter city, reached Vancouver lately. They are investigating the lumber industry.

Except in a few instances, trade with the retail lumbermen is rather quiet in all the Ontario towns. There has been a pretty good crop in all the rural sections and next spring should see a loosening up of money among the farmers. As it stands to-day, building is not active in any of the smaller towns.

Calders (Canada) Limited, the manager of which is John L. McDougall, has opened an office in the Canada Life Building, Ottawa. The company was incorporated in August last with a capital stock of \$1,000,000 to carry on a general lumber business.

Levi Leblanc, 33, of Richibucto, N. B., a lumberman, was burned to death when the Campbell house, Arnprior, Ont., was completely destroyed recently. Total losses were estimated at \$50,000, partly covered by insurance.

Shipments of pulpwood in the log are now being made from Queen Charlotte Island to Port Angeles, Wash., for use in the manufacture of paper. The first shipment, consisting of 600,000 feet of spruce, was discharged recently by the barge Vincennes.

The Hobson shingle mill, on Bewicke Ave., North Vancouver, B. C., was destroyed by fire recently, together with a large supply of shingles. The mill had a capacity of 65,000 shingles and employed about twenty men.

The Haileybury Lumber Co. at Haileybury, Ont., is erecting a planing mill at Haileybury on the site formerly occupied by the pulpwood rossing plant of the Riordon Co.

The Haileybury Lumber Co. have commenced the construction of their new planing mill on the site of the former Riordon rossing mill at Haileybury.

S. B. Nichol, of Blenheim, Ont., has erected a new planing mill in that village and started operations.

Graham Island Timber Co., Limited, Vancouver, B. C., is a new company recently formed with a capital of \$300,000.

The Frontenac Lumber Co., at Ardoch, Ont., recently suffered a loss by fire.

The assets of the L. H. Cantin & Co., manufacturers and dealers of lumber, Montreal, are being advertised for sale.

The Manager and Retail Yard

There is a difference between the retail lumber trade in a small city or country town and a larger place. Diverse methods have to be pursued and the service must be on a different basis. In the city there is competition which is often decidedly keen and each firm has its representatives out interviewing contractors, builders, manufacturers and others. The personality of a manager may not count as much as in the town or smaller city, and service must be the whole idea.

No. 20

Looking Backward in Lumber Industry

Just forty-three years on this date, October 15th, 1880, the first issue of the "Canada Lumberman" appeared. It was printed in Toronto at 33 Adelaide St. West, A. Begg being the proprietor and editor. It was then said that though much attention had been given to the lumbering interests by the press of Canada, yet it was felt that a special organ which would concentrate the views of those who understood the business and present them to the public in a way in which they could be fairly discussed with a full comprehension of the value of the vast interests involved, would not merely serve those who are engaged in the trade and their employees, but also the country at large. The publisher added,—"Let it be remembered that the lumbering industry is the second greatest in Canada, being next to agriculture."

The "Canada Lumberman" continued to be published in Toronto twice a month until March 15th 1881, five months later, the paper was purchased by Toker & Co., of Peterboro, Ont. In a formal notice of transfer, Mr. Begg stated that the facilities afforded by the extensive and old-established house of Toker & Co., would be a guarantee that the "Canada Lumberman" would command a prominent place among the leading journals of the day. The field was ample and the transfer was made with a view to improving the paper. The retiring editor stated that he felt sure that it only required the combined support of those in whose interests it was published, to ensure it that success which was anticipated when the paper was first established.

The new proprietors, in a lengthy introductory notice, stated that it would be their aim not only to advocate any measure that might be an advantage to the lumbermen but also to afford a means by which lumbermen might express their wants and wishes or exchange ideas on subjects of interest to them. By this means the publishers hoped that their natural connection might be facilitated. With this aim in view communications from those interested in the great industry would be gladly received.

From that date—1880-81—the development and influence of the "Canada Lumberman" has kept pace with the growth and expansion of this great pioneer industry.

Even in those days—over forty years ago—there was talk of substitutes for lumber and complaints made regarding the high price of the product which was probably then, so far as the finished article was concerned, about one-eighth or one-tenth of what it sells for to-day. So far as substitutes for lumber were concerned, the editor at that date stated he had received a sample of lumber from straw

manufactured after a patented process. The shipment came from Lawrence, Kansas, and it was stated by the producer that lumber like the sample sent could be turned out in any desired length, from 12 feet upwards and up to 32 inches in width, at a cost competing with the better or finishing grades of pine. The inventor of this substitute stated that the manufacture was, of course, confined to a grade which will compete with the better class of lumber and that there would be no object in filling the new products with knots, and shakes would scarcely be obtainable even if desired, while sap and decayed wood would be impossibilities. The sample sent would hold a nail as well as wood, was equally susceptible to a high painting finish and could be polished to as high a degree as desirable. The reference wound up by stating,—"On the whole we are favorably impressed with the appearance of the new artificial lumber."

Another interesting statement is that the cut in 1881 along the towns of the Midland Railway amounted to 145,000,000 feet. Of this the British Canadian Lumbering & Timber Co., Midland, turned out 21,500,000 feet; Chew Bros., Midland, 5,000,000 feet; Powers, Victoria Harbor, 12,000,000 feet; McDermott, Victoria Harbor, 1,000,000 feet; Christie, Sturgeon Bay, 3,000,000 feet; Tanner, Sturgeon Bay, 1,000,000 feet; Georgian Bay Lumber Co., Wauhaushene, 26,000,000 feet; R. C. Smith, Fenelon Falls, 10,000,000 feet; Green-Ellis, Fenelon Falls, 3,500,000 feet; M. Boyd, Bobcaygeon, 10,000,000 feet; Hilliard, Peterboro, 4,000,000 feet; Hazlitt, Peterboro, 5,500,000 feet; Sherin, Peterboro, 3,000,000 feet; Irwin & Boyd Peterboro, 11,500,000 feet; J. Z. Rogers, Peterboro, 1,500,000 feet; Ross & Co., Lakefield, 6,000,000 feet; Bigelow & Trounce, Port Perry, 6,000,000 feet. There were a number of smaller mills at Fesserton, Coldwater, Alma, Satterthwaite, Uthoff, Orillia, Breckin and Lindsay which turned out about 14,000,000 feet.

To illustrate the changes that have taken place in the lumber line, it may be stated that the mills mentioned in the foregoing list have since joined the silent majority and not one firm is carrying on business under the same name as in 1881. The only mill that is still in the hands of descendants of the family and operating, is that of Letherby & Chew, successors to Chew Bros., Midland, Ont. The Georgian Bay Lumber Co., under the direction of W. J. Sheppard, operated at Penetanguishene, Ont., until a couple of years ago. Thus, it will be seen, how fleeting is time and how great are the ups and downs in the lumber arena.

New Policy That is Co-operative

Hon. James Lyons, the new Minister of Lands and Forests for Ontario, is showing a comprehensive grasp of the duties of his position and co-operating with all departments in an effort to preserve the forest wealth of the province. This has been evidenced in a number of conferences and appointments that have been made, one of the latter being the selection of Major Hartt, of Orillia, as supervisor of Crown timber and land agents. As a practical lumberman his duties will be to see that waste is avoided in cutting and that business methods in scaling, measuring and checking characterize the outside staff of the Department. Mr. Lyons has also shown that he is an ardent advocate concerning the wooded assets of Ontario and for a long period has believed that an export duty or embargo should be placed on hardwood logs in order that the country might not be drained of its rich resources and the raw material travel elsewhere to be converted into a finished product. In this attitude he is being supported by the Sault Ste. Marie Board of Trade and other public bodies.

Over a quarter of a century ago there was a similar agitation carried on in connection with the wholesale exportation of white pine logs to the mills in Michigan. The pine timber of Ontario was being cut and towed across the Great Lakes and nobody reaped any benefit from this devastation except the treasury of the province in some paltry dues and license fees and the axemen who were engaged in felling the tall timbers. On December 17th, 1897, an Order-in-Council was passed placing an embargo upon pine sawlogs and since then the sawmilling industry has flourished at many important points in Northern and Northwestern Ontario. If there had been no restriction of export, the population would be scattered and the land bereft of its natural protection, without any compensating advantages in the way of a contented people, progressive towns and steady business for the railways and navigation companies. Three years later an embargo was placed upon the export of pulpwood from the Crown lands and now the Federal Government is considering the advisability of stopping the wood cut from private lands being shipped out across the border. A Royal Commission has been appointed to make an exhaustive inquiry into the whole situation and is now holding sittings in the East.

Mr. Lyons also believes that something practical can be done in the way of conservation by bringing about a closer unity and more friendly interest between the settlers of the north and the

pulp and paper companies. For some years it has been known that many pioneer residents in the hinterland of Ontario have been dissatisfied with the price received for their pulpwood, claiming that they could not dispose of it locally at any profit, and in order to get a fair figure they had to contract with firms who sent the product out of the country. When a settler locates in the north about the only revenue he has for the first two or three years is from the sale of his wood and, if he can get nothing more out of it than his labor, his progress is certainly not rapid. The settlers have long claimed that the big pulp and paper companies have not been treating them as generously as they should and the Minister of Lands and Forests is asking the co-operation of Ontario consumers of pulpwood and suggesting that they purchase the cuttings of the settlers at the same cost at which they have been able to cut from their own limits.

It is believed that this practical step taken by the Department of Lands and Forests will result in great benefit to the province and the settlers generally. It shows that something feasible may be done by closely associated interests in conserving the wealth of the north and bringing about more cordial understandings and relationships between the settlers and the operating organizations. Mr. Lyons makes some valuable suggestions in asking the companies to regard their limits more as reserve supplies and afford the settlers a market for their product. He states that the move, made by him, has not been with any view to personal aggrandisement or dictatorship, but solely in the interests of conservation, co-operation and weal of the great north country.

As a result of the action of the Minister, a number of mists will likely be cleared away and material advantages soon be in evidence among the settlers. The proposition of Mr. Lyons is sane, timely and thoughtful and is practicable in principle application and achievement.

Are We Really so Far Ahead?

This is an age of progress and expansion. We hear this trite remark made on all sides but the query crops up "How far have we gone along the pathway to development when certain basic factors are considered?" We marvel at the aeroplane, the gramophone, the telephone, wireless telegraphy, radio and other manifestations of scientific achievement and specialization, and we also look at what has been done in the way of sawmill construction, productive capacity, time and labor-saving methods and increased output.

In a late edition of the "Canada Lumberman" there was shown an illustration of the red men whipsawing lumber in the Mackenzie River territory. With an Indian on either end of the cutting instrument this was a rather slow operation. The process was painful and tedious.

The next step in the development was that called attention to by a correspondent who stated that his father, about three-quarters of a century ago, had built a mill dam over a stream and, with the help of a millwright, had constructed a very primitive plant for cutting up logs. There was an up and down saw making about fifteen strokes per minute, and practically all the equipment used was of wood, wood cogwheels all through, and just a little wrought iron. With this mill the owner averaged a cut of 1000 feet daily, doing all the work himself.

To-day the largest mill in Canada is located on the Pacific Coast and has a cutting capacity of 300,000 feet, daily. A correspondent of the "Canada Lumberman" writes that in chatting with the genial manager, he asked him the number of men required to man the mill and he answered three hundred, and added that it was usually necessary in modern plants to have one man for every one thousand feet of lumber cut.

This causes our correspondent to moralize upon the great question of how far is the human element in the industry ahead when contrasted with the methods of seventy-five years ago and those that prevail to-day. In 1850 a mill was built by hand and one man cut one thousand feet per day. Now possibly in a structure costing \$2,000,000, 300,000 feet is sawn by three hundred men. In the old days the profit all went to the sole owner and operator. To-day there is a president to pay, a general-manager, superintendent, a foreman, mechanical experts and a host of others who draw liberal rewards. Leaving out the question of mechanical progress and development and considering only the personal equation, the writer asks why have all these great inventions, new ideas, wonderful opportunities, etc., built up large capitals and made a few men rich while the position of the working man has not materially improved? Someone else, he adds, will have to answer. The inquirer is not of a socialistic or a Bolshevistic turn of mind, and holds a good position to-day in one of the large woodworking establishments on the Coast.

For those directly or indirectly connected with the lumber industry there is food for thought in this whole problem of production and expenditure. We have plants that are huge hives of industry

and yet are not turning out any more lumber per man employed than was the case in the primitive days, the average holding around 1000 feet daily per man. Here is a question which, from an economic, scientific, capitalistic, labor and other standpoints, much may be said pro and con. It causes those who devote more than passing attention to human affairs to pause and wonder whether after all we are far ahead of the good old days when wants were fewer and opportunities for expenditure more restricted. Were the workers of half a century ago not as happy, contented and prosperous as those who live in this automobiling, golf-loving, bridge-playing, radio-development age?

Keeping up Traditions of the Past

"Is it not funny," remarked a man the other day, "that persons who have stayed for years in a certain business and met with a modicum of success, declare that theirs is the worst line on earth and they would not have a son or any other member of the family follow the same pursuit."

We all say things against ourselves, our habits, character, disposition and demeanor which we would not tolerate others to utter without a sharp reprimand, a timely protest or a nasty look. It is the same, too, in connection with a profession or trade. The father wants his son to learn something else, to have an easier time than he has, and to get into a line free from worry and troubles that offers a larger field of usefulness and remuneration. He tells his worthy scion that he would gladly get out of the business if he could but he has been so long in it that he could not find another avenue that would yield him a living and he has, therefore, to stick until the end.

The boy, however, should have a chance. In some other line the future is brighter, promotion swifter and the opportunities greater. But sometimes the boy does not want to embark in a venture that is strange or new and he follows in the footsteps of his worthy sire and makes a success of it, even greater, than that achieved by paterfamilias. He has push and pep and is receptive to new ideas and ready to give new things a trial; this in spite of advice to the contrary.

There are many men today in Canada in the lumber line whose fathers and grandfathers have been in the business for generations. Numerous examples might be furnished. Some three or four years ago the "Canada Lumberman" published an extended reference to W. H. Johnston, of Pefferlaw, Ont., remarking that this family had been in the sawmill business for one hundred years. W. H. Johnston is the grandson of the founder, Capt. William Johnston, and has a son, George K. Johnston, who is associated with his dad and will follow in his footsteps when the latter retires. There is, however, no immediate possibility of this as Mr. Johnston is in splendid health and has many years of usefulness ahead.

There are other historic firms in Canada who have been going for fifty, sixty and seventy years. Among them may be mentioned the Eddy Co., the Gilmour Co., J. B. Smith & Sons, Maclarens, Edwards, Booth, Chew Bros., and a host of others.

These thoughts have been induced by the statement that "Once a lumberman, always a lumberman," and there is a deal of truth in this assertion. Scores of businesses have been handed down from father to son and on to grandson and to-day these enterprises have an honorable and even enviable reputation. They have stood for something worth while in the way of value, quality, and integrity and their names are respected wherever lumber is made or marketed.

The performance of a trustworthy service for a long period of years gives prestige and standing to a firm that is in every way worth while and as has been stated, the heritage of a good reputation is both an inspiration and a stimulus to further honorable performance. Each succeeding generation ought to do better than its predecessor because it has both example and precedent to guide.

The lumberman of the present period has many problems to solve but there are equally as good opportunities to win success as in the past. Progress is evidenced all along the line and there is no reason to doubt that the next generation will witness achievements and development that the men of the present period know little of. The lumberman to-day, instead of knocking the business that he is in, should take a pride and satisfaction in its accomplishments and potentialities and should give those, who are to follow him, the benefit of his experience and hand down to succeeding generations, not only the influence and association of a good name and stock in trade, but high ideals, a clean record and noble traditions.

Randolph & Baker's sawmill at Randolph has been closed down for the season. There is also word that Murray & Gregory's mill at Marble Cove, St. John, will close down in the near future.

Reunion of Hardwood Flooring Men After Lively Game of Baseball

Sporting Activities of Progressive Organization

A fine spirit of healthy rivalry in sport exists between the various offices of the Seaman, Kent Co. On June 30th when a number of the members of the Toronto staff visited Meaford a game of baseball was played which was won by the home team. The Toronto boys, however, were not satisfied that the Northerners were the better team and invited the Meaford exponents of the diamond to spend a few days in Toronto which they did over the Labor Day holiday and played a return game. This was also won by the mill team from Meaford, clearly establishing that the same efficiency that is displayed in the production of Seaman, Kent hardwood flooring is characteristic in the sporting activities of these men. The accompanying picture shows the two teams with some of their friends, Frank Kent, the president of the company, occupying the central place.

Customer of Lumber Firm Over Fifty Years

The Oliver Lumber Co., Limited, are removing their offices from King and Yonge Sts., Toronto, to their yard at the foot of Spadina Ave., where a new office building has been erected. J. Ormsby Oliver, who has been spending the past few months in California with his wife and son, has returned to Toronto. His son, Jack Oliver, has joined the organization and will make the third generation connected with the business which was established 52 years ago by the late Joseph Oliver, former Mayor of Toronto.

The first customer who bought lumber from the late Mr. Oliver was John Waugh, of Niagara Falls, Ont., who has done business with the company for the long period of over half a century. Mr. Waugh not only prides himself on being the oldest customer of the firm but also that on the opening of navigation each season between St. Catharines and Toronto, he invariably comes over on the first boat and makes the trip across the lake on the last sailing.

Ban on Slash Burning is Raised

Following the heavy falls of rain which took place recently in New Brunswick, the Department of Lands and Mines have raised the ban on fall brush and slash burning as long as this work is carried out under permit and the supervision of the Department. This additional burning will be extended until such time as general conditions of fire hazard require it to be discontinued. After October 15th permits are not required. Lumber operators and timber licensees are being encouraged to dispose of as great a quantity of slash and operation refuse as possible during these periods of fall burning, in view of the fact that no spring burning will be permitted in 1924. Already considerable areas of timber limits have been cleared of the fire hazard accruing from a collection of slash.

Eastern Firm Reports Help Scarce

The A. A. Sutherland Lumber Co., of Oxford, N.S., whose head office has been in that town for the past four years, have been cutting in Pictou County, during the past season. One mill is operating at West River on the C.N.R. from Truro to New Glasgow and the

other at Scotsburn on the short line from Oxford Junction to Pictou.

The A. A. Sutherland Lumber Co. have two steam portable mills, and the product which is about 2,000,000 feet per year of sawn lumber, has to be drawn from five to twelve miles to be loaded on the railway. The hauling is done with teams and motor trucks. The logging of the company is entirely by horses. On account of the snow last winter, the cut of the firm for this year will not exceed that of 1922. At the present time and, in fact, during the summer it has been found that men were very scarce and wages considerably higher than last year.

The A. A. Sutherland Lumber Co. consider that the outlook for the coming winter in respect to labor is serious, there being very few men in sight at the present time. On account of their long haul and also the long freight haul, they are at a disadvantage in supplying the New England, Montreal and Toronto markets. About three quarters of the cut of the firm this year has been shipped overseas. The company say that with the increased wages for labor, the advance in the cost of supplies and the present heavy freight rates, they can see not profit in it for the lumber operator in that section of Nova Scotia at the prices which are being offered for stock today.

Will Erect Creosoting Plant in East

The Canada Creosoting Co. and the Creosote Products Limited, both of which are Ontario organizations, will erect a new creosoting plant at Newcastle, N. B., which will employ 200 men the year round, according to the announcement recently made by Mayor Creaghan of that town.

The Canada Creosoting Co. already has contracts for the creosoting of all railway ties used in the Atlantic region by the Canadian National Railways and the works for this purpose will be located at the upper end of Newcastle where more than 200 acres have been acquired. The work of erecting the buildings will begin at once.

Creosote Products Limited have obtained the Hickson mill site at the deep water terminal for their plant and it is the intention of that company to use a large quantity of hardwood in the Newcastle district in the manufacture of their products.

Inspector Will Move To Toronto

Major J. I. Hartt, of Orillia, Ont., who was recently appointed inspector of Crown Timber Agents and supervisor of operations in connection with the timber administration of the Department of Lands and Forests for Ontario, will have his headquarters in Toronto and open an office in the Legislative Buildings where he will be in close touch with the Department. The idea behind the appointment is the conservation of timber resources. Mr. Hartt will supervise and inspect the agencies, he will inspect the lumber mills and will have charge of the estimates and the sale of leases. He states that he hopes to eliminate a great deal of waste and to promote natural reforestation by stopping the cutting of young trees. Another feature of the work of the Department will be the furthering of the Government's policy of manufacturing the products of the forest in the province.

Mr. Laking Passes Another Milestone

William Laking, Hamilton, Ont.

The many friends of Mr. William Laking, of Hamilton, extended hearty congratulations on October 11th on the occasion of his 78th birthday. He has been fifty-seven years in the lumber business and is still going strong. Mr. Laking is enjoying good health and makes frequent trips to Toronto in connection with the William Laking Lumber Co. and the Riverdale Lumber Co. He has been president of these concerns for some thirty-one years, the former specializing in wholesale hardwoods and the latter doing a general retail business. Mr. Laking generally spends a portion of each winter in the South and has made a number of visits to Florida. It is likely that he will again sojourn in the southern clime during the coming Winter. A sketch of

Mr. Laking's long connection with the forest products trade appeared in the "Canada Lumberman" a year ago and was read with much interest. Mr. Laking then recalled the days when mill run white pine lumber sold at \$8 and \$10 per M feet and a teamster and his horses could be hired for \$2 a day, the man boarding both himself and his team. Numerous changes in the lumber line have taken place since Mr. Laking first swung an axe and pulled a cross-cut saw but its progress has been upward and steady. Many friends will wish this veteran lumberman many more years of health and happiness.

Happenings of Interest in Lumber Line

That the lumber cut on New Brunswick crown lands alone during the season would reach approximately three hundred million feet was a recent prediction of A. T. Murchie, chief scaler of the Department of Lands and Mines, following his return from an inspection in the northern areas of the province.

However, the big question of the day hinges on the labor problem. Providing that the operators can secure the necessary number of men their operations will be extensive. Last season's cut on Crown lands amounted to 220 millions.

The greatest lumbering activities this season should be centered around Restigouche County where the fire ravages during the summer were very heavy. It is estimated that in Restigouche County alone at least one hundred million will be cut, although some estimate that the cut there will be much heavier. The heaviest cut will be in the areas damaged by fires, under instructions issued by the Department of Lands and Mines in order that as great a proportion of the merchantable timber still standing be salvaged before becoming a greater loss and a menace to green timber.

Among some of the heaviest cuts now anticipated and prepared for are included the Nepisiquit river territory, where it is expected between thirty-five and forty-million feet will be taken out, and the Upsalquitch areas where it is expected that the cut will be at least twenty-five million feet. Twenty-five million feet will also be taken from the Tobique districts. A cut of ten million feet is expected to be taken from the White's Brook timber lands.

Mr. Murchie said that he believed the final and complete returns of the forest fire damage in the province would be considerably less than the estimates of a billion feet, which had been made.

From statistics compiled it is shown that more pulp wood has been exported this summer from Bay of Fundy ports than ever before. There has been considerable activity in the shipping line at Digby, N. S.

The slash burning season expired in the Province of New Brunswick on September 15. Owing to the condition of the woods, which are very dry, numerous requests were received at the Department of Lands and Mines office, asking that the season be not extended. As a result orders went forth that there was to be no more slash burning for the time being at least.

Over 5,000 feet of lumber valued at \$15,000 was destroyed at Port Elgin recently. A mill nearby was saved only through the great efforts of the fire fighters. C. H. Read of Amherst N. S. was the largest owner of the destroyed property.

Hamilton and Collier, Ltd., of Campbellton, who conduct a lum-

bering and woodworking business, assigned recently to the Canadian Credit Men's Association for the benefit of their creditors.

A big shipment of spruce deals and logs was made from St. John port on the steamer Magdala. She was bound for Glasgow, Scotland, and had 5,500,000 feet. Timber was piled seventeen feet high on the deck.

F. Kay, late of Rose-McLaurin Limited, has joined the sales staff of Terry-Nicholson-Cates Limited, Toronto, and will cover part Toronto recently calling upon the trade.

It is stated that 200 men and women of Finland have recently arrived in Ontario and that a number of the men will work in the lumber camps during the winter. It is reported that one Georgian Bay lumber firm contracted with several Finnish bushmen at a monthly wage of \$50.00, and if they find the growth of the timber on the limits heavy, the Finns will contract on a piecework basis of 15 cents a log, earning by working long hours as much as \$8 per day. Finland is an agricultural country where lumbering is an important industry and emigration has been heavy during the past few months. Finlanders are regarded as excellent bushmen and, it is understood, prefer to carry on all operations by piecework.

Why Lumber is Keeping up in Price

A group of Long Island builders, New York, whose interest in lumber is primarily in the construction of dwelling houses has just completed an inquiry into the high costs of building materials. They have reached the interesting conclusion that the mounting costs are due to scarcity brought about in great measures by consumption of timber in ways of which the general public rarely thinks.

Forest fires in this country, they learn for example, destroy yearly enough good timber to build a row of five-room frame dwellings spaced 100 feet apart on both sides of a highway running from New York to Chicago.

They find also that the railroads of the United States use about 125,000,000 new wooden cross-ties every year, or about four ties every second. That number of ties would be enough for the building of 40,000 miles of new railroads. The same quantity of lumber could dot Long Island thickly with homes.

If all the farm wood-lots in the country were joined together they would make a tract of about 200,000,000 acres, or an area as large as the New England States plus New York, New Jersey, Pennsylvania, Ohio, Indiana and Illinois. Were this timber to be used as building material instead of firewood to heat homes already built, it would suffice for the construction of several score good-sized cities.

The printing and publishing industries have come under the scrutiny also for they learn that every year the paper mills of this country turn out an amount of newsprint equivalent to a strip as wide as the ordinary daily newspaper and extending 46,000,000 miles, or half the distance to the sun. If such a quantity of wood had been turned over to carpenters instead of being converted into pulp, it could have been made into a row of houses crossing the continent.

Even lead pencils have been considered. They are made at the rate of more than a billion a year and require such an amount of wood that Eastern red cedar and juniper have already become scarce and pencil makers are eagerly hunting for other suitable woods. Builders do not even try to get these woods.

Not Much Change in Ottawa Market

Practically no change was noted in the Ottawa lumber market during the closing period of September, when orders and inquiries were rather slow. There was no betterment in the demand from the United States yards, which dealers earlier in the year had looked forward to and said was due to arrive about the end of September. The Canadian trade also did not show much, if any, change so far as the Ottawa Valley firms and companies were concerned.

The impression of several dealers was that the American yards have either become pretty well stocked up with western American grades, or else they are holding off placing new orders hoping that the price will come down. Though business was not by any means brisk prices remained absolutely firm and there was no indication of a weakening market.

The situation in regard to woods labor did not show any change the men for the camps continuing to grow scarcer daily. Wood operators believed that with the termination of the western harvest that a large number of workers who went to gather the harvest will return east and will be available for the woods camps.

Transportation conditions both by rail and water continue good. There was little or no change in regard to conditions surrounding the operation of the woodworking plants and factories.

PULPWOOD and PULP

Pulpwood Shipments Heavy From Quebec

The shipment of pulpwood from the district of Quebec is still proceeding steadily and it is said that the shipments from the province to the American mills this year will be double in quantity the shipments of 1922. This does not mean, however, that the American mills are unduly active in anticipation of the proposed embargo on the shipment of Canadian pulpwood to the United States. Rather is the explanation found in the fact that there is an abundance of railway rolling stock and the prices are the same as they were last spring, consequently they are taking advantage of these conditions to obtain a plentiful supply of the wood.

In conversation with Americans who have from time to time visited the city of Quebec in the interests of their paper mill interests, they are practically unanimous in their opinion that the Canadian Government will eventually put the embargo into effect. Should this come to pass they admit that the American mill interests will be prepared to meet the changed situation. They will not remove their paper mills to Canada but will build and operate pulp mills in this country for the manufacture of pulp to supply their American paper mills for the manufacture of the finished production of paper.

Canada's Export of Pulpwood Grows

During the six months ending September, Canada will have exported to the United States approximately as much pulpwood as she did during the whole of the fiscal year 1916. In that year the exports were 879,934 cords; for the five months ending August this year they were 700,716 cords, and, at the rate of export maintained during the last three months, they should come very near to the total for the whole fiscal year 1916. In August alone these shipments were 163,411 cords.

In so far as value is concerned the shipments made during these six months will have quadrupled the value of those for the year 1916, for, whereas the latter were worth \$5,743,000, those for the six months of this year will, at the present rate of exportation exceed \$24,500,000. All this, of course went to the United States.

As an indication of the extent to which the United States is dependent on Canada for pulp, newsprint and pulpwood, it may be said that, whereas during the fiscal year 1916 she took \$31,000,000 worth, at the present rate her purchases of these during the current fiscal year should total \$150,000,000.

Colony of Danes Will Cut Pulpwood

"Opportunities will be limited in Toronto this winter," said H. C. Hunter, general superintendent of the Ontario offices of the Employment Service of Canada, regarding unemployment probabilities. Prospects were splendid for unskilled labor in Port Arthur, he added.

"There is a great amount of construction work going on, for the railways, for pulp mills and for power development work, and I think that all the men who go there will be absorbed. Arrangements are also being made there for the reception of a colony of Danes who will cut pulp wood under contract. The immigration officials and the Department of Labor are co-operating in this matter. The Danes who have arrived so far are a splendid type of men."

Lumbering firms in Ontario, he said, could easily take another 500 men. At present there is a demand for peach pickers and men who can plough, but shortly the market for men with no special qualifications will close.

No Surplus Pulpwood For Export

Sir William Price, Quebec, head of Price Bros., Limited, in a recent interview on the proposed prohibition of the export of pulpwood from private lands, said that last year to produce 1,088,205 tons of paper, 1,405,440 cords, or 702,722,000 feet, board measure, of pulpwood were consumed in the 46 mills in the province. In addition 553,836 cords or 276,918,000 feet, board measure, were exported to the United States and about 925,360,000 feet, board measure, were used for other forest products; the whole accounting for a total wood

cut of approximately 1,915,000,000 feet, board measure. To this consumption must be added in the future 500,000 cords of pulpwood—an amount that practically equals the present export—to provide for new mills or paper machines now under construction.

"It is only with the most intensive protection and the strictest conservation that it will be possible to maintain this vast supply of raw material for provincial forest industries. In some districts a timber shortage is already well in sight and it will be necessary for the mills operating there to purchase all the available pulpwood that is produced in the province. "There is, therefore, no surplus supply for export, and mills in Quebec are going to be short exactly the quantity of wood that is sold to mills in the U. S., unless our forest reserves are depleted in defiance of conservation. This means that they will be unable to operate at capacity and will give less employment to labor. The people of the province may do what they like about it but they cannot change the state of affairs I have outlined," concludes Sir William.

Buying up Site for New Pulp Mill

The St. Regis Paper Co. whose head office is in Montreal, have acquired from the Canadian National Railways a large parcel of land which includes the spacious harbor, heretofore, the property of the Cap Rouge Wharf & Pier Co., who sold out to the railway interests some twelve years ago. This property is close to the Quebec bridge eight miles distant from the city of Quebec, and is a beau ideal spot to locate and operate a pulp mill which will not only have easy water access but the accommodation of the Canadian National Railways operating in the vicinity.

The Brown Corporation have leased a large parcel of land from the Canadian National Railways on the St. Lawrence River frontage at Quebec for development in connection with their extensive pulp and paper mill as well as lumber interests and their mills at La Tuque, etc. It is as yet not definitely known what the Brown Corporation intend to do with this property as the Quebec office is reluctant to give out information for obvious reasons until their intentions, now only in an initial stage, are further advanced.

The Laurentide Paper Co., Limited, have acquired by purchase the limit holdings and sawmills at St. Joseph and St. Raymond in the county of Quebec on the line of the Quebec and Lake St. John Railway. These limits comprise 350 square miles, 50 miles of which are free land, while the remaining 300 miles are under Government lease. It is not the intention of the Laurentide interests to put the mills on their property out of commission. The company, taking into consideration the organization, will continue to operate the mill at St. Raymond.

Messrs. W. & H. Kennedy, of Quebec, who have been in the lumber business for over thirty years, at the same time acting as steamship agents at Montreal, recently decided to sell out their lumber interests but will remain to carry on in the shipping business.

Saving Young Trees is Important

An interesting contest is being conducted by the Interlake Tissue Mills Co., of Toronto, whose plant is located at Merritton, Ont. The management announce that the object of the competition is to conserve the natural resources of Canada. Geo. Carruthers, president of the Interlake Co., who is also vice-president of the Canadian Pulp & Paper Association, has long been a strong advocate of safeguarding the wooded wealth of the Dominion, and particularly Christmas trees. In a breezy announcement sent out in connection with the competition he says that every year thousands of trees are destroyed and shipped in trainloads to cities for Christmas use, resulting in an appalling loss of the forest wealth of the nation. It is also pointed out that trees stabilize the climate, conserve water-power, improve agriculture and ensure future generations their rightful inheritance.

To offset this unnecessary waste and invite persons to make Christmas tree screens to take the place of real article is the object of the test of the Interlake Tissue Mills, and valuable prizes are being donated for the best screen, the contest closing on December 1st. The screens must be made out of crepe paper only and in size must

be 5 feet wide and 8 feet high. It is pointed out that the Christmas tree may be hung in any convenient corner and a receptacle for gifts may be placed behind the same. Mr. Carruthers believes that the tissue paper creation will answer every purpose from a decorative, useful, sentimental and other standpoint as a real tree and at the same time enlist the interest of Canadians young and old in the perpetuation of the young growth in our forests.

Mr. Carruthers is not the only man who has drawn attention to the woeful annual waste of young trees. At the last convention of the Canadian Lumbermen's Association, held in Montreal, J. Fraser Gregory, of St. John, N.B., who is a prominent lumberman, stated that the export of Christmas trees from the Eastern provinces by hundreds of thousands was becoming alarming. He declared that these trees would become more valuable if left to grow. A greater revenue would eventually be derived from them by the people instead of them being cut and sent out of the country every winter. All persons loved Christmas trees but substitutes could be found and it would be more profitable all round if the immature spruce was not cut and taken away for Yuletide decorations. Mr. Gregory said that he felt very keenly on this point and a number of other delegates spoke in a similar strain. Considerable discussion took place in the press at that time regarding the reference of Mr. Gregory and his attitude on the question was widely endorsed.

New School for Pulp Mill Workers

Arrangements have been completed for the courses to be given at the new pulp and paper school which is affiliated with the Technical School in Three Rivers, Que. This result was the outcome of a conference which was held recently by representatives of the industry and the forestry service of the province.

The object in view was to arrange two systems of courses to be given in the new school and the co-operation of the advisors named by the Pulp and Paper Association has been sought in this respect.

The first series of courses will last four years during which the students will frequent the schools for a period of thirty-six weeks per year, following the courses, and working in the pulp and paper mills eight hours per day from September to June. A fifth year will comprise special courses to specialize in pulp and paper fabrication.

To allow the men employed in pulp and paper mills to become experts in their trades, special evening courses will also be conducted.

Move to Finance Woods Operations

Ontario courts have appointed receivers for the Dryden Paper Company, Limited, the same being F. Perry of Montreal and F. A. Sabbaton of Grand Mere, the latter one of the directors of the company and a large shareholder. It is understood that application was made with the co-operation of the directors and is in the nature of a friendly development for the purpose of enabling the company to finance its woods operations this year and conserve the equities for the creditors and shareholders.

No reorganization is in prospect at this time, as it is hoped that the company can be put on a profitable basis and eventually discharged from receivership. The company found itself unable to pay the sinking fund and interest on its bonds, due October 1, and at the same time finance the year's wood's operations.

Porcupine Company Improving Mill at Hoyle

The Porcupine Pulp & Lumber Co., Limited, has been operating at Hoyle, Ont., for the past six years. The head office of the company is at Niagara Falls, N.Y., and the president is E. E. Mansfield, of Niagara Falls. The Porcupine organization takes out an average of 8,000 cords a year and this season let contracts for about 11,000 cords of 4 feet wide. The wood is cut by contractors from lands either owned by the company or upon which they have cutting rights. The company has rights upon some 8,000 acres. M. E. Crouch, who is an Ontario land surveyor and formerly resided in Port Arthur and Nipigon, Ont., has been appointed manager of the organization.

Hoyle is on the T. & N. O. Railway, 16 miles south of Timmins. The Porcupine Company owns 39 acres at Hoyle, upon which are mill buildings, etc. A subsidiary concern, the Porcupine River Improvement Co., Limited, operate a dam on the Porcupine River at the mill and have certain driving rights on the stream under the Provincial act governing such companies. The wood is either hauled direct to the mill or driven down the Porcupine River to the rossing plant.

The company does not operate any camps itself, but gives contracts to outsiders for all wood. The mill rosses on an average about 125 cords in ten hours. For the past two months men have

been placing concrete piers under the mill, erecting a new conveyor and making other changes and improvements.

The firm has not built any cottages as yet for the employees but may do so in the spring. The buildings at Hoyle now consist of the manager's house, cashier's house, store and offices, rossing mill, bunkhouses, accommodating 70 men, cookery, warehouses, stables, blacksmith shop, etc. No sawmill is operated in connection with the plant but it is understood that the Porcupine organization has under consideration a proposition to instal one to utilize the enormous quantities of poplar and birch on their lands. All the wood rossed at Hoyle is shipped by the Temiskaming & Northern Ontario Railway to the Cliff Paper Co., of Niagara Falls, N.Y.

Beetles Create Havoc in Burned Trees

Dr. Arthur Gibson, of Ottawa, Dominion Entomologist, has been conferring in Fredericton, N. B., with the heads of the various Provincial Government departments with whom his work in New Brunswick brings him in contact, and also with Dr. J. D. Tothill, of the Dominion Entomological Laboratory of the University of New Brunswick.

The research work conducted by the Dominion Entomological Branch in New Brunswick this year has been confined largely to a study of the burned timber areas which are being infected by the beetles and borers which attack burned timber following fires. Authentic information received from the North Shore shows clearly the difficulties which are being experienced in this direction. It was stated that in some of the larger sections the calculations which were originally made following the fires, from an inspection of the areas, and on which were based to some extent the policy in regard to this season's cut, have been entirely upset by the swift and unexpected attack of the beetle. While this has been confined generally to areas in which the budworm has previously operated (and the unexpected intensity of the attack of the beetle following recent fires is partially attributed to the budworm preparation) the extent of the destruction wrought has been such as to necessitate complete changes in plans.

Deciding Old Agreement on Timber

In the Supreme Court, Mr. Justice Rose has the pleasant task of interpreting an agreement executed July 2, 1887, between The Canadian Land and Emigration Company and the united townships of Dysart, Dudley, Guildford, Harcourt, Harburn, Bruton, Havelock, Eyre and Clyde, who are the plaintiffs in an action against The Canadian Land and Immigration Co., of Haliburton, Ltd., the Canadian Bank of Commerce and W. H. Lockhart Gordon, Toronto.

Plaintiffs declare that they entered into an agreement with the Canadian Land and Emigration Company, by which the company would sell the timber on the road allowances as well as their own. As the amount on the road allowances was estimated at two per cent. of the total, the company was required to pay the municipality two per cent. of the total received, for privilege. The commissioners for the company were James M. Irwin, since deceased, and W. H. Lockhart Gordon.

Recently, plaintiffs proceed, the defendants sold to the Hydro Electric Power Commission of Ontario all their land and timber in the township of Bruton for about \$35,000, as well as a large block of timber to the Standard Chemical Co. On these sales the plaintiffs complain they have received only \$23.76 for 1919; \$41.08 for 1920 and \$57.80 for 1921, on behalf of the Hydro Electric Commission and \$24.04 for 1919 and \$27.53 for 1920 on behalf of the Standard Chemical Company.

They ask for an interpretation of the agreement and a statement as to what the plaintiffs are entitled to receive out of the purchase price of the timber sold by defendants, as well as a declaration of the respective rights of plaintiffs and defendants and an accounting of all timber sold by the latter.

Defendants deny that by the agreement they must pay plaintiffs two per cent. of the selling price of all timber but declare that the amounts referred to as having been paid to the plaintiffs on behalf of the Hydro Commission and the Standard Chemical Company are the amounts to which the plaintiffs are entitled, and were paid by those corporations to the plaintiffs.

Since the agreement the Canadian Land and Emigration disposed of half their interests to Messrs. Irwin & Gordon and the other half of the Canadian Land and Emigration Company. Before his decease, Mr. Irwin disposed of his interests to the Canadian Bank of Commerce for valuable consideration.

Burned forests build no homes.

Keep out of Ruts; a Rut is something which if travelled in too much becomes a Ditch.

Truth is the greatest thing any man may keep. It is the bond of union, the basis of human happiness.

Logging in Algonquin Park District Almost Ideal

Operations Have Been Going on in That Area for Fifty Years—Visit to the Booth Camp Was Interesting—The Various Activities

By J. R. Walton and J. D. Brown

The timber limits of J. R. Booth, Limited, are extensive and are located at various points throughout Canada. The veteran "lumber king" who is hurrying to the century mark, having passed his 96th milestone, is the largest holder of woodlands in the world. Mr. Booth has always believed in the gospel of hard work and is the oldest active lumberman on the American continent.

Of particular interest are Mr. Booth's limits at Long Lake in the Algonquin Park district. As head of the organization of J. R. Booth Limited, he is the guiding genius of all its logging activities. He has lived in Ottawa for the last 66 years and is still going strong. Next to him in an executive position is John Black, who is stationed at headquarters at Ottawa and with the aid of a travelling inspector, directs all bush operations from there. Under Mr. Black are a number of inspectors, or, as they are often called, "walking bosses," each of whom has charge of a definite sub-division of the limit and the camps in it. These men spend most of their time travelling from camp to camp, more or less in the capacity of inspectors, making their headquarters usually at the camp nearest the railway station. Directly under the agents are the camp foremen. Each foreman has charge of a particular camp and is responsible to the agent for its activities. He is usually French-Canadian by birth. His duties are supplemented by the camp clerk.

On this particular limit, the agent has headquarters at Brule Lake, situated on the main line of the Grand Trunk Railway, between Ottawa and Parry Sound. He is assisted in his duties by two men; a clerk, and assistant clerk. This agent has supervision over two camps, Numbers 1 and 2, distant thirteen and nineteen miles, respectively, from Brule Lake, which are arrived at by a rough but direct tote road. There is, as a matter of fact, another road which is in much better shape, but it is very round-about. A farm is situated on this second road, where vegetables are grown for the two camps, and it is mainly for the transportation of these supplies to the camp stores, that it is used. All executive business, such as employment of men, keeping of accounts, wages, etc., is carried on at the office at Brule Lake.

The limit in question is located in the northern half of the townships of Butte and Divine, which part is in the western and central portion of Algonquin Park. Camp No. 1 is situated at the western extremity of Long Lake in the

northern part of Divine Township.

Logging has been going on on this tract for the past fifty years, first for white pine saw timber only, then commencing at a later date for spruce. It was first granted by the Government to the Fraser Lumber Company who cut only the choicest of the white pine and then sold it to the Intercolonial Company. This company continued to log it for white pine up till ten years ago when they in turn sold it to J. R. Booth, Limited, primarily for the spruce it contained but also for any white pine they might find. The cruiser's estimate was 80,000 cords of spruce and 7,000,000 board feet of pine. They are finishing their last cut, and it has run to 5,000 cords of spruce and 75,000 board feet of pine.

Because of the prevailing low prices for hardwoods and the difficulties of bringing them to market—driving being the only means of transportation—it is profitable to cut only conifers, and even these are restricted to spruce and pine. Balsam, though it is of good proportions and sound, has not good driving qualities for long duration, water-logging being its principal defect. The length of the drive is of two years' duration, and French Canadians are employed solely for this purpose as well as for most of the other logging operations. It is found cheaper to import these men from Gaspe, rather than hire English-speaking men to do the work.

Cutting Conifers Only Profitable

The topography of this limit is characterized by fairly steep parallel ridges running East and West, with valleys a quarter of a mile to half a mile wide between; this condition gives rise to four forest types.

On the ridges is found a pure hardwood stand, consisting of hard maple, yellow birch, beech; the stand is virgin and fairly open, with a dense reproduction of hard maple about five feet high. On the upper slopes is a mixed type of maple, birch, white spruce, hemlock, balsam, with an occasional white pine; the lower slopes are covered with a coniferous type of balsam, white spruce, black spruce and an occasional white pine; in the valleys are black spruce swamps with scattered balsam according as the swamp is very wet or fairly dry. There is practically no slash, what little there is being confined mostly to the lower slopes and in a rapidly decaying state.

About 15% of the spruce is merchantable and this is in

Form 224-1a-8-20-M. Co.

Memorandum of Agreement

MEMORANDUM OF AGREEMENT entered into at _____ this _____ day of _____ A.D. 192____, between J. R. BOOTH, of Ottawa, Ontario, hereinafter called the purchaser, and _____ of _____ hereinafter called the seller.

WITNESSETH:—The seller hereby contracts and agrees to manufacture, haul out and deliver to the purchaser on the ice at _____ the following wood goods:—

White Pine Logs	13½ ft. and 16½ ft. long, 7 ins. and up at top end at _____	per 1000 ft. B.M.
Red Pine Logs	16½ ft. and 18½ ft. long, 7 ins. and up at top end at _____	per 1000 ft. B.M.
Spruce Pulpwood	12½ ft. and 16½ ft. long, 4 ins. and up at top end at _____	per cord of _____ cu. ft.
Balsam Pulpwood	12½ ft. and 16½ ft. long, 4 ins. and up at top end at _____	per cord of _____ cu. ft.
Hemlock Pulpwood	12½ ft. and 16½ ft. long, 4 ins. and up at top end at _____	per cord of _____ cu. ft.
Jack Pine Pulpwood	12½ ft. and 16½ ft. long, 4 ins. and up at top end at _____	per cord of _____ cu. ft.

Different lengths in pulpwood to be piled separately.

The seller agrees to deliver during the season _____ the following quantities:—

The above sawlogs and pulpwood to be delivered on the ice at _____ and where necessary, boomed in such a manner acceptable to the purchaser or his representative. The purchaser agrees to furnish the necessary chains for booming purposes.

The above logs and pulpwood to be cut on _____ owned by _____ and where cut on private lands owned by seller, to be free of all crown dues and all other encumbrances.

Balsam in no case to exceed 20 per cent of the total quantity of spruce. All logs and pulpwood must be sound and free from rot or coarse knots. The purchaser to get the full product of the tree. Logs to be well trimmed and each piece sawn squarely at both ends, and closely piled in rollways in such a manner to enable the culler to examine and measure same.

All logs and pulpwood manufactured under this agreement to be measured by a culler employed by purchaser and the measurement of said culler is to form the basis of settlement and is to be final and indisputable.

All logs and pulpwood to be well bark marked thus:  "Turtle" 14 inches long, on butt end of each piece. Also well hammer marked on both ends of each piece thus  with marking hammers provided by the purchaser. Any logs not bark and hammer marked as above stated, will not be measured or accepted by the culler.

Payments will be made as follows:—

_____ Payable when logs are cut and skidded and roads cut.

_____ Payable when hauled.

_____ Balance payable when terms and conditions contained in this contract have been fully complied with to the satisfaction of the purchaser or his representative.

IN WITNESS WHEREOF, we hereunto attach our respective signatures:—

Form 22:

Statement of Van Goods

Branch _____

Camp No. _____

Month Ending _____ 192 _____

[illegible]

This sheet illustrates the method of making the monthly statement of goods bought and sold in the van

very good condition. The pine is in excellent condition as regards soundness. There is no noticeable crook and the taper is about one and one-half inches in sixteen feet. The average merchantable length is fifty-two feet and the contents of an average sixteen-foot log is one hundred and fifty-four board feet (Doyle Scale). The balsam is in good condition and of merchantable size, but was not bought with the pine and spruce on account of its bad driving qualities.

The hardwoods are in excellent condition and of a large size, the maple averaging about sixteen inches D.B.H. However, on account of their inaccessibility to market, they cannot be cut profitably, unless the price of hardwood lumber takes a phenomenal rise.

Logging Conditions are Ideal

The topographical features give rise to almost ideal logging conditions. The narrow swamps and stream beds are splendidly located for making logging roads, all terminating in the same main driving stream while the skidding trails are short and down-hill. In the spring the streams are well flooded by the natural drainage and melting snow from the fairly steep slopes. Cold winter without thaws are desirable for logging operations and a fairly large snow-fall and wet spring for driving; this is the normal climate in this region. The maximum stand per acre is about two hundred and fifty trees and the average about one hundred and ten, without taking into consideration the hardwood type on the ridges, which would greatly reduce these figures.

The distribution of species over the whole limit is as follows:—Spruce (white and black) 35%; Maple, 25%; Birch, 15%; Balsam, 15%; Pine, 5%; Cedar, Hemlock, Beech, 5%.

The total number of men employed in this camp, during the period of operation was one hundred and three, divided according to their skill and type of labor.

The following divisions of activity prevail during the logging season:—Maintenance at the camp itself; transportation of supplies, etc.; road making; skidding; log making.

Log Making

The crews for this operation, altogether comprised eleven cutting logs and two filing. The cruising and estimating in general is done ocularly. The company employs some man, very experienced in the work or else trains one of their employees for this position, which work he does exclusively; the men are usually lumberjacks, who have shown more than the average intelligence. J. R. Booth employs one timber estimator, who has now been in his employ for a good many years. All limits to be bought by the concern are first cruised by him and he has now acquired an enviable reputation for accuracy throughout the northern part of Ontario. This man, who is an old and experienced lumberjack, cruised this tract in about two weeks with him an assistant, to act as general help and cook, so that he himself could confine his whole attention to the estimating.

How Timber Cruising is Done

His method of cruising is as follows: He walks through the area and covers as much of it as his time allows him, marking roughly on his map good locations for camps and roads, as shown by the streams, general drainage and other topographical characteristics of the limit and also giving the location of the main bodies of timber suitable for cutting. He sometimes marks off an area, say

half an acre, and counts the merchantable trees on it, basing his estimate on this plot, but more often makes a rough estimate, based on his experience in judging similar stands elsewhere. The pine was estimated in board feet by the Doyle scale and the spruce in cords.

Plenty of running water and good drainage seem to be the main factors to be taken into consideration when choosing a camp site in this district. This particular camp is admirably situated from all standpoints but that of toting in provisions; it is a clearing 350 feet x 300 feet, located on a small plateau, affording excellent drainage; on the north side is a large lake, called Long Lake, about four miles long by one mile wide; on the south is one of the main driving streams, called Pine River, into which the majority of the logs are dumped in the spring; on the west is the outlet of Long Lake into Pine River. At this point there is a stop log dam, and thus, the logs being driven from Camp No. 11, about six miles away, and coming by way of Long Lake, can easily be checked up and looked after by this camp.

The maximum size of the tract that can be logged from the camp is based on this fact, that in good going, to obtain the greatest effi-

ciency of operation, the men should have to walk no further than three miles to work.

Furnishing the Men With Supplies

The method employed in furnishing the men with supplies is similar to that of other organizations of the sort. In the office is built a counter with shelves behind it on which are placed goods for sale, forming the camp store. Such necessities as are in use in lumber camps are furnished. The clerk keeps a book in which the names of all men in camp are written and when an employee comes in and makes a purchase, he does not pay for it at the time but, instead the amount is made note of opposite his name and on his discharge is deducted from his wages. The store is open only after supper in the evening. On the whole notwithstanding the fact that supplies have to be brought in by a rather tedious method, the prices are slightly lower than they are outside. The average total value of the stock to supply this camp of 109 men for one month is about \$1,000.00.

The location of the tote-road from Brule Lake to Long Lake was roughly laid out in the most direct line between these two points, regardless of obstructions and unfavorable spots with the exception, of course, of lakes. Little work was done on the whole, the trees and stumps being cut out and underbrush cleared. The waggons themselves were used in the fall to help level it off and make the ruts. The open nature of the country, especially in the hardwoods, and the small amount of slash and bush, greatly facilitated the work.

The greatest drawback to the task of making the road, was the topography. The ridges all run at right angles to the direction of tote-road, making the passage exceedingly rough and hilly. No grading was done and one bridge only was built on top of the dam at the camp. Streams and low wet places were spanned with corduroy, cut from young spruce stock.

Built Five Miles in Three Days

A crew of 15 men, 1 clerk and 1 foreman, with the aid of a team, built five miles of road in three days. Little repair work was done until this year—when 20 men went over 13 miles in two days, filling in mud-holes, and replacing corduroy, at a cost of \$5.09 per mile.

Logging roads are located early in the fall or late summer, the proposed route being blazed first, and the crew sent in on completion of this. The operation consists, merely in cutting away trees, levelling stumps and filling in low places with brush and corduroy. No grading is done whatever but sand is sprinkled on the few steep iced slopes that are necessarily traversed. This preliminary preparation is merely to furnish a foundation upon which to build an ice-road when the snow falls. Roads for the most part are located in the stream beds and in swamps, thus reducing expenses to a minimum. Six miles is the greatest length of haul used.

Log scalers are employed by the concern and one is placed at the disposal of each agent. This man travels from camp to camp, scaling the logs on the various skidways, assisted usually by the camp clerk, foreman or walking boss. Usually when scaling logs of their own cutting, the clerk assists, but the agent is on hand during the scaling of jobber's logs. For pine the Doyle rule is used, the diameter at the smaller end being tallied. Butt rot shortens the scale and the diameter is reduced for punky wood. For red rot both the log scale is reduced and the diameter shortened. Both ends of the skidway are necessarily approached in scaling, as the logs are piled up regardless of their small dimensions.

As regards the spruce, the cord for the government standard is 115 cu. ft.—but J. R. Booth find that 98 cu. ft. is all the solid wood that can be stacked in an average cord in this limit.

The scale stick is 30 inches long and has a metal toe on one end. It is graduated in inches and on one side the corresponding number of board feet for the Doyle rule, and on the other side the number of board feet for the Quebec rule. This allows the tally to be made directly in board feet. However, this is not done as a rule but, instead, the diameters and lengths are recorded and their contents computed later in the office.

The tally board consists of a smooth square 9 inches by 12 inches, on which a sheet of paper is placed by means of drawing pins, ruled by the scaler with the necessary divisions. As each log is scaled, a cross is made with a piece of blue crayon, to guard against repetition in scaling. The final tally is placed in a book, ready for government inspection.

Fire Hazard Reduced to Minimum

Where the pine has been logged out, there is no noticeable change in the stand, owing to the scarcity and scattered condition of this species. In the spruce region, however, there is a decided difference; after an area has been lumbered. It acquires a rather desolate appearance and consists of balsam, dead stubs and an abundance of young balsam reproduction. Even though one would expect

a great deal of windfall, and consequent accumulation of slash, such is not the case, probably on account of the ideal locations of the logging areas from the standpoint of shelter. It is true that dead stubs are blown over occasionally or are thrown by other agencies, but owing to the moist condition of the ground and the absence of much slash, they lie flat and soon rot.

This location, together with the absence of slash and the moist condition of the ground, just mentioned, reduces the fire hazard to a minimum.

Insect attack was noticed on all the dead stubs, but not on any of the living trees. These dead stubs consisted of older trees, and were situated near the stream beds or, at least, on the flats directly next to the streams. It is thought that some years ago this area was flooded more than usual and for rather a long length of time, finally killing the trees which were later attacked by the insects but not before. There was very little fungus attack in these areas, although there are signs on the hardwood ridges, especially on the beech.

The future stand will probably consist of about 98% balsam, the remaining 2% divided between an occasional hardwood and spruce. It does not seem practicable to improve the present state of affairs, since the market is so far away and the means of transportation for all species, which cannot be driven, financially impossible.

No species seem to be reproducing themselves except the hard maple on the ridges and the balsam on the slopes and in the valleys; in the very wet swamps, there is no reproduction at all. If the market permitted it, it would very likely be profitable to cut hardwoods in this region, by means of portable sawmills and transport the lumber by hauling to the railway at Brule Lake.

Do You Know Your Profit?

A brand new angle to this buying and selling game forced itself upon us a few days ago and we like it. We like it so well that we're going to pass it on to you, elaborating a bit as we go.

We can state this idea best by saying that there are two kinds of lumber dealers—the kind that buys lumber and the kind that buys profits. Of course all dealers buy lumber. That, however, is all that some of them ever get—just lumber. The others get not only lumber but also profits. And therein we find a great difference, says the "Retail Lumberman."

Now we want you to understand perfectly what we have in mind in making the foregoing distinction. We do not mean to infer that aggressive dealers are those who give more consideration to the profits they hope to make than to the quality of the lumber they buy. There are dealers, to be sure, who care little about the lumber they get provided they can get it at a price that will permit them an exorbitantly large margin of profit; but those dealers are in the minority. We are convinced that the majority of lumber dealers are well satisfied with a very reasonable profit.

We are leading you on to a discussion of cost accounting.

Now it is to be assumed that men in business—at least 99 per cent. of them—are there for the purpose of making money or have engaged in that business as a means of livelihood. Yet there are dealers who seem to give very little attention to that side of their business.

Hard Work Don't Kill—Get Busy

It is said when some men die that they worked themselves to death. Dr. James J. Walsh in his splendid book, "Health through Will Power," which you can buy at any bookstore, says according to the Lombard News Letter:

We often hear of hard work killing people, but, as a physician, I have carefully looked into a number of these cases and have never found one which satisfied me as representing exhaustion due to hard work.

"Insidious kidney disease, rheumatic heart disease, the infections, of which pneumonia is a typical example, all these have been the causes of deaths, and not hard work, and they may come to any of us.

"There are just as many accidents as any other of the mischances of life, for it is as dangerous to be run into by a microbe as by a trolley car. Using the will in life to do all the work possible only gives life and gives it more abundantly, and people may rust out, that is, be hurt by rest, much sooner than they wear out."

Certainly this is good news to business men who are driving themselves night and day. Of course, it must be understood that the man who does the same thing over and over again gets into a rut. Wise men rest themselves, not by loafing but by turning from one job to another, which gives them the benefits of variety.

LUMBER TRADE CONDITIONS

Ottawa Prices are Firm But Trade is Quiet

A further advance in the cost of woods operations, due to an increase in pay for woods labor, evidenced itself in the Ottawa lumber market during the opening period of October, when wages, which had formerly been from \$35 to \$40 per month with board, jumped to from \$35 to \$45 per month with board. The likelihood is that another increase will be made before the 1923-24 logging and woods season is over.

Last year at this time wages ranged from \$26 to \$35 per month with board, and toward the end of 1922 rose from \$30 to \$35 per month with board. Even, with the higher wages which have been put into effect, there is a continued shortage of woods labor and, in the majority of instances, the help offering is not by any means up to the old time standard of efficiency.

Some of the more optimistic of the trade believes that there is still hope that a good percentage of men who went to the bush last season and who have not shown up this season will do so later on. If they do not, some of the heads of companies aver that the Ottawa Valley companies will be faced with one of the greatest woods labor shortages in their history.

The market as a whole did not show any improvement over September, and advices from the United States bore out previous surmises that several of the large eastern yards, had stocked up with American western lumber, which, according to information at Ottawa was being put on the market at from \$6 to \$10 per M. less than what the Canadian product could be supplied for.

The chief reason given for the low price at which the western American lumber was sold to the eastern yards, was that an over-production had been gotten out by the western mills and they were anxious to realize on their investment and had correspondingly cut prices, regardless of production costs.

"It seems like a case of the western companies sacrificing their stocks to get a market," was the comment of the head of the Ottawa Valley companies which in past years did a considerable trade with the eastern yards.

What little demand there was for the Ottawa Valley stocks with the American yards, was chiefly for the lower grades.

With the prospect of rising wood costs especially for the labor end, coupled with the fact that some companies will try and get out a normal cut, and with the United States market, showing only an apathetic interest from the buying end, the outlook ahead of the Valley lumbermen does not appear to be the best.

Prices, though orders and inquiries were slower than what had been expected, did not show any general change, and did not tend toward an indication of a weakness in the market. Transportation conditions both rail and water remained satisfactory. Conditions effecting other factors of the trade did not show any general change.

Montreal Lumber Trade Fair with Stocks Fair

Business in Montreal is fairly good. Orders both for the United States and for local account, have picked up with the outlook favorable for a maintenance of this condition.

Wholesalers state that stocks at the mills are low. Inquiries at Quebec and Maritime mills elicited replies that they had little to offer and that prices of spruce stocks available were higher than had been previously quoted. In some sizes there is no stock to be bought. Under these circumstances it is predicted that wholesale and retail quotations will shortly advance. The position is much the same as that during last fall when there was a scarcity of lumber.

It is almost certain that the new cut will command better prices. The cost of woods operations, due to increased wages, is bound to go up. There is a strong demand for bushmen even at the higher figures, and reports reaching this city are to the effect that the competition for men by the pulp and paper companies is forcing up wages. The men, too, are difficult to retain. As one lumberman put it,—"The pulp and paper companies are stealing the men; the market for labour is like a sieve,—men continually dropping through it." The pulp and paper companies are active in cutting all the wood possible and they apparently are determined to secure all the help that is available.

Spruce lath is very firm. There is very little to be had and the demand is more than equal to the supply.

The call for lumber for the U.K. is still limited. The season

has been quiet and even should there be a spurt from now on, the total will be below that of last year.

It is clear that American users of pulpwood have not got over their fears as to a possible embargo. The exports of wood in August totalled 163,411 cords, valued at \$1,790,772, the second highest total for the year. The effect of the appointment of a committee of inquiry is demonstrated more clearly by the exports for the five months of the fiscal year. They amounted to 700,716 cords, valued at \$6,873,165, compared with 411,661 cords and \$4,255,333 or more than 70 per cent.

St. John Market Reports Quiet Conditions

There is very little stirring in local market conditions, and there has been hardly any noticeable increase in the demand from either the American or English markets. The same irregularity in prices are reported.

Some of the largest manufacturers are holding "pat" and refusing to cut their prices. They are confident that the present quiet spell will not last and the near future will see bigger and better times for the trade.

Provincial random is holding and some orders from the American market have been returned as the prices were not high enough.

The prices are steady for boards although the demand is not more than moderate volume, but the tone is firm.

The price of laths remains at \$6.50 and from well informed circles it is said that they may be higher and certainly not lower for some time to come. The market for 1 5/8 laths is firmer and good prices are being asked and secured for this size.

The demand for shingles is fair and the outlook is that it will increase. Prices remain unchanged but still firm.

Some shipments of provincial random have been going forward to England and the market there indicates continued strength.

On the whole there is little change in conditions in St. John and it is evident that the manufacturers are content to wait until things become more favorable.

Shipments from Quebec Have Been Good

Notwithstanding the political situation in Europe, affecting the commercial and industrial conditions of Great Britain and the dockers' strike that lasted seven weeks to tie up the shipping of British ports, the shipment of Canadian timber and deals through the port of Quebec this season of navigation of the St. Lawrence has been fairly good. During the month of September 1,270,499 feet, b.m. timber, 986,194 feet b.m., deals and 65,455 feet, b.m., spoolwood, making a total of 2,326,650 feet b.m., was shipped from the port of Quebec, or a grand total of 10,687,931 feet, b.m., shipped from the beginning of navigation to September 30th.

The September shipments would have been further augmented if the British dockers' strike had not taken place which caused the British importers to cable instructions not to ship goods ordered until the cessation of the strike. In the meantime no new orders have been received by the Quebec shippers from their United Kingdom customers and, owing to the present complex color of the European political situation in spite of Germany's back-down in the Ruhr, British importers are using the utmost caution in their buying for the present, at least. This does not denote that the wood interests in the United Kingdom are to any extent alarmed and becoming less optimistic at the turn of events. They are fully confident that the situation will soon begin to brighten but they are guarding against any further difficulty in the rates of exchange and the economical conditions which might, in the meantime, assume an aspect of stringency which they desire to cope with.

Confidential reports received from England by expert students in political and economic conditions, while not pessimistic in their opinions, discuss the wood market and its prospective probabilities with caution in order to discourage any tendency towards speculation. They refer to the position of the market, the level of prices and probabilities of higher or lower values ruling as to warrant no satisfactory conclusions. From an importing point of view they refer to the poor outlook of many industries in Great Britain and the impossibility of real prosperity returning to England while Europe remains in its present turbulent and unsettled condition. Hopes and fears have alternated rapidly only to be followed by a reaction which has caused the British buyers to appreciate more

clearly the danger of being influenced by anything except tangible evidence.

On the part of the British sellers they have many uncomfortable moments on account of the foreign exchanges fluctuating in a manner calculated to stop all international business. This has been further accentuated by the chaos in Germany and threatened revolution in that unfortunate country to offset the effects of the German Government's decision to bring the passive resistance in the Ruhr to an end. The surrender of the Germans in this respect was decided to stall off a threatened revolution. They realize with all European statesmen that their action was tardy and if they had come to that conclusion even one month sooner, they would have avoided their present difficulties and greatly assisted the European world to recover itself. However, though late, a step has been taken that must soon lead to a tangible understanding between Germany, France, Belgium and the allied powers of Great Britain and Italy. In the meantime it takes more than trade depression to discourage the British.

British experts in the timber and lumber trade do not anticipate a stop in values. They say that unfortunately when a fall does take place, it proceeds too far and prices drop more than is actually justified. But too much wood has been sold this year to allow any sensational change in prices. Nervousness on the part of a few will not create anything approaching a slump. Moreover, there is nothing this season to give the impression that there will be a slump. Steadiness has been the pronounced feature and when a market has been steady for a year or more, prices become stabilized and change slowly.

While there is nothing to justify speculation, it is the opinion of experts that British importers are fairly safe in totalling up specifications for the winter that are likely to create orders for Canadian fall shipments, for to carry light stocks during the winter as a precaution in expectation of an alteration in f.o.b. prices this year, is not deemed a good policy in confronting the present statistical position.

The London market in the first weeks of September was in an abnormal condition and the demand strong. In other sections of England which have not been affected by the dockers' strike, trade is fair and the majority of importers admit that their sales are most satisfactory. On the South Coast consumption is quite up to expectations. In the midland districts, merchants who allowed their stocks to run low in anticipation of a slump in prices or the hope of concessions, have come to realize that values are firm and more likely to rise than fall. In the West Coast trade is better than in the early summer while in Scotland there is a slight improvement and this also applies to Ireland where the Free State Government enjoying the confidence of the people is now carrying on with a view to reestablishing the country in line with practical, sane legislation that forebodes a big business for 1924 in which reconstruction will be a leading factor.

Referring to the question of non-employment in England, information received dealing with the question says it has been considerably reduced but, unfortunately, indications are that the trade is turning. This is unusual at this period of the year when unemployment should be at a minimum. The Government is alive to the danger and promoting schemes for work during the winter, which, at its best, will only furnish work for one out of every four, leaving nothing for the remainder but a continuation of the wasteful and demoralizing expedient of the dole. But there is one bright spot,—the increase in housebuilding and this with the Government schemes, may soon restore the industry of England to its normal strength.

In the meantime the banking interests of Great Britain give vent to the opinion that it cannot be reasonably expected to see flourishing conditions in England until the French and Germans get together to settle the reparation questions and until then there is no justification for a true spirit of optimism in the entire as well as the European world.

In contradiction to the opinions of the British banking interests, the diplomatic school in European politics feel and express the belief that the situation is becoming brighter, with every evidence that the Ruhr and the complex political conditions of Europe in general will be settled by Christmas when England will quickly back to normal. Trade and industry will quickly revive with present-day methods of production, together with a united effort for the world reconstruction to encourage the lumber trade of Canada.

Another Heavy Timber Cargo from Coast

Another heavy cargo of British Columbia forest products arrived in Montreal recently from Vancouver, consigned to the British Empire Lumber Corporation, which has completed the erection of a huge timber yard and re-manufacturing plant on Bickerdike pier. The cargo comprises about 5,000,000 feet and was brought by the

steamship "Peter Kerr." A cargo of similar size was a few weeks ago brought by the "Margaret Coughlan," which vessel on her return trip carried the first cargo of general merchandise ever shipped from Montreal to Vancouver by the all-water route.

J. B. Knox, of Montreal, president of the British Empire Lumber Corporation, said that by the end of the present season of navigation his firm will have received eight cargoes of lumber and timber from Vancouver, estimated at from 35,000,000 feet to 40,000,000 feet. These cargoes are carried on vessels chartered by the company and are being disposed of almost as soon as received. This new lumber trade is regarded as one of the most significant developments of the Panama Canal traffic, from the Canadian viewpoint.

Better Tone Generally in Ontario Market

There is a little better tone in the general market than prevailed during the month of September and business is picking up some in a number of lines although the improvement is not as marked as many would like to see. The general outlook has improved in some small places but building in the larger centres is rather on the decline.

Prices on all forest products are holding firm. Collections are not as good as they might be and the banks have been tightening up on credits. This has naturally caused a falling off in buying in certain territories but, on the whole, conditions are sound. Available stocks are none too plentiful, there is no speculative element in trading and what transactions are taking place are based on actual needs and not on "futures." The situation is still spotty and on the whole the lumber business of 1923 should, so far as turnover is concerned, show a considerable increase over that of 1922. Collections are fair.

So far as white pine is concerned, there is a lively call for No. 1 and No. 2 mill culls in all widths. The lower grades of pine are pretty well cleaned up in the Middle West and the available stocks in Ontario are limited. No. 1 culls are used principally for box manufacture and No. 2 for crating, rough sheeting and other purposes. Some sales have recently been made at a very satisfactory figure.

In the hardwood lumber line business has improved so far as American demand is concerned, and there is a good call for all grades of birch up to 2½ inches in thickness in No. 2 common and better. A scarcity is reported in 6/4 No. 1 common and selects. Automobile concerns in Detroit and other cities are purchasing quite heavily at the present time. Maple is scarce in all grades and thicknesses and very little is being offered. Northern elm, except in thicker lengths, is rather slow and there is also very little activity in beech. Not much basswood appears on the market at the present time although some heavy sales were recently reported. The requisitions for 6/4 and 8/4 brown ash, No. 1 common and better, and for 4/4 in 1sts and 2nds are strong.

A number of Ontario sawmills have closed for the season, some of them a month earlier than usual owing to logs hung up on many of the northern drives this spring due to low water conditions. The cut of three or four large plants will, therefore, be considerably less than it was a year ago and this through no fault of the firms themselves. Practically all the mills will close down by the end of October. A large number of men, which have been employed in the mills and yards will go to the woods for the winter. The labor situation is improving somewhat and as the western harvest is now garnered, there is a more liberal supply of help.

Nearly all the leading lumber companies are putting in as many camps as last year, if not more, and the logging harvest on the whole will apparently be heavier than in 1922-23.

So far as western mills are concerned, there is every reason to believe that the next few months will witness an acute shortage of common items which to-day are none too plentiful. One leading lumber firm states that the situation will be further aggravated not only by the demand from Japan, the government of which country will likely suspend import duties on standard West Coast yard stock, but California, Atlantic Coast and Australia will also be competing against one another for their requirements. Australia, which was out of the market for basic Coast products for a couple of months has, since the Japanese disaster, sent in many inquiries, while the California market has also advanced several dollars per M. It is believed that the call of the Japanese market on the West Coast mills will affect the general lumber market of America. While there have been no visible increases as yet and will not likely be until concrete business develops, the old law of supply and demand is bound to operate with the usual results.

Reports from various parts of Western Ontario, as well as the Far East, show that most retail yards are rather quiet. While there is a certain amount of lumber moving out, it is not enough to stimulate an active demand or any buying other than for immediate requirements. In numerous yards stocks are fairly complete and it

would seem that the general disposition is to get rid of them so that they will be down to the lowest possible mark for the winter months.

One leading representative of Pacific Coast interests stated recently that not a few dealers appreciate that the Japanese situation will likely influence the general prices on all common grades for all sections, but rather than speculate on any future possibilities, they seem content to liquidate their own stock as far as possible, arguing that they are quite willing to pay any increases that may develop later on. Yellow pine is the lowest-priced product at the present time. The larger wholesalers are not attempting to meet the low prices from the South and are content to wait until conditions adjust themselves in order to obtain their figure.

Improving Aspect of Business Forecasts

The great war crop of 1915 has been left behind by a hundred million bushels. The vast flood of grain is moving eastward from the prairies from what is estimated to be the greatest harvest in Canada's history. A leading paper poignantly says, "if the people of this country were not so strangely pre-disposed at this time to suspect that every egg is addled and that every to-morrow is going to be a disagreeable day, the enormous crop of 1923 would set this country singing from coast to coast, and everyone would begin to be as busy and happy as bees in clover." Business generally is taking on a rapidly improving aspect, and to observe another significant sign, one need but reflect that unemployment has almost ceased to exist in Canada. Immigration is on the increase and there will constantly be more people to shelter.

Contemplated new construction reported during September totalled \$50,779,000, or \$11,702,200 more than a year ago. There seems no room for doubt now, but that activity for the rest of the building year will be considerably higher than had been rather commonly expected.

Pronounced activity has been in evidence this year in the construction of public works and utilities. During the first nine months of 1923 contracts were awarded in the Dominion for 219 bridges, costing \$3,738,800; 66 dams and wharves, \$3,379,200; 190 sewer and water systems, \$3,677,200; 1,087 road construction contracts, \$37,809,100; and 250 general engineering projects, costing \$28,025,000. This represents a total of \$76,629,300 expended on engineering developments alone, or \$24,630,300 more than during the same period of 1922. With the return of lower interest rates, provinces, counties, municipalities, railroads and certain other corporations will now institute building programs which have been latent for many years. It is now more than ten years since interest rates have been as low as they are today, and this condition will likely become more favorable during the next two years.

The total awards for Canadian construction for the month of September, according to MacLean Building Reports, Limited, were \$23,382,100. While this total shows a falling off of \$4,106,600 from August, it must be remembered that the autumn is a period of completion rather than inception of important new work. The decline is natural and seasonal. Residential building accounted for 34.7% of the September total, and amounted to \$8,091,300. Business building amounted to \$5,374,200, or 22.6%; industrial building, \$816,700, or 3.8%, and public works and utilities, \$9,099,900, or 38.9%.

More Stable Values During the Year

The general longing in the timber trade ever since prices came tumbling down in 1921 has been for stability, says the "Timber Trades Journal" of London Eng. Previous to 1914 excitement was welcomed as a pleasant change from the monotonous course of values year after year, and as offering opportunities for mild speculation. But trades have had enough of excitement these last few years; they would welcome most heartily a change towards a stable basis of values, and would rejoice in some such sense of security as that which they enjoyed before the war. On looking back at the events of the present season and remembering at the same time the state of the world politics and the circumstances under which trading operations have been conducted, it is impossible to avoid the conclusion that the timber trade in Great Britain has had a season which, as regards prices, approaches very closely to the old conditions. An alteration in the basis of values of, say, 10s. per standard, was a momentous event before the war, and frequently from one year's end to the other a difference of about 5s. per standard represented the fluctuation in f.o.b. prices.

During the present season up to date there has really been very little change. Certainly the quotations of some shippers have varied a good deal, but the actual contracts closed, and especially those closed with the leading shippers, have been on an astonishingly regular basis. During the current season Europe has seemed again and again to be on the brink of war or revolution, and currencies

have depreciated to an extent which seemed incredible, and yet the whole time the timber trade has pursued a steady course.

During the season of 1922 prices rose rapidly, reacting strongly from the slump of the previous year, but the rising process slowed down towards the end of last season and may now be said to have ceased altogether.

It may well be that, as regards f.o.b. prices, the market has now reached its zenith, that the costs of logs and of production will be lower in the near future, and that with European trade in a state of chaos we shall not see any higher prices, but rather a steady reduction to a level which will correspond with the lessened cost to the producers. Costs, however, do not come down rapidly, and if supply and demand in the timber world have, as seems probable from the course of the market over the past couple of years, adjusted themselves, we are likely to have a fairly steady level of prices.

For the present season shippers have done so well that a slump is not to be expected; but, as lower wages enable sawn goods to be produced more cheaply, exporters may find it possible to start the 1924 campaign on a more moderate basis. In the producing countries we do not think this idea is as yet the prevailing one, but unless a great change takes place in the condition of Europe, it seems a very likely contingency. We repeat, however, that, taking into account the great need for sawn goods, the progress of house-building in England and the reconstruction work waiting to be done in nearly all parts of the world, the probabilities of any drastic fall in wood values are not great.

Logging Activities Depend on Circumstances

The extent of lumber operations to be carried on this fall and winter in the Quebec district forests have not as yet been definitely arranged. The difficulty in the way is the scarcity and high cost of labor. Quebec limit holders have the vision of a big cut to meet the 1924 demand for timber and manufactured lumber, and have found, while making estimates and in consultation with their forest foremen, that labor will be scarce this winter owing to the emigration of the many thousand woodsmen and their families to the United States and Northern Ontario, especially the former. The exodus from the province naturally has caused a dearth of woodsmen and a demand for increase of wages by the labor available. The added cost in logging will, as a consequence, tend to increase the price of lumber.

These conditions have been seriously considered by the Quebec limit holders and the lumber trade in general and while the operators admit that they look for a big harvest this winter, they say that it is impossible at the present time to make any definite statement as their activities will depend altogether on circumstances. They admit, however, that they will have to be careful and in this regard will not unnecessarily speculate on the future. In this respect more attention will be given to the supply needed for shipment to the American market than to the United Kingdom, on account of the uncertainty of the latter market owing to the complex political condition of Europe.

Another phase in the situation is the disappointment felt by the lumber operators at the refusal of the Quebec Government to continue the suspension of the 1920 stumpage dues, etc., granted by an Order-In-Council in 1921-22 and 1922-23, which would, in a measure, mitigate the increased cost in operation in the woods this winter by the scarcity of and demands of labor. The Government were impressed with the idea that fifty per cent. of the timber could be logged in the burnt areas and conceded a reduction in tariffs in this operating connection, no doubt obsessed that this concession would satisfy the limit holders and lumber operators in general. In this connection the activities of the worm and borer were not seriously reckoned with. These pests, contrary to calculations, made their appearance and set to work much sooner than anticipated and for some time have been on the timber stands in the burnt areas. The borers especially, have been busy boring their way into the spine of the timbers to make the logs useless as an asset for logging and those, who had made calculations to save fifty per cent. for disposition as culls, are meeting with disappointment, in so far as logging for timber and deals are concerned.

Mr. Chahoon, president of the Laurentide Paper Co., of Grand Mere, recently gave out a statement at a meeting of the company's board of directors that 80 per cent. of this pulpwood area owned by the company which had been swept by fire, would be saved. Other similar corporations do not entertain the same sanguine feeling, obsessed with the fear that the worm and the borer will make progress before they would proceed very far with their cutting.

In the meantime, the Quebec mill owners with limit holdings are in hopes of doing a big export to the American markets in the spring and summer of 1924 and making preparations accordingly. The trade with this market has been exceedingly good this summer

The illustration appearing above shows a Linn Logging Tractor equipped with Pulp wood rack, having a capacity for four cords of four foot wood

LINN LOGGING TRACTOR

Where the operator is hauling logs, we supply double bolsters, 10' long, inside, and having a capacity of 1750', or about 3½ cords.

The Linn Logging Tractor comes equipped with both sled and wheel steerage—the wheel steerage enables the operator to utilize his Linn Logging Tractor, also for portaging—the Linn Logging Tractor with a platform mounted on bolsters or pulp wood rack, has a carrying capacity of itself, of ten tons, entirely in addition to the trailer loads it hauls behind it.

The Linn Logging Tractor has Electric Lights, with generator and storage batteries as well as closed and heated cab over the driver's seat.

Every detail of the design and construction of the Linn Logging Tractor has been developed with the thought for convenience and usefulness in logging—it was designed exclusively for log hauling—it was developed on actual logging operations—and its unparalleled success in this work is one of the rewards for the thought devoted to its development.

The writer of this advertisement was recently in a city in the Maritimes, just leaving the hotel to visit one of the largest operators in New Brunswick—he met two Linn users who had just arrived from the States and one of these gentlemen asked what he was doing there—upon receiving his reply the American user said, "I've been using Linn for five years—tell your man to ask me—I'll tell him."

"Ask the logger who uses one"

—Logging Department—

MUSSENS LIMITED

Philips Place Building

Montreal

and the books of the Quebec shippers are still replete with orders without any evidence of a falling off in the demand. Their only anxiety is that the shortage of labor in the woods this winter may curtail their cutting.

The local retail lumber trade has met with successful business this summer in consequence of the activities in construction, especially housebuilding which has been active in the city and district of Quebec, with every prospect of continuing to meet the shortage of dwellings.

Letter from Lumber Salesman

The Southern Pine Association Barometers for the last four weeks have shown sales in excess of production and shipments, with the exception of the week of Labor Day, which reflects five days' sales, as against six days' production. Six days' sales, for that week, at the same rate as the five days, would have put the sales considerably in excess of production, says J. K. Wesson, general sales agent for the Central Coal & Coke Co., Kansas City, Mo.

Stocks of lumber in the hands of manufacturers and retailers are approximately four billion feet less than January first of this year.

The spasmodic production of small mills, operating in cut over lands and isolated virgin timber, has shown great increase during the year and has, in a measure, offset the depletion of large mills.

The supply of logs in the Columbia River indicates that mills dependent upon this supply will be forced to stop production shortly after logging operations cease this winter.

The Japanese disaster, as estimated, will make a market for three to four billion feet of lumber for reconstruction. This lumber will be drawn from the Pacific Coast, and will take a good portion of their production for many months, which will proportionately diminish their offerings in the domestic market.

The Berkeley, California fire will create an immediate new demand for a large quantity of lumber for rebuilding.

The Building Permits for August showed a substantial increase over June and July of this year, and are greater than any on record for August in any previous year.

The resumption of diplomatic relations with Mexico will open the flood gates of Mexican requirements pent up for years.

There have already been inquiries for some large amounts of lumber from Mexico, although the development there has hardly begun.

According to the Wall Street Journal, the value of farm products in 1922 was \$14,310,000,000.00, and in 1923, based on present prices, will be \$15,000,000,000.00, indicating clearly that any losses on wheat have been more than offset by gain on other products. Therefore, the purchasing power of the farmers will be materially higher than in 1922, which justifies the conclusion that demand from the agricultural districts will increase as these crops are marketed.

The slow development of new Western Production, with a possible shut down for want of logs and withdrawal of the output of plants burned out since the first of the year, clearly indicates that the production of the Coast will be no greater for some time to come.

The delayed construction, due to curtailment of building, to meet essential requirements, caused by propaganda early in the year, should cause construction to continue into 1924.

There is at present developing a car shortage in the lumber districts, due to very light movement of grain, and the holding of empty box cars in the grain districts. This situation may become acute within the next two to three weeks, and very seriously hamper the filling of requirements in the lumber consuming districts.

So the situation in general indicates exceptionally good business for the balance of this year, and probably all of next year.

More Burned Over Timber is Sold

The Ontario Government has completed a timber transaction by which it disposed of badly burned over timber on an area of 25 square miles, situated in the vicinity of Clearwater Lake in the district of Kenora. The timber was so much damaged by fire that it was already commencing to deteriorate, with the result that the Lands Department was forced to offer it for sale in order to secure its immediate removal. The only bidder for it was the Shevlin-Clarke Company, which agreed to pay the usual crown dues, and which forwarded the required marked cheque for \$1,000 as a part of its tender. The timber must be removed by April 30th, 1926.

The prices which the department will thus receive are:—Red and white pine, \$2.50 per thousand feet; jack-pine, \$2.50 per thousand feet; spruce, \$2 per thousand feet; spruce pulp, 80 cents per cord; other pulp, 40 cents per cord; ties, 10 cents each; wood, 25 cents per cord; cedar posts, 2 cents each, and cedar poles, 25 cents to \$1 according to their length.

Market Page Quotations in New Form

The current lumber prices have been omitted from this edition of the "Canada Lumberman" but will reappear in the next issue in a new and revised form which will make the pages more up-to-date and in line with the modern trend of merchandising. Many items which have been quoted in the past, have not been in heavy demand and these have been eliminated. Quotations on grades, widths, thicknesses and lengths that have the largest call, will prevail. It is believed that the new presentation will be much more acceptable and easily consulted than the figures which have been running in the past.

How to Give Canada Permanent Forest

At the present time, every voice is raised, and every ambition strained to win new population. New population costs. Immigration is expensive salesmanship. While every conservationist wants to see new settlers brought to Canada his sense of proportion makes him ask why we cannot spend, at least, a couple of extra dollars to block the emigration of Canadian families driven out of the forest areas by the plague of human-set forest fires. District after district has been abandoned, and whole counties have decreased in population. Railway lines have lost the bulk of local traffic. Towns have been boarded up and for the sole reason that a forest resource which should have been perpetual has been swept off the ledger of Canadian assets by the recklessness of Canadian citizens, said Robson Black, of the Canadian Forestry Association, in a recent address before the Rotary Club of Ottawa.

Whose fault it is that the forests of Canada run down hill? The focus point is right here in this room, he continued. We as citizens own 85 per cent. of the forest lands of the Dominion and are directly and personally responsible for what is done with the only crop that can grow on these our lands. Every civilized country on earth looks to the state with its self-perpetuating life, and its providential relationship to its people, to look after the forest properties which, unlike wheat or potatoes, require as much as a century to mature. The state is the obvious and only efficient custodian of the rights of future generations in a very slow growing but utterly essential national resource.

Before an intelligent and helpful interest on the part of the public can bring about a measure of complete forest protection we will have to jettison two or three fetishes, all of which are predominantly false and yet fix themselves upon succeeding generations. One of these fetishes is that the forest resources have been given away or otherwise alienated. They never were and are not today. All but fifteen per cent. of the timbered acres of Ontario are under the control of the Ontario government as concerns measures of conservation. The right to cut timber is leased on 10 million acres and the remainder of eighty million acres is still held by the Crown. What is the meaning of a lease to an operating company? That 42,000 workmen in Ontario shall be allowed to draw a regular week's pay and that 36 million dollars shall be allowed to circulate as wages each year and that 123 millions received for forest products in Ontario shall be enjoyed by every business interest and every workman in the province.

The so-called timber baron cuts down logs worth five dollars. Out of that he hands over \$4.50 as wages and for materials and the remaining fifty cents he splits between interest on his investment and taxes to the Ontario government aggregating \$4,000,000 a year. Strangely enough we visualize the motor car industry as the "life blood" of Oshawa and Walkerville and a dozen other towns and the "meal ticket" of thousands of workmen and, at the next instant, discuss the lumber business as the sinecure of a quartet of "barons" into whose purse pour untold millions wrung from a wretched peasantry driven to build two-car garages with high price boards. More men have left the lumber industry in the last ten years than have entered it and most of those who moved out, were not financial gainers for their experience.

You ask what is to be done to give Canada a permanent forest and the immediate and only comprehensive answer is—Keep Out the Fires. We citizens burn ten times the trees that the lumbermen have cut and since the earliest days of Canadian history have put a torch to 600,000 square miles as against about 100,000 square miles utilized by all the lumbermen from coast to coast.

Please let us lay off the cry for tree planting to produce timber until we look into a much more inviting proposition. An acre of human-made plantation of spruce is a lovely sight. How few of us know that there is in Canada a plantation of just 50 million densely packed acres of young forests set out by Nature without human contrivance or expense. They lie in patches from coast to coast. That 50 million acres is richer than all the gold mines for its gold grows and repeats into endless generations. All that plantation asks for is that fire be kept out.

Edgings

A bush fire which broke out on Langley Prairie, B. C., recently, burned up several cords of shingle bolts; otherwise no great damage was done.

Approximately 33,000,000 feet of lumber was exported from B. C. mills during August. There was plenty of business during September, and October trade is also looming up well.

Nelson River Construction, Limited, Winnipeg, Man., has been incorporated to manufacture and deal in timber and lumber products. Capital \$20,000.

Northern Canada Supply Co., Limited, Toronto, is a new organization formed with \$135,000 capital to conduct a supply business to lumbermen, miners and settlers.

Mexicana Mining Corporation, Limited, Toronto, was recently granted a federal charter to operate sawmills and generally deal in all kinds of forest products. Capital \$500,000.

According to the National Automobile Chamber of Commerce the amount of lumber used in the automobile industry in 1922 exceeded 520,000,000 feet as against 340,000,000 feet in 1921 and 516,000,000 in 1920.

A steamer service has been started between Port Arthur, Ont., and Houghton, Mich. Instead of rafting pulpwood to the South Shore a fair proportion of manufactured-in-Canada pulp will constitute the chief part of the return cargo.

The sailing ship "William Taylor," recently loaded 1,127,000 feet of lumber at the wharves of the Canadian Western Lumber Co., Fraser Mills, B. C., and sailed for the Cape and South African ports via Cape Horn.

At a meeting of the creditors of the Whalen Pulp & Paper Co., Vancouver, which was held recently, a committee of nine headed by W. J. Blake Wilson, of P. Burns & Co., was appointed to co-operate with the directors in the reorganization of the company. G. F. Gyles, of Price, Waterhouse & Co., is the receiver.

J. A. Mercier, lumberman, of Riviere du Loup, Que., has taken out the contract to cut and put in the water some 14,000 cords of pulpwood at Shelter Bay. Mr. Mercier is now busy getting his horses and equipment ready and will start operations in a few days. He is well and favorably known in the forest products arena.

The sawmill of the Matheson Lumber Co. at Matheson, Ont., was burned to the ground recently. The total loss is about \$40,000 with no insurance. The firm lost about 60,000 feet of lumber but saved the balance of their cut. R. S. Potter, who had a controlling interest in the company, states that they have not made any plans for the future at the present time but hope to build again later on.

C. B. Manufacturing Co., Limited, Hull, P.Q., is a new organization recently formed with a federal charter to manufacture and deal in timber and lumber. Capital \$100,000. Among the incorporators of the new enterprise are C. B. and B. Moses, manufacturers, of Ottawa, J. H. Isbister, of Britannia, Ont., and H. W. Nesbitt, manufacturer, of Winchester, Ont.

By an almost unanimous vote the city of Fort William recently passed a by-law granting aid to the Great Lakes Paper Co. and the rural municipality of Neebing in which a portion of the plant will be located, passed a similar by-law. The company has commenced work on the spur tracks to the property and it is expected that the construction of the big pulp mill will be proceeded with rapidly.

The Maritime Woodwork Products, Limited, of Woodstock, N. B., have been incorporated to do business with a capital stock of \$20,000. S. C. Heckbert, of Woodstock, S. D. Heckbert, of Chatham, and Chas. J. Jones, of Woodstock, are the incorporators. The company will take over the business now carried on by S. C. Heckbert at Woodstock.

Hatfield, Kyle Limited, has been incorporated with a capital stock of \$99,000 and head office at Juniper, N. B., to carry on the lumbering business established by the late George W. Upham at Juniper, which has been acquired from the estate of the deceased. Among the incorporators are Heber H. Hatfield, Arthur W. Kyle and Harvey T. Reid, all of Hartland, N. B.

The rossing plant of the Miramichi Lumber Co. at Chatham, N. B., has ceased operations for the season. There still remains about 10,000 cords of pulp blocks lying at the wharf. It is expected that these will be shipped out before the close of navigation. It is rumored that the mill machinery will be shipped to the Morrison mill

at Chatham Head and that the Chatham plant will not run again next season.

There is an exceptional demand for high-grade draught horses for work in the woods, according to the sales report of local dealers at Sudbury. Several carloads of horses arrived recently from Seaforth and were all promptly sold. Prices have been good and buyers demand quality.

A report has been received from the St. Lawrence Paper Mills, Limited, of Three Rivers, Que., stating that they have no interest in any deal for the acquisition of the pulp and paper mill formerly owned by the Nipigon Fibre & Paper Mills, Limited, at Nipigon, Ont. It is stated that negotiations have been entered into by the Guaranty Investment Corporation, Limited, with which the St. Lawrence Paper Mills have no connection.

R. L. Sargent, secretary of the Canadian Lumbermen's Association, has forwarded to the members copies of the new Sales Tax Act, together with the tentative regulations, published in the last issue of the "Canada Lumberman." Mr. Sargent requests that the members make constructive criticisms and suggestions in order that the Association may prepare its case and obtain, if possible, a more simple method of collecting the tax from the lumber trade.

Harry McMullen, lumberman, of Ripley, Ont., was in Toronto recently attending the funeral of his father, John McMullen, 396 Manning Ave., who passed away at the age of 94 years. The late Mr. McMullen was born in Ireland and lived there for 20 years and then coming to Canada settled for some time in Hastings County. He afterwards resided in Kingston and Windsor and subsequently took up his home in Toronto.

The S. Hadley Lumber Co., of Chatham, Ont., with which is affiliated the Chatham Sand & Gravel Co., will continue business and pursue the same policy as has characterized the organization since 1846. It will be remembered that W. A. Hadley, president of the company, passed away recently. The new general manager is Charles S. Hadley, son of the late president, who has been associated with the business for some years. M. R. Bogart will continue as secretary-treasurer of the company.

Walter J. Moore, a former resident of Meaford, Ont., apprehended at the United States border recently, as he was trying to get into the United States, pleaded guilty to a charge of arson, in connection with the burning of the Euphrasia Lumber Co. mill last year and was remanded at Owen Sound, Ont., for sentence. His arrest was largely the result of evidence given in the preliminary trial at Owen Sound of William Fox, also of Meaford, who is charged with arson in connection with the burning of the same mill.

K. J. Skirton, of Dunnville, president of the Ontario Retail Lumber Dealers' Association, and Horace Boulbee, of Toronto, secretary-treasurer of the O.R.L.D.A., attended the seventh annual meeting of the National Retail Lumber Dealers' Association which was held from October 9th to 11th at Louisville, Ky. The gathering was a most representative one and many important matters were taken up and discussed. Delegates were present from many States of the Union and everything passed off most successfully.

It is rare that a Canadian company is affected by legislation dating back a century and a half. Price Brothers, of Quebec, however, recently had their ownership of the Frenchville property confirmed in the Quebec courts. This legal battle began away back in 1785, when original proceedings in connection with the Frenchville "fief" were instigated. The property in question was claimed by Jules Hamelin, of Montreal; it was originally part of the seigneurie of Grondines. The value of the land is approximately half a million dollars at to-day's figures.

Construction has started on a new lumber and shingle mill at Eburne, B. C., to cost approximately \$100,000. The mill is being built by the McNair Lumber & Shingle Company, whose establishment on the North Shore was burned down on August 1, and will be of the most up-to-date type. Twelve and a half acres have been secured by the company adjoining the B. C. Electric bridge on the North Arm of the Fraser. This site is convenient both for water and rail transportation. Mr. J. A. McNair, head of the firm states that it would take between six and eight months to have the mill in such shape that sawing operations could be started.

The fourteenth annual session of the Pacific Logging Congress will be held at Spokane, Wash., October 24th to 27th. An interesting programme has been prepared and among the subjects that will come up for discussion are fire protection in pine districts; devices for fighting fire; yarding and loading methods and equipment; tractor logging; truck logging; overhead systems; fluming logs; towing logs in chutes with tractors and donkey engines; opening up new timber tracts; mechanical felling and bucking; horse logging vs. Caterpillar skidders; steam boring rig for boom sticks; accident prevention education, etc.

Will Not Appoint Forest Supervisor

It is understood that the Ontario Government will not appoint a forest supervisor for the province which project was favored some time ago by the late Drury Government. The present administration under Mr. Ferguson have abandoned the proposal and the appointment of Major J. I. Hartt, of Orillia, as overseer of timber agents and Crown lands fills any need there might have been for a closer check-up on cutting and checking returns.

Major Hartt, who is a well-known lumberman, is in sympathy with the Forests for the province in connection with supplying settlers with a market for their own pulpwood cuttings and, on behalf of the Government, will make observations in the various districts. That the new policy is meeting with favor among the timber operators

is indicated in several replies that have been received to date to the Minister's letter asking for co-operation among the big lumber concerns. Without exception the replies indicate a willingness to co-operate along the suggested line to the fullest extent economically possible.

Daniel Ferguson, of the sales staff of the Union Lumber Co., Toronto, has returned after spending an extended holiday along the Kawartha Lakes.

The shingle mill operated by Sullivan Bros., Sullivan Station, near Cloverdale, B. C., was recently destroyed by fire. The stock shed and repair shop were saved.

Edgings

The yard of the Beaver Lumber Co., at Eaton, Sask., was recently damaged by fire.

W. H. Bromley, of W. H. Bromley & Sons, Pembroke, Ont., spent a few days in Toronto recently calling upon the trade.

J. T. Todd, of Toronto, eastern manager of the Adams River Lumber Co. has returned from a business trip to Winnipeg and Calgary.

George Mason, of Manchester, England, head of the firm of G. Mason & Co., whose milling operations are at Midland, Ont., spent a few days recently in Midland, Toronto, Montreal and other points.

J. L. MacFarlane, of the Canadian General Lumber Co., Toronto, who has been on an extended trip to the Maritime Provinces, has returned.

H. P. Rowles, of the Duncan Lumber Co., Vancouver, B. C., was in Toronto and Montreal recently calling upon the members of the industry.

L. M. Hanbury, sales manager of Hanbury & Co., Vancouver, B. C., spent a few days recently in Toronto, Montreal and other cities, enquiring into the lumber situation in the East.

H. Brooks, of the Black Rock Lumber Co., Buffalo, N. Y., was in Toronto lately bidding friends goodbye previous to sailing for England on an extended visit.

The British Columbia Government will contribute \$45,000 toward Japanese relief work, Hon. J. D. McLean, Acting Premier, announced lately. The contribution will be used entirely for the purchase of lumber.

S. Bick, formerly with the Bennett Lumber Co., Limited, Montreal, has commenced business at 224 St. James St., Montreal, specializing in hardwoods. He is trading under the title of Bickwood Lumber Co.

The Brompton Lumber & Manufacturing Co., Limited, Bromptonville, Que., have purchased, by public tender, the assets of L. H. Cantin & Co., retailers, 260 Greene Ave., Montreal. The price paid for the entire assets was 36-3/4 cents on the dollar.

R. S. Plant, of Toronto, eastern manager of the Vancouver Lumber Co., who was some time ago elected a director of the Central Y.M.C.A., Toronto, has been made president of the Senior Section of that institution and presided recently at the opening gathering of the fall and winter activities.

Frederick W. Newton, of Blind River, Ont., manager of the Victory Lumber Co., died recently in Montreal. The remains were taken to Bracebridge where they were interred in the Anglican cemetery under Masonic auspices. The late Mr. Newton was 53 years of age and was born at Baysville, Ont.

The plant of the Canyon City Lumber Co., six miles east of Creston, B. C., was completely destroyed by fire lately. The mill had a capacity of 50,000 feet a day and the loss is about \$40,000, partially covered by insurance.

Brien McDonald, who followed the vocation of a lumberman in the Arnprior district for forty years in the sawmills and on the river, died recently. He was a native of Ireland and had many friends in and around the Ottawa district.

R. D. Jago, M.Sc.F., who is a graduate of the University of New Brunswick Forest School, has been appointed regional forester in charge of the Saguenay River district by Price Bros. Mr. Jago has been engaged with the forest service in New Brunswick and will shortly assume his new duties.

Frederick J. Bannister, who resigned the presidency of the Long-Bell Lumber Co., Kansas City, Mo., has become president of the Edward J. Bannister Lumber Co. The latter organization is a Missouri corporation and was founded by the son of Frederick J. in 1920. The entrance of the father to the son's business brings increased capital to the company's operations.

An unusual case came up in the Appellate Court in Toronto recently, when the appeal of Fred Little from the judgment at the trial awarding him \$1,612.26 for pulpwood supplied under contract to the St. Maurice Lumber Co. was dismissed with costs. An unusual feature is that before judgment was given at the trial, the defendants had agreed to settle the case for \$2,000 and costs.

At the recent Central Canada Exhibition, held in Ottawa, a splendid display of hardwood flooring was made in the machinery hall by Seamon, Kent Co., Limited. One of its features was a motion picture demonstration of the manufacture of hardwood floor-

ing from the forest to the finished product. The company has a local office in Ottawa at the Broad St. Station which is also used for warehouse purposes.

Scores of members of the Ottawa Valley lumbering trade mourn the passing of Mr. Arthur Ferguson, for thirty years accountant of the Hawkesbury Lumber Company who died from injuries he received in a motor car accident near Ottawa. His funeral was attended by many friends and relatives who occupy well known positions in the Ottawa lumber trade. After the service at Ottawa the remains were taken to Hamilton for interment.

F. H. Devenish, who for the past year has been secretary of the Montreal Wholesale Lumber Dealers' Association, has resigned and is leaving for South Africa where he expects to spend a prolonged period. His son-in-law has been prominently connected with the Ford motor plant in Montreal and has been transferred to Cape Town. Mr. Devenish is accompanying his daughter and her husband to their new home.

Rapid strides taken by the Japanese Government in rebuilding were reflected lately in orders totalling 80,000,000 feet of lumber placed within the last 10 days with lumber dealers of Seattle, San Francisco, Portland and Vancouver, B. C., according to R. B. Allen, manager of the West Coast Lumbermen's Association, with headquarters in Seattle. Mr. Allen announced that other orders were expected soon and said the northwest lumber industry would be stimulated greatly as a result.

The sixteenth annual convention of the Canadian Lumbermen's Association will be held at the new Statler Hotel, Buffalo, N. Y., on Wednesday and Thursday January 30th and 31st. R. L. Sargent, secretary of the Association, is already doing some effective publicity work in connection with the forthcoming gathering. A recent blotter issued by the C.L.A., announces that the convention will be for "business, pleasure and fellowship," and members are invited to bring their wives and also another member and, in the meantime, boost for the gathering.

At a recent meeting of the directors of the Belgo-Canadian Paper Co., held in Montreal, an initial dividend of 1-3/4 per cent. on the preferred stock was declared. There had been some expectation of dividend action on the common shares, but none was taken. This expectation was based upon reports of large earnings by the company, which are understood to be at present around 15 to 20 per cent. on the common after all prior charges. It is expected that the new mill will be in full operation and giving the company an additional output of 100 tons daily by Nov. 1.

Work has been completed by the Hage Timber & Investment Co. on their camp at Port Coquitlam, B. C. The camp will be a permanent centre and a logging railway has been extended to it. Instead of housing a large number of men in one room, the bunk-house will be smaller than usual, having a capacity for six men only. Each of these houses is equipped with shelves and cupboards and has a comfortable sitting-room where the men are able to spend their evenings without having to congregate in large numbers in close, stuffy quarters. A comfortable reading room and other conveniences are also at the disposal of the employees.

The damming of Metis Lake, at the head of Metis River, Matane County, which was recommended by the Quebec Stream Commission some time ago and recently approved by the Provincial Cabinet, will be started early next spring. The enterprise is expected to cost over \$2,000,000, and tenders have now been sought by the commission. As a result of the construction of that dam, sufficient power will be developed to allow the lower St. Lawrence Power Co. to extend its operations in the lower St. Lawrence district and electricity will be available whether for power or other purposes in the counties of Rimouski, Matane, Matapedia, Gaspé and Bonaventure. In fact, it is understood that the intention of the company referred to is to allow the municipalities to get electric lighting at very good conditions.

The first ocean-going shipment from the newly constructed Brunette sawmill at New Westminster, will be loaded on the steamer Margaret Coughlan. While the shipment will only be a small one, it is looked upon as the forerunner of greater things in the near distant future now that the mill is commencing to turn out its product. The Margaret Coughlan, which is a Vancouver-built vessel, will load a half million feet from the Timberland Lumber Company in South Westminster. The main plant of the Brunette Sawmills has been thoroughly tested out and is working satisfactorily. The shingle plant, which is being operated in conjunction with the main saw mill, has been in operation for some time and attention is now being paid to the box factory, situated to the west of the main mill in the premises formerly occupied by the Iowa Lumber Company, which have been found ideal for such operations.

DEPARTMENT OF LANDS AND FORESTS

Province of Quebec

LEASING OF WATER POWERS

Notice is hereby given that on Tuesday, October 23rd, 1923, at 10.30 A.M. in the sales room, Parliament Buildings, at Quebec, the Department of Lands and Forests will offer on lease at public auction the water power known and designated under the name of "Chute de la Cheminée", on the Batiscan river, county of Champlain.

Interested parties shall be under the obligation to deposit \$2,000.00 by accepted cheque to the order of the Minister of Lands and Forests, at least seven days before the auction. This deposit will be forfeited should the applicant put up no bidding; it shall be refunded after the auction to the unsuccessful bidders, while the grantee's deposit will be retained as a guarantee until the development is completed.

For further information, write to the Department of Lands and Forests, at Quebec. ELZ. MIVILLE-DECHENE, Deputy Minister. 20

For Safe Logging Equipment

Empire Delegates Welcomed at Queen's Park

Prior to leaving recently for the western provinces, the members of the British Empire Conference were received at the Parliament Buildings, Toronto, by Premier G. Howard Ferguson and Hon. James Lyons, Minister of Lands and Forests.

In extending the greetings of the province to the distinguished visitors, the Premier stated that Ontario took considerable pride in her natural resources, and that he felt the present visit would do much toward the spreading of information regarding them through the Empire, with many beneficial results to immigration. "Although this Government has been in office for less than a month," he declared, "it is endeavoring to put into practice a rather intensive policy of securing new population adapted to the needs of this country."

Referring to the commendatory remarks made by the delegates on the St. William nurseries, Hon. Mr. Lyons suggested that, it would be highly appreciated, should help in the reforestation problems of the province, be forthcoming from members of the conference.

Replying on behalf of his colleagues, Lord Lovat offered to the province the fullest use of any information which had been obtained in Europe, where reforestation had been in practice for many years. As a slight return for the hospitality which had been extended in Canada, he felt that all their technical knowledge should be placed at the disposal of this country.

"We are finding our study of your timber resources and conservation plans very instructive and may congratulate you upon your forward-looking policy of conserving and renewing your wood resources," he stated. "Unlike your neighbors in the United States, who have not taken the same wise view of conserving forest wealth as you, you still have vast resources, while theirs are rapidly nearing depletion."

Most important to the maintenance of prosperity is a fair day's work.

A Good Belt Saves Money

THE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue Belts" in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent. than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.

According to the conditions under which the belt is to run, we recommend "Extra," "Standard" or "Acme Waterproof" belts.

GOODHUE BELTS
J.L. GOODHUE & CO. Limited.

DANVILLE — QUEBEC.

Buy a Keystone Excavator and put some real roads on your property at low cost---

Good level roads will certainly cut your operating costs—and there is no road maker in the same class as the Keystone Steam Shovel.

With a 3 man crew, this light but powerful 32 h. p. outfit can shovel 300 to 500 cubic yards per day.

The Keystone tackles rough boulder-strewn soil with its forward-thrusting $\frac{5}{8}$ -yd. Skimmer Scoop, as illustrated, in a manner that quickly turns bush tracks into real roads.

A Ditcher Scoop can also be used if required for ditching or excavation-digging.

Price very moderate. Delivery from stock. Explanatory literature gladly sent on request.

Weight: 18 tons;
capacity: 300 to 500 cubic yards per day; 32 h. p. Shown with Skimmer Scoop as used for grading. Travels under its own power.

Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7. steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

Oily Timbers as Dangerous as Dynamite

THE most serious menace to any lumber mill—oil-soaked timbers! The oil attracts and holds dust and sawdust right at the most dangerous point. An overheated bearing touches off the whole mill like a well-laid fire. Thick, heavy clouds of oil smoke prevent fire-fighting—the mill is doomed.

What's the preventative? The Underwriters' Laboratories tell you, the Fire Insurance companies tell you, they all approve and endorse the use of Tropical Oil Resisting White.

This is a paint especially prepared for the purpose of preventing oil from soaking into the timbers around machinery. Rigid tests have been made by the Underwriters' Laboratories and Tropical Oil Resisting White has been **approved as the only paint that prevents oil soak and thus reduces fire hazard.**

A hard pure white surface is produced by Tropical—oil accumulations can easily be seen and wiped off. Tropical can be applied to new timbers or old and it is equally effective. It does not chip nor peel and Tropical outlasts ordinary paint three to one!

Hundreds of Good Housekeepers have used Tropical Oil Resisting White for many years. Let us send you test samples of wood that will prove what Tropical will do to protect your mill against fire.

The Tropical Paint & Oil Company
1241-1287 West 70th St. Cleveland, Ohio

TROPICAL

Oil Resisting White

The only Oil Resisting Paint Approved by the Underwriters' Laboratories

The Only Oil Resisting Paint Approved by Underwriters!

The Underwriters' Laboratories of the National Board of Fire Underwriters say this:

Oil Resisting Properties

Actual tests of wooden panels painted with Tropical Oil Resisting White immersed in oil and grease for long time periods showed that there was practically no increase in weight of the wood specimens. Chemical analysis of drillings taken from such panels showed a negligible percentage of oil, etc., absorbed. The panels when sawed in two parts showed no evidence of the oil having penetrated the paint coating.

These Insurance Companies Endorse Tropical Oil Resisting White

The U. S. Epperson Underwriting Company and The Rankin Benedict Underwriting Company approve the use of Tropical Oil Resisting White.

CANADA LUMBERMAN,
347 Adelaide St. West,
Toronto, Ont.

Dear Sirs:-

I have just returned from making a trip through Western Ontario, calling on retail lumbermen with one of our local representatives, and have been impressed with the wonderful thoroughness of your circulation among the dealers in that territory. In practically every dealer's office I saw the distinctive "CANADA LUMBERMAN" cover, and, what is perhaps more important, I found that the paper was very carefully read and highly spoken of.

I was particularly interested in this because of a recent order placed with you for an advertisement for our firm. It certainly looks as if the lumber manufacturer will have to use CANADA LUMBERMAN to get his message to the retail dealer.

Very truly yours,
G. G. King

GGCK/A

Relieve the Box Shook Shortage

By the use of

Gerlach Box Board Mills

For the cutting of

BOX, CRATE, CHAIR, FURNITURE, CABINET and other dimension stock, LATH, HANDLE MATERIAL, Etc. These machines are built in three sizes:—

CHAMPION for stock 10" to 24" Long
SPECIAL " " 10" to 36" Long
JUMBO " " 10" to 48" Long

All cut any required thickness from $\frac{1}{4}$ " to 3" and from 3" to 20" wide.

Cut either plain or quarter sawn, through the side or with the grain of wood, hence saw dust is like excelsior. Saw kerf $\frac{1}{8}$ ". Round or quartered bolts may be utilized, as well as slabs and mill waste. Will cut 3000 feet of lumber per

man per day. Turns 80% of standing trees into finished product against 40% for the saw mill.

Average net cost of producing finished box lumber from small timber delivered at mill:

TIMBER	\$ 8.00 per M ft.
SAWING & OVERHEAD	2.00 " "
NET COST	10.00 " "

Carson "Quality" Harness

CARSON Harness is made better to fit better, consequently horses can do a harder day's work with less exertion and the danger of breaking is minimized.

The best quality Oak Tanned leather is used exclusively and every section of harness thoroughly tested before leaving our factory. In short, it is a "Real" Harness with a reputation in the lumber industry that proclaims its worth. We also manufacture and carry in stock all kinds of Horse Goods and Equipment, such as, Saddlery Hardware, Horse Blankets, Horse Collars, Oiled Duck Covers, etc.

Carson Quality

We also manufacture:
"Carson Quality Luggage," Trunks, Bags, Suitcases, Packs and Canvas Goods, Oiltan Moccasins.

Catalogues and price lists on request.

Hugh Carson & Co.
LIMITED

72 ALBERT STREET, OTTAWA

Our Michigan Skidding
and Lumber Harness

Mussens Limited have recently signed a contract for three pages in color in every issue of this paper for a year. That, perhaps, more eloquently than any testimonial they could write, expresses their opinion of the value of advertising in Canada's leading publication in the construction and engineering fields. If Mussens were a young firm or a new advertiser, this decision of theirs might not have so much significance.

The fact is, however, that for **20 years** an advertisement for this firm has been appearing in every issue of "Contract Record", and this increase of 300 per cent in the volume of their advertising in this one paper has been made after the most exacting test of the value of the publication.

Experience has evidently taught them that the buyers of heavy equipment in Canada read and are influenced by the advertisements which appear in "Contract Record".

FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "M.D. Elk"**

Write for copy of our catalogue,

Holt "CATERPILLAR" northern logger hauling train of logs on the operation of Abitibi Power & Paper Company, Iroquois Falls, Ontario

This is only one of the successful lumbering operations hauling the "CATERPILLAR" way last season. The success which was met with by the Mt. Murray Woodlands Corporation at St. Fidele, Que., and also the Anglo Newfoundland Development Company at Bishop's Falls, NFD. has resulted in orders for many additional "CATERPILLARS" from these companies to be placed on their operations for the coming season's log hauls. The continuous operation, number of trips, low costs and the ability of the "CATERPILLAR" to meet every situation, whether operating on snow or iced roads, has convinced the owners hauling the "CATERPILLAR" way, that no other machine or method can successfully compete with the "CATERPILLAR". Many of our users have placed their orders for early delivery and are using the "CATERPILLAR" for portaging supplies and building and clearing their lumbering roads before the winter sets in.

Write to-day for further facts and figures on "CATERPILLAR" performance.

**There is but one "Caterpillar"—Holt builds it*

LUMBERMEN'S

EQUIPMENT

A Money-Making Machine

ALTHOUGH a familiar sight in the lumber industry of Canada, there are still a number of mills in which we are sure this machine should find a place. First, because it can improve the output of those mills, and, second, because it can increase the profits of the owners of those mills.

We can readily prove this statement to any interested mill owner—at no obligation, of course.

In the meantime let us forward our descriptive catalogue.

The heaviest
and most
rigid Bandmill

BRANTFORD, ONTARIO, CANADA

A DOUBLE SURFACER YOU CAN DEPEND ON

We believe there are more Yates 177 Double Surfacers in operation than any other machine of this type. So successful has been their performance that practically all users of the machine, when in the market for additional surfacers of this type, have re-ordered 177's. This is a gratifying fact.

Here is an important detail of its construction. Eight inch feed rolls, exceptionally large for a surfacer of this type, are furnished on the 177 and make possible a very powerful feed. These rolls successfully will feed to any cut which the machine might be called upon to take.

Then too, Yates 177 has various other exclusive features which make it exceedingly accessible and easy to operate. We suggest that you request full particulars of the machine.

Kendall Gang Circular

The Machine that will convert your small logs into more and better lumber, quicker than ever before.

The illustration shows one of the latest designs of gang circular patented by Mr. I. N. Kendall, the well-known millwright, of Ottawa. This machine takes 16-26 in. diam., 10 gauge saws—will cut cants up to 8 inches in thickness, and we furnish with it necessary saw collars for any thickness of lumber desired. It has a hollow mandrel, water cooled saws; each saw has a separate guide; easily accessible and readily adjustable, and the bridge tree is so designed that it can be removed, the saws taken off and a new set put on in 7 to 10 minutes. Safety fingers hung just inside the front press roll prevent a cant flying back off the saws. Lumber cut on these machines is guaranteed to come out absolutely true to size from end to end, and so smooth that 1/16 in. over size is all the allowance necessary for finish.

Read what one user says about it:—

"The machine has given every satisfaction and in many cases far exceeded my idea of sawing lumber; the proof of this being that our customers are paying me \$1.00 to \$1.50 per thousand more for certain classes of lumber than they can purchase same quality elsewhere—this advantage being purely on account of the uniform and smooth sawing this saw is capable of doing."

We are the original manufacturers of these machines

We have been manufacturing them for the past fourteen years, and the experience gained in all those years is at your disposal. We make these machines in three sizes, as follows, using

26-in. saws for 8-in. cants, as illustrated.

32-in. saws for 10-in. cants.

36-in. saws for 12-in. cants.

Each size is of the very latest design and up-to-date in every improvement.

May we send you a list of satisfied users?

We also make a complete line of twin circulars with chain or steam feed for slabbing logs for these machines.

A Newspaper Campaign to Bring You Business

The accompanying illustration (reduced) shows one of the advertisements now being run in the Canadian daily press, acquainting the public with the merits of Red Deer Birch Flooring. Already the campaign has met with marked success. Reports from dealers state that the public's interest in this material is exceptionally keen. And while to many people it is entirely new flooring, their orders show how convincing are the arguments in its favor.

Do you want some of this business?
If so, drop us a line for full particulars to-day.

The Muskoka Wood Mfg. Co.
Limited

Huntsville

Ontario

As hard and durable as Maple, but more attractive — equal in beauty to Oak but has even greater wearing qualities. Birch is the ideal flooring.

A Permanent Lumber Service

AFTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually
6,000,000 ft. birch annually
2,500,000 ft. beech annually
2,500,000 ft. elm annually
900,000 ft. basswood annually
200,000 ft. ash annually
6,000,000 ft. hemlock annually
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

PRICES ON COAST AND MOUNTAIN STOCKS ON REQUEST

Western Woods

Wherever competition is as keen as it is today, the dealer who can offer a little better quality is the one who gets the edge on his competitor.

Therefore, we believe our offerings of Golden Spruce, Fir and Cedar will interest you—particularly our

1" NO. 1 COMMON CEDAR

This is a small-knotted type which makes excellent boards and shiplap, also a good cheap siding.

As our stock is run through the planing mill at time of shipment, it reaches you bright, clean and newly milled.

We are still manufacturing upon the basis of the old Mountain Grading Rules and maintaining our reputation for grades and service.

SHINGLES

"EDG-GRAIN"

Note the parallel and vertical grain of the wood, which prevents warping.

FLAT-GRAIN SHINGLE

Note the irregular grain of the wood, that causes unequal stresses and strains, which result in warping.

Can't Warp, Cup or Curl

"EDG-GRAIN" SHINGLES can't warp, cup, or curl. The parallel and vertical grain of the wood makes all strains and stresses absolutely equal. A shingle that is not cut with a parallel or vertical grain (the flat-grain shingle) will warp under adverse weather conditions, because the stresses and strains are unequal. Consequently, certain British Columbia shingle manufacturers offer the trade a 100 per cent. "EDG-GRAIN" SHINGLE. This is a very important fact for both the dealer and home-builder to bear in mind, because a roof is only as strong as its weakest shingle.

DEALERS WRITE

The "Second Mile"

BUSINESS to-day demands more than just ordinary effort. The spirit of "the second mile" is pervading all successful institutions.

It is not enough that we simply fill your needs.

An enduring reputation is attained, not by being merely different, but by being better, finer. It is the reward of extra investment, extra effort, extra thought.

We cannot produce all the lumber. We can, however confidently assert that what we do produce is more than just "ordinary stock."

"Big Chief" lumber and shingles are distinctive.

"Big Chief" stands for all that is splendid in both character of grades and standard of service. Manufacturing the very best has always seemed to us to be the pre-eminent thing worthwhile.

Power Transmission Service is Taken for Granted

After we receive an order from a customer we rarely hear from him again until he is ready to place his next order. Then it comes along automatically.

There's no correspondence about delays. Promises as to delivery are fulfilled, and, of course, the quality of Dodge Power Transmission Machinery is never questioned. In brief, the reliability of Dodge Power Transmission Units has become so firmly established that it calls for no comment.

Power users expect the best in quality and service from us, and would be just as astonished as we should be ashamed if they were disappointed.

The point we particularly want to stress in this advertisement is: that an order for one small pulley or a few feet of shafting is just as welcome and as carefully looked after as a contract job.

Single pulley buyers of twenty and thirty years ago are to-day among our biggest accounts—we have grown and prospered together. Here's hoping we may see you develop in like manner. If you haven't one, send for our Catalogue B. 10.

What Building Associations are Doing

Three Questions Which are Always Asked When the Building and Loan Association Scheme is Introduced, are:—Is It Practical, Is It Safe, Is It Profitable to All Parties Involved?—The Following Paragraphs Tell Why It Is Success And What Great Help It Can be to Community

"If you wish for anything you usually get it in the end if you keep after it," declared a speaker recently before a district meeting of retail lumbermen in Ontario. The retail dealer should put the same persistence into his work and advertising so far as stimulating the home-building instinct is concerned. This leads up to the statement that one of the greatest factors in the encouragement of home-building and making the process easy for the wage earner, is the creation of building and loan associations. The formation of such bodies have received attention at various gatherings of retail lumbermen and at the last annual meeting of the O.R.L.D.A., held in Windsor, Ont., a resolution was carried to the effect "That we recognize the importance and value of the work that building and loan associations are doing in other places, and believe that it would be a desirable thing for our Association. Be it resolved, therefore, that the secretary and directors be requested to take this matter up with the Ontario Government, looking to their permission to form such organization and to co-operate with any other organizations that are looking at the matter from our point of view."

Across the border the facilities for forming such organizations are more simple and practical than on this side of the boundary. It was explained by one of the speakers at a recent gathering how difficult it was for prospective home builders in Canada to secure the necessary credit with only a small cash investment. In the United States there are said to be 8,600 building and loan societies doing a business of \$1,400,000,000 annually. The reason that such associations have not flourished on this side of the 49th

Parallel is that the loan and trust corporation act stipulates that a body of this kind must show a capital of \$300,000 with \$100,000 paid up before any progress can be made.

In practically all the United States special statutes have been enacted governing the organization, amendment and supervision of building and loan associations. These laws are to be found in the main designed to encourage their development and to provide protection against perversion or misuse. Usually they are placed under the supervision of the department having supervision of state banks. Certain states still exact a substantial charter fee, and in a few states unduly heavy fees are charged for examination, but in the main the legislators, recognizing the paramount need of fostering these associations, have greatly simplified the procedure in securing charters by establishing nominal fees and granting exemptions from taxation. The U. S. Federal Government for many years granted exemptions and privileges which have added greatly in extending the benefits of building and loan bodies throughout the country.

Local Funds for Local Benefit

Building and loan associations vary greatly in different States and even in different localities but the majority are local and, as the name implies, they are conducted for local benefit. It is declared that no other form of financial institution has a more favorable record of solvency or is conducted on a smaller margin of expense or renders greater service to savers and borrowers alike. It is stated in Michigan that if it were not for building and loan associations

seventy-five per cent of the business of retail lumber dealers would be cut off.

The Ontario Retail Lumber Dealers' Association hope to receive the assistance of allied bodies, when seeking legislation from the province that will enable local organizations to be operated in various centres. If this proposition can be carried out successfully, it will aid very materially in encouraging building in the smaller centres.

House Building Interests Lumber Dealers

There is little need to say anything regarding a building and saving society or its functions and purpose. The object is mutual and co-operative and the members are united together for financial wellbeing and thrift. Most companies have both investing and borrowing members. They rely on the small savings of the people and the average person building a dwelling desires a long-time loan which can be paid off in weekly or monthly instalments by the owner.

The person, who owns a house and is paying for it on that basis or who starts to save by some such plan, makes the best type of citizen. He has a real stake in the community and payments are made just like rent. Churches are financed by what is known as the weekly envelope system and this has enabled the revenue of religious bodies to be increased regularly. It also makes it easy for attendants to donate larger sums than they otherwise would, to help along worth while causes and institutions. In the same way the regular weekly systematic givings or savings are doing much to foster the feasibility of owning a home on the part of the small wage earners.

House-building is a vital part of the busi-

ness in which the retail lumbermen are interested. In the State of Ohio, in order to stimulate building operations, there are 800 building and loan associations who have \$530,000,000 in assets and there are more such associations in America today than there are national banks. The amount paid in is double the capital of the National Banks. Building and loan concerns restrict their operations chiefly to houses and the people make use of such organizations to deposit their savings. One thing to be remembered is that every time an association makes a loan on a building, it means the disposal of some lumber and the sales of such goods help the retail merchant in increasing his turnover.

Much more might be presented on the subject of organizing such bodies in the smaller towns of Ontario with a view to employing the small savings of the average citizen to finance the construction of dwellings. There are a few such bodies flourishing in Ontario and one of them is the Niagara Falls Building, Savings and Loan Association, which has been in existence for over a quarter of a century. The Association commenced to loan out money right away, according to the by-laws and constitution adopted at the time, and the result is that hundreds of homes have been constructed in Niagara Falls, Ont., as an outcome of the impetus imparted to construction by this body. Another outstanding point is that, in all this time, there has not been one foreclosure of a mortgage and no property has ever come back into the hands of the society.

Way of Home Owning Made Easy

No easier way or simpler means for people with limited means to build and own homes can be furnished than by paying over a small sum every week which includes principal and interest and works out itself in a comparatively few years. An advantage possessed by loan companies is that the more a borrower pays on his home, the more anxious he is to protect and own it. Payments are a little more than rent and comfortable, sanitary dwellings are the best asset for the permanent progress and higher welfare of any community.

It might also be emphasized that the money invested in a local building and loan society does duty at home and helps to build up the community, create public spirit, establish civic pride and make one feel that his native spot is the best on earth. This sense of satisfaction, however, cannot be created without the home-building instinct. Any money deposited in a loan company is let out on first class mortgages. This is paid back in stated weekly payments and the wherewithal is loaned over and over for fifty-two weeks of the year.

Recently "Financing the Small Home," was issued by the National Lumber Manufacturers' Association. It contains some pertinent references which will be read with appreciation. It is pointed out that in building and loan associations two features are usually emphasized—first that savings must be on a systematic basis and, second, that the funds shall be available primarily for loans on homes. It is declared that no man ever worked or fought for a boarding house, and if there were no houses there would be no homes or civilization.

Ratio of Loan to Value of the Property

The amount which Building and Loan Associations will loan on a given property varies in different sections of the country and in different communities in each section. Broadly speaking the ratio of the loan to the value of the property varies from 50 to 80

per cent. It is fair to say that Building and Loan Associations will lend two-thirds of the value of the premises. In some states this amount is limited by statute. In New Jersey, laws place the limit at from 50 per cent to 75 per cent. Usually state laws are silent on this point, leaving the matter to the judgment of the directors of the several associations. The mortgage is usually repayable at the rate of 1 per cent per month of the face amount.

Is a Building and Loan Association Safe

What is the cost involved in obtaining a loan from a building and loan association? The cost is not uniform with all Associations. Some charge the borrower only with actual expenses involved in viewing and appraising the premises, and the drafting and recording of necessary papers. Other Associations make a flat charge on all loans to cover the cost and expenses in consummating the loan. Still others charge a certain percentage of the loan to cover the costs. Occasionally a bonus is charged on all loans in addition to the actual cost incurred. Building and Loan Associations charge a rate of interest depending upon local money conditions and the vision of those conducting the association. In rapidly growing communities in the West where the demand is heavy and the supply of funds often meager, mortgage rates are likely to be higher than in the Central and Eastern States where the rate varies from 7% to 6%. It should be made low enough to allow the deduction of a minimum of expense, and to permit the payment of satisfactory dividends earnings to shareholders, as the association primarily can loan only what its saving members provide.

Of what other financial or business institution is it said that there have been so few losses to depositors or members over a period of ninety-two years? The reason they are unquestionably sound is because their assets are primarily easy payment mortgages on homes and it is very rare that a borrower will sacrifice his equity in a home and resume rental payments practically equivalent to those through which he might soon own his home free from debt. Many associations protect themselves and the families of their borrowers from loss by means of an insurance policy on the life of the borrower.

Yes, associations usually meet requests for withdrawal promptly but it is commonly provided that only a portion of monthly receipts need be applied to meet withdrawals except with the consent of the Board of Directors. This provision is for the protection of members in guarding against the possibility of a "run" on a building and loan association.

Loans were formerly made to the highest bidder, in "premium" or in interest rate, but in most states this custom is obsolete and loans are usually made to applicants for approved loans in the order in which their written applications are filed and at an agreed rate.

What if I have no money and no lot but want to own a home? Subscribe for all the shares you can carry in the building and loan, keep up your payments without fail until you have acquired both cash and credit; then apply for a loan, assured that the building and loan will carry the heavy end of the loan, but not all of it.

How Much Should a Home Cost?

Your Income	Annual rent or annual cost of your own house will average one-fifth of your income	Average cost of house and lot per income	This share of the cost goes into the lot	This share of the cost goes into the house	Estimated size of house you can build, at a cost of 30 cents a cubic foot for the amounts given in column 5	Estimated size of house you can build at 50 cents a cubic foot, which is the cost of the more elaborate private homes

A Simple Home of English Design

FIRST FLOOR

PLANS FROM HOME OWNERS' SERVICE INSTITUTE

SECOND FLOOR

A small house should be, above all, simple in its architecture. For that reason the Colonial type, whose outstanding characteristics are simplicity, symmetry and unassuming dignity, embodies the very qualities to be desired for the modern small home that will not be out of date when one's children grow up.

Here is a splendidly planned six room Colonial house that is truly Colonial in type. What could be more restful than the long, sweeping horizontal lines of the roof, broken by three simple dormers? On the exterior, ten inch wide siding is used, for the house is of frame throughout, with brick for the well balanced chimneys at either end. Wide siding has a tendency to make a house look larger, and therefore is a most suitable material for this house. Slender porch columns and six-panel doors are also true to type. Although there are two stories, the impression is that of an English Colonial cottage.

The central hall type of floor plan is used. The living room at the left. There are open fireplaces in both of these rooms. Such built-in features as corner Colonial china cabinet in the dining room, with seat and bookcase flanking the fireplaces in the living room, will be noted on close examination of the first floor plan. The kitchen is conveniently arranged. There is a rear service vestibule with space for ice-box and rear service porch.

There are three bedrooms upstairs each with good cross ventilation from the windows. There is a tile bathroom and ample closet space for both clothing and linen. An overhead trapdoor in the upstairs hall permits of access to trunk storage space under the roof. This house is 34 feet 6 inches wide and 24 feet 6 inches deep, not including the depth of service porch and vestibule, 5 feet 2 inches. It has a cubical contents of 24,485 feet. According to the Home Owners' Service Institute it would cost today from \$11,000 to \$13,000 to construct this house. Complete working drawings and specifications are available through the Home Owners' Service Institute, 37 West Thirty-ninth Street, New York City, at moderate cost. They can be examined and purchased at the Institute.

Masonry.—All foundation walls, piers footings, areas, etc., to be of concrete. Chimney footings project three inches and to be twelve inches thick. Other footings as indicated on drawings. Columns four-inch Lally type. Build fireplaces as

shown on detail drawings; Brick laid in mortar composed of equal parts lime and cement to three parts sand. Build fireplaces as shown on details, faced with best quality common brick selected for pleasing color.

Plastering and Lathing.—All walls and ceilings of first and second stories to be covered with plasterboard three-quarters of an inch thick. Plastering to be two coat work and the finishing coat of plaster of Paris gauged with hydrated lime putty.

Carpentry.—All framing timber to be full and square to the dimensions shown well seasoned and free from imperfections; white pine, spruce, or Douglas fir. Inclose all side walls with one thickness of seven-eighths inch spruce or fir shiplap or white pine roofers and one layer of building paper put on with tin-capped nails. Outside finish to be well seasoned fine common white pine. Inside trim to be flat grain white pine, birch not selected for color, ash, chestnut, or white pine for paint. Stock millwork should be used at owner's option. Complete details for mill work are included in architect's detail drawings.

Hardware.—Owner will furnish all hardware trimmings or doors and windows and for closets and case work. The contractor is to furnish a correct list of hardware and is to put it on in a careful and workmanlike manner. Rough hardware to be furnished by contractor.

Insulation.—In Northern sections it is best to insulate all outside walls of rooms between studs with sheathing quilt; also the entire second-storey ceiling between collar beams and rafters.

Metal work.—All metal work, including gutters, leaders, downspouts and flashing to be sixteen-ounce copper.

Roofing.—Cover all roofs inclosing rooms with one thickness of seven-eighths inch spruce or fir, shiplap and one layer of building paper. Shingle all roofs with eighteen inch quarter-sawn red cedar shingles seven-sixteenths inch at butt, laid six inch to weather.

Painting.—Roof shingles to have one brush coat silver gray creosote shingle stain. Exterior wood finish to have two coats of white lead and oil paint. Interior wood finish to have one coat of light walnut stain, as selected by owner, and two coats of varnish. All floors to have one coat of specified preservative and one coat of hard wax polish.

How Retail Firms Handle Lumber Delivery

Practically all Concerns Charge for Cartage to Country Points but Agree That There is Too Much Free Handling of Material Within Corporation Limits

In the delivery of lumber the question of whether a charge should be made separately or included in the price is receiving consideration at the hands of many retailers. A number of firms have replied that they follow the practice of making the customer pay for haulage and do not try to convince him that they are assuming something for which he does not have to pay.

It has been pointed out several times in the columns of the "Canada Lumberman" that no yardman can afford to deliver lumber without receiving pay for the service. Motor or horse equipment cannot be bought and maintained and the time of a man or driver taken up without somebody going good for the expenditure. There are still in Eastern Canada some retailers who deliver lumber both inside and outside city limits and do not charge for the service but the number is comparatively few and is growing less each year.

Should be Frank With Customers

One Nova Scotia firm says:—"We believe in being open and above board in this matter and letting a patron know just exactly what it is going to cost him to have the lumber carted to where he wants it. Apparently it may be philanthropic or generous for one to throw out his chest and say that 'we assume that charge and it will not cost you a cent'. There is very little in this world without a quid pro quo or, in other words, we may think we are getting something for nothing but, in the end, we generally pay. We believe in being frank in such matters and telling a customer just what it is going to cost him to have the material laid down at his door. Such a proceeding is more satisfactory all around than including the cost in the price for the finished article, we are of the opinion that delivery charges should be based according to distance. The man, who is five miles away from your yard should pay more to have his material taken to him than if he lived within the next block or two or, say, within a mile radius."

Another Nova Scotia firm states that they do not charge a customer for town deliveries but any loads that are taken into the country have to be paid for on a certain arranged basis.

A yardman in Hamilton, Ont., says that the price delivery there is supposed to be included in the cost of lumber per M as quoted from the office. "Personally" he adds "we do not think it is adequate to take care of the high cost of today. When delivery is made outside of the city limits we assess what we think the time is worth and also for gasoline and overhead charges. At the present time in this city a man with a few boards is paying the same price as the one who purchases a load."

A Western Ontario dealer observes: "We include delivery charge in the price of our lumber so far as city cartage is concerned but we make a specific charge for out-of-town deliveries and the rate is \$2.00 an hour.

Is Free Delivery Necessary Handicap

A Sherbrooke, Que., firm remark: "We believe that there is no such thing as free delivery of lumber and it is not possible, unless every concern delivering lumber in the community acts under an agreement to charge for delivery, to make any specified charge. We ourselves are catering to a large trade both in Sherbrooke and the surrounding towns and have had the question under consideration a great number of times but are compelled to look at it in the light of retail business. We do not make a charge to our customers for delivery within the city limits no matter how large or small the order may be. We do, however, charge more for small lots of lumber than we do for large lots and the delivery cost we figure is in as an item of our overhead expense. Certainly a customer ordering a few boards or a few bundles of lath, should be required to pay a delivery charge, but in a great many cases these customers are contractors or large consumers of lumber who send us big orders which help to pay the excessive cost of delivering small lots.

"We also feel that a delivery of a small order sent to the customer promptly and cheerfully without a delivery charge being specified tends to bring more business from that customer or from his friends. We have somewhat regretfully come to the conclusion that "free delivery" is one of the necessary handicaps in the retail lumber

business, which must be borne by that much over-worked item "overhead expense."

"As for delivery to points out-of-town, by truck or team, a delivery charge of so much per M is specified and agreed upon (according to length of haul) between ourselves and our customers at the time the order is booked."

Separate Charge on Each Load

A Montreal lumber firm says,—"We make a separate charge for cartage on every load of material that we deliver." A Hamilton, Ont., concern adds,—"We include our delivery charge in our selling price. We, however, instruct our shippers that when taking small orders they must not forget to add for delivery. We make an extra charge for delivery out of Hamilton.

The general-manager of a well-known lumber company in an eastern Canadian city says that the whole subject of delivery charges is being taken up by the local lumbermen at the present time and it is expected that a uniform policy will be agreed upon and further information be forthcoming in a short while.

A New Brunswick lumberman remarks,—"We quite agree with the contention that there must be an extra charge for delivery. We quote all our prices, f.o.b. yard delivery charges extra. It is the only fair way as our margin of profit is small and will not stand delivery charges. It is a perplexing problem as in some cases we have yards only a few miles away that are willing to make local delivery free and this often appeals to a customer. The whole problem is a difficult one to handle and yardmen must be governed by local conditions. It is certainly a question to know what to do sometimes."

The "American Lumberman" has been delving deeply into the question of what retailers are charging for delivery costs and naturally the levies depend very much upon the size of the place in which the dealer does business. It is however, interesting to compare the fees charged in certain towns with those that prevail in the larger cities. The figures will prove interesting and instructive. In one Kansas town of 5,000 population, a leading dealer gives the following information with respect to his system and charges for such a service. He says:—"We formerly delivered all orders free, using our own equipment, but abandoned that plan several years ago, and since have been charging for all deliveries. For this purpose we employ a dray line, this line doing all of our work and devoting certain equipment to our exclusive use. The dray line is paid by the piece, and on all deliveries we charge our customers exactly what we pay for the service. We find this to be a much more equitable plan for a country yard than the free delivery system, as we depend largely for our trade upon the farmer who hauls his own goods. Under the delivery charge system the farmer or other customer who comes to the yard and hauls his own merchandise obtains the same prices as the customer to whom we deliver. We also find that by charging for deliveries fewer trips are required to deliver a bill of material than formerly, due to the fact that we make a minimum charge per trip, thereby making it to the buyer's advantage to order a load instead of only a few pieces. Our schedule of delivery charges is as follows:

Lumber, per thousand feet	\$0.75
Coal, per ton	1.00
Cement, lime, plaster etc., per ton50
Shingles (wood), per thousand05
Lath (wood), per thousand10
Minimum charge, per trip35

Charge Cartage to Merchandise

In a California town of 2,000 population the appended charges prevail according to a local retailer who says:—"We believe that cartage is a merchandise charge the same as freight, and we therefore charge cartage to merchandise and not to expense. Therefore it would be as foolish to give away \$100 worth of cartage as to give \$100 worth of lumber. We haul distances ranging from one block to 75 miles. In one case the lumber figured \$187 and the cartage came to \$150. We have had numerous single loads lately where the cartage cost as much as the material was worth. We consider that in delivering material we render a valuable service, for which our customers are glad to pay. We carefully show them that our cartage charge is

less than they could haul the material for themselves; in other words, that they can make more money at home working on their farms than they can by hauling their own material from our yards. In ten years we have had very few complaints. We consider that any dealer who gives cartage free simply is fooling himself because by so doing he cuts the price of his lumber, whether he admits it or not.

Our delivery schedule is as follows:

Minimum charge in town	\$0.50
Lumber, per 1,000 feet, first mile	2.00
Cement, lime, brick, etc., per ton, first mile	1.50
For each additional mile, 50 cents per mile on lumber and 40 cents per ton on cement. Minimum charge for country delivery	\$1.00

Make Delivery Equipment Self Supporting

In another city of 9,000 in the same state the accompanying figures furnish some timely data on the rates that prevail:—It always has been our policy, as well as that of other dealers in this city, to charge for cartage. Since we have been operating motor trucks, we have endeavored to make a charge that would make the delivery self supporting, but not with the idea of realizing any profit therefrom. Since we have used the accompanying schedule, our truck equipment has broken a little better than even, with prior to the adoption of this schedule it always showed a deficit. The greatest cost in delivering a load of material is in the first mile because the heaviest part of the expense is in the cost of loading and getting on the job and unloading and getting under way again. That is why our schedule is so much heavier proportionately for city than for country delivery. The schedule follows:

City Hauling

Lumber, per 1,000 feet	\$2.00
Shingles, per thousand20
Lath, per thousand40
Shakes, per thousand80
Posts, 4"x5"—7', per hundred	2.00
Grape stakes, per thousand	4.00
Lime, cement, plaster, per ton	1.00
Posts, 3"x4 to 6", 6', per hundred	1.50
Brick, common, per thousand	3.00
Brick, pressed, per thousand	6.00
Sash and doors, each05
Mouldings, per 1,000 lin. feet	1.00
Minimum50

Country Hauling

(Add to above as a basis)

	Per mile
Lumber, per 1,000 feet	\$0.50
Shingles, per thousand05
Lath, per thousand10
Shakes, per thousand20
Posts, 4"x5"—7', per hundred50
Posts, 3"x4 to 6", 6', per thousand35
Grape stakes, per thousand	1.00
Lime, cement, plaster, per ton25
Brick, common, per thousand75
Brick, pressed, per thousand	1.00
Sash and doors, each01
Mouldings, per 1,000 lin. feet50
Minimum50

The Rates Prevailing in Syracuse

Syracuse is a city in New York state a little larger than Hamilton or Ottawa and a lumber firm there sizes up the delivery as follows:—At the present time we do not charge cartage where we are furnishing a house job and delivering in full loads, but for everything else we

charge 75 cents for a single horse load and \$1.50 for a two-horse load, delivered anywhere in the city. For delivering to the suburbs, we charge \$1 and \$2.

The single cartage applies if the customer wants two or three pieces. We think that by having this charge, we get away from at least 40 to 50 per cent of the deliveries we would otherwise have to make, as a great many people buying small amounts pick the material up in their cars, while others sometimes even have their children come with carts and get it. They figure that by so doing they save the 75 cents charge, and we of course are always glad to have them take it away from the yard.

Definite Haulage Charge per Mile

In Reading, Pa., which is a city of about 100,000 people, one representative concern which goes very thoughtfully into the question, gives the appended data:—

For quite a number of years we had a hauling charge in effect in Reading and vicinity, covering the delivery of lumber. This charge was put into practice to eliminate the necessity of delivering a piece of lumber into a distant section of the city, when very often it could have been carried, or arrangements could have been made to order it in time so that it could have been included with a load going to that vicinity. This hauling charge has been only 25 cents a load, whether for a single piece or a wagon load, and it covers any delivery made within the city limits. For delivery beyond the city limits we charge 50 for three miles and \$1 for five miles. Beyond five miles we base our hauling charge on so much an hour for each truck whether it is a 1-ton, 2-ton or 3-ton unit. We make allowances for the time and the charge that would be made for the first five miles, namely, \$1, and then charge on a per hour basis in accordance with the accompanying schedule. Making a hauling charge for anything beyond a reasonable distance from the city enables us to make our prices for material the same to everyone, and besides eliminates the trouble that we encounter so often where people bought lumber from us and it cost us more to deliver the material than we received for it.

Our hauling charge experience has been very satisfactory, and we would not think of deviating from it; in fact, we would rather lose an order, in practically every instance, than to make any allowance. Our schedule is as follows:

Miles	3-Ton trucks	2-Ton Trucks	1-Ton Trucks
6	\$ 3.75	\$ 2.50	\$1 25
7	5.00	2.75	1.50
8	6.00	3.50	2.00
9	7.25	4.00	2.25
10	8.50	4.50	2.50
11	9.50	5.25	3.00
12	10.75	6.00	3.25
13	12.00	6.50	3.50
14	13.00	7.25	4.00
15	14.25	7.75	4.25
16	15.50	8.50	4.50
17	16.50	9.00	5.00
18	17.75	9.75	5.25
19	19.00	10.25	5.50
20	20.00	11.00	6.00
21	21.25	11.50	6.25
22	22.50	12.25	6.50
23	23.50	12.75	7.00
24	24.75	13.50	7.25
25	26.00	14.25	7.50

Valuable Information on Lumber and Construction

A valuable service was recently offered the retail lumber dealers when the National Lumber Manufacturers Association, Conway Building, Chicago, issued a correspondence course in Lumber and Construction Information.

The course is issued in sixteen letters in loose leaf form. The first two letters explain thoroughly, with the help of illustrations, the structure of timber and the defects and physical properties of lumber. The next three chapters on Projections and Plan Reading are interesting to the retail lumber dealer who is endeavoring to acquire a practical knowledge of building, as well as the merchandising of building materials. These letters explain the fundamentals of scale drawing; the theory of projections and describe the common forms of building construction.

Following the chapters on plan reading are two comprehensive letters on Construction Details, Specifications and Types of Construction, which set forth the building details of different parts of a building. These chapters are practical and to the point, and time spent on them will well repay the retail merchant. Accompanying each letter in the series are pen drawings of the different subjects in hand which help the reader to assimilate the information contained in the letters.

The eighth letter is devoted to Estimating and Rules for Taking off Quantities. It explains correct and quick methods of estimating lumber, millwork and other material going into construction of a building. Letter nine describes good and bad designs in planning a building and gives the fundamentals of good house planning.

The remaining letters are devoted to the Figuring of Stresses and Sizes, Preservation of Lumber, Shingles, Merchandising and a chapter on Heavy Construction Timber. The course is being widely taken advantage of in the United States and is available to any retail lumberman who is anxious to extend his knowledge of lumber and the allied building industry.

Greater Activity in Coast Sawmills

Exporters of lumber report increasing demand for Japanese squares, as well as for shingles and other building material, says a recent despatch from Vancouver. Large bookings are reported of Atlantic business in dimensions and specified materials by Puget Sound mills, but the local mills do not consider the bids of \$21.50 to \$23 for dimensions and \$23 to \$25 for specified material high enough in view of the fact that business can be placed in California at \$23 and \$23.50 for commons at the mills.

New Secretary of Montreal Wholesalers

S. Barker, Montreal

S. Barker, who was lately appointed secretary of the Montreal Wholesale Lumber Dealers' Association and has entered upon his new duties, succeeding F. H. Devenish, who recently resigned, is well versed in the forest products industry. Mr. Barker was educated at Freshfield College, near Liverpool, England, being sent there at the age of eight, as was often done in those days, along with his two older brothers. When twelve years old he was forced to commence a commercial career and afterwards got a step on the foot of the ladder in the office of a ship broker in Liverpool and at twenty-one was manager with a staff of six under him. This brought him in touch with Canadian lumber shippers and in 1894 he came to Canada as manager for Robert Cox & Company's office in Montreal where he remained until 1906 when he went to the Pacific Coast and was engaged in the lumber trade there. Later Mr. Barker returned to the East and became connected with the Swedish-Canadian Lumber Co. in New Brunswick. Subsequently he returned to Montreal and engaged for the same firm in the steamship business as manager for Thomas Harling & Son. In 1920 he was manager and vice-president of the Standard Export Lumber Co., doing a large business in South America. Mr. Barker is well qualified to represent the lumber interests in his new capacity and his knowledge should enable him to do justice to the position that he now occupies and render efficient service.

First Official Trip to Georgian Bay Mills

Forty three years ago last month the "Canada Lumberman" made its first official trip of inspection to several of the mill operations on the Georgian Bay. This report is an interesting one and mentions many operations and landmarks which have passed out of existence with the succeeding years and the diminishing supply of raw material.

Many older readers will recognize the incidents and persons referred to in the following paragraphs which recall familiar scenes and activities, in and around the bay, of over half a century ago. The report was written in Toronto on October 24th in 1880, appearing in the October 30th edition of the "Canada Lumberman" of that year. It is here reproduced:

"We intended last week visiting the saw mill at Midland and vicinity before they closed down for the season, but found that time did not permit the trip to be extended farther than the Waubushene and Severn mills. The latter mills closed on Thursday, the 21st inst to allow the men to go to camp for winter operations. The past season's work at the Severn mills has been satisfactory. There is yet on hand in the mill yard about six million feet of lumber. Probably about three million feet of this will be transferred to Waubushene docks before the close of navigation. The Waubushene mills were in full operation, and likely to continue at work for two weeks yet or longer, as a further supply of logs is expected.

The mills are situated at the mouth of Matchedash Bay, on the Midland Railway, which has six tracks running through the mill yard, and a leading track extending along the dock, where barges unload lumber intended to be conveyed by railway from the Severn mills about four miles distant. This extensive and complete establishment, which gives employment to over 150 men, during the summer season, is a pattern of neatness and convenience. A church and school house have been erected by the Company (Hon. W. Hodge & Co., New York) for the accommodation of the workmen. Similar accommodation is provided by the Company at the Severn mills, which also gives employment to over one hundred and fifty men. The company have also erected a large building with twenty six rooms, for the use of parties having business to transact at the mills, as well as for transient travellers. This is named "The Dunkin House" which, as its name indicates, is a temperance hotel. The temperance principle extends over the whole company's works, it being a stipulation with employees when engaged, that they shall abstain from intoxicating drinks while in the company's service. The present landlord of "The Dunkin House" is Mr. Perkins, measurer and culler. He keeps an excellent house, at the ordinary charge of \$1.00 per day.

It may be noticed here that the Waubushene establishment is headquarters of several extensive saw mills on the East coast of the Georgian Bay, incorporated about ten years ago at the instance of the Hon Mr. Hodge of New York, and others, under the names of the Collingwood Lumber Co. (at present under the management of Mr. D. G. Cooper) the Georgian Bay Lumber Co. (including the Waubushene and Severn Mills, under the management of Mr. T. W. Buck the Parry Sound Lumber Co. (mills at Parry Sound, since sold to J. C. Miller, Esq.,) and Maganetawan Lumber Co., under the management of Mr. J. H. Buck. The general supervision of the whole concern is vested in Mr. T. W. Buck, Waubushene, who has proved himself a capable manager. We had not the pleasure of seeing Mr. Buck on this trip.

Besides the powerful propeller Maganetawan and the tug Hayes, the company have a handsome steam yacht, which when in port is protected from the weather by an enclosed shed built along side the dock. Preparations are being made to have another steam tug, 90 feet keel, built this winter.

Each establishment belonging to the company is provided with a well-appointed machine shop, so that everything is kept in the best repair. The manager's residence—a handsome mansion—is built on a rising ground, a short distance south, commanding a complete view of the bay and mills. The office and general store are near by the mills, and together with the workmen's residences, make quite a village. Every branch of the work is thoroughly systematized, so that if a sale of lumber is made, the manager can tell, from the reports sent in to him, where a certain pile stands, its quality, etc., without leaving his office. To give some idea of the extent of the business done at this place, it may be stated that one day lately there were one hundred and six cars of lumber and square timber in the yard consigned to points over the Midland Railway principally for eastern markets.

Wages during the summer range from \$25 to \$35 per month—paid, the workmen say promptly and regularly. In the woods at present, wages range from \$15 to 18, so that the rate during winter, with board is equal to the summer rate, without board. Towards Midland, along the railway, are Tanner's mills and Christie's mills, each of a capacity of turning out 25,000 to 30,000 feet per day, and Power mills,—Capacity 75,000 feet per day.

On the Midland Railway, toward Orillia, is Mr. Ross's mill at Fesserton about two miles east of Waubushene. This mill has a capacity of about 25,000 feet per day. At Coldwater is the shingle mill of Mr. Lovering, and that of Messrs. Hall & Co.

New Policy for Workmen's Compensation

Announcement of a new policy which is to direct the Workmen's Compensation Board was made recently at the Parliament Buildings by Hon. Dr. Forbes Godfrey, Minister of Labor and Health in the Ferguson Government. The changes planned amount to no less than directing the efforts of the Board into new channels and giving it a new significance to the workingmen in whose interests it operates. Where the Board has during the past few years been, as its name implies, an agency seeking to balance cash payments against loss of human efficiency, it is to become during Hon. Dr. Godfrey's regime rather a board of rehabilitation, seeking to restore the man who comes under its care to physical fitness.

During the last session of the Ontario Legislature the Compensation Board was the subject of criticism that was almost bitter by members of the House. It was alleged that it was not functioning in the interests of the workmen, but that it was taking the stand, rather, that its duty was to stand between the workmen and their possible inroads upon the Provincial Treasury. The debate upon the subject broke out intermittently while the Legislature sat, and a phase of it which frequently inspired members of the chamber to caustic comment was the fact that Hon. Walter Rollo, then Minister of Labor, failed to defend the body for the policy of which he was responsible.

Hon. Dr. Godfrey is taking the stand that the Compensation Board should not be a merely formal body which settles, after a manner akin to arbitration, the lump sum which shall be paid to a workman who has been injured. His view instead is that it should be a distinctly humanizing agency, interested in each individual case which comes before it and seeking to give each case the particular treatment which it requires.

He does not favor the lump sum basis of settlement, because of the fact that experience has shown that when the injured man has exhausted the money thus paid him, he becomes a charge again upon the community. The Board should, he believes, study each man with whom it deals and take the steps necessary to secure for him the medical or surgical treatment which will fit him again to be self-sustaining and a useful citizen. If the disability cannot be corrected, he believes that a pension lasting during the period of the victim's lifetime should be granted.

Wholesalers Consider Aspects of Sales Tax

Effort Being Made to Clear Up Some Complexities in Reference to the Application of Measure—Difficulties in Interpreting Its Provisions

Amendment to Special War Revenue Act of 1915
Sales tax of 6% on sales price of goods manufactured in Canada.

Sales tax of 6% on duty paid value of imported goods.
Collectors:

The Government require the tax from those licensed.

- (1) A licensed manufacturer who is producing more than \$10,000 per year pays 6% sales tax on all sales to those who are not licensed.
- (2) A licensed wholesaler pays 6% sales tax computed on cost to the said wholesaler on all sales to those unlicensed.

No Tax Payable:

- (1) On exports.
- (2) On imports by a licensed manufacturer of goods to be used in production.
- (3) On imports by a licensed wholesaler.
- (4) On sales by a licensed manufacturer to another

licensed manufacturer of goods to be used in production and subject to the tax.

- (5) On sales by a licensed wholesaler to a licensed manufacturer of goods to be used in production and subject to the tax.
- (6) On sales by a licensed manufacturer to a licensed wholesaler.
- (7) On sales by a licensed party to a Provincial Government.
- (8) On sales by an unlicensed manufacturer.
- (9) On goods bought in Canada by a licensed manufacturer to be used in production.
- (10) On goods bought in Canada by a licensed wholesaler.
- (11) On sales or imports of logs, fence posts, tiles, when produced and sold by the individual settler or farmer.

The federal sales tax was the subject of a lively discussion at the regular monthly meeting of the Wholesale Lumber Dealers' Association held at the Albany Club, Toronto, on October 19. There was a large attendance and practically no other business was taken up. An hour or two was spent in consideration of the many points covered in the new revenue act and the opinion was generally expressed that several regulations were neither understandable nor workable. Some even voiced a doubt as to whether the act would be enforced owing to its complications, overlapping and ambiguities.

It was pointed out by A. C. Manbert, A. E. Eckardt, A. E. Clark, J. L. Campbell and others that, while the sales tax itself could not be changed except by act of Parliament, there might be some modification in the regulations regarding its application and interpretation in order to make the measure more simple and practicable. At present, owing to the complex character of the lumber business and its various sources of distribution, some of the product being further manufactured into a finished article and other portions being left unchanged, the opinion was expressed that the new piece of legislation would be anything but satisfactory and equitable. Mr. Manbert said that, as the lumbermen looked into the application of the new federal sales tax, the fears, which they held earlier in regard to it, were in no wise lessened as far as the interpretation of the various points were concerned. These were not easy to explain unless the members were good at solving puzzles. The secretary of the Association had prepared an able resume of the act together with certain explanations but many things still remained in doubt.

There was no doubt that the measure would go into effect at the first of the year and anything, that could be done to ameliorate some of the difficulties should be brought to the attention of the proper parties. The act could not be changed in its principle or its prescription. It was not likely that the federal authorities would withhold enforcement of the different phases of the measure and lumbermen would all simply have to wait and see what eventuated.

A. E. Clark explained that a recent meeting of the Canadian Lumbermen's Association executive had been held in Montreal when the new federal sales tax and proposed regulations came up for consideration.

John Bain, of Ottawa, an expert on tariffs and excises, had been called into consultation and even he admitted that certain phases were not clear to him. A committee of five representative lumbermen had been appointed to confer with Mr. Bain in order to place the objections of the industry in concrete form and suggest certain amendments regarding the operation of the act. Mr. Clark did not see how the present measure could be applied. Some improvement was needed as the project was open to ambiguities. It was also full of incongruities and was too technical for the average man to understand. Mr. Bain had explained that the old act had been repealed and the new act would come into effect in January next. The Government expected to raise an annual revenue of \$140,000,000 through the new sales tax and it was not likely that its operation would be

suspended. Any suggestions that the lumbermen had should be sent to Mr. Bain, who was preparing a brief to go before the Government in order to have some of the difficulties of the situation removed.

Mr. Eckardt read a digest of the proposed measure and explained the difficulties in obtaining refunds where an unlicensed wholesaler sells to a licensed manufacturer and the probability that a double tax might be collected on the product if refunds could not be obtained without going through a long rigmarole.

In the course of the discussion it was explained that an unlicensed wholesaler was one who did not make fifty per cent of his annual sales to a licensed manufacturer and some doubt was expressed as to how many wholesalers disposed of fifty per cent of their output to licensed manufacturers. An unlicensed manufacturer, it was stated, was one who does not manufacture or produce goods to the value of \$10,000 or more during any fiscal year.

J. L. Campbell, who is a member of the committee on Dominion and Foreign relations of the Board of Trade, said he had attended a meeting of that body at which various representatives of different industries had been present. After a two-hour discussion in seeking to clear up the mysteries of the act and ascertain what it really meant, it was a case of "confusion worse confounded." He advised each member to consider the act as it applied particularly to his own business and never mind the other fellow.

One member stated that at a recent gathering a remark had been made that ninety-five per cent of the mill men in the East turning out white pine doubted if they could get a license as they could not declare that fifty per cent or more of their product was sold to be manufactured. It must also be remembered that the tax must be collected on the cost price of the lumber and not at the price at which the product is subsequently sold.

Mr. Manbert instanced several cases of how involved and intricate the new sales tax would be, and outlined some difficulties which would be found in applying the measure, particularly where stock went through further processing so that its original identity was not maintained. Lumber did not travel through one regular channel the same as leather and other materials which were easy to trace back to their origin. Various instances were given by the speaker of the different forms of sale which were common and inevitable in trade practice. Mr. Manbert pointed out the fact that every board had an individuality and, as it passed from hands to hands, changed form or shape. The objection of the trade was that the lumber business rests on fundamentals which could not be adjusted to the new proposals of the sales tax.

At the close, on motion of R. S. Plant and Hugh A. Rose, a hearty vote of thanks was tendered Messrs. Manbert, Eckardt and Clark for the explanation of the new sales tax, and a copy of the digest presented by Mr. Eckardt was also ordered to be placed in the hands of the members of the Association.

Big Logging Operations in Quebec

The next winter's cut of the Quebec forests is expected to be one of the largest in recent times. Over three thousand lumber camps are due to be in operation, employing in the neighborhood of 25,000 men, according to Chief Forester Piche. He stated there was a scarcity of labor in some sections of the lumber district and that, consequently, higher wages were being offered as an inducement to go out into the woods for the winter.

Regarding the situation in the forests of the province, Mr. Piche said that there had been a lot of fog, which combined with the dew, tended to keep the leaves and grass moist. The conditions at present were ideal, he added. The Department is keeping men engaged in patrolling the forests in certain sections of the province, mostly the western part, which is regarded as the most dangerous spot, and these men, in addition to patrolling the forests in their capacity of forest rangers, were also checking up on lumber operations and reporting to the Department.

Asked regarding the possibility of any forest fires in other places spreading to the province of Quebec, Mr. Piche said that the only forest fire that had taken place recently was in Ontario, and that was a thousand miles from Montreal.

Are Salvaging Damaged Timber

According to information received by the Department of Lands and Forests of New Brunswick, the majority of those operators holding leases on Crown Lands which had been damaged by fire or by budworm have commenced operations to salvage the damaged timber. In only two cases was it reported to the Department that operators were not in a position to cut this season.

No estimate of the season's cut is yet available but the belief is that as large a proportion as possible of the damaged timber will be removed during the logging season now opening. The receipts from stumpage are coming in steadily to the Provincial Treasury. Reports from the sections, which were burned over and afterward infested by borers, are to the effect that the progress of the worms in the timber is much faster than had been believed. On the Tabusintac areas of the Snowball Co. particularly heavy damage is reported. The company will make an effort to salvage what is possible, however.

How Russell Bros. are Expanding

Russel Bros., manufacturers of head works, Fort Frances, Ont., have acquired the entire business of the Minneapolis Campbell Motor Works. The transaction includes the patent rights, drawings, machinery and tools of the company. Considerable new equipment has already been purchased and everything will be rushed to be in readiness to commence the manufacture of these well-known engines. Not only will Russel Bros. manufacture engines for their head works and power winches, but will also make delivery of these marine engines from 5 to 60 h.p.

Russel Bros. have been successful in turning out gasoline power boats known as "alligators" and the sales during the past year greatly increased over that of any previous year. The outlook for 1924 promises to treble that of this year. The Campbell motors have been in the market since 1902 and are among the foremost of marine engines of their type. The engines will be built on the same line as that already followed by the Campbell Motor Co. with, possibly, a few minor alterations.

Keen Competition for Timber Berths

There was some competition in connection with the recent sale of timber berths at the Crown Land Office, Fredericton, N. B., three of the seven berths offered being purchased in advance of the upset price of \$20 per square mile bid by the applicants. These were No's. 68 and 69, which were purchased by the Royal Bank of Canada at \$35 and \$52 per square mile respectively. No. 68 is located on the north forks of Coal Branch river and contains two and one half square miles, while No. 69 is located on Otter Brook, a branch of Salmon river, and contains eight and one half square miles. No. 72, south of the Dungarvon river, and containing two and one half square miles, was purchased by the Fraser Companies, Ltd., at \$20.50 per square mile.

The following berths were sold to the applicants in each case at the upset price of \$20 per square mile:

No. 66, head of Cumberland creek, containing two and a half square miles, to W. J. Colwell.

No. 67, Brittain stream, west of Nerepis river, containing two square miles, to J. A. Gregory.

No. 70, parish of St. Mary's, Kent county, west of McLaughlin

No. 71, parishes of St. Mary's and Weldford, Kent county, containing eight and one half square miles, to F. D. McWilliam.

British Woodland Survey is Progressing

Good progress is being made with the census of woodlands in Great Britain conducted by the Forestry Commission. The work is being done in Scotland by the commission's own staff and local correspondents, and in England and Wales through voluntary consultative committees with the assistance of the Inland Revenue Department.

It has been said that the United Kingdom is the most poorly wooded country in Europe, with the exception of Portugal. The census will settle the question; though it is feared that the statement will prove only too true, having regard to the depletion of woods during the war, when practically all the reserves of mature coniferous timber were felled.

The Forestry Commission is proceeding with its task of replanting on the restricted scale rendered necessary by the position of the country's finances. The Committee on National Expenditure recommended that the afforestation policy adopted by Parliament after the war, when the Forestry Commission was established, should be completely scrapped. That policy was to revive the almost exhausted timber resources of the country by growing trees on some of the millions of acres of waste land. The suggestion of the Committee on National Expenditure was rejected by the Cabinet. It would have entailed the waste of much useful work of reconstruction already done. It would also have prolonged indefinitely the period during which the country was left quite unprepared for the world timber famine, which is apprehended at no distant date, owing to the constantly increasing demand for timber and the working out of the virgin forests.

The Cabinet decided, however, that the provision for planting for the next two years should be on a reduced scale, entailing a temporary departure from the original programme, though still admitting of the afforestation of ten thousand acres each year.

The principal scene of the commission's operations so far is in the Eastern Counties. Here over thirteen thousand acres of derelict land—once cultivated, now little more than a rabbit warren—have been planted, mostly with pines.

How Lumber Distribution has Widened

British Columbia has entered a new age in commerce, according to the figures which H. R. McMillan presents. A new day has dawned such as pioneers of the lumber industry of this coast never dreamed. "In 1911," said Mr. McMillan, "we exported 47,000,000 feet of Douglas fir from British Columbia. In 1922 we had jumped to 285,000,000 feet."

Ten years the destinations of British Columbia fir shipments were as follows: Africa 14,000,000; Australia, 9,000,000; United Kingdom, 7,000,000; Orient, 5,000,000; California, 1,000,000.

"That was the winding up of the old order of world business," said Mr. McMillan. "The Orient still slept; the Atlantic seaboard was not taking a foot of our timber; we sent comparatively little to Australia, and California took but a trifle. History has been made since those days; the map of the world has been changed and the demands of the nations of the world developed for British Columbia products. In 1922 the province exported to the Orient 105,000,000 feet—this is 21 times our sales there in 1913. We were on the Atlantic with water-borne shipments which ran last year into 69,000,000 feet. In a space of a few years we have multiplied our shipments to Australia by seven, and to California by twenty-two. We have doubled up on our sales of timber to the Old Country.

"The world does not realize it yet, but the port of Vancouver is cutting in on the immense trade which was formerly monopolized by San Francisco. Ten years ago ships were not to be had by the lumber trade of Vancouver. There were but twelve deep-sea shipping lines from British Columbia in 1913. To-day we have forty-four deep-sea lines, some with their head offices right here, with plentiful tonnage at the disposal of British Columbia shippers, and so our export trade in lumber has run up from 1,935,000,000 feet to 3,055,000,000 feet, over a space of nine years."

Tempering the Teeth in the Saw

Hardening of the teeth in the power saws used in lumber manufacture causes frequent delays in the operation of the mills, and the novel electrical tempering of M. Geerlops, Dutch engineer, is claimed to lessen the time of shut-down very materially. An electrode being applied to the teeth, a five-volt alternating current, varying from 175 to 600 amperes, according to the size of the saw, is passed until the steel becomes bright red. The electrode is then removed, and the heat is withdrawn so rapidly through the body of the cold saw that tempering is effected without further treatment. As many as 400 teeth an hour may be tempered, and the process is said to have given an increase of 20 per cent. in the output of a Dutch Indies sawmill.

Montreal Lumbermen Consider Trade Query

*Lively Discussion on Who is a Wholesaler and Who is a Retailer—
Every Effort Made to Arrive at Definite Understanding*

The monthly meeting of the Montreal Wholesale Lumber Dealers Association was held at the Mount Royal Hotel, Montreal, on Thursday evening October 18th. There was a large attendance over two thirds of the members being present thus making the largest number of any gathering of the Association. The Chair was taken by the President, J. S. Bock.

The importance of the meeting was emphasized by the difficulty now being experienced between this Association and the Montreal Lumber Retailers Association, it having being alleged that the latter is attempting a boycott of some members of the Wholesale Association on account of alleged sales to consumers direct, though no proof to this effect has yet been put forth by the Retailers Association. This matter has been in the air for some little time but nevertheless up to the present no agreement has been arrived at between the two associations regarding what constitutes a wholesaler or retailer respectively, and it must be acknowledged that this is a somewhat difficult point to decide.

Some contend that if a man buys a carload he is a wholesale man, whilst, on the other hand, if it were a mixed carload that could not be considered a wholesale order. Furthermore, the difficulty appears to be to define what class of contractors the wholesalers shall sell to without infringing on the rights of the retailer. This is no easy matter to adjust and it will take some little time yet before a settlement of the question may be arrived at. While the Montreal Association feel that they have already made earnest endeavours to reach an amicable settlement with the retailers it is felt that the retailers have not on their part made the same amount of effort to reach an adjustment. It is believed that it would be wise for the Retail Association to consider carefully their position, as, should the Wholesale Association as a body decline to sell to the members of the Retail Association the latter would ultimately find it to their disadvantage.

In touching on this point wholesalers feel that they are treading on delicate ground but it cannot be denied that the retailers as a body receive excellent terms of sale from the Members of the Wholesale Association and, should such a drastic step be taken as that the Wholesalers were compelled to refuse business to the retailers, one is forced to believe that they would not receive such good terms and perhaps not such good service from the mills as they do from the wholesalers in general.

Every section of the lumber trade is more or less dependent upon other sections and in order that a profitable business may be done matters must be made to run smoothly so as to give an equitable return to each section of the trade. It is known only too well that the trade has sufficient difficulties to overcome at the present time without having further burdens thrust upon it and anything that may disturb the present methods will likely mean loss, and not gain, at the moment.

Writing to the "Canada Lumberman" a Montreal lumberman says, "Looking at it from a strictly financial standpoint let us remember that consumers look to retailers for credit, that the retailers look to the wholesalers for credit, that the wholesalers look to the mills for credit and that finally the mills are more or less dependent upon the banks for necessary extra credit. Now if this system of credit is to be disturbed at this juncture and the retailers are going to look direct to the mills for credit, we fear that it will not be very long before they must come to the decision that they have made a mistake, as the mills must of necessity have their drafts promptly met and cannot give an extension of time, inasmuch as they have had to carry the burden for months from the time that they have started to log, and from start to finish it is pretty nearly nine months or more before they get their return.

"Should such a thing happen as the withdrawal of the wholesalers from selling to retailers it virtually means a financial "strike" in the trade. We have never yet known where a strike meant anything but a loss all round, and are disposed to believe that the chief sufferers will be the retail men. However, whilst the matter has reached a somewhat acute step with the wholesalers in Montreal and feeling is apt to run high, there is yet time to come to a sound and reasonable agreement between the two associations and we trust that this may be done during the next month.

"We understand that the Montreal Retail Association is influenced by methods in vogue by the various retail associations in the United States. While these methods may be desirable and well understood by the trade on the other side of the border, we think the time inopportune to attempt to put such methods in effect in Canada, where mills are much further away from consuming centers, and we cannot pretend to be in quite the flourishing condition that our neighbours across the border enjoy at this moment. It is all very well to shout that our time is coming but for the time being we are hard at work in the woods and will have to do a little more cutting and a little more sawing before we spend too much time looking at the other fellow across the line. This may not be reading of a poetical character but perhaps it will be wholesome."

Galt Firm Resumes After Big Fire

The premises of P. W. Gardiner & Son, Limited, Harris St., Galt, Ont., were visited by fire on October 14th. The flames broke out in a private garage on property located south of the plant. The blaze quickly spread to the lumber sheds of Gardiner & Son and assumed tremendous proportions igniting the warehouse and threatening the entire plant. Fortunately, however, the fire-wall between the main factory and the warehouse stayed the progress of the devouring element and enabled the brigade to bring the conflagration under control. The fire was not finally extinguished until about twelve hours after its first outbreak and continuous streams of water were played upon the ruins and burning piles of lumber for a whole day and night.

P. W. Gardiner & Son resumed operations a day or two after the blaze, being handicapped only by shortage of lumber requirements and warehouse facilities. The rebuilding of the destroyed portions will be started at the earliest possible moment. The big warehouse which was wiped out, contained a huge quantity of doors, sash and columns. The loss is estimated at between \$200,000 and \$250,000 and is covered by insurance.

Reforestry Will Never Overtake Fire Loss

Those who believe that the timber supply of Canada will be replenished by the planting of trees artificially will be surprised to learn from figures just issued by the Canadian Forestry Association that during the past five years Canadian citizens, through their own recklessness, have destroyed over 3,600,000 acres of merchantable timber growing on public owned land, while in the whole Dominion only 6,000 acres have yet been planted artificially in forest trees. No figures could more graphically indicate the hopelessness of catching up with the forest fire loss in the Dominion by any programme of reforestation. As if the Canadian people were not content to wipe out more than three million acres of merchantable timber by human-set fires, an additional four million acres of young growth was also put out of existence by fire in the same period.

The replanting of timber trees, however, bids fair to show a higher ratio to forest fire losses in the future, particularly if these fire losses can be held to their present proportions. The province of Ontario has now in its provincial nurseries twenty million seedlings to be utilized for reforesting 10,000 acres of waste land in Old Ontario each year for at least six years. The forest nursery established by the province of Quebec at Berthierville has distributed four million seedlings for private planting and has reclaimed more than three hundred acres of shifting sand by the use of trees from the nursery. This is but the beginning of the Quebec Forest Service programme of reforesting as much as possible of the three million acres of waste land in the province. Quebec also has under consideration the establishment of communal forests.

The private companies have also been active in replanting treeless areas, the Laurentide Company of Grand Mere having, at the present time, more than fifteen million seedlings and transplants in its nurseries, with 2,500 acres already set out in spruce plantations. The Riordon Company has reforested about 300 acres and the Abitibi and Spanish River Companies have established forest nurseries and are initiating reforestation programmes.

Lumber Salesman Who Covers Much Ground

With a territory extending all the way from Halifax, N.S., to Windsor, Ont., Thomas H. King, eastern Canadian representative of the A. W. Burritt Co., Bridgeport, Conn., is kept constantly on the move. He manages to cover this ground about every six weeks and his home, which is at 17 Henry St., Moncton, N.B., does not see him except at long intervals. Mr. King has been in the lumber business all his life. His father, G. L. King, ran a sawmill for years at River Philip, N.S., until he disposed of his interests some time ago to his son, J. Russell King. Thomas H. King worked in the bush, the sawmill, furniture factory and woodworking plants until he obtained an intimate acquaintance with all the details of the industry. He was for several years with Dunfield & Co., Halifax, as

Thomas H. King, Moncton, N. B.

inspector and later had charge of outside water shipments. Afterwards he was manager of a large sorting and stop-off yard for the company at Moncton which was burned about a year ago. Early in 1923 Mr. King joined the A. W. Burritt Co. and has charge of their Eastern Canada interests in both buying and selling. The firm have branch offices in New York and Boston and have worked up a large connection in Canadian spruce, white pine and other woods. Mr. King, who calls upon the wholesale trade and the larger retail yards from the Atlantic east to the great lakes, has many friends in the trade and was a guest recently at the annual picnic of the Wholesale Lumber Dealers' Association, Toronto.

Breezy Happenings in Lumber Arena

George Byers, of Chase, B.C., a well-known lumberman, was a recent visitor to several points of Ontario and the East.

George M. Madden, head of the Apex Lumber Co., Limited, Vancouver, B.C., spent a few days in Toronto calling upon the trade.

A. K. Leitch, late of the East Kootenay Lumber Co., of Jaffray, B. C., has formed the Alberta Wood Preserving Co. with headquarters at Calgary, Alta.

The Lockart, Westcott Lumber Co., of Winnipeg, has dissolved partnership and Mr. Westcott has accepted a position with the McDonald Lumber Co., of Winnipeg.

Supplementary letters patent have been issued authorizing an increase of the capital stock of the Searchmont Lumber Co., Searchmont, Ont., from the sum of \$250,000 to \$500,000.

Murray & Gregory's mill at St. John, N. B., has closed for the season owing to lack of logs. Last winter's heavy snows made it impossible to get out the usual supply and as a result the mill has to shut down earlier than usual.

J. J. O'Grady, of Ottawa, J. S. Granner, of Outremont, Quebec, and C. R. Hawkins, of Fredericton, are the incorporators of Federal Lumber Company Limited, which will have headquarters in Fredericton, N. B. Incorporation of the company will have an authorized capitalization of \$49,000.

Gates Engineering Company, Montreal, have just completed the contract on the 350 H.P. boilers at Knox Bros.' mill at Bickerdike Pier. The boiler settings are equipped with the Gates Patent Air

Cooled Arches for burning waste fuel. The Gates Engineering Co. have also been awarded the contract for four boiler settings for the new Court House on Notre Dame Street East, Montreal, and two boiler settings for the Military Hospital at St. Anne de Bellevue.

At a log sawing contest held lately at South River, Northern Ontario, to test the cutting qualities of cross cut saws manufactured by the makers of Canada and United States, the Maple Leaf cross cut saw, manufactured in Galt, Ontario, was given first prize, cutting a maple log 18½ inches in diameter in thirty-two seconds.

Mark Cummings, of Boston, Mass., who represents Edward Clark & Sons, of Toronto, in New York and Pennsylvania, was in Toronto during the past few days. W. N. Fox, secretary-treasurer of Edward Clark & Sons, recently returned after spending some time looking after the company's interests in Quebec and the New England States.

Dr. E. Miville Dechene, Deputy Minister of Lands and Forests for the province of Quebec, recently resigned. The strenuous duties of looking after the increasing volume of business of the Department caused the Deputy Minister to ask for superannuation. It is believed that Francis Lemieux, secretary to Hon. H. Mercier, Minister of Lands and Forests, will succeed Dr. Dechene.

James Lanigan, Belleville, Ont., was fatally injured in Lazier's paper mill near that city when he was caught between the pulley and some shafting and drawn in headfirst. The victim's nose was torn off and the left eye injured to such an extent as to necessitate its removal. He also suffered compound fractures and died shortly after being taken to the hospital.

The Sault Ste. Marie Board of Trade has received word from Hon. James Lyons, Minister of Lands and Forests, that no decision in regard to opening up the Mississauga Forest Reserve will be made until the report of the Department surveyors has been received. The surveyors are now at work going over the reserve to determine the condition of the timber thereon.

Loren L. Brown, of Victoria, British Columbia Lumber Commissioner, who has been spending the past few weeks in Toronto, Montreal and other points East, is returning this month to the Coast. Mr. Brown recently completed a course in dry kilning at the Forest Products Laboratory at Madison, Wis., and speaks in high terms of the equipment and efficiency of that institution.

Sydney M. Elliott, of Port Elgin, Ont., passed away recently. He is one of the oldest and best-known pioneers of Bruce County and had reached his 90th year. Forty-seven years ago he located in Southampton where he operated the first sawmill in that section of the country. His wife predeceased him a year ago. A family of three daughters and three sons are left to mourn his loss.

The ratepayers of Midland, Ont., by a practically unanimous vote, recently granted a fixed assessment of \$50,000 for ten years to the International Fibre Board Co., which have taken over the premises formerly occupied by the Midland Woodworkers and are making extensions and alterations. The plant of the International Fibre Board Co. was destroyed at Penetanguishene about two months ago and the company have been effecting arrangements to resume operations. Good progress has been made and the International Fibre Board Co. will soon be in full swing again.

Mayor T. S. Annandale and several aldermen of New Westminster recently visited the new plant of the Brunette Lumber Co. where they were taken over the premises by C. J. Culter and were much impressed with the industry. Although the agreement with the city, entered into two years ago, called for an expenditure of only \$200,000 on the mill, the total cost to date has exceeded \$500,000. The completion of the wharf alongside the Fraser River is under way, which will ultimately lead to the company being in a position to load ocean-going steamers direct from the wharf without the necessity of lightering.

A Montreal paper recently printed a statement from Ottawa under date of October 13th that \$104.00 per month, and board, is being offered in the Gatineau Valley. This is a little hard to believe, says the Montreal correspondent of the "Canada Lumberman." The numerous agencies along the well-known labor bureaus on St. Antoine St. give no such indication as this price for labor, which remains at \$50 to \$60 per month for Ontario and Quebec. Of course as the logging season gets closer, it may be that higher prices will have to be offered as it is quite certain that Quebec province in particular has been heavily drained during the past three or four months for men for the Maine woods. One firm alone applied to Washington, D.C., headquarters for permission for 1000 men to enter the Maine woods and another firm for 500 men and both secured permits. These two items alone represent a heavy drain on Canadian labor and having once got down there, it is certain a good proportion of the men will stay. It would seem that this is a matter for the Labor Department at Ottawa to look into.

Progress Made on Cost Accounting System

New Plan Evolved Which May be Installed at Comparatively Low Cost and Will be Applicable to Both Yard and Factory—Merits of the Method

It is important to know costs and to have a reliable, workable and simple system which will tell the retailer what he wants to know at any time and whether he is making money and in what way. Correct cost in business is what is wanted, whether the business be large or small.

For some time a committee of the Ontario Retail Lumber Dealers' Association has been making inquiries relating to a uniform cost accounting system which will embrace both yard and factory. After the general principles are agreed upon, it is likely that an expert accountant will be engaged to complete it so that members can avail themselves of the proposition.

It is a well-known fact that to-day business is an exact science and growing more and more so. All guesswork has to be eliminated and estimating must be carried out on a definite, fixed basis. Any set of ledgers will tell a lumber merchant whether he is making or losing money but will not give him specific information regarding where he has made money or lost it and when. This is the kind of data that the yardmen desire so that they will know where they are at in every detail of manufacturing as well as work, material, time, turnover, etc.

At the seventh annual meeting of the National Retail Lumber Dealers' Association which was held recently in Louisville, Ky., President Shirton and Secretary Boulbee, of the Ontario Retail Lumber Dealers' Association, attended. They were much interested in cost accounting and, as a result, some new information was gleaned with reference to the progress made in this direction. On returning from the convention the secretary of the O.R.L.D.A. stated while the Ontario Association had been talking over the cost accounting problem for a long time and seeking to find out how it could be handled from an association point of view, the same difficulty had been occupying the minds of retail lumber dealers in several of the State associations across the line. Finally, two of the associations in the United States, proceeding independently of one another, evolved cost accounting systems of their own, which were adopted and put into operation by many of their members. These were the two associations of New York State (now the Northeastern Association) and of Ohio. A testimony to the correctness of these two systems is the fact that, although they were worked out quite independently, they are, in regard to their essential points, very largely similar. The success of these two State association cost accounting systems naturally led many members of the National Association to believe it possible to adopt one or the other of them, or a combination of both, for use in all parts of the United States. Some two years ago, the National Association submitted the subject to a special committee.

This committee found it a comparatively simple matter to co-ordinate the two systems and evolve from them a system which would meet, not only with the approval of the Northeastern and Ohio Associations, but the approval also of the other associations that are represented in the National. Such a system was submitted to the National Association a year ago at its annual convention in Cleveland and was then adopted as the National System.

Work of Installing System

During the past year, arrangements have been completed and put into effect, with expert certified accountants to install the system in the offices of those members who wish to adopt it. A large number have already put it in and, without exception, the results have been completely satisfactory. The accounting firms charged with the duty of installing the system consist of men of practical experience both in accounting and in the special problems of the retail lumber dealer. There is nothing haphazard about the way in which the work is being carried out. These men know in advance how to handle every peculiar problem that will confront them in any individual yard or mill. They have given satisfaction to each dealer for whom they have carried out the work and they have shown to the retailers that the scruples and fears they formerly entertained about a standard system of cost accounting were without foundation.

Undoubtedly the results already obtained by the National Association in connection with cost accounting were the most interesting and important feature of the seventh annual convention at Louisville, from the point of view of the Ontario Retail Lumber Dealers'

Association. President Shirton and the Secretary of the O.R.L.D.A. were fortunate enough during the convention to have a private conference with Mr. E. F. Hunt, Secretary of the Eastern Millwork Bureau of New York, who is in charge of the installation of the system for the Northeastern Association of Retail Lumber Dealers. Mr. Hunt clearly showed that the system is amply capable of taking care of the accounting requirements of any member of the O.R.L.D.A., however small or large his business may be.

The system has three outstanding characteristics. In the first place, it recommends itself because of its simplicity. To install it, does not require any extensive scrapping of methods already used in a dealer's office. Some comparatively slight alterations may be required here and there, and some slight additions. The big point about the whole thing is that it furnishes, by means of the methods already in use and by perhaps a few additional controlling and analyzing statements, complete information on every point that is essential. It does not make the bookkeeping either complicated or additionally burdensome.

In the second place, the system is characterized by extreme flexibility. It is based upon thoroughly scientific principles of cost accounting. It naturally follows from this that it lends itself to installation under any variety of conditions. It does not matter whether the individual yard or mill has problems of its own which do not occur anywhere else. The system can take care of them all easily and completely.

Outstanding Features of System

Finally, and most important of all, the system gives "all the information." It is thoroughly comprehensive. Once it has been installed and is running smoothly, the bookkeeper knows, and can furnish to the manager at a moment's notice, all the essential facts connected with the cost accounting of the business. It has been the experience of many of those who have installed the system that at first the bookkeepers have objected but, within a few months, they have been enthusiastic supporters. They have found in every case that the anxieties and the uncertainties prevailing under the old method of cost accounting have disappeared, giving place to accurate knowledge of all details.

After several years' experience in installing the system, the certified accountants engaged in the work have now become thoroughly conversant with all the difficulties they have to meet. Their method is to spend the necessary time in making the changes required and to give the accountant of the firm as full instructions as necessary regarding the work. Then, for several months, they keep in close touch with the accountant, visiting him as frequently as they can. In a comparatively short time, the accountant masters the system and requires no further assistance. The cost of making the installation runs from \$200.00 to perhaps \$400.00, according to the size of the business and the method formerly in use. Once it has been completed, there is very little further expense over and above that of ordinary cost accounting.

It is now understood that President Shirton, of the O.R.L.D.A., was so much taken up with the new cost accounting system that he has decided to make use of it in his own office. Cost accounting will be one of the live topics discussed at the forthcoming annual convention of the Ontario Retail Lumber Dealers' Association which will be held at the King Edward Hotel, Toronto, on January 15, 16 and 17, when it is expected that a definite report from the Cost Committee, of which George S. Zimmerman, of Tavistock, is the chairman, will be presented. Mr. Zimmerman recently had a conference in New York with Mr. E. S. Hunt, secretary of the Eastern Millwork Bureau, for the purpose of learning the details of the system as outlined to the president and secretary of the O.R.L.D.A. at the late Louisville gathering.

The President and Secretary of the Ontario Retail Lumber Dealers' Association while away also looked into the house plan service for the coming year, and enquired what developments had been made for 1924 so that more effective arrangements might be given. It was stated by those associated with the plan service that the staff had now been organized and developed to a point where it would be possible to provide more efficient and satisfactory results. This matter will be more fully dealt with at the next meeting of the O.R.L.D.A. in Toronto.

Veteran Lumberman Speaks of Early Times

John Bradley, of Hamilton Has Been Fifty-seven Years in Forest Products Industry and is Going Strong—Exports Large Quantities of Hardwood to Old Country

John Bradley, Hamilton, Ont.

manufacture and distribution, as well as efficiency and economy of operation.

He was born in Plantagenet, Ont., in the historic county of Prescott, and in his youth secured a position with Wilson Bros., lumbermen, of Ottawa, who carried on extensive operations and bought considerable white pine in Western Ontario. Mr. Bradley was engaged in the office of the firm with whom he spent ten years and made frequent trips to the mills and limits in Wentworth and other counties. There he met the late John Ira Flatt, who did considerable jobbing in the logging line and became a warm friend of Mr. Bradley. Wilson Bros. retired from business and sold out their interests to Mr. Bradley. He came West again in the early 70's and accidentally encountered Mr. Flatt in Hamilton and made a proposition that the two should go in partnership. Mr. Flatt, who was quite taken by surprise, agreed to the proposition and for eighteen years their combined business interests continued. There was never a scratch of the pen between them and their relationship was always of a most cordial character. After Mr. Flatt left the firm to become associated with his sons in their lumber activities in Michigan and elsewhere, the close friendship of Mr. Bradley and his former partner continued up to the death of the latter several years ago.

Mr. Flatt was a member for Wentworth in the local Legislature for one term and was a distinctive and outspoken character. He generally got what he went after and on the platform he hit straight and landed in lively style. He was successful in having the last toll gate in Wentworth county abolished, and through his instrumentality a bill was introduced and passed wiping out tolls on all the highways in the province. Sir Oliver Mowat at that time was disinclined to grant Mr. Flatt's request but the latter told him that he would promptly resign, and this brought the little Scotch premier to bay. Mr. Flatt had a number of sayings which stuck. He said the opponents of Mr. Mowat had accused him of extravagance but he wished to say that the First Prime Minister of the province was not guilty of any such fault. "In fact," declared the irrepressible member for Wentworth, "I have known him for some years and he's tighter than the bark on a tree."

Operated Big Mill in the East

Flatt & Bradley in the late 70's acquired 5000 acres of timber limits at Casselman, in Russell County, and bought out a sawmill there. The deal involved \$100,000 in cash and the money was promptly paid. The firm operated the plant for ten years but times were dull, lumber was not in active demand and they lost considerable cash in the venture. The mill was one of the largest in Eastern Ontario and turned out about 75,000 feet a day, principally of white pine, with a small proportion of hemlock and hardwoods. In 1887 the property was sold to the Casselman Lumber Co. and Messrs. Flatt & Bradley continued in the export lumber line. Among the

firms who flourished in that day and have since gone out of business were Cook Bros., McArthur Bros. and others whose names were well known a quarter of a century or more ago.

Before the war Mr. Bradley said that his firm did a large export business to Germany and there used to come to Canada a stalwart representative of the German race who purchased considerable timber from the Bradley Co. When the hostilities were well under way Mr. Bradley discovered one day that the former timber trader had become a general in the German army but he has not seen or heard of him since.

The Bradley Co. exports logs and hardwood lumber to Manchester, London and Glasgow and during the present year has sent about sixty carloads of rock elm and maple logs across the water, together with a quantity of hardwood lumber of 2 in., 3 in. and 4 in. thickness and of a width of 6 in. and up. Considerable American oak is also handled by the Bradley Co. for export.

Mr. Bradley recalls interesting associations with a number of Canadian firms and well remembers when Edward Clark & Sons first started in business in Hamilton in a small way. He had the pleasure of selling the late Mr. Clark his first carload of basswood.

Mr. Bradley has seen many changes in the trade and there are few living to-day who were engaged in it when he first launched out in ante-Confederation days. Lumber was then a decidedly cheap commodity, supplies were plentiful and mills dotted all parts of the land, Wentworth County possessing a large number. To-day the search for hardwood is something of a problem, and in order to secure sufficient supplies of rock elm and maple for export, Mr. Bradley has several men who are out scouting all the time and making purchases from farmers, small sawmill men and others. He uses the farm papers to a considerable extent to announce what kind of timber he is in the market for, and buys up the total output of several small plants and all the logs that are taken out by farmers.

The Bradley Co. has established a wide connection in the hardwood lumber and log export line and Mr. Bradley loves to recall former days and recount reminiscences of the men who were active one-third of a century or more ago in felling the trees of the forest and clearing the timber from the central portions of Ontario, thus making way for the smiling farm lands which to-day dot both sides of the highways in all parts of Ontario.

Subsidies to Encourage Forest Control

The Canadian Government has under consideration the recommendations made by the British Empire Forestry Conference that the use of airplanes in forest protection work should be encouraged by the granting of subsidies. Hon. E. M. MacDonald, minister of national defence, stated lately that on the return of Major-General J. H. MacBrien, chief of the general staff, from attending the Imperial Conference, the whole question would be entered into.

Forestry protection, however, explained Mr. MacDonald, was a question for the provincial governments, as, excepting for the Northwest Territories, the forests were under provincial control. The federal government's policy at present was against granting subsidies for assisting provincial work, but he had no doubt that some assistance could be given along other lines.

At present, he explained, the Canadian Government was assisting in Forestry patrol work by lending airplanes to the provincial governments and training airmen for this work in its military schools.

Safety League Organized in Quebec

A representative gathering took place at the Windsor Hotel, Montreal, on Wednesday, October 17th, for the purpose of organizing a Safety League in the province of Quebec. The chair was occupied by Sir John Gibson, former Lieutenant-Governor of Ontario, who in opening the proceedings, said that whilst Safety Leagues were not subjected to much criticism, the main difficulty was to arouse people to action against the perils of modern means of quick transportation which had apparently developed more rapidly than the mind of the general public—more especially in the larger cities like Montreal. After other speeches, the league was definitely formed for the Province of Quebec.

Steady Upward Movement Expected

The lumber business is passing through a period of transition at the present time. Varying opinions are offered with respect to what will be the outcome during this fall and winter and how conditions will shape up for next year. In times like the present when there is a certain amount of diffidence and hesitancy every man becomes a law unto himself and starts prophesying the way that he thinks or would like things to go. Frequently the wish is the father of the thought and there is no solid basis for his argument or judgment.

There are, of course, certain features in the trade to-day which are difficult to explain but the best evidence that the lumber market is not sagging, so far as general business or quotations are concerned, is that the big operators are all preparing to go into the bush on a larger scale than ever and will take out more than the normal cut of logs at a higher cost of production than in 1922-23.

City trade during the past few months has been good. Building activities have proceeded on a large scale but in the smaller towns and rural sections there has not been much stir. Only a limited number of new dwellings have been erected and some necessary repairs and renovations carried out.

It is not believed either that retail dealers in building material will see much of a revival this fall. The autumn months are never the best for large construction work on farms. By the time harvest and threshing and fall plowing are disposed of, the farmer cannot commence the building of a barn or a home. He can do some repair work and can build some of the small structures required on the farm. This kind of work is being done and there will be more of it before the snow flies. But the larger jobs will be delayed until spring. Because of this condition, retailers will not buy heavily this fall. They are taking only what they must have to care for current demands, and are sending in frequent repeat orders rather than large individual orders.

It is the country trade that has lagged. Most rural districts are way behind on their normal building programs, but will start catching up as soon as sentiment and actual conditions in the rural areas commence to change. By spring they ought to be well on their way. City and country yards have been carrying as little stock this year as they could carry and take care of current business. The improvement in building conditions that should come next spring will send the dealers into the market then, if they do not realize the need before and place their business during the winter.

While it is impossible to foretell the price situation as it will be in 1924, everything now points to a strong market even though yard

buying may continue light during the remainder of the fall and during the coming winter. There is no burden of surplus stock at the mills of any producing section. At most of them the situation is just the reverse. Stocks are badly assorted and low in amount. The worst of the whole situation has evidently passed. From now on there should be a steady upward movement.

How Retailer Can Stimulate Trade

There are many seasons of the year when the retail lumberman can do much to stimulate local trade if he is active and aggressive and looks around in the hope of seeing what may be done to cater to the immediate wants of his fellow-townsmen.

Winter is coming on rapidly and yet few newspapers contain advertisements relating to retail lumbermen being able to supply storm sash and doors which, in these days of the ascending price and scarcity of coal, should be welcome contributions to the equipment of any domicile. Comparatively few houses are fitted with storm windows or doors which, if properly installed, it has been estimated will save about one-third of the coal bill of the average home.

The retail dealer should get some bright, attractive advertising in the local paper and also issue illustrated leaflets or mail a personally directed letter stating that he has a good stock of such doors and windows on hand and is able to supply them at the shortest notice. He might emphasize that the time to have such work done is now when it can be attended to more efficiently and with less rush and delay than later on. A good selling talk can be incorporated in such announcements emphasizing how sash and doors save coal and add to the comfort of the inmates of any dwelling. It might be pointed out that such adjuncts last for years, are easily put up and taken down and the first cost is practically the last cost and even the initial outlay is not heavy. Many other points might be stressed regarding the necessity of having this work done during pleasant weather before the fall rains, snow and zero temperatures arrive.

All the facts that have been set forth are widely known both by retail lumbermen and customers but it is often necessary to make mention of a seasonal suggestion in order to arouse activity and secure practical results. Advertising at this time can do much to emphasize the advantages and economies of equipping homes with safeguards against cold weather and overcoming the tendency to put off things until the last moment. Both the merchant and customer are inclined to follow the lines of least resistance instead of taking time by the forelock and getting things done. Decision and promptitude instead of procrastination and indifference are the characteristics needed in business to-day.

It is necessary that something should be done in order to keep business on the move. He, who is ever watchful and alert, will find many opportunities for increasing trade and capturing a number of odd jobs in his community which, while they may not be large, so far as each unit is concerned, yet, in the aggregate, make up a respectable total and increase the profits on operations during 1923.

What Canada Should do with Forests

The Empire Forestry Conference, which was recently held in Canada and surveyed the wooded resources of the Dominion from coast to coast, has issued a comprehensive report making certain recommendations which are of vital interest and should receive prompt attention with a view to definite action. The menace of the forest fire is dwelt upon and more effective protective measures are advocated in the interest of the conservation of standing timber.

The report, which was fittingly issued during the recent Fire Prevention Week, is interesting, and not only emphasizes the need of more vigilantly safeguarding the dendritic areas of Canada but also draws attention to the reduction of waste in sawmill and logging operations. The employment of aircraft is stressed as well as the application of more efficient methods of silviculture.

The Conference was well received in various parts of Canada. It aroused the interest of the public in the wealth and welfare of the forest and drew attention to the necessity of carrying on reforestation of waste lands in the belief and confidence that the Empire's timber needs should be applied from within.

Reviewing the possibilities of practising silviculture throughout Canada, following its tour of inspection, the conference makes certain recommendations as follows:

Eastern Canada—Forest planting of waste lands as a measure supplemental to the intelligent management of existing forests, which, however, must always constitute the main source of future supplies.

More extensive experiments in the transportation and use of hardwood, which is destroying the pulpwood forests.

Prairie provinces—Material extension of planting shelter belts on the prairie farms.

Western Canada—More economical methods of logging and the protection of seed trees at present destroyed by the debris and waste matter covering the soil, following logging operations.

One of the most important recommendations made by the conference is for the establishment of "reserve forests," or clearly defined districts intended to remain as forests, where the arts of fire prevention and silviculture would be specialized. In other areas, not so well suited for reforestation, no attempt would be made to replant trees.

The conference expressed its opinion that the British Empire's requirements of timber and other forest products should be supplied to the greatest possible extent from sources within the Empire, and that it should become self-supporting in almost all minor forest products.

Owing to Canada's vast forests, fire control, it is stated in the report, must continue to play an important part in the protection of the standing timber. While active fire prevention is urged, the conference claims that unfavorable climatic conditions may result in sudden emergency periods of great danger, and for this reason forest officers should be clothed with powers adequate to conscript labor to fight emergency fires.

"We are impressed," the report says, "not only with the value but with the necessity of using aircraft in protecting the forests of the inaccessible and uninhabited north country of Canada. Unfortunately, costs of operation are so high as to restrict use below the point of efficiency, where forest authorities are required to pay in full for services received. In view of the importance of this subject we feel that the attention of the governments should be drawn to the national necessity of providing airships free or at moderate rates for the use of existing air services to the fullest extent in forest protection work. Where government air facilities are not adequate to meet all the requirements, we are of the opinion that subsidies should be granted to commercial air companies, sufficient to allow them to carry out forest protection work at rates which are within the economic means of forest authorities."

Proper Cost Accounting Saves Pitfalls

It is pleasing to observe that a good portion of the time spent by the directors of the Hardwood Manufacturers' Institute was devoted to a consideration of cost accounting methods. That organization is launching into an earnest effort to arouse the manufacturers of hardwood lumber to a realization of the necessity of knowing their costs; and if it should accomplish that and never do anything else it would have rendered the industry a most signal service, says the "Southern Lumberman."

It would be impossible to over-emphasize the importance of a knowledge of cost accounting to lumber manufacturers. When we stop to consider the fundamentals of the business we must inevitably arrive at the conclusion that such a knowledge is absolutely essential to the intelligent conduct of a lumber manufacturing business. The lumber manufacturer is engaged in cutting down trees, converting them into lumber and selling that lumber to factories which fabricate it into a finished product. The natural assumption is that they are engaged in this activity for the purpose of making money. The only way they can expect to make money is to sell the lumber for more than it cost to produce it. But how can they know whether they are doing that if they don't know what it cost? All that sounds elementary in its simplicity, but it is a deplorable fact that perhaps a majority of the manufacturers of lumber are staggering along from day to day, really in ignorance of what it costs them to put their lumber in the pile. When a buyer offers \$95 for good plain oak or \$50 for B and better pine flooring, the average manufacturer has only the vaguest idea as to whether such prices would realize him a profit or a loss.

In other words, the success or failure of a lumber manufacturing business depends entirely on the selling price; and without a knowledge of costs it is impossible to fix a selling price intelligently.

If a proper knowledge of costs prevailed generally among the manufacturers of lumber there would undoubtedly be greater stability about the business. That is, the trade would not be subjected to the periodic successions of extremities of prosperity and adversity which have characterized the lumber market in the past. There would, of course, continue to be seen the normal round of ups and downs; but there would not recur those depressing times when the sawmill operators appear to be actuated by a concerted determination to force their lumber on the market regardless of price. As a well-informed lumberman expressed it recently: "There will always be bargain counters and there will always be distress lumber for sale, but the more the mill man knows of his costs the less lumber you will see on the bargain counter and the more will he fortify himself

against distressed stocks. It takes an intimate knowledge of cost to develop a keen appreciation of intricate values and there can be no more deterrent influence against panicky conditions in the lumber market than a certain knowledge of what we are losing by our transactions."

It might be thought by some that we are harping too much on this one subject, but we feel that the future prosperity of the business is dependent on a general recognition in the lumber manufacturing trade of the basic importance of knowing production costs. In fact, the lumber manufacturer who does not know his costs accurately is not a business man but a gambler; and he can foresee the outcome of his business venture with no more accuracy than can the man who hazards his whole fortune on a cast of the dice.

Tourist Travel Means Much to Canada

From reports received from the different sections of Canada and from railway, steamship and motor travel figures, there is every reason to believe that a conservative estimate of the value of total tourist traffic into Canada for the year under review would be not less than \$100,000,000.

This means it has already become one of Canada's most important sources of wealth. When money is brought into the country by tourist travel it is the same as if goods were exported to that amount and money received in return, the only difference being that nothing has been shipped out of the country that leaves the capital stock diminished.

There were only in the year under review three items of exports trade which aggregated more than \$100,000,000, so that the export of scenery occupies fourth place in Canada's foreign trade.

Happy is the Man Who Knows

he was born to work, and that by work well done he can keep on climbing as other men have done to more enjoyable and profitable work.

If he is jealous of other men above him, let him remember that it has been long given out as a fact that John Jacob Astor, the first Astor, peddled his goods from a basket; and that the writer saw Thomas A. Edison working at his beginnings in a barn of a place, said to have been used once as a stable.

No man need always stop at his beginnings if he has got anything more in him.

Take a move, at once upon yourself, please.

—John Wanamaker.

Staying on the Job Always Wins

Success comes only to those who are willing to pay the cost necessary to obtain it. We all have the opportunity but very few of us are willing to pay the price.

One of the first items that enters into this cost is attention to business, yet many business men allow their business to suffer through lack of attention.

Show us a successful merchant in any line of business who will go fishing, hunting or visiting and leave a man in charge of the business who is incompetent, a man whose only qualification to handle the work is his honesty or faithfulness or the fact that he is a reliable old fellow. It is not done by successful business men.

Yard managers who leave their yard to go fishing, hunting or visiting without leaving a competent man in charge of the business are courting failure. They are not willing to pay the price of success. If a man who is capable to make a sale properly or settle up an account with a customer or look after any of the other ordinary details of the business, cannot be secured, the manager should stay on the job.—The Knot-Hole.

The SS "Margaret Coughlan" sailed from Vancouver on Oct. 10 for Montreal with a large cargo consisting chiefly of B. C. fir timbers and planks. She also brings 50,000 to 60,000 cases of salmon. This steamer is due to arrive in Montreal about Nov. 10.

Those lumbermen dealing in B. C. fir products should keep in touch with freights ex steamers from the Pacific Coast to St. Lawrence ports as they will find it cheaper to have their stock come by water. The prevailing rate is quite low and as vessels are expected to do the journey in about thirty days' time, goods are not much longer en route than by rail; also opportunities of getting a snap rate when steamers are short of cargo are sometimes open.

National Lumber Dealers Get New Viewpoints

Annual Gathering at Louisville, Ky., Was Attended by President and Secretary of Ontario Association—Handling Materials in Retail Yards

K. J. Shirton, of Dunnville, president of the Ontario Retail Lumber Dealers' Association, and Horace Boulton, of Toronto, secretary of that body, returned recently from attending the seventh annual gathering of the National Retail Lumber Dealers' Association which convened at Louisville, Ky., on October 9, 10 and 11. A large attendance and much enthusiasm marked the proceedings of the representative gathering and several timely questions were discussed. The addresses were practical and pointed and the social features were delightful. The convention was most successful from every standpoint and was well managed throughout.

In his interesting, annual address, President John E. Lloyd of Philadelphia, said that one of the most serious problems facing the retailer today is the increasing cost of retail distribution. He declared that economy and foresight were needed in every walk of life and the retail lumber merchants of the United States should do their part in devising ways of keeping the cost of material to the consumer as low as possible.

In presenting some of his ideas along this line the president said in part:

We should study carefully the possibilities of a centrally located yard or yards, in which all competing yards have a proportionate interest. The duplication of stocks, especially of heavy timbers and of those grades and sizes that have a slow turnover, is something that should have serious consideration. I believe the difficulty could be largely eliminated by a central yard.

Should there be a general trucking company formed in which all, or at least part, of each yard's equipment is pooled? Can we go even further and have just one holding corporation, and by this means eliminate expensive yards supplying the same territory? Is it not a fact that many of the larger yards in the big cities are located in the congested areas, where real estate is the most expensive and where the majority of their hauls are through congested streets to the outlying districts? Why not dispose of these yards, buy in the suburbs where land is cheap and where most of the future development will necessarily be? Inefficient labor is a big problem today and a study should be made of the application and development of piece work in retail yards.

The Movement Toward Standardization

Of the much discussed theory of standardization Mr. Lloyd said: Can we not all agree on some standard for lumber and try it for a year? If it does not work, we can make a change. It is a matter of give and take; we will all of us have to give up some of our pet ideas and all sections of the country will have to concede something for the sake of definite results. So far, it appears to me, the manufacturers have done most of the taking and little of the giving, and we might well make better progress if they would be willing to meet us at least half way, and not demand that we apparently concede that they are always right.

I do not feel that we need a new unit of measure, and far as I know the manufacturers hold the same opinion. With the present unit of measure continued, and with the adoption of standard sizes, it will be necessary in order to obtain Government sanction, that lumber be cut full size green. If manufacturers and retailers are agreed on that, then why cut away 3/8 inch to arrive at the finished standard size of a 2 by 4, when 1/4 inch or less is ample under the best manufacturing practice?

E. P. Allen, director of publicity of the National Lumber Manufacturers Association, Washington, spoke on the benefits that would accrue from co-operative efforts by manufacturers and retailers and outlined the campaign that the lumber manufacturers were inaugurating to educate the public to the value of lumber as a construction material. He stated that the manufacturers could not successfully carry the campaign without the help of the retailers and urged that the latter enter into the idea with enthusiasm.

The general plan contemplates the holding of an intensive home building campaign featuring lumber as the exclusive construction material. The initial demonstrations will be held in two representative cities where the campaign will be given every possible publicity. An important feature will be the construction of a model home

of lumber, which, it is hoped can be started and finished within the period of the campaign. From the day the erection of the home is started a newspaper story will appear daily, which will explain the construction and keep the public in touch with the progress of the structure.

Following this address was a general discussion on the subject of advertising. Here again the co-operative idea was propounded and several short talks by retailers showed the value of advertising in an educational way. It was pointed out that the thought of home owning should be inculcated on the public mind through the advertising of retail lumber dealers.

W. S. Dickason, of Kansas City, opened an interesting discussion on the value of keeping the public informed regarding the price comparisons of building a standard house. He stated that, as everyone knows, the public get erroneous ideas about the price of lumber and that it was an excellent idea to keep the people informed by such periodical surveys as conditions warrant.

Handling Material on Piece Basis

Another profitable discussion was held when the subject of seeking economies through labor and time saving devices was given a good airing by the delegates. Amos Y. Leshner, Philadelphia, in opening the talk, advocated having plenty of yard space wherever possible, so that lumber piles can be kept at moderate height, as high piles spell high labor cost for handling; also wide alleys in sheds, facilitate greatly, the loading of trucks. He said that his company had received good results by paying for unloading cars on a piece-work basis, the rate being 50 cents a thousand feet when the lumber is piled beside the tracks, and 40 cents a thousand feet for loading from piles onto trucks. These figures are based on a wage of 40 cents an hour for labor.

An interesting talk was on the part motor trucks play in the handling of material around the lumber yard. J. R. Bohn of Toledo, Ohio, said that his company attributed greater economy and efficiency in the tractor-trailer system and in maintaining light trucks for making small deliveries. The tractor-trailer system enables them to make up loads and keep the men occupied all the time. When a tractor returns from a trip it immediately hooks on to a loaded trailer and starts out again. By using the tractors only for supplying hauling power on the road and trailers for assembling loads while the tractors are cut out, time is saved and costs are kept down.

At the close of the three days' convention the National Retail Lumber Dealers Association adopted several outstanding resolutions which were as follows:

Whereas, The members of this association in convention assembled took action favoring establishing as standard 1 and 2 inch lumber when dry, rough, and inasmuch as this association has a permanent committee on standardization, be it

Resolved, That this matter of standard widths and thicknesses be referred to the Central Committee on Lumber Standards through the standardization committee of this association.

Are Opposed to Odd Lengths

Resolved, That we are opposed to the manufacture of odd lengths of lumber longer than 9 feet, and we believe a market can be found for lengths 4 to 9 feet only when bundled separately by the manufacturer and sold at an adequate differential in price.

Resolved, That the secretary shall call on one or more dealers in each section of the country to refigure the cost of lumber and millwork for a certain dwelling at certain intervals, thus making possible comparisons on a percentage basis of one period with another for the purpose of correcting any erroneous information being circulated.

The annual banquet of the association was held on the last evening of the convention and John W. Blodgett, president of the National Lumber Manufacturers Association, gave a talk on the benefits to be derived from closer co-operation between the manufacturer and retailer on the subject of determining the standardization of lumber grades and sizes and in serving the lumber consuming public. The dinner was followed by vaudeville entertainment and dancing.

Reduced Stumpage Dues in Quebec

Logging on Burned Areas Will Likely be Conducted on Extensive Scale During Season

The Quebec Provincial Government has, after further consideration, met the wishes of the Quebec limit holders in regard to a reduction of tariff rates on stumpage. It will be remembered that in the month of August last the members of the Quebec Limit Holders' Association waited on the Taschereau Government and made the request that the Order-in-Council passed in 1920 in regard to tariffs on logging, be further suspended and that the 1918 tariff rates be continued in force the same as was done in 1921-22, to encourage operations in the lumber camps which would have to be curtailed if the 1920 Order-in-Council raising the tariff rates was put in force. The deputation of limit holders, who waited on the Quebec Government to make this request, pointed out the conditions of the lumber market, the present high cost of living and demands of labor for work in the woods on account of labor shortage.

This request, after some consideration by the Government, was refused and the Order-in-Council passed in 1920, was put in force. This decision was a surprise to the limit holders who were waiting for an answer to their request from the Government before they started to make their estimates for the work of logging to be carried on in the lumber camps this fall and winter.

Later in the latter part of September the limit holders met in Quebec and decided to again call on the Quebec Government and demonstrate in practical detail the urgent necessity of a reduction in tariffs to insure logging operations in the woods. The situation was clearly illustrated by the limit holders, who were assured by Premier Taschereau and Hon. Mercier, Minister of the Department of Lands and Forests, that the Government would seriously study the situation and the arguments advanced and render an early decision.

During the first week of October the Quebec Government notified the Quebec Limit Holders' Association that, after carefully studying the arguments made in the request for a continuation of the 1918 tariff rates, the Government had decided to make the following reductions for logging in the burnt areas as follows:—White pine from \$3.25 to \$2; red pine from \$2.25 to \$1.75; spruce from \$1.75 to \$1.10. The rates on green wood to remain in force as stipulated in the Order-in-Council passed for tariff rates in 1920.

Results Received With Satisfaction

These reductions have been received with satisfaction and have enabled the limit holders to proceed with the making of their estimates for the cutting to be carried on this fall and coming winter and will assure a much larger cut than would have taken place if the Government had insisted on 1920 tariff rates. Operations will be confined to the burnt areas with little or no cutting in the green timber areas.

In the meantime it is generally recognized that the Taschereau Government manifested creditable wisdom in granting the reduction for logging in the burnt areas for, if the reduction had not been made, there would not have been any special inducement for the cutting in these areas and very little work carried on in the green wood areas on account of the Government tariff rates and the market conditions in Europe as well as the competition from the European continental wood supply countries which would be too formidable for the Canadian trade to meet with any degree of profit.

Another phase in the situation which the Government no doubt well considered was the dangerous menace of insect breeding and destruction. It was realized that if the burnt areas, where fifty or more per cent of the timber can be salvaged, were to a large extent abandoned by the lumber interests in their logging operations, these territories were likely to become a dangerous breeding centre for the borer, the bud worm, fungus and every species of the insect pest which would develop into enormous proportions and spread to every section of the forests with appalling results. This menace will now be in a large measure obviated by the fact that the lumber interests have declared their intention of carrying on logging operations on an extensive scale in the burnt areas leaving the green timber limits for future operations.

Active Prevention Against Fires

In the meantime the Quebec Government realizing the need of guarding the provincial forest areas against fire destruction, have under consideration a scheme on a large scale in this direction. Among the resolutions passed at the British Empire Forestry Conference held at Ottawa, was the protection of standing timber. The resolution proceeds to state:—Owing to Canada's vast forests, fire control must continue to be an important part of the protection of timber and the urgency of active prevention against fires. That owing to unfavorable climatic conditions may result in sudden

emergency periods of great danger and for this reason forest officers should be clothed with powers adequate to conscript labor to fight emergency fires."

The Canadian Forestry Association's report just issued points out that during the past five years Canadian citizens, through their own recklessness, have over 3,600,000 acres of merchantable timber growing on publicly-owned land while in the whole Dominion only 6,000 acres have as yet been planted artificially. This is a serious picture of waste and destruction and it is time the collective Provincial Government got together to map out and put into effect a plan for the protection of Canadian forests from destruction by fire.

Wholesalers Honor Retiring Secretary

A pleasing incident occurred at the weekly luncheon of the Montreal Lumber Dealers' Association, at the Mount Royal Hotel, on Monday, October 15th, when the retiring secretary of the Association, F. H. Devenish, who intends making his future home at Port Elizabeth, South Africa, was presented with a case of silver mounted pipes as a memento of the esteem and appreciation of the members of this Association.

The presentation was appropriately made by Alex. Fenton, of the Riordon Sales Co., Mr. Devenish, in tendering his thanks, feelingly expressed his regret at parting from the Association and said

F. H. Devenish, Montreal
Retiring Secretary of Lumber Dealers'
Association

that private reasons alone have caused him to decide upon leaving the land of his adoption and that, though English born and coming to this country with many old prejudices natural to those from the Old Country, he had learned to appreciate the qualities of Canadian citizenship and that Canada was the country for the young man who wished to make good. Amongst those present at the meeting were Messrs. J. S. Bock, Page, Bennett, Beaudette, Blair, C. H. Church, G. E. Church, W. H. Cote and W. T. Mason.

Mr. Devenish sailed by the SS "Calumet," Elder Dempster Line, which carries numerous other passengers for South African ports. The new secretary is S. Barker who is well known in Montreal lumber circles and a sketch of whose career appears in another column.

Mattagami Plant is Busy Producing

The plant of the Mattagami Pulp & Paper Co. at Smooth Rock Falls, Ont., has undertaken several improvements of late and is now running to capacity in the production of unbleached sulphite pulp. Several economies have been effected and production costs brought down to a reasonable figure so that the organization has been able to show some profit on their operation of late notwithstanding the fact that the market price for pulp has dropped from \$5 to \$10 during the past few months. The Mattagami Company have built up a good sales organization which has kept them well supplied with orders. The company have very little pulp on hand at the present time unsold.

Mary—"I suppose your father will be all unstrung when he hears about your exams."

Jack—"No, I wired him last night."

Many Witnesses Before Pulpwood Commission

Evidence Thus Far is Strongly Against Proposed Embargo—Best Method of Dealing With Forest Fires and Ravages of Bud Worm Considered

At a recent sitting of the Royal Commission on pulpwood held in St. John, N.B., several lumbermen gave evidence. They were practically unanimous in their opposition to any embargo at the present time. The question of the best methods of dealing with forest fires were discussed at length by several of the witnesses and the commissioners and also the ravages of the budworm.

Kenneth L. Golding, Bonny River Lumber Co., opposed the embargo and advocated the use of aeroplanes to protect forests from fires. A. J. O'Connor, Bonny River Lumber Co., advocated the burning of dry grass off meadows in spring and fall as he felt this grass caused forest fires. It was not feasible to burn slash and an embargo would leave wood owners without a market. W. E. Golding spoke in favor of greater fire protection and favored fire police and look-out towers. The quantity of hardwood being used was not as large as it should be. He suggested that G. H. Prince, chief forester, who was an asset to the province be given more money to fight fires. Fire was the chief enemy.

George B. Jones, M.P.P., Apohaqui, said it would be a mistake to put on an embargo until there was a market at home. Farmers in Kings and Queens were opposed to it.

Charles Anderson, McAdam Junction, also opposed the embargo

be appointed to enforce the fire laws as regards forests. His company operated in the southern part of the province from York county downwards. His business was export entirely. Prices paid farmers f.o.b. at mill ranged from \$7.50 to \$11.50 a cord, depending on the distance from the mill.

Edgar Rickard, president of the Pejepscot Paper Co., said that it was a corporation of Maine consisting of sulphite pulp and paper mills. Its chief source of supply was from Canada, owning 600,000 cords in New Brunswick and 300,000 cords on Crown lands. It also owned large interests in Quebec besides others in Maine. An embargo would cut off the supply of 30,000 cords of wood in Canada and would jeopardize the company. It would be in effect the seizure of private property. The holdings of the company were on the shores of the Bay of Fundy in New Brunswick and there was no chance to develop water power to operate mills here. The pulpwood thus would seem to be useless if an embargo was effected. The company would not think of moving its mills to the province and an embargo would mean the scrapping of plant worth millions of dollars.

Standing timber to-day after twenty years' operation was greater than at the time of acquisition. The sum of \$400,000 had been spent on forest preservation and reforestation. There had been only small losses from fire as the result of the resolve to take every safeguard to preserve the company's property as a perpetual source of supply. Conservation as regards the Pejepscot Co. would not be gained by an embargo as they already had it. He spoke of the necessity of protecting vested interests.

In answer to the chairman it was stated that the cost of shipping from New Brunswick to Bath, Me., was between \$4 and \$5 per cord.

New Pulp and Paper School at Three Rivers

The Quebec Government has established at Three Rivers, Que., a school of pulp and paper manufacturing which is the only one of its kind in America. At a meeting of the pulp and paper manufacturers recently held at Three Rivers, they officially gave their sanction to the programme of the school.

For the purpose of keeping the teaching staff in close contact with the pulp and paper industry of the country, the government has appointed an advisory committee with the object of communicating to the school whatever advices or suggestions they may judge of interest to the students. The members of the committee are,—Messrs. Sabbatton, of the Laurentide Co., Grand Mere, Que.; Carruthers, of the Interlake Tissue Mills, Toronto; Stadler, of the Belgo Paper Co., Shawinigan Falls, Que.; Bothwell, of the Brompton Pulp & Paper Co., East-Angus, Que.; Ed. Beck, secretary of the Canadian Pulp and Paper Association, and J. N. Stephenson, Gardenvale, Que.

The ordinary course to be given by the new school will last four years of thirty-six weeks each and is open to those of fourteen years of age or over. There will be an additional fifth year for those who should wish to specialize. The students will be regularly employed in a mill during class hours and also during the summer vacation if they so desire.

Among the different subjects to be taught will be mathematics, mechanical drawing, physics, hydraulics, chemistry, mechanics and electricity, special studies on the preparation of pulp and paper, paper making, commercial and industrial law, industrial control, mill tools machinery and laboratory work of all kinds. The subjects pertaining to the preparation of paper and pulp manufacturing will be taught with all possible care and in all details.

The school opens on November 12 and it is expected that, at least thirty students will register for the first year, besides twenty-five already at the mills who will take in the night classes. Mr. P. E. Piche is the director of the new school.

Turrible! Turrible!

One Sunday two lovers went to church. When the collection was being taken up the young man explored his pockets, and finding nothing, whispered to his sweetheart, "I haven't a cent, I changed my pants."

Meanwhile the girl had been searching her bag and finding nothing blushed a rosy red and said, "I'm in the same predicament."

E. H. Finlayson, Ottawa,
Secretary Pulpwood Commission

on the ground that farmers in his section to-day could realize money on hardly anything else but pulpwood. Percy Anderson, lumberman, of Charlotte County, was another who opposed the embargo on the same grounds.

Commissioner McLellan, just before adjourning, took exception to a newspaper report which stated that the evidence had been presented to the effect that "the forests were not decreasing, and that there was no reason why they should be with proper methods of conservation." The forests are decreasing at a rapid rate, said Mr. McLellan, not so much by the axe as by fire and budworm. Articles like these are more or less misleading. The forests are rapidly decreasing and more people must understand this. The article was not a correct presentation but practically the reverse.

Gray B. N. Keith, of the Atlantic Pulpwood Co., was not in favor of an embargo on pulpwood. It would mean that farmers would not have a source of revenue their lands now afford them. It would offer no inducement for pulp mill owners to come in until the resources of his own country were exhausted. It would take away the right to sell to the highest bidder. It is not logging but careless lumbermen, fishermen, etc., whose fires destroy more than operators could hope to cut, that are depleting forests. Fire was the arch enemy of forests. To put down fires should be the primary object in preservation of forests. He suggested that a commission

Conference Held on Building Material Costs

An interesting conference was held recently at the Vancouver Builders' Exchange when a number of lumbermen met contractors and others and after the dinner had been partaken of an interesting debate followed. It is believed that a building boom will shortly eventuate in Vancouver and it is desirable that all trade interests should work together in unity and harmony. Naturally some criticism has been levelled against lumbermen at different times, alleging that they are selling their product at too high a figure.

The recent gathering was to discuss the cost of all building material with a revision in price if it was found that such could be carried out. Arguments were brought forward by certain builders who thought lumber should be cheaper in Vancouver than the price charged for orders shipped by rail to the United States. A discount from the retail price on all material, including sash, doors, shingles, etc., should be given to certain contractors, was urged on the one hand. It was alleged that this was the practice elsewhere.

E. F. Sanders, manager of the Vancouver Lumber Co., in replying for the lumbermen said lumber was cheaper in Vancouver than at any other point on the Pacific coast. That would mean, also, that it was considerably lower than quotations in towns in the interior reached by rail. It was obvious, he added, that contractors were getting lumber cheaper than contractors in other cities anywhere on the continent.

J. A. Edgecumbe of the Canada Shingle Co. and president of the Shingle Association, repeated the assertion that lumber could not be obtained anywhere at lower figures than those prevailing in Vancouver. The building trade was being supplied at the lowest possible cost.

Representations of supply houses in such building material as cement, sand, gravel, lime, heating and plumbing equipment, were unanimous in telling the builders that until there was a greater demand very little reduction in present prices could be expected. They pointed out that the plant for production of such material was handicapped with the same overhead as if the demand were good, and the capacity of existing plants is equal to many times present demand.

Guard Machines at Point of Operation

At the National Safety Council which recently held its twelfth annual meeting in Buffalo, there was a splendid attendance and much interest was taken in the proceedings. A number of Canadians were present at the sessions. The congress was one of the most inspiring and co-operative that has taken place since 1911. The great cry is to reduce the number of accidents and thus maintain efficiency and productiveness.

The woodworking industry came in for its share of attention and several sessions were devoted to considering safety devices and methods for this line of activity. It was emphasized that greater care should be exercised in the operation of woodworking machines and it was stated that, in this specific branch of industry, much more interest should be aroused as \$9,000,000 was paid out in losses through workmen's compensation. It appears that over 42 per cent. of all the losses paid occurred through accidents at the point of operation.

Ways and means of guarding the point of operation on circular saws and shapers were considered. For this purpose a large number of saw guards manufactured by commercial houses together with home made devices forwarded by industrial concerns which had been developed in their specific plants were exhibited and after each specific type had been demonstrated an able discussion on the subject was conducted by C. B. Auel, manager, employees service department, Westinghouse Electric & Manufacturing Co., East Pittsburgh, Pa.

Throughout the discussion particular emphasis was placed upon the large number of accidents occurring from "kick backs" and it seemed to be the consensus that each circular saw other than the self feed saws should be provided with a device to prevent the material from being thrown back on the operator. Considerable weight was placed on the fact that because of the losses through accidents jointers should be furnished with guards which would provide the maximum of protection. Great interest was exhibited in the guarding of wood shapers. It seemed to be the opinion that each cutting head of a wood shaper, hand fed panel raiser and similar machines which were not automatically fed should be enclosed with an adequate cage guard so designed as to keep the operator's hands away from the cutting edge. Devices of this type were demonstrated.

How to organize for safety in the woodworking plant was ably dealt with by J. L. Thompson, superintendent of the Engineering and Inspection Division of the Travellers' Insurance Co. The speaker called attention to the necessity of so locating machines that each be overcome by safeguarding and pointed out that the only way to counteract such accidents was to conduct a well organized safety organization in the plant. The National Safety Council has issued

very complete instructions covering methods of organizing safety work and these publications will be of interest to any industrial plant carrying on woodworking operations.

A. S. Kurkjian, of the Oliver Machinery Co., Grand Rapids, Mich., talked "Safe Plant Layout and Equipment." This paper called attention to the necessity of so locating machines that each operator will have sufficient space in which to handle material with the least possible interference from or to other workmen or machines and also the necessity of placing machines so that it would not be compulsory for the operator to stand near an aisle. The machines should also be arranged to take advantage of natural light as far as possible and the work laid out so that the operations on each floor follow in sequence, thus allowing the process to develop from one end of the plant to the other. Emphasis was placed on the fact that floors where operators were compelled to stand to operate machines such as woodworking shapers, jointers, saw and wood turning lathes should be provided with effective means to prevent slipping and attention was called to the fact that aisles should be of sufficient width to permit passing of trucks and workmen without crowding.

A thoughtful and timely paper was given by Sherwood Brockwell, State insurance department, Raleigh, N. C., on "Fire Protection in Lumber Yards and Woodworking Plants." This was followed by a discussion on the "Cost of Point of Operation Accidents" and a method of reducing these costs by H. G. Wiberg, chief engineer and underwriter, Lumber Mutual Casualty Insurance Co., of New York, who made a complete analysis of the cost of accidents in woodworking plants and emphasized the fact that through the guarding of the point of operation of machines the cost of workmen's compensation could be greatly reduced.

Dues on Green Timber are Higher

Contrary to the impression that recent orders-in-council passed by the Quebec Government will reduce the stumpage dues on burnt timber, the Canadian Lumbermen's Association, Ottawa, lately issued a statement to the effect that the dues on green and burned timber will be considerably higher for the cutting season of 1923-24 as compared with the 1922-23 season. The statement says:

On green timber the increase on white pine, oak, hickory, walnut, is \$2.40, the dues last season being \$2.60, whereas they are \$5 for this season; on red pine, elm, ash, basswood, birch, maple, tamarac, the increase is \$1.50, last season's dues being \$2.00, this season \$3.50; on spruce, balsam, grey pine, hemlock, white birch, aspen, poplar, the increase is \$1.10, last season's dues being \$1.60 and this season \$2.70.

On burned timber the increase is 25 cents on all classes of timber. The dues last season on white pine, oak, hickory, walnut, were \$1.75, this season \$2.00; on red pine, elm, ash, basswood, birch, maple, tamarac, last season's dues were \$1.50 this season \$1.75; on spruce, balsam, grey pine, hemlock, white birch, aspen, poplar, last season's dues were \$1.25, and this season \$1.50.

These dues are all based per 1,000 feet board measure.

Canada Can Have Any Site Desired

President Lalou of the Municipal Council of Paris appeared before the Municipal Committee which met recently to decide as to the request submitted by the Prefect of the Seine regarding the fixing of a site in Paris for the installation of the Canadian travelling exhibition. He urged his colleagues to come to a favorable decision in order that the city might give evidence to Canada of its feelings of fraternal sympathy.

The committee, with a view to encouraging by all means at its disposal the success of the exhibition, designated the following sites from which a choice could be made: Esplanade des Invalides, Place de Breteuil, Boulevard St. Francois Xavier, Place Vauban, Champ de Mars, Cours de Vincennes.

"As long as there is lumber left in America I must have My CANADA LUMBERMAN."

So writes a reader from a far country who has been reading Canada's National Lumber Journal for years. Perhaps you know him, he is:

W. W. Thamas,

Solhem, Karlshamn, Sweden

Securing and Training Young Men Is Problem

Present-day Methods of Obtaining Apprentices Is Far From Satisfactory—Some Improvements Urgently Needed—Radical Change Suggested

During the past thirty five years this old world has certainly travelled at a dizzy pace. Whether the tremendous energy has taken us forward or not, is a difficult question to answer.

When we view the situation today from one angle we see the milestones of passing years marking great advances in science; innumerable inventions in industry and countless discoveries of natural phenomena which, on the face of it all, ostensibly personifies true progress.

It was inevitable that with these tremendous changes a certain discontent for old methods would gradually manifest itself. Many of these obsolete methods and institutions had to go, of course. But we are learning today that some of the so-called improvements have fallen down badly, and many of us are wondering if the old ways were not superior, in some cases.

The present day method of obtaining apprentices in many lines of trade is an example that stands out like a sore thumb. When this comparatively new country of Canada commenced to get on its feet not so very many years ago, the system of binding youths for a certain number of years to an employer, for an agreed upon wage, gradually lost its preference. People coming to this land of ours desired to make improvements upon the systems of the old land which in some cases they believed were more or less oppressive.

Our educational system was a radical change. Children raised under the school system of Canada were afforded a better chance to obtain a higher education than their fathers and mothers did in the old land. With the minds of the people focussed on that desire to give their children something better, which meant in most cases, a white collar job, our schools system trained the youth under that influence. Today we are witnessing the initial results in an acute shortage in all lines of industry.

In the wood manufacturing industry the shops and mills are filled with elderly men and in many cases, the positions are held by those who have passed their three score years and ten.

A Western Man's Idea

At the Second Congress of Western Planing Mill and Wood-working Association, held at Portland, Oregon, P. J. McDonald of the Los Angeles Planing Mill Co. addressed the delegates on the problem of "Apprenticeship Training." He made many pertinent observations and suggestions on the perpetuation of the labor supply in his particular field of activity. These deductions mark Mr. McDonald as a man who has given the subject careful thought. The salient points of his talk are reproduced here and are well worth a perusal.

"I have run an open shop for 23 years, and believe this is the reason of my success with so many apprentices. We do not discriminate against a union man, but we do insist on a non-union foreman, and expect him to treat the union and non-union men alike, to be firm, but kind.

It is not only the personal interest which the foreman takes in the help, but it is the interest which the executives show in their employes that really counts. I like to walk through the shop and know every man and boy by name, pass the time of day, and if they have any sorrows or troubles, assist them when you can, and you will find this personal interest is a big asset.

Difficult to get Help

I believe I have been instrumental in training and turning out more young men in the different branches of the planing mill industry than any other planing mill man in Southern California.

In the past it has been very difficult to secure young fellows on account of the low wage paid, the exception being that the sons of many of our old employees took up their father's trade; but the number of these are few, comparatively speaking, when we consider the large number engaged in our line.

Of late years, on account of the improved condition of wages, we find a greater number anxious to work in our shops. It is up to us, therefore, to encourage them in every way; first, by paying a decent wage, give each a locker for his clothes, provide a place to wash, keep the premises sanitary and clean, and secondly, see that the teacher, or foreman, is interested in them, treats them kindly and has a word of encouragement for each one. If mistakes are made, correct in a kindly way, and you will find the boy more anxious

to improve. Do not expect too much until he has had a reasonable time to make the grade. If it takes too long to bring about this condition, then something is wrong; either he is not properly trained, or else he is dull and not interested in his work except to the extent of his pay. If the former, correct and give him a fair chance; if the latter, let him go, he will never make good.

Difficulty in Holding the Boy

We find one of the most discouraging circumstances in connection with apprenticeship training is that on account of not having some legal method of holding a boy in your employ, that after spending your time and money on his training, he wants more wages than he is really worth, forgets his obligations to you, leaves because he doesn't get it and immediately goes over to your competitor and gets more than you could afford to pay him.

This has occurred to us many times, and to others whom I know. And this condition must be remedied before the mill owners will seriously interest themselves in this phase of the business.

Isn't it possible for the Western Planing Mill Association to take up this question in earnest and adopt some standard of legal contract, or indenture, to cover apprentices? Then, and not until then, will we be able to interest the majority of employers and make real mechanics of apprentices."

When the Mill Falls Down on Delivery

"Many mills are blaming us for not selling more lumber when there is little stock changing hands, or they declare that there is business if we will only get out and dig for it," remarked a leading lumber salesman the other day. "While the fault may occasionally be on our side, there are not a few times when the mill is to blame. All the sins of omission cannot be pinned on the lapel of the traveller. The millman knows that in many instances he falls down on shipments. We promise that a carload of such and such stock will be in the hands of our customer by a certain day. He does not receive it and naturally he attaches considerable blame to us when it is the mill that is wholly to blame. The customer quite properly becomes irritated. Generally when he orders, he has a very definite outlet in sight for the stock or a need that he wishes to supply immediately. Delays, therefore, seriously inconvenience him and he does not like to order more from other sources as he fears overloading. Occasionally we find a man who cancels his order just because he cannot get prompt delivery and no one can really blame him.

"Mills talk about their service and should make every effort to live up to it, for there is nothing that can take its place. When we call on some of our customers later, they do not fail to remind us,— "Oh! you are the beggar from whom I ordered that carload of merchantable hemlock which you promised would reach me by the 16th of last month. It did not get here till the 10th of this month."

"Then we have to do a lot of talking in the way of offering excuses and seeking to pacify the complainant. Even then he will retain doubts and will be chary of placing another order with us especially if the stock is required within a certain specified time."

"Service" is a much-abused term in connection with all businesses and "delivery" is often at fault. Living up to one's promises is a great lever in landing trade, establishing close relationships and working for the expansion of business and a larger turnover."

Teacher (to boy sitting idly in school during writing time): "Henry, why are you not writing?"

Henry: "I aint got no pen."

Teacher: "Where's your grammar?"

Henry: "She's dead."

Jonny was learning the alphabet and was asked by his teacher what letter came after "H."

"I dunno."

"What have I on each side of my nose?"

"Freckles."

CURRENT LUMBER PRICES—WHOLESALE

Toronto Hardwood Prices

The prices given below are the average quotations for carload lots, F.O.B. Toronto, from wholesalers to retailers, and are based on a good percentage of long lengths and good widths without any wide stock having been sorted. The quotations under plain and quartered oak refer to soft textured oak. Hard southern oak is usually quoted at \$10 less per M than soft oak. Dry weight white ash averages 3,800 lbs. per M. feet; birch 4,000 lbs.; basswood 2,500 lbs.; chestnut 2,800 lbs.; maple 4,000 lbs.; elm 3,000 lbs.; red gum 3,300 lbs.; hickory 4,500 lbs.; plain white and red oak and quarter cut white oak 4,000 lbs.

These are Some Things Which Make Us Smile

A group of negroes were at the terminal station Sunday morning, telling a few departing brethren good-by. A trainman noticed one negro looking on nonchalantly, and inquired: "John are you going north?" "No, sir," said the negro addressed. "I see a class B nigger."

"What do you mean by class 'B' nigger?" asked the trainman.

"Well," said Sam, "I B's here when dey leave, and I B's here when dey come back."

An ancient, and the only, Chinaman in a certain town is the possessor of several dozen chickens, and had long been in the

habit of supplying the lone grocery store in the village with its weekly quota of eggs. One day, during the moulting season, he sauntered in without the customary bucketful.

"Well," demanded the merchant, "no eggs for me today?"

"Nopee," replied the official egg purveyor. "Me tella you why no gotum. Chicken he changum pants. He no layum now."

"I forgot to ask you to come to my camp-fire picnic—will you come?"

"It's too late now. I prayed for a blizzard!"

A cynic one defined faith as "belief in

something you know ain't so." It must have been some such inspiration that moved a customer of a large brokerage house—a man of marked Teutonic appearance—to give an order to buy 100,000,000 marks recently, when marks were 5,000,000 to the dollar. The manager told him he was practically throwing money away, but he replied:

"You Americans do not understand. I have faith in Germany. Look at what she did before the war in trade and commerce. Why can't she repeat. My faith in the Fatherland is such that I have been accumulating marks all the way down from 7 cents, and I now hold many hundred millions which will make me a wealthy man some day."—Wall Street Journal.

LUMBER TRADE CONDITIONS

Montreal Lumber Market Continues Steady

There is a reasonably good demand for B. C. fir clears though not sufficient to stiffen prices at this end as wholesalers are not disposed to hold larger stocks. Dimension stocks of such sizes as 8" x 8", 10" x 10" & 12" x 12", 20 ft. and up are quoted around \$57.50 per M. ft. ex rail; when water borne stock is available this can be had at something less. It is that an over shipment of about 170,000 ft. is coming forward ex steamer which will probably be the last to reach port before the close of navigation. There is also some stock offering ex New York at about the above price.

The spruce market is steady with good demand but there is hesitation on the part of the yards to buy at the advanced prices now asked by the mills; indeed, yards are often prepared to sell at a lower price ex yard than the mills are willing to accept ex f.o.b. cars Montreal; in such a size as 2" x 9" local dealers are selling at \$45 whereas mills ask around \$47.50 f.o.b. cars Montreal.

Until the present divergence of views is rectified the trade does not look for a great deal of activity as between the mills and wholesalers. With the export market "off" buyers are going warily.

The export market to Great Britain continues quiet for this time of the year when shippers are generally getting stocks across to complete their winter specifications, prior to any possible increase in freight rates and to avoid extra insurance. There is a fair quantity of white pine being moved out but it is doubtful if these represent sales. It is more for the purpose of reducing holdings on this side and no doubt financing is easier across the pond.

Ocean freight rates to all ports continue to be quoted at 70/-per standard, an absurd rate as compared with pre war figures, and as long as such a rate is maintained it will tend to impede business and will assist the Swedish and Norwegian shippers.

It is contended that even at this figure the steamers do not make money but shippers cannot believe that running expenses today are 100% higher than at pre war times. The opinion of some is that the extra cost is caused by inflated capital on which dividends are expected to be paid. If ocean rates to old country ports were say 50/-per standard it would help lumber exports immensely and this shippers consider would be a fair rate both for themselves and the steamship companies.

It is too late now to look for a change this season but better things next spring are hoped for. Should the recent dullness in grain shipments continue the Maritime Province shippers may get some concession for winter shipments as should grain not offer in larger quantities the liners may be forced to look for deals in larger quantities.

Lumber Business in Ontario is Spotty

Business in the lumber line generally shows but little change and the majority of wholesalers describe the trade as "spotty." Some weeks are exceptionally good and others are decidedly off. It is the same, too, in the matter of orders received by mail. On certain dates inquiries are numerous and on others there is an entire absence. Retail yards are not buying very much at the present juncture and are replenishing their stock in the various widths and thicknesses only as required.

Building materials are not moving any too freely in any section of the province. Many dealers are awaiting rumored price declines; others have adequate stocks on hand; and still others are not buying because they anticipate a subnormal volume of business during the following few months.

Prices on the whole, however, are fairly firm and this applies particularly to No. 1 and No. 2 white pine mill culls. Hemlock is a little easier than it has been owing to the falling off in general building in the larger centres, but spruce is holding up well and prices are inclined to stiffen.

No two men seem to hold identical opinions with respect to the future of the lumber industry. Several wholesalers declare that a period of lower prices is at hand, and affirm that while the reductions may not be radical, they will be substantial. On the other hand, manufacturers contend that stocks in their yards are much lower than they were last year, that manufacturing costs are ascending owing to the higher wages, the scarcity and inefficiency of labor, etc.

It is also pointed out that the cut in Ontario has fallen far short of what was anticipated last spring due to the absence of heavy rains and the low water which resulted in many drives being hung up and plants having to close down in several instances before the usual

time. It is generally agreed that should there be any unprecedented demand for lumber this fall it would be difficult to meet the call.

The majority of mills will close at the end of October and some have already completed their operations for 1923. At many points men for the bush are exceedingly scarce but harvesters from the West are returning and this should tend to relieve the situation to some extent.

Eastern representatives of British Columbia mills report that the demand for Western woods is particularly good and this applies, owing to the house-finishing season, to ceiling, flooring, casing, base, V-joint, etc. Shingles are still off in demand and varying in price and a number of the mills are not operating. They contend that they cannot turn out shingles at the present figure and make a profit on production.

So far as hardwoods are concerned, the market shows virtually no change. Furniture manufacturers are evidencing a bit more interest in the market and are buying in limited quantities as trade is developing to some extent. Sales to industrials in Ontario, however, are small and fully 90 to 95 per cent. of the hardwoods disposed of are marketed in Buffalo, Detroit and other U. S. consuming centres. Automobile concerns are buying in moderate volume but the farm implement producers, piano factories, gramophone and other consuming concerns are cautious in their purchasers. Other users are waiting to see how much fall business will develop before placing orders for forward requirements, figuring that, from the amount of early autumn trade they can compute more accurately the probable extent of demands for their products during the next few months.

The lath market is rather quiet at the present time particularly in No. 1 white pine. No. 2 and 32 inch. are having a fair call but owing to the subsidence of building operations, there has not been the active requisition for the product that was anticipated. Spruce lath from the eastern provinces is enjoying a lively demand in New England points and the price has been stiffening. All the manufacturers are sending forward large quantities. Just how long the call will keep up is problematical. Some believe that the market will be sustained for several weeks while others look upon the present state of affairs as a flurry.

Quebec Export Trade Has Slowed Down

The shipment of lumber from the port of Quebec during the month of October was insignificant in comparison to earlier expectations. With the exception of a few parcels called for the complete orders, practically no shipments were made. This is due to the continued complex European conditions and the reluctance of English importers to purchase to any extent until the European situation manifests more definite signs towards a settlement. The recent export advices received by the Quebec lumber trade from the United Kingdom agents, while not in the least pessimistic, are not encouraging as far as the outlook for any further orders is concerned for the balance of this season of navigation in the St. Lawrence.

It would be idle to dispute the fact that politics do not figure in the life of trade and commerce especially international politics and that, until the present European situation clears up, the trade of the entire world will continue to remain in a chaotic state. It must, however, be considered from past experience and the trend of events recorded in history, that the dawn of brighter days have materialized when the clouds that overspread the horizon were the blackest. This is the position of things at present in Europe with an occasional rift in the dark horizon to lend hope for an amelioration of political conditions and a rejuvenation of trade and commerce with the beginning of 1924.

European agents of Quebec exporting firms, in making the deductions from the export statistics of the world's politics and its economical viewpoint, are of the opinion that the issue has reached its worst phase and the time has matured when the diplomatic forces of the European nations must get together to agree on a settlement with give and take concessions and sacrifice in the interests of the economic life of the world. One of the barometers in the present chaos is the wonderful susceptibility of the stock markets and the readiness with which they respond to the slightest sign or hope of a settlement of the reparations dispute to show the importance which the business men in the United Kingdom attach to this Franco-Belgo German problem.

It must be admitted, from past and present experience, that all trades are dominated by politics, and international business can only

Interested in Hardwood Flooring Machinery?

Muskoka Wood Mfg. Co. Ltd.,

Mfrs. of Hardwood Flooring

Huntsville, Ont., October 16th, 1923

The Garlock Machinery Co. Ltd.,

Toronto, Ont.

Dear Sirs:

We have your letter of October 15th and in reply wish to state that the equipment purchased through you from the American Machinery Corporation is proving quite equal to anticipation.

We are feeding our machines at the present time 140 feet per minute in 13/16 Maple or Birch. These machines are equipped with scrapers but we are not using the scrapers as the work is as near perfect, we think, as it is possible to get flooring.

The end matchers do their work also in the best possible style, each joint being perfectly square.

Many of our customers have written that the "Red Deer Brand" Flooring turned out at the present time with the equipment purchased through you, is the best manufactured flooring in Canada.

All our machines are direct connected motor driven and we certainly are pleased with the Hardwood Flooring equipment.

Yours truly,

THE MUSKOKA WOOD MFG. CO. Limited,
Per R. J. Hutcheson.

T. H. Hancock, Limited

Mfrs. of Hardwood Flooring

Toronto, October 22nd, 1923

The Garlock Machinery Co. Ltd.,

Toronto, Ont.

Dear Sirs:

In reference to the No. 77A Hardwood flooring machine we installed this spring—we have nothing to say of this machine but that which is the very best. In fact, since it was put into the mill we have heard very little of it.

On looking up the records of work this machine is doing we find it has been running continuously on 3/4" and 7/8" flooring, and we have had no repair bills whatever. We are somewhat cramped for room and have not been able to run this machine to its capacity.

In reference to the quality of work this machine is doing—we feel we are making one of the best products on the market to-day and see no reason why this unit, with proper attention, should not keep up this good work.

One of the reasons for purchasing this type of machine was from the fact that about ten years ago we installed a machine of the same type, No. 77, Softwood and if this Hardwood machine holds up to the record of the Softwood machine we will be more than pleased.

Yours truly,

T. H. HANCOCK, LIMITED,
T. H. Hancock, President

be conducted on an extensive scale if there is a stable basis of currencies and a consistent measure of values. The foreign exchanges are so upset by alarms in the political world that trades are bothered to know from day to day, in England especially, whether or not their transactions will result in profit or loss. The importing timber trade in Great Britain is no exception and this cannot be otherwise.

In the meantime the consumption of sawn lumber for house-building is to some extent an encouragement but in this regard the continental wood-producing countries are the largest companies and not Canada. However, in this connection it must be considered that price is the predominating feature with the advantages in favor of Scandinavian shippers. It is well for the Canadian trade to comprehend that there is no sentiment in business and the British import lumber trade will buy their supplies from the cheapest market. The British trade journals feature the selling and general activities of these foreign markets taking little notice of the Canadian lumber interests.

The British Empire Forestry Congress recently held in Ottawa, after the British delegates had made a tour of the various Canadian provinces to inspect and take cognizance of the forest resources of Canada at their final session and the drafting of resolutions among the recommendations made, expressed the opinion "That the British Empire requirements of timber and other forest products should be supplied to the greatest possible extent from sources within the Empire and that it should become self supporting in all forest products." It will remain to be seen what effect this recommendation will have on the British wood purchasing public and the British steamship owners in the regulation of their ocean freight rates to enable the Canadian lumber trade to enter the United Kingdom market in competition with the wood-selling interests of Russia, Finland and Sweden.

It is quite possible that, before the close of the month of October, the Canadian export trade may receive cable orders for shipment during the early part of November. The British agents, looking after Canadian lumber interests, in their latest reports to Quebec shipping firms, convey the information that a brisker tone was noticeable from the beginning of October in the English market in all its departments, f.o.b. negotiations more active and more contracts closed. Importers were selling with greater freedom and the consumption was well maintained, and London firms have turned over a good quantity of their c.i.f. terms. The spot trade has also been brisk and landed values likely to further rise while all cargoes that have arrived and supplies for prompt delivery are wanted in a hurry.

As regards purchasing for the late autumn, the position in England according to these export reports, is not so difficult. A firm market now is in the interest of the English buyers as well as the sellers and the majority of the importers would be surprised to see anything in the nature of a slump so late in the season. Such an event is not considered at all probable and importers feel that in booking up their winter requirements at current figures, they are not incurring risk.

As to the future and prices for next year, there is a great divergence of opinion in the minds of the English importers. In the meantime reports from all quarters of England show that spot values are tending upward. Some purchasers in the import trade say they expect to see early quotations for next year reach the present top figures for next year's business but do not intend to purchase early on such basis. The British demand may be put down as satisfactory and likely to remain so but there is the political situation to influence prospects as these naturally influence exchanges, either in the direction of stability or otherwise, especially, when the whole of the present season is looked into and diagnosed. Europe seemed to be on the verge of financial chaos and even of war and yet one crisis after another has been overcome. Fresh troubles have again arisen to retard progress toward stable conditions which, however, are not without hope. Nevertheless the economic and political experts in England believe that the change for the better will be extremely gradual. But taking the widest possible view of the market, the present situation is likely to close without any great alteration in f.o.b. values and that for 1924 the British expect to maintain this year's basis with the hope, however, of a near settlement of the reparations question to accentuate and put new life in the lumber business.

Spruce Deals Shipped to South Africa

The SS "Calumet" sailed from Montreal for South African ports, Cape Town, Durban and Elizabethtown, on October 20, taking about 460,000 ft. b.m., of spruce deals. This is quite a fair shipment as recently orders have been scarce for South African ports. The shipment is made for New York accounts. Canadians would like to see more lumber going forward to the sister colony but competition from

the spruce countries is evidently too keen. The trade from Canada to South Africa was first started about 1900, and the largest shippers at that time were Messrs. Robert Cox & Co., who sent forward some good consignments of red pine, this lumber being suitable to stand the South African climate. Unfortunately the first season's business resulted in a heavy loss of some thousands of pounds sterling and the trade was afterwards conducted from their Liverpool yards.

Freight rates to South Africa have always been kept at a reasonable level. Even during the war when everything was inflated, the Elder Dempster Line maintained a solid policy, with the consequence that there has never been drastic competition.

Canadian Woods on British Market

According to the latest information set forth in Farnworth & Jardine's letter from Liverpool, Eng., imports all around during the past month have been moderate and with a fairly large consumption, the stocks did not change much. Business on the whole ruled quiet and values generally were a shade easier.

In regard to the market for Canadian woods in the Old Country, the following information is presented:—

Quebec, etc., Yellow Pine Timber.—There was a small amount of business done leaving stocks practically on a par with this time last year. Wane Pine.—First-Class.—An import of 25,000 cubic feet to Manchester on contract. Consumption small. Stocks are not excessive. Second-Class.—Only a small movement noticeable. Stocks are sufficient. Square Pine, Red Pine.—No demand. Oak.—Import and consumption were both 1,000 cubic feet. Stocks are not heavy. Elm.—Stocks very light and there should be an opening for suitable wood. Pine Deals.—There was a considerable import. Consumption on the small side, therefore stocks are increased and stand about the same as twelve months ago. Spruce.—A small import by Liner. Deliveries fair. Stocks are not heavy.

New Brunswick and Nova Scotia Spruce and Pine Deals, etc.—The Mersey (including the Manchester Canal) received an Import of 5,640 Standards, of which 4,640 Standards went into consumption. Stocks come to a total of 14,100 Standards, which is more than that held at the corresponding period last year, viz., 9,690 Standards. Values for the better productions were fairly well maintained, but Liner parcels from Halifax sent forward on consignment were weaker. Pine Deals.—Practically no stock.

Birch.—Logs.—The import came to 3,000 cubic feet. With a similar quantity going into consumption stocks are unchanged. There is no stock in Manchester. Planks.—Imports were mostly to Liverpool. Consumption more than kept pace. Stocks, however, are full, viz., 180,000 cubic feet, of which 131,000 cubic feet are held in Manchester. Values were slightly easier for Lower Ports wood.

What Lumber Industry Means to Coast

According to the report of the department of labor, Victoria, B. C., for 1922 lumber concerns to the number of 667 paid out in wages \$23,827,204, as against \$18,180,962 paid by 533 firms in 1921. Altogether the forest products industries payrolls were as under:

Lumbering	\$23,827,204
Pulp and paper	3,639,689
Wood manufacture N.E.S.	1,045,914

Total \$28,512,794

The total wages payments by all industries in British Columbia amounted to \$86,192,190 (2809 firms reporting). The forest products industries thus are responsible for over 30 per cent. of the province's payroll.

As regards labor, the average number of workers in the lumber industry during any month was about 19,100; in the pulp and paper industry 2150 and in other branches of woodworking 750, making a total monthly average of 22,000 males. In all the provincial industries the average number of workers engaged was about 54,000 males (2809 firms reporting.) The forest product industries therefore employ about forty per cent. of the province's male industrial population.

For the purposes of classification lumbering includes logging, logging railways, planing mills, sawmills, and shingle mills. Under wood manufacturing (N.E.S.) are grouped sash and door, veneer box manufacturers, etc.

A. T. Murchie, chief scaler of the Department of Lands and Mines, who returned lately to Fredericton from a visit to Charlo, Restigouche county, N. B., said that there was still a shortage of woodsmen in that section of the province, although some of the harvesters have commenced to return from the West. Woodsmen are also being attracted to the provinces of Quebec and Ontario, he said, lured by the reports of high wages.

Linn Logging Tractor equipped with 15-ton Semi-trailer for Portaging of Supplies

LINN LOGGING TRACTOR

In addition to the cutting of his timber, the hauling of his logs, his spring drive and his improvements, the portaging of supplies is of prime importance to the logger. Portaging with horses is expensive and slow.

The above illustration shows the Linn Logging Tractor with summer steerage wheels attached, prepared for summer portaging work, with a semi-trailer mounted upon its rear bolster. This trailer can be 16 or 18 ft. long and of a width necessary to permit the carrying of large quantities of baled hay, oats, or general camp supplies. The Linn Logging Tractor can of course be equipped with a body on its own frame, which can be 13 ft. long and over 6 ft. wide, but as the carrying capacity of the Linn Logging Tractor is limited to 10 tons on its own body, the use of this semi-trailer enables an additional 5 tons to be carried.

Linn Logging Tractors have demonstrated their usefulness to the logger, and in the realm of portaging the Linn Logging Tractor fulfills an equally important part.

We will be pleased to discuss the merits of this Linn portaging outfit and we can supply this equipment to users of Linn Logging Tractors who have been using their machines for two or three years.

"Ask the logger who uses one"

Minister Promises Adequate Pulpwood Limits

Hon. James Lyons, Minister of Lands and Forests for Ontario, who is touring the north country, was recently tendered a dinner at the Shuniah Club, Port Arthur, when several hundred members of the Chamber of Commerce were present.

Mr. Lyons said that adequate provision would be made for future extensions in regard to pulpwood limits for the necessary expansion of the pulp and paper industries of Port Arthur and Fort William. The province intended to take care of its existing mills. More limits would be required. These would not be placed on the market immediately but, after a general survey of the timber and waterpowers of Ontario had been made. Foleyet, Sioux Lookout, Alse and other places were looking for industries.

Dealing with forest fires, Mr. Lyons said that they had 1200 men fighting fires in Ontario during the past season along with four aeroplanes, involving an expenditure of \$1,070,000. The government was going as far as it could in protecting the north country.

The Minister predicted that within twenty-five years north of the C.P.R. there would be greater wealth developed than to the south. Not fifteen per cent of the resources of the north had as yet been developed.

Says Embargo Would Check Colonization

F. Charpentier, of Hearst, Ont., in reviewing the present pulpwood situation, says:—"The proposed embargo does not seem to make American buyers more anxious to buy wood in this district or to rush the market. I know that if that embargo would go into effect, it would hold back colonization of the north country for many years, for the only way of earning, or, in other words, the only chance a settler has of making a little money at home and being able to clear up his land is in cutting pulpwood. Without the competition of the American market, settlers would receive very little for their wood and a little less means that they could not earn their living.

"There are now two American companies around here. They are the Port Huron Sulphite Co., of Port Huron, Mich., and the Munising Paper Co., of Munising, Mich. I am purchaser of wood for the former and I understand the latter has recently closed a contract here for some 9,000 cords. We have the Lake Superior Pulp Co., of Sault Ste. Marie, Ont., as a Canadian buyer. The price offered for pulpwood now is \$7.00 per cord, f.o.b. on car, and unless there is an advance, there will not be as much wood cut this year as usual, for labor and bushmen are scarce and expensive. There was about 30,000 cords of wood cut in this locality last season and by present appearances not more than 25,000 cords will be taken out this season."

More Witnesses Oppose Pulpwood Embargo

The Royal Commission on pulpwood recently held a session in Fredericton, N.B. Among the witnesses were Gordon Grant, of Fredericton, a pulpwood buyer for the Eastern Pulp Co., who said he was opposed to the proposed embargo, his reason being that it would seriously affect many small farmers who made a considerable part of their income from pulpwood.

R. B. Hanson, M. P. for York-Sunbury favored conservation and the manufacture in Canada but opposed the embargo at the present. Pulpwood was produced by small settlers and an embargo would deprive them of a market when farm products generally were very low in price. With proper fire protection there was an available pulpwood supply for a long time to come.

Says That They Have an Axe to Grind

In a recent letter to the press a correspondent, who signs himself as "Another Lumberman," declares that he believes in the final analysis the pulpwood commission will accept only such evidence as they believe to be honest and of an independent character. He

states that he has followed the evidence of the different witnesses having due respect to the men, who gave it and has come to the conclusion that as far as the investigation has gone every witness with one or two exceptions, who has argued against putting some restriction on the export of pulpwood, has an axe to grind. The correspondent further says that he has taken the trouble to ask quite a number of lumbermen and they have been practically all emphatic in saying that some measure of restriction should be enacted. He concludes:—"I believe the Commission will act quite independently, i.e., they will not allow the powerful influences that are at work to influence them in the slightest degree. There are men in Nova Scotia who will not hesitate a moment to sacrifice the public interest, if it will put a dollar in their own pocket; they have done it before and they will do it again."

Belgo-Canadian Company is Expanding

Belgo-Canadian Paper Co. established a new record for daily production the other day at Shawinigan Falls, Que., when over 300 tons of newsprint were produced in one day. This will be materially increased when the second of the two newsprint machines that are being installed comes into production towards the end of November.

To meet the demands of the extra paper tonnage it has been found necessary to increase the groundwood output and two new groundwood machines were brought into operation recently, increasing the groundwood pulp capacity of the mill by about 40 tons a day. A portion of the extra pulp is now being marketed as such, although the full amount will likely be used in the Belgo plant when the last of the new newsprint machines is running. Something of a record was set up in putting in the new groundwood machines as the contract was only let during the month of August.

Another addition to the company's properties that has just been completed is a spur to bring in logs by rail. The logs brought in in this manner supplement the supplies of pulpwood floated down the St. Maurice river. The spur track is something new in pulp and paper manufacturing as it runs out over the river where the logs are dumped into the water and carried up the usual system of conveyors to the sawroom and thence through the mill. Hubert Biermans, president and general-manager of the company, returned from the continent a few days ago.

Believes Production Will not be Overdone

In a recent expression of his views on the outlook and demand for newsprint, George H. Mead, president of the Spanish River Pulp and Paper Mills, takes a hopeful view and believes that production will not be overdone. He says in part:—

"It would be unwise to assume that the coming decade will be covered without some depressions and such variations in the business as pertain to all lines, but the industry is now in position to properly take care of normal fluctuations.

"Some fear has been expressed regarding over extension from a production standpoint in the immediate future, and it is, of course, necessary that proper judgment be used in this matter. It is equally important to realize fully that the publishers of the continent are now dependent upon Canada for their increased requirements (further development in the United States not being possible because of the wood situation), and it is therefore, an obligation to continue development at a sufficient rate to provide for such demand.

"A careful analysis of the present situation in the case is that the announced plans for extension during the coming year are about in keeping with the increased requirements over the same period, and it is only necessary for the financial and operating interests of the country to carefully analyze the statistics to determine from year to year what the requirements may be and the rate of new production necessary."

"The next person who interrupts the proceedings will be sent home," said the judge.

"Hurray!" said the prisoner.

Edgings

Weiler Bros., Formosa, Ont., are erecting a sawmill at Chepstow in Bruce County.

\$10,000 damage was caused by a fire of unknown origin which destroyed the sawmill owned by M. Senecal, of St. Scholastique, Que.

A special meeting of the shareholders of the Riordon Co., which was to have been held in Montreal recently, was adjourned until a later date.

Kensington Building Co., Limited, Toronto, is a new firm recently formed to deal in all kinds of building materials and to erect all kinds of structures.

Industrial Contracting and Sales Company, Limited, Longueuil, P. Q., was recently formed to generally deal in all kinds of building supplies. Capital \$20,000.

W. P. McDonagh and Charles Pedwell have recently joined the inspecting staff of the McDonagh Lumber Co., Toronto, and are looking after a number of stocks in the East.

The standing timber on the land owned by the Presbyterian Church, Newcastle, N.B., on the north west Miramichi was purchased recently by W. M. Sullivan for \$1,000.

The B. C. Fir & Cedar Company's planing mill at False Creek B. C., which was destroyed by fire last August, will be rebuilt. The cost of the new structure will be about \$100,000.

Horace Wells Donnelly, a retired Ottawa lumberman who had been living for the past 25 years in St. Catharines, Ont., passed away recently at the advanced age of 96. Mr. Donnelly was born in Rigaud, Que.

The Hocken Lumber Co., whose milling operations are at West River, Ont., have put in three logging camps this season and will take out a larger cut than last year. The company's mill has been operating at capacity all season.

Joseph LeBel, J. O. LeBel, U. J. LeBel and Arthur LeBel, all of Blue Bell, Victoria County, N.B., have formed partnership for the purpose of carrying on the business of lumber dealers, and will operate under the style of Joseph LeBel & Son.

G. Mason & Co., of Midland, Ont., are carrying on extensive logging operations on Hope Island on the east shore of Georgian Bay and it is reported will employ five hundred men during the coming season in that district in logging operations.

Daniel R. Roberts who was at one time engaged in the lumber business, died recently in Toronto. He was a travelling auditor for the Provincial Government and had been in the civil service for the last seventeen years. He is survived by a wife and four sisters.

Hon. James Lyons, Minister of Lands and Forests and Hon. Chas. McCrea, Minister of Mines, left recently on a tour of Northern Ontario where they will enquire into the possibilities of the hinterland from a settlement standpoint and investigate the natural resources of the north.

Logging operations will be brisk in the north this winter. The North West Lumber Co., which operates at Edmonton, Sask., one of the most modern lumber mills in Canada, is laying plans to cut 30,000,000 feet in 1923. During the past season the cut was a little over half of this amount.

The Megantic Pulp & Lumber Co., of Lake Megantic, Que., have closed down their milling operations for the season having sawn all their logs. The cut during the past few months was 4,500,000 feet. The company will operate two camps during the coming winter in the Lake Megantic district.

The big drying and storage shed of the Heaps Lumber Co., on Burritt Inlet, B.C., collapsed recently. The shed was filled with lumber aggregating about 2,000,000 feet. It is estimated that it will cost about \$20,000 to replace the building and an additional \$5,000 to remove the debris and recover the lumber stock.

A large number of men arrived in Midland, Ont., recently who had accepted positions in the lumber camps that are now being established at different points up the bay. It is anticipated that the present winter will be a fairly busy one in connection with lumbering operations and quite a number of new camps are being put in.

A serious shortage of woods labor, which is said by lumbermen to be the worst in many years, exists in the Ottawa Valley, where, it is estimated, between eight and ten thousand more men are required to fully man the camps of the lumbering and pulpwood companies. Only about one-third of the number required to operate the

camps has been engaged and in some instances they have not been enough to build the camps. According to a local employment agent, the lumbering companies in the Ottawa Valley and along the Soo line ordinarily employ about 25,000 men each winter and considerably less than half of the men required have so far been secured. The present scale of wages for bushmen is from \$40 to \$50 per month with board, a considerable increase over last fall when the wages paid were \$26 and \$30.

Robert Beatty, William Cordick, Jonas Trelford, William Wolfe and John Hindman, of Tara, Ont., are inspecting some timber lands about 20 miles from Cochrane which have been opened for settlement by the Crown Lands Department. Major Moffatt, formerly in command of the 160th Bruce Battalion, has erected a pulp mill in that district.

London Lumber Co., London, Ont., MacDonnell & Conyers, Ottawa, J. C. McDiarmid, Reg., Montreal, Que., have become members of the National Hardwood Lumber Association. The Satin Finish Hardwood Flooring Limited, Weston, and Builders' Moulding Co., Toronto, have become members under the Associate Membership plan.

The Ontario Department of Lands and Forests is calling for tenders for the right to cut the timber part of which has been burned in the township of Rennie, district of Sudbury. This is mainly a jack pine and tie proposition although there is a certain quantity of pulpwood on the area. The time for receiving tenders expires on November 5th.

Practically the last of the 425 fire rangers and foresters who have been at work during the past summer in the Sudbury district, have completed their season. The ten chief rangers who have charge of the territory supervised from the Sudbury office, are still on the job and will be for some time. For several weeks there has been no trace of fire in the whole district.

The annual meeting of Charles Walmsley & Co. (Canada) Limited was held recently in Montreal and an encouraging report was presented. Sir William Price, of Quebec, was re-elected president of the company. It was stated that the reconstruction of the plant of the company at Longueuil is now practically completed and the manufacture of complete pulp and paper mill equipment will begin shortly.

A. J. Nicholson, of Terry-Nicholson-Cates Limited, Toronto, recently returned from an extended trip to the West. While at the Pacific Coast he visited several mills and reports that they are all busy and that about 75 per cent. of forest products shipments are now made by water. On his return Mr. Nicholson and Mr. Terry spent several days on a visit to Collins Inlet and other points in the Georgian Bay district.

Robert Linton who died recently in Campbellford, Ont., in his 88th year, was one of the pioneer residents of that section of Ontario. He located in Campbellford in 1858 and had the distinction of being a chartered member of the Golden Rule Masonic Lodge which he attended for 65 years. The late Mr. Linton became interested in public affairs and is survived by his widow, two daughters and four sons, one of whom is J. F. Linton, secretary-treasurer of the Peterboro Lumber Co., Peterboro, Ont.

Fear of forest fires destroying the result of silviculture, or the treatment and planting of forest fires, is the greatest single deterrent to the general practise of reforestation in Canada. This view is emphasized by the British Empire Forestry Conference in its report fittingly issued lately during "Fire Prevention Week." This report deals at length with the great need of better fire protection in Canada, the reduction of waste in logging and sawmill operations and the application of more efficient methods of silviculture.

D. A. Macdonald, superintendent of forest resources, stated recently in Winnipeg that 90 per cent. of all forest fires were preventable. During the past five years 28,896 forest fires had occurred in Canada and in that time 10,000,000 acres had been burned over, with a property loss of \$72,000,000, to which, he remarked, one must add loss of labor and depreciation of soil. He said the purpose of Fire Prevention week was to bring to the notice of the general public the fact that its hearty co-operation is desired by forest protection authorities in helping keep down forest fires.

The British Columbia government has authorized the expenditure of \$45,000 dollars for Japanese relief. This money will be used to ship lumber and shingles to Japan. The province is sending 1,750,000 feet of dimension lumber and 1,000,000 shingles to aid the reconstruction of wrecked Japanese cities. Already 135,000 feet has been shipped from Prince Rupert, and the remainder will go from Vancouver in about a week. With the province's contribution the federal government will ship 2,000,000 feet of lumber. The provincial government's \$45,000 contribution is provided in a special warrant approved today.

Some Humor for Busy Lumbermen

"How often does your road kill a man?" asked the salesman of the railroad conductor.

"Just once," sourly replied the man.

New Cook: "What do I say, ma'am, 'Dinner is served' or 'Dinner is ready'?"

Mistress: "Well, if it is anything like it was yesterday, it would be simpler to say 'Dinner is spoiled'."

Patient: "There is an awful rumbling in my stomach, just like a wagon going over a street car track."

Doctor: "M'm! Probably it's that truck you ate last night."

The Professor: "Let us take the example of the busy ant. He is busy all the time. He works all day and every day. Then what happens?"

The Bright One: "He gets stepped on."

"You can't like me," said the penny stamp as the post-mark struck him.

A traveler in Indiana noticed that a farmer was having trouble with his horse. It would start, go slowly for a short distance, and

then stop again. Thereupon the farmer would have great difficulty in getting it started. Finally the traveler approached and asked, solicitously:

"Is your horse sick?"

"Not as I know of."

"Is he balky?"

"No. But he is so danged 'fraid I'll say whoa and he won't hear me, that he stops every once in a while to listen."

Mrs. Cohen was very popular. Cohen was blindly in love, but jealous enough to find cause to write to young Isaac Levy as follows:

"Dear Levy: You have been making love to my wife. Meet me in my office, 2 P. M., Jan 31. Cohen."

Levy replied:

"Dear Cohen: Your circular letter received. I will be at the meeting you have called. Levy."

Binks—I'll pay you when my shoes wear out.

Collector—What do you mean by that?

Binks—By that time I'll be on my feet again.

This instance of what a mistake a comma can produce has been noticed:

"Lord Palmerston then entered upon his head, a white hat upon his feet, large but well-polished boots upon his brow, a dark cloud in his hand, his faithful walking stick in his eye, a dark, menacing glare saying nothing."

M. J. Conkey, of the Haileybury Lumber Co., Haileybury, Ont., spent a few days in Toronto lately on business.

The McLean Lumber Co., of McDougall Ave., Windsor, Ont., are erecting an addition to their plant at a cost of \$30,000.

Ray. B. Maxson, of the Thurn-Maxson Lumber Co., South Bend, Ind., spent a few days in Toronto recently calling upon the trade.

La France Incorporee, Quebec, P. Q., was recently organized to conduct a business as dealers in all kinds of wood products. Capital \$20,000.

W. F. Oliver, of the Oliver Lumber Co., Toronto, and wife, who have been spending a pleasant holiday at Atlantic City, have returned home.

Addington Lumber Co., Montreal, is a new company recently formed to manufacture and deal in timber and lumber products. Capital \$20,000.

Plouffe & Cie, Limited, Montreal, is a new company recently formed to manufacture and deal in lumber and wood products. Capital \$25,000.

W. B. Cochran, of the Cochran Foundry Co., Tillsonburg, Ont., manufacturers of portable sawmills spent a few days in Toronto recently on business.

The Canada Creosoting Co. have definitely decided to build in Newcastle, N. B., and word to this effect was received by the town authorities recently.

Dwight J. Turner, formerly of Toronto and Midland, who is well known in lumber circles, is now manager of the Michigan Lumber Co., Detroit, which was recently organized.

Fred H. Bigwood, of the Canadian General Lumber Co., Toronto, and a former president of the Kiwanis Club, Toronto, was in Quebec City lately attending a large district convention of Kiwanians.

George S. Zimmerman, of Tavistock, Ont., president of the Eastern Canada Box Manufacturers' Association, was in New York lately attending the annual meeting of the National Box Manufacturers' Association.

At a recent meeting of the City Council of Longueuil, Que., Mayor Thurber announced that another loan of \$50,000 had been obtained from the Quebec Provincial Government for the construction of houses in Longueuil.

J. A. Edgecumbe, president of the Edgecumbe-Newham Co., Vancouver, and head of the Shingle Manufacturers' Association of British Columbia, spent a few days in Toronto recently on business and called upon a number of members of the trade.

A charter has been granted to the Provincial Carton Co. with a capital stock of \$40,000 and headquarters in Toronto to manufacture, import, export and deal in goods of various kinds. Among the incorporators are J. B. O'Brien, James M. Forgie and others.

The Fesserton Timber Co. whose sawmill at Krugersdorf, Ont., was burned some time ago, have installed a semi-portable plant at this point on the T. & N. O. railway and are sawing up about a million and a half feet of jack pine and spruce logs which they had on hand.

At a recent meeting of the Fort William City Council as provided for in the agreement with the Great Lakes Paper Co., authorization by by-law was given for the closing of more street ends near the site in order to facilitate the construction of the new pulp plant of the company.

M. A. Grainger, of Vancouver, general-manager of the Timberland Investigation & Management Co. of British Columbia, and Mrs. Grainger passed through Toronto recently on their way to England where they will spend some time. Mr. Grainger's father died lately in the Old Country.

On the first day of the sittings of the Royal Commission on pulpwood at St. John several witnesses appeared and an even more pronounced spirit of opposition to an embargo was manifested than was the case in Nova Scotia. John D. Kay was the only one who appeared in support of the embargo.

Three groups of rapids of the River Megiscane, County of Temiscamingue close to Canadian National Railways were leased by public auction lately in Quebec. There was only one bidding party. Mr. Louis Napoleon Huard, of Levis, who bid \$5.00 over the upset price of \$4,000 annual rent. The successful bidder will start at once works

of developments on the location of those powers. One of the conditions is that power exported from this province will be charged 50 cents per horse-power. The minimum development of the three groups of rapids aggregate 17,000 horse-power. The successful bidder is said to represent E. W. Tobin, of the Brompton Pulp & Paper Co., East Angus, Que.

J. H. McDonald, manager of the Westminster Shook Mills, New Westminster, B. C., and managing-director of the British Columbia Mfg. Co., spent a few days in Toronto on his way to England where he will spend some time. The firm will make an exhibit at the British Empire Exhibition which opens in London in April next and will continue for six months.

The Canadian Puget Sound Lumber & Timber Co. has decided to build about forty miles of logging railway from Sooke Harbor through the Jordan River country to Port Renfrew, on the west coast of Vancouver Island. The company, whose headquarters and sawmill are at Victoria, owns some of the finest timber on the island and the proposed railway will tap it.

The Shuniah Lumber Co. has been granted a charter to carry on the business of timber merchants, sawmill owners, etc., and to buy, sell and deal in lumber and wood of all kinds. The authorized capital stock is \$40,000 and the headquarters of the company are in Port Arthur. Among the incorporators are Alex. J. McComber, J. L. McComber and George J. McComber.

L. M. Hanbury, of J. Hanbury & Co., Limited, Vancouver, B. C., who lately returned West after an extended visit to Toronto, Montreal, Ottawa and other points, stated that he was well satisfied with conditions and prospects as he found them in the East. He booked a good volume of business during his trip and looks forward to a big trade in Pacific Coast lumber products during the coming months.

Newsprint production in Canada during the first six months of 1923 amounted to 551,395 tons, compared with 457,340 in the corresponding period last year and 373,982 tons in the first half of 1921. Exports to the United States in the first six months of 1923 amounted to 97½ per cent. of the total exports, or 536,817 tons. Shipments were also made to Australia, New Zealand, South America and South Africa.

A new sawmill with a cutting capacity of 75,000 to 100,000 feet daily will be built at Atli Inlet, Queen Charlotte Islands, according to John McMillan, of the T. A. Kelly Logging Co., of Prince Rupert and Massett, B. C. The mill will be ready to start cutting early next spring. The company has also made arrangements to ship pulpwood in barges from Moresby Island to the Powell River Pulp & Paper Co., Powell River.

The judgment of Mr. Justice Mowat for \$12,000 damages against the Canadian Northern Ontario Railway in favor of Ernest J. White, lumber manufacturers, Sucker Lake, Muskoka, Ont., has been sustained by the Appellate Division. The appeal was heard at Osgoode Hall, Toronto, recently. The plaintiff had a quantity of lumber stacked beside the tracks of the defendant company at Medora. It was destroyed by fire which had been set out by employees of the railway along the right-of-way.

Recently the Quebec Provincial Government passed an order reducing the tariff on stumpage dues on fire-killed timber. The new schedule is as follows:—\$2.00 per thousand feet on white pine, as compared to \$3.50; \$1.75 on red pine as compared to \$2.75; \$1.50 for spruce, balsam and other woods, as compared to \$2.10. This is the second reduction granted by the Government to encourage timber holders to cut timber which has been fire-killed this summer. The 1920 tariff will apply for green timber.

More than \$6000 has been paid out to ranchers and their wives and daughters during the past few weeks by the Dominion government for Douglas fir cones for seed extraction. Some 3000 sacks have been delivered to the seed-extraction plant at New Westminster, B. C. Each sack of cones yields approximately one pound and a half of seed. The seed is being sent by the Dominion Forestry Department to the British Forestry Commission, and is to be used for replenishing the devastated areas.

Victoria Mills, the plant of the Fraser Companies, Limited, at Fredericton, N. B. will be operated throughout the coming winter. The season's cut of long lumber closed lately with approximately 12,000,000 feet as the product of the summer operations. The winter's activities will be confined to the cutting of lath and shingles. The only long lumber that is being carried over is a quantity of cedar. The lathwood will be cut on properties in the vicinity of Fredericton where the Fraser Companies have brought stumpage, this being the same character of operations carried on last year. The expectation is that the operation of the mill and the getting out of material for the winter sawing will give about 200 men continuous employment throughout the winter.

We Specialize in Milling in Transit

Our mill is situated on the G. T. R. with C. P. R. connections. We also supply Mixed Cars of sash, doors, frames and house trim.

Any work entrusted to us will receive our careful and prompt attention.

Mr. Ferguson Speaks of Northern Timber

Hon. G. Howard Ferguson, Premier of Ontario and party, who
recently returned from an extended trip to the north, going as far as
Moose Factory on James Bay, had a rare opportunity to view the
resources of the country from many standpoints. Speaking of the
timber prospects, Mr. Ferguson, in an interview said:—

The country for 90 or 100 miles beyond the Transcontinental is
what is known as the northern clay belt. It is in this tract, and espe-
cially along the banks of the rivers that most of the merchantable
timber is found. The area farther north and extending to James Bay
is called the coastal plain, and in this district there are immense
areas of swamp, muskeg and dwarf timber. Only a small portion of
this timber is of commercial value, and the cost of operations would
be high.

From an operating standpoint, Mr. Ferguson said the problem
was where mills could be most advantageously located. Logs will
not float up-stream, and as these waters all drain into James Bay it
means that the wood must be floated north to a central point and
there manufactured and the finished product brought out by rail.
The fact that all the foliage, except evergreen, had turned color
owing to the frost, enabled the party to size up the timber situation
better than if the trip by airplane had been taken earlier in the season.

Twenty Years Building Operations to Catch Up

A gloomy picture of the future in Great Britain if the building
conditions remain unimproved was drawn by George Hicks in his
presidential address at the opening of the annual conference of Na-
tional Federation of Building Trades Operatives at Ilfracombe, Eng.

President Hicks said the population was gaining rapidly upon
the supply of buildings and it would take twenty years of building
operations to catch up if the builders were to give even a tolerable
measure of housing accommodation, nevertheless building was going
back owing to the bad conditions of the industry.

Fathers were ceasing to apprentice their boys to the building
trade, President Hicks said, because the wages were so ridiculously
low. The nation declined to limit overcrowding and this even-
tually would mean desperation and potential barbarism.

St. John Lumber Market Continues Quiet

There is no apparent change in the lumber situation here during
the last two weeks. The demand for various dimensions is light,
but prices remain firm. There are indications of renewed activity
later on, this being based on the number of enquiries received by the
trade. Many of the leading shippers feel that later in the fall the
demand will be greater and are therefore not worrying about the
present.

The demand for laths is daily increasing and the price at the local
mills is now being quoted at \$6.75. This is an increase of seventy-
five cents during the last few weeks. From all indications the demand
for laths will be quite heavy from now on.

Shingles remain at the same price quoted some time ago although
the demand is daily picking up. The cedar extras remain at \$6.25,
while clears are still being quoted at \$5.25. Spruce shingles are still
going at \$3.25.

Greater Precautions in Slash Burning

A strong sentiment in favor of the elimination of spring and
summer slash burning has been created by the recent disastrous fore-
st conflagrations in New Brunswick, many of which have been
traced to slash burning sources. Residents of many sections of the
province, particularly those most seriously affected by forest fires,
are demanding greater precautions in the control of slash burning
fires.

As an example of this public sentiment which has been aroused,
the Restigouche County Council, in semi-annual session recently,
adopted a resolution in support of the elimination of spring and sum-
mer burning and asking the Department of Lands and Mines to
take steps in this direction. These demands which are being received
from various sources also advocate the supervision of slash burning
under qualified persons during periods when the fire hazard is at a
minimum in the Fall. Forestry officials have long ago advocated
such steps stating that sooner or later the elimination of burning
during the period mentioned, would become imperative.

More than 100,000 men are engaged in Canada converting forest
products into wealth in some form or other. Nearly 400,000 other
people depend on this "forest army" for their food and shelter.

Quaker Flour

Always the Same—Always the Best

For the camp loaf or roll, Quaker Flour yields the best results. It makes good, even-textured bread of amazing lightness. It will please your men, because it makes their meals more enjoyable. Quaker Flour is especially adapted for camp use, not only because of its fine baking qualities, but because it goes farther.

Ivory Brand, our second patent, also made entirely from Manitoba Hard Wheat — popular among lumbermen and bakers.

"TRUMILK"

Trumilk is Easy to Transport—

it is the essential part of milk only

Milk is an essential food. Keeps the men in good shape physically. Enables them to do better, quicker work.

Trumilk is rich, full cream milk with only the water removed. Keeps fresh indefinitely in the original container. Will not sour or freeze. You transport and store only the milk solids. Water is the only ingredient necessary to return Trumilk to fresh, liquid milk.

Write for sample of Trumilk, and see how appropriate for camp use it really is.

UNIFORM DEPENDABLE QUALITY IN EVERY UNIT HELPS TO KEEP THIS PIPING SYSTEM IN CONTINUAL SERVICE

BUILDING FOR PERMANENCE

Lower upkeep expense for piping systems depends on uniform quality in all equipment used. For a pipe-line is an assembly of many units and the stability of the whole demands unfailing service from each unit—valve, fitting, piping, flange or specialty. The high quality of all Crane valves,

ittings, pipe bends and specialties, guarded by rigid inspections and the most severe factory tests, insures dependable service from a pipe-line constructed of Crane units. Crane branch houses maintain complete stocks of standard pipe-line equipment at strategic shipping points.

"Brazel Patent" SNOW PLOWS

Known in every Camp from the Atlantic to the Pacific as the most satisfactory Snow Plow made.

Combination Model, Lumberman's Snow Plow can be used either with or without Rut Cutter.

One man to operate. Adjusting wheels close together made change for light or heavy work in an instant. Wings placed to throw snow 9 ft. wider than sleigh track or narrower if desired. Height of mouldboards prevent snow falling back on track. BRAZEL PLOWS cut 6 in. wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure heaps from an ice road, leaving a clean roadbed. Roll and push entirely away from the road, 12 inches of loose snow each time the plow passes over.

Holt "CATERPILLAR" northern logger hauling train of logs on the operation of Abitibi Power & Paper Company, Iroquois Falls, Ontario

This is only one of the successful lumbering operations hauling the "CATERPILLAR" way last season. The success which was met with by the Mt. Murray Woodlands Corporation at St. Fidele, Que., and also the Anglo Newfoundland Development Company at Bishop's Falls, NFD. has resulted in orders for many additional "CATERPILLARS" from these companies to be placed on their operations for the coming season's log hauls. The continuous operation, number of trips, low costs and the ability of the "CATERPILLAR" to meet every situation, whether operating on snow or iced roads, has convinced the owners hauling the "CATERPILLAR" way, that no other machine or method can successfully compete with the "CATERPILLAR". Many of our users have placed their orders for early delivery and are using the "CATERPILLAR" for portaging supplies and building and clearing their lumbering roads before the winter sets in.

Write to-day for further facts and figures on "CATERPILLAR" performance.

Here's a Better Light for

Lumber Camps, Saw Mills, Bunk Houses,
Cook Shacks, Stables, etc.

It's the Coleman QUICK-LITE Lantern, "The Light of a Thousand Uses." The handiest, brightest, steadiest, most dependable lantern you ever used. Gives more light than 20 old-style oil lanterns. And it's always ready for any job, any night, in any weather.

Coleman Quick-Lite

"The Light of a Thousand Uses"

The QUICK-LITE is safe—can't spill fuel even if tipped over. Can't blow out. Mica globe makes it wind-proof, rain-proof and bug-proof. Uses common motor gasoline. Lights with matches. Built of durable brass and steel, heavily nicked. Lasts a lifetime. Price \$10.00.

Dealers Everywhere sell Coleman QUICK-LITE Lanterns, Lamps and Lighting Plants. Write us for full information regarding Coleman Quick-Lite Lamps, Lanterns, Camp Stoves and the name of the nearest Coleman Dealer. Address Dept. xxx.

"I'm Thinking of Twenty-five Years From Now"

Capt. Robert Dollar, 80 years young
"Some of those guys sit back in their
swivel chairs and say, 'Let George do it.'"

said that veteran lumberman, Robert Dollar, in a recent address before a Pacific Coast Service Club. Vision is not denied the man whose faith and confidence is undimmed by years. The lumber industry of British Columbia was not built to its present splendid proportions in a day. With practically the whole world her market, the future is surpassingly bright.

Arm in Arm With this Development

THE FORDSON

FOR THE LUMBERMAN

One of the most important problems which confronts the Lumber Dealer is handling costs. Cars must be switched and unloaded; there is always general yard work which demands attention and in many cases loads of lumber have to be hauled to and from outside points.

The Fordson Tractor with W & K Rubber Tired Wheels solves the problem. There are Rubber Tired Fordsons working in different Lumber Yards and without exception, these Lumber Dealers report that the work is being performed efficiently and at a substantial saving.

Let us show you how the Fordson can be adapted to YOUR needs.

SHIMER

*Ask
for
our
Catalogue*

THE wide awake mill operator who desires strictest economy with highest efficiency always specifies Shimer Fast Feed Expansion Matcher Heads.

These heads are built extra heavy where the strain is greatest, and being devoid of all angles or openings, the wind resistance is lessened, and it cannot block with shavings. The straight knives are long, which assures greater service, while the circular knives can be set back and the straight knives jointed. In this way the whole width of the straight knives can be jointed at one setting. The circular cutter is then brought to its proper position.

SHIMER CUTTER HEAD CO., OF CANADA, LIMITED

Manufacturers of Cutter Heads, Safety Cylinders and Grinders

GALT — ONTARIO

ALLIGATOR BRAND

HARNESS

Comfortable, well fitting, and **STRONG!**—such is Alligator Brand Harness. Decide now to outfit your horses with this famous product and they will reward you with better service.

Ask us for catalog and prices.

BLANKETS

Throw an Alligator Brand Blanket over each of your horses when they are standing idle after the heavy pull. Horses that stand steaming unprotected in the wintry weather are the ones that soon find a place on the sick list.

FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

"Elkco Special," "Elk Steel,"

"St. Marys," "Keystone" and "M.D. Elk"

Write for copy of our catalogue,

MERSHON

BAND RESAWS
A SPECIALTY - NOT A SIDE LINE

SIMPLEST and BEST

Wm. B. Mershon & Company
Saginaw, Michigan, U.S.A.

Relieve the Box Shook Shortage By the use of Gerlach Box Board Mills

For the cutting of

BOX, CRATE, CHAIR, FURNITURE, CABINET and other dimension stock, LATH, HANDLE MATERIAL, Etc. These machines are built in three sizes:—

CHAMPION for stock 10" to 24" Long
SPECIAL " " 10" to 36" Long
JUMBO " " 10" to 48" Long

All cut any required thickness from $\frac{1}{4}$ " to 3" and from 3" to 20" wide.

Cut either plain or quarter sawn, through the side or with the grain of wood, hence saw dust is like excelsior. Saw kerf $\frac{1}{8}$ ". Round or quartered bolts may be utilized, as well as slabs and mill waste. Will cut 3000 feet of lumber per man per day. Turns 80% of standing trees into finished product against 40% for the saw mill.

Average net cost of producing finished box lumber from small timber delivered at mill:

TIMBER	\$ 8.00	per M ft.
SAWING & OVERHEAD	2.00	" "
NET COST	10.00	" "

Swift's Jewel Brand Shortening

—makes good
baking easy

Swift's Jewel Shortening comes in tins or wooden pails,
tubs or tierces.

Give your chef Swift's Jewel Brand Shortening to work with and he'll turn out better baking and do it easier. Jewel Shortening is sweet and pure—and CONSISTENTLY so. Every lot is the same. You will find it cuts down your

bills, too, for good shortening is cheaper than butter or lard.

Let us also quote on your requirements in Silver-leaf Brand Pure Lard, Barrelled Beef and Pork, Fresh and Frozen Meats, Cooked and Smoked Meats, Sausage, Soap, Canned Goods.

Swift Canadian Company Limited

Let us

PROVISION THAT CAMP

of yours!

Why have all the worry and trouble of getting just the right kind of food for your men, when you can place the matter entirely in our hands?

First class service, the choicest foodstuffs, moderate prices—you get them all when you come to "Davies."

WATEROUS SAWMILL MACHINERY

Mills Like This, Eighty Years Ago—

Earned for Waterous Sawmill Machinery the reputation which it enjoys today— of being the most up-to-date, most economical, and efficient equipment in the country. Many old time lumbermen will recall the famous old Waterous "Clipper" mills in those days when the lumbering industry was beginning to boom in Canada.

Sawmilling conditions and sawmill machinery have changed since then, but the reputation of Waterous equipment has remained the same. To-day, eighty years of experience are combined with the best engineering and mechanical skill to produce the Waterous Machinery that is being used in more than sixty per cent. of the sawmills of the Dominion.

We build everything from a Portable Outfit to a 200,000 ft. mill complete. Our catalogues and any information we can give you are at your service.

ATKINS

STERLING QUALITY SAWS

Good Saws, Saw Tools and Machine Knives

are necessary for speed, economy and efficient production.

They are the deciding factor in the success of any sawmill, furniture factory or woodworking plant. Thousands of saw users know, because they have convinced themselves, that the installation of Atkins Saws, Tools and Machine Knives means more and better work with larger profits.

Give Atkins a Trial

We will make good with our products and convince you that they are what we claim in our slogan,

"The Finest on Earth"

Leading manufacturers of Saws, Saw Tools and Machine Knives, also Atkins-Coleman Feed Rollers. Use Acrolite and Ferrolite Wheels for your saw gumming and knife grinding. Increase your belt efficiency by using Cantol Belt Wax.

"HAMILTON" CIRCULAR RE-SAWS

Here is a strong, rigid, well designed machine, specially gotten up for resawing slabs. The feed rolls are carried on a sliding frame that is easily adjustable to cut lumber any desired thickness. The binding or press roll is 13 in. diam., fitted with saw discs and power driven. The saw used is 42 in. diam., driving pulley 18 in. diam. x 12 in. face. Cut shows Left Hand Machine.

We also make this machine with wooden frame, having the mandrel and saw carried on an adjustable sliding frame.

Descriptive circular sent upon request.

"HAMILTON" HUSK FRAMES

Made in different sizes to suit all requirements. Frames are all of cast iron, of heavy section throughout, planed on top and bottom, and mandrel boxes lined with high grade babbitt. Mandrels are exceptionally large, of forged steel with forged collar, and the guide is the famous Parkhurst steel saw guide with steel splitter.

We manufacture a complete line of up-to-date Sawmill Machinery for either Band or Circular Mills.

A Permanent Lumber Service

AFTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually
6,000,000 ft. birch annually
2,500,000 ft. beech annually
2,500,000 ft. elm annually
900,000 ft. basswood annually
200,000 ft. ash annually
6,000,000 ft. hemlock annually
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

Red Cedar SHINGLES

—That can't warp
cup or curl

BRITISH COLUMBIA "EDG-GRAIN" INSPECTED RED CEDAR SHINGLES are cut from the world's finest stand of Red Cedar; soil climatic and drainage conditions are responsible for the superiority of BRITISH COLUMBIA RED CEDAR. Certain mills are manufacturing a 100 per cent. EDG-GRAIN SHINGLE. The grain of the wood in every shingle is vertical and parallel, which prevents warping, cupping or curling. It is good business on your part, Mr. Dealer, to sell the world's best shingle—BRITISH COLUMBIA "EDG-GRAIN" INSPECTED.

We will gladly put your name on our mailing lists for price lists and other information which the association of mills who manufacture "EDG-GRAIN" Shingles are mailing from time to time. Simply send us your name and address.

Handling Hog Fuel on Efficient Link-Belt Conveyors

Here are two types of Link-Belt Conveyors which have proved their effectiveness in handling hog fuel and sawdust.

On the left: a Link-Belt Belt Conveyor.

On the right: a Link-Belt "H" Class Chain Conveyor.

Let us tell you more about the Link-Belt method of conveying. As a first step, send for our new 112-page book "Link-Belt Chains and Equipment for Saw Mills".

"Should We Make Charge for Delivery?"

Here are More Views and Arguments on the Important Item of Handling the Cost of Retail Yard Delivery—Many Constructive Criticisms and Worthwhile Ideas are Included in the Various Opinions of the Dealers

In the last issue of the "Canada Lumberman" there was published some interesting opinions in regard to the delivery of lumber and whether a separate and distinct charge should be made for this service or should the cost be covered in the invoice. The problem is one that causes much perplexity and anxiety in different centres. In most cities and towns the haulage charge is included in the selling price. So far as rural deliveries are concerned, most dealers appear to make a specific levy for this work which is generally based on a mileage or time basis. In this edition of the "Canada Lumberman" further opinions on the question are presented and will be read with much interest.

The Ball Planing Mill Co., of Barrie, Ont., say: We do not find the delivery problem as perplexing in the smaller towns as those in the larger centres would find it. Within the limits of the town we deliver without any extra charge being added to our regular retail prices, the charge for delivery being included in our cost. For out-of-town delivery we quote so much a load, based on an estimate of the time and mileage. If a delivered price is asked for, we estimate the number of loads and include that in the total estimate. In a town of this size we have very little trouble with small rush orders. Items of this kind can usually be delivered along with large orders, except in the case of contractors and then it would not be policy on our part to charge them delivery, as the larger orders we receive from them take care of the smaller ones.

Give Customers Lump Estimate

The Sandwich Lumber Co., of Sandwich, Ont., of which A. W. Osborne is manager, say that the cost of cartage is a very important item which sometimes amounts to more than the cost of the material being delivered. About six years ago the Sandwich Lumber Co., who are successors to the Naylor-Osborne Co., made a specific charge for small deliveries in town but they found that by doing this, they were losing business, hence had to change their tactics to overcome the difficulty. They now give their customers a lump estimate which includes a portion of the delivery charge. All deliveries in the country are taken care of in the same way as the small lots in towns, and as all charges are figured in overhead, the firm do not find it necessary to make a specific levy for delivering in large quantities.

A. L. McDermid & Co., Apple Hill, Ont., say: "We do not make a special charge for delivery but simply include it in our cost when making our selling prices. In a few cases when the distance is too far we then make a charge ample enough to cover expense. We have been delivering out of town for six or seven miles as a rule and at an odd time, if the order is large enough, we might go a little farther without making any additional cost. We find that since we started delivering out of town, our orders have increased considerably. Apple Hill being a small place, we could not confine our delivery to it alone as it would not pay us.

R. W. Nicholson, of Strathroy, Ont., says he does not charge anything for delivering lumber or coal inside the corporation limits and the cost of carrying is always added to the selling price. In a case where customers wish only a small amount delivered as a bushel of lime, a bundle of lath or moulding, Mr. Nicholson says he charges a little extra for the article. He has practically nothing to deliver outside the corporation as the farmers haul their own lumber.

The S. Anglin Co., Kingston, go thoroughly into the question of delivery and say:—"It has always been our custom to make a

separate charge for delivery excepting on coal when the price quoted includes delivery within the city limits. When we send coal out of the city limits, we make a levy according to distance. Our prices for cement also include delivery, a custom in vogue among hardware men who handle this line but it is quite understood that delivery on cement is for full cartloads. Delivered prices do not apply on orders for less than five barrels.

"In regard to lumber and builders' supplies, we make a minimum charge of 25 cents for small deliveries and in sending out orders we try to arrange that three or four go out at one time, making to each customer a small charge sufficient to cover the trip. For deliveries of lumber and builders' supplies outside the city, we charge, for a three ton truck 50c per mile going and returning. For a two ton truck, the charge is 40c per mile including return trip. We do not tell our customers how this is figured up but assess the charge ourselves, on this basis. We occasionally have customers coming in, who pretend to be very much surprised because of the delivery charges and we tell them that we keep our horses and trucks for their accommodation and are not trying to make a profit on our delivery equipment. Furthermore, customers are perfectly welcome to engage other deliveries if they wish to do so. We also tell them that we cannot maintain six horses and five trucks and drivers, on wind. They require considerable hay, oats, gasoline, oil and tires and these cost money, therefore, we have to make a delivery charge. All our prices are based on goods at the yards or mills and the cartage is assessed at cost. We contend that this is the fairest way to dealer and customer alike and that each customer pays exactly for the service he receives.

The Bryan Manufacturing Co., of Collingwood:—"We do not make any charge for delivery inside of the town limits but make a small charge to cover actual cost of deliveries by truck out of town. We do not figure on making any profit out of this end of our business."

Making Up Commercial Burden

John McGibbon of Sarnia, Ont., writes:—"It costs us about \$6,000 a year for the men and teams delivering lumber or around \$20 per day which is quite an item to take from the profits. We would not mind delivering large orders but we had a case in point recently where a man ordered one plank to be sent half a mile and by the time we delivered it, we might as well have given him the lumber. This state of affairs happens quite frequently. We are in the central part of the city which makes the distance comparatively short for delivery but just the same it is a great drain on profit."

The Angus-Keefer Co., of Belleville, Ont., say that they make a practice there of charging cartage and on any order outside the city limits they have a set charge of so much per mile. In the case of an order which will take 12,000 to 15,000 feet this is delivered without a cartage charge. Where a customer wants only a few boards or small quantity of any material he is advised by the firm that there will be a cartage charge added to his invoice.

Robert Stewart Co., Limited, of Guelph, Ont., of which E. M. Stewart is president, say they operate six motor trucks. The cost of operating the same is taken care of in the commercial burden of the firm. In making up this burden the following items appear: Value of investment and equipment used for delivery of our products, trucks, company's car, gasoline tank as per ledger. Depreciation of 25% of full value as above on the above investment.

Total premium for insurance on above equipment as per ledger. Cost of truck upkeep for year 1922, this includes gasoline and tires. Actual wages of delivery crew (truck drivers) paid during year 1922.

Our percentage of commercial burden, as you know, adds Mr. Stewart, depends on the bulk of our sales, therefore we charge nothing on the price set for our different materials for delivery within the city limits; for delivery outside these limits, we charge fifty cents per mile, each way, or one dollar per mile, one way, the distance computed from our speedometer.

In our estimation, it is absolutely impossible to set the cost of operation at a flat rate, for as we stated before, the percentage of cost depends absolutely on your turn over. As there are so many different items in connection with commercial burden, depending on this, unless the average small town lumber dealer can be educated to operate on an absolute cost basis, instead of at random, there will always be a big difference in opinion in delivery cost as well as different manufacturing costs.

We might state that we are members of the millwork cost bureau and we find that their basis of arriving at the cost can be applied with the greatest of satisfaction to all sizes of retail lumber concerns. On account of operating the number of trucks we do, we find that it has paid us to keep our own mechanic, whose duties are to have these trucks in running order, as nearly as possible at all times. Our experience has been that the average so-called mechanic in a garage is in many cases, unqualified for this position and whether the work is satisfactory or not, the truck owner has to pay the shot.

Of course, we have our own tank, thereby saving considerably on the cost of our gasoline. Each truck is charged with the amount of gas consumed, thus enabling us, on the basis of mileage, to discriminate between the careful and careless truck driver.

All Deliveries Free of Charge

The Vigars-Shear Lumber Co., whose head office is at Port Arthur, Ont., declare that it has always been the custom in the cities of Fort William and Port Arthur to make all deliveries free of charge. G. F. Clarkson, manager of the company, adds:—"We cannot say that the prices asked for our lumber really include the cost of delivery. We think they do not and further we feel quite sure that no other cities in Canada are giving the service on deliveries such as is the case at the head of the lakes. Deliveries are made into the surrounding country free of charge where the distance is not more than two or three miles from the yard. On points three to ten miles out deliveries are carried on special terms. Regarding deliveries of small quantities of material, we endeavor to take care of these orders and usually are able to have them in the hands of customers within an hour or two after the placing of the order."

James Davidson's Sons, Ottawa, say that the lumber dealers in the capital do not make any charge for delivery of material on any job. A few years ago they had arranged to charge a rate of 50 cents per M, but latterly this has been done away with owing to competition. In regard to out-of-town deliveries, if the stock goes by rail the price is either f.o.b. Ottawa, or a certain amount is added to cover freight, and in delivering material to the suburbs if it takes half a day to deliver the stock and return, the firm charge \$5.00 and for a whole day \$10.00.

Ingleby-Taylor Co. Limited, of Brantford, Ont., say they do not make a separate charge for city deliveries but do charge for deliveries which they make in the country according to distance. With respect to persons who want a few boards, they try to include the delivery of small lots with other orders going in that direction and avoid making a special trip.

Whole Question Complex One

Laird Bros., of Dresden, say that the whole question of delivery is rather a complex one as the system which they follow at present in Dresden does not meet the conditions in other places, particularly where retailers do not care for their opponents in the same line. Laird Bros. make free delivery inside the corporation but make a charge where cartage is outside the town limits. Free delivery seems to have become a custom and is a service that the dealer does not get pay for.

The firm are of the opinion that free delivery arose in the retail lumber ranks from persons being anxious to sell even at a loss. "Personally we are of the opinion that no delivery should be made without a charge. It is difficult, however, to tell how it can be overcome unless the dealers can be depended upon to arrive at a mutual understanding within the others' territory. Deliveries of small jags are made that do not justify such a service and the parties, who want a few boards sent up immediately, no matter what the cost is to the dealer, are imposing upon his good nature, and yet the dealer

frequently yields. We could," concluded the firm, "enlarge upon this matter a great deal and cite cases where deliveries are made that do not in the least justify the act."

Barrett Bros., of Ottawa, state that they do not make an extra charge for delivery of material. The price of the goods ordered is supposed to cover the cost of delivery within the city limits. Outside of the corporation boundaries the firm charge according to distance.

The Evans Co., of Sudbury, Ont., observe—We include our delivery with our listed prices except when a delivery is out of town, when we charge regular teaming rates. We have tried both ideas and find this is the only one that is workable. When a man wants a bunch of lath sent a mile or more we ask him to come for the bunch or wait until there is a truck going his direction. We find the delivery situation applies to the retail lumbermen just as it does to the butcher and the baker and has to be included in the price of the finished product.

J. P. Abel-Fortin Limitee, Montreal, declare that the question of delivery with most retailers is not quite clear. When making delivery in town this firm include as a rule delivery fees in their selling price, but for all outside deliveries they charge according to distance. On small lots they generally make special cartage charge and their selling price is based in proportion. They would much prefer in every instance to make a specific charge the same to be added on invoices, charging so much for delivery, either per load or per M feet for all the lumber to be carted.

Sold Delivered on the Job

The Builders Moulding Co., Limited, Toronto, say that flooring and interior trim is sold delivered on the job in the city. The selling price includes the cost of delivery. Regarding occasional cases where customers ask for a small delivery of a few boards or a small bundle of flooring, we deliver these and do not make an extra charge, but this is a costly operation. However, we feel it is necessary in order to give service. We might say that frequently our trucks will be going in the direction where the delivery is to be made and consequently the delivery charge is very small. If you could work out some plan whereby manufacturers or shippers could have a uniform system regarding these special deliveries, it would be of benefit and a saving to all concerned, as there is no doubt but that some people take advantage of good nature to the cost of the shipper.

The John Carew Lumber Co., of Lindsay, Ont., remark:—"The question whether retailers should charge for delivery has been up very often. There was a time when we made a minimum charge of 25c for delivering very small loads and \$1.00 per M. for loads of 500 ft. or over, but owing to competitors cutting out this charge we were also compelled to do it. At the present time we are not charging for any local deliveries whatever, although there are times when delivery of a small piece costs as much as we get for same, and we feel that there should be a charge made for all deliveries. For deliveries made outside of town we charge \$3.00 per M. up to 10 miles and \$5.00 per M from 10 to 20 miles.

Could Sell for Less if no Delivery

W. H. Harrison, Niagara-on-the-Lake, Ont., who deals in building material, etc., says that he adds on an average 20 per cent to the cost of lumber, f.o.b. station, and delivers for this price inside the town limits and a short distance beyond, all orders large and small. If a customer some distance away asks for delivery, say over two miles, he delivers only when the order would make a full load. On orders less than full loads he adds from \$1 to \$3 for the trip according to distance. "I believe the cost of delivery is included in the selling price here as, for instance, mill run hemlock is quoted now at \$36, f.o.b. Niagara-on-the-Lake, adding 20 per cent, which makes \$43.20 our selling price on good-sized orders, and \$45 on small orders delivered in each case."

Continuing, Mr. Harrison says:—"If we cut out delivery all together we would not have to keep delivery trucks or teams and could or would sell one to three dollars cheaper per thousand. Prices here on orders for building material to be delivered in the country, are regulated greatly by our competitors prices in St. Catharines and Niagara Falls. We find that, although we work on a 20% basis, their tenders are frequently 10% below ours. This latter margin leaves no profit, and must be pretty much like or close to free delivery. In case we meet outside competitors prices for country trade we sell on a 10% margin which leaves no profit and the delivery cost must be paid by profits on some other orders or out of some other branch of our business. In case a farmer brings in his team for a load of lumber we would not make any reduction unless the bill was a fair sized one, say one hundred dollars or more. On very small orders, a few boards or few bundles of lath or shingles, we do try to get a few cents more to cover costs of haulage."

Way to Get at Cost of Producing Long Lumber

Northern Lumberman Says that the Problem Outlined Raises Large Question as to How Much Detail in Book-keeping Really Pays

How to get at the cost of lumber is always an interesting topic with manufacturers. In the Annual Number of the "Canada Lumberman" appeared a timely and instructive article on how representative manufacturers arrived at the cost of the product turned out in the sawmills.

An outline was given of the different systems employed. This was in response to a query received from a manufacturer, who said that he was running a lumber business with a sawmill in which he had a lath machine, box plant, shingle machine, and planing mill, and the wood waste from the mill was sold for firewood purposes and delivered by teams. He said that, to arrive at the cost of the long lumber and the piling of it on the wharf, he deducted from the total wages paid at the mill, the wages of the planing mill, lath machine, shingle machine and wages of the men engaged in cutting the wood and also the teamsters and teams delivery, debiting these to accounts kept for each of these items, thus showing the actual cost to turn out long lumber.

The manufacturer stated that this method had been called into question by some manufacturers who said that was not the way to figure out the long lumber but that the whole cost of the wages of the mill, including lath machine, firewood and planing plant, should be added, and that these others, being by-products, should not be considered in arriving at the other cost.

In a recent letter to the "Canada Lumberman," J. A. Fraser, head of the Pine Lake Lumber Co., Limited, Pickerel, Ont., said that the problem outlined raises a large question, viz., "How much detail in bookkeeping pays?"

"Any business man," continues Mr. Fraser is mainly concerned with how much money he can make at the business he is engaged in and the best index to the amount of money he is making, is the amount of cash or assets easily realized on which he has at the end of one year as compared with any previous year. The main object of bookkeeping is to give him always a true statement of his obligations and a record of amounts due him so that he can pay all amounts due correctly and only once and similarly collect all amounts owing to him when due.

"Your correspondent says that he deducts from the total wages paid at the mill the wages paid at the planing mill, lath mill, shingle and other side industries and that this method has been questioned by others who figure that the whole cost of the wages of the mill should be charged to the manufacture of the lumber.

This second method would be manifestly unfair as the lumber could be produced without these extra expenses and the by-products of the sawmill could in most mills be disposed of without any extra cost, certainly in all mills equipped with a burner. At that way of calculating the cost of the long lumber, his total output of lath, shingles, and other by-products would be clear profit.

"I do not believe that anything is gained by too much detail in bookkeeping around a sawmill plant, but that if a mill owner wishes to know exactly what the long lumber is costing him to manufacture, he should charge the wages in the sawmill to lumber sawing account, and similarly with his lath mill, planing mill, and shingle mill, and apportion the repairs and maintenance cost of the mill among these different accounts at the actual cost, if he is able to keep tract of that, to each division or in any way that seems most fair to himself.

"He will also have to settle whether he should charge each of these plants which use by-products of the mill, with the raw materials or not. This charge would vary at every mill depending on whether he can find a sale for all of his slabwood and the prices which the slabwood would command if he can sell it.

"Another factor that would effect costs on the separate parts of his operation would be power costs. In most mills, there is a central power plant and wages of engineer and foreman as well as of maintenance of power plant should be subdivided among the different operations.

"It is quite conceivable that if this plan were followed and everything charged up to the different operations that some parts of the operation might show a loss on the books while actually they were contributing to the success of the business.

"One mill owner might say that he was producing lath cheaper than another and selling them at a higher price than the second man, but the first man might be losing money and the second man making

money through the production of lath, for the reason that the first man will be able to sell his slabwood through large local demand at a price which would pay him better than manufacture of lath. The second man might have no market whatever for slabwood and, through the manufacture of lath not only be finding a market for his slabwood but saving himself considerable expense in getting rid of it because he was not equipped with the burner.

"Conditions vary so widely at different plants in the lumber industry that cost sheets are not of as much value as they may be in some other industry. It is quite conceivable that sawing costs might be higher in a plant that was well managed than in another plant not so efficiently managed, but where, owing to labor supply or natural advantages for handling both logs and lumber, the costs may be less.

"In general, the lumber manufacturer gains more by trying to increase the output of the plants which he already has or studying how he can get equal or greater production with a smaller number of men, by changing his methods or altering his plant. In short, study your operation more and your books less."

Saving Forests by Prolonging Wood Life

An interesting address was given at the last meeting of the Montreal Branch of the Engineering Institute of Canada, on November 1st, by Richard V. Look, president of the Canada Creosoting Co., Toronto. The main point of Mr. Look's paper was the large saving that is being effected by the use of creosoting woods for railway purposes, principally, of course, in railway ties which, he stated, meant a saving of two to three million ties per annum which did not take into consideration the saving effected in such material as telephone poles, piling lumber, bridge timbers and other work of a similar character which was subject to weather exposure—such as fence posts. The saving effected by the creosoting process ran from 30 to 70 per cent. and in the case of railway ties, much more, it being estimated as high as four times greater than the ordinary tie.

Another instructive feature brought out by the speaker was the use of creosoted poles for grapevine supports, where not only was the life of the pole prolonged but the creosote acted as a protection for the vine against all forms of fungus and also parasites, thus helping to prolong the life of the vine as well as the poles used for supports.

Mr. Look also brought out the saving effected by the use of inferior woods which after treatment by creosoting methods, were found to be as effective and as lasting as the more expensive material.

In conclusion, he referred to the two particular processes of creosoting, the superficial method of application by brush only and secondly the more intensive process of impregnation so that all the fibres of the wood were thoroughly treated. This last process cost as high as seventy and even one hundred per cent. of the lumber itself, but taking into account the extra length of life given to the material and the economy effected in the way of replacement costs, it had proved a real saving.

Montreal Wholesalers' and Retailers' Controversy

The controversy now going on between the wholesale and retail lumbermen in Montreal has not yet been settled and a diversity of views continues to prevail between the two sections of the trade as to whom each section may properly sell to. A meeting for the discussion of the situation was called by the Montreal Retail Lumber Dealers' Association on Wednesday evening Oct. 31, last, but evidently someone had overlooked the fact that this was Halloween night, with the result that not anywhere near a quorum turned up and the meeting was adjourned to a later date. Meantime the Wholesale Association has issued the following circular to all sawmill owners throughout Canada:—

We take the liberty of sending you a list of all members of this Association, with the request that you will first communicate with such members when you have lumber or other forest products to offer.

This course, we believe will be to the benefit of both saw mill owners and members to this Association whose interests are so intimately connected with one another, and we think it advisable that the close connections hitherto existing between these branches of the trade shall remain undisturbed.

District Dealers Will Get After Dead Beats

List Will be Compiled in Niagara Peninsular of Names of People With Whom Retailers Have Had Undesirable Dealings—Co-operative Spirit.

The Niagara Peninsula Branch of the Ontario Retail Lumber Dealers Association, held an enthusiastic gathering when the dealers of the district gathered in the commodious offices of the William Shirton Co., Dunnville, on October 27th. The session was marked by splendid spirit and the great interest evinced in the discussions. Several important suggestions were placed on record which will render the succeeding meetings even more interesting than those in the past have been.

Owing to the unavoidable absence of James Harriman, recently elected chairman, S. L. Lambert, of Welland presided. He opened the proceedings by talking briefly on the value of retail lumber dealers uniting their efforts in protecting their business from unscrupulous customers. He was very warm in his praise of the work that had been done by the O.R.L.D.A. in bringing about reforms in the Mechanics' Lien Act which now offered the building supply men a far better measure of protection than before. Mr. Lambert told the members that already the efforts of the association with the Act had saved him money on a recent case for the simple reason that the judge was permitted to use his common sense. Another similar case was pending, he said, and by putting the property up for sale would protect himself from any fictitious valuation.

The next problem of discussion was that old friend of retail lumber dealers, the bad-pay customer. K. J. Shirton, of Dunnville, opened the subject on collections and explained how he came to be a past master at devising ways of trying to get customers to cash in for value received. He emphasized the word "trying" because that was where he shone and not in getting the money. He kept note of these kinds of customers by classifying them as poor, bad, and disputed and in this way had a ready reference in knowing what sort of heavy artillery to use. The column headed "disputed" accommodated the names of customers who declared they had never received the materials on the bill. This opened up an interesting talk on the various methods of getting the goods signed for when they are delivered. Everyone present agreed that the method of having a driver's delivery book was not a reliable one as the book was often lost and all the signatures with it.

Getting Receipts of Delivery

S. L. Lambert explained that he had purchased a small machine which by the use of carbon paper, writes three copies and the original could be torn off and handed to the driver. This was found to be an improvement on giving the delivery man a carbon copy which often gets smudged and rendered illegible. Each morning, said Mr. Lambert, the girl in our office goes over the deliveries of the preceding day and sees that the customers' signatures have been obtained as a receipt for the delivery of the goods. If the goods have been delivered to a certain location but no signature could be obtained, the customer is notified of the fact immediately. In recording the deliveries of materials in this manner the customer is protected as well as the dealer and there can be no room for disputes which cause ill feelings on both sides.

In further consideration of the best steps to take toward bringing the slow-pays to a realization of their debt, several methods used by dealers present at the meeting were discussed. K. J. Shirton, displayed the various forms used by his company. Some were printed forms and others were stickers with a few well-chosen words. The latter were attached to the statement drawing the attention of the customer to the amount outstanding.

It was the idea of some of those present that a personal letter in the dealer's own handwriting or a typewritten letter with a few lines added at the bottom by the personal hand of the dealer, brought the best results. It must be admitted that more attention is paid to the personal communication rather than the form one which is more or less regarded by the customer as a half-hearted attempt to get the cash and it is therefore, not taken seriously.

Ability of the Farmer to Pay

In discussing the different classes of customers and their ability or willingness to pay, the farmer was declared to be a good customer by several dealers. This may be contrary to the ideas of some retail lumber dealers who find farmers hard to deal with. But it was pointed out that the latter in most cases like to have the cash to pay for

lumber which they need. This ranks them ahead of the speculator or other parties who buy on credit.

In touching upon the subject of credits most of the members declared they had accounts on their books that they would never be able to collect. Secretary Boulthée of Toronto pointed out the advantage of exchanging these names and so protect one another from these unscrupulous people. These kind of men moved from place to place to buy their materials and the sooner a tag was placed upon them the better for everybody.

It was decided that each member should compile his own list of bad pays and bring them along to the next meeting. These names would be handed to the local secretary, A. D. Wise of St. Catharines, who, with the help of Secretary Boulthée, would arrange the list for circularizing the yardmen of the district. Each month an important item of the program will be the bringing of any new names of people with who the retailers have had undesirable dealings. This co-operation among retailers in exchanging their bad accounts will have a lasting impression upon the dishonest buyer of material and will teach that class to recognize the unity of the retail lumber business.

Will Issue Member Cards

After other subjects of interest to the retail yardmen, the talk turned to the idea of putting the Niagara Branch of the O.R.L.D.A. on an even better footing, so as to make it really attractive to those who have not yet attended the lively gatherings. John Davis, of the Davis Lumber Co., St. Catharines, moved that the branch association order printed stationery with the names of the officers in the letterhead. Membership cards should also be ordered so that when a new member was asked to join there was something tangible to offer him. J. G. Morningstar, of Welland, seconded the motion.

A number of other good suggestions were made by Secretary Horace Boulthée, in reference to circularizing the members with the minimum of work for the local secretary. Printed cards giving the date, place and principal topic of discussion will not only be a business-like method of announcing the meetings, but will be systematic and easy to handle. With these facilities, each member will take a few membership cards and call on the other dealers of their district or town and invite them to come to the monthly meetings and enjoy the discussions.

The next meeting of the Niagara Peninsula Branch of the O.R.L.D.A. will be held at the Clifton Inn, Niagara Falls, on Saturday afternoon December 1. The gathering will take the form of a luncheon and the discussions will follow the repast.

Millwork Men Hold Joint Conference

L. C. Thomas, secretary of the Vancouver Lumber Co., spoke on cost accounting, dwelling on the desirability of the trade arriving at uniformity in costs and in methods of figuring them out, at a joint convention of the Pacific Northwest Millwork Association and the B. C. Woodworkers Association held lately in Vancouver.

E. C. Chrystal, president of the British Columbia association, took as his theme "Apprenticeship." His suggestion was favorably received, being in short a plan to lay out a schedule for boy workers, starting them out at a reasonable wage, graduated upwards over a period of four years. At the end of the apprenticeship period a bonus of \$500 would be given, provided the services rendered had been satisfactory. It was hoped by such a method to induce more youths to take up woodwork designing as a lifework, as it was an occupation more attractive and fascinating than almost any other of the skilled trades.

One of the objects of holding the joint convention in Vancouver was to give the Pacific Northwest association an opportunity formally to present an invitation to the British Columbia association to affiliate with the former, which includes the planing millmen of Oregon and Washington, with branches in Seattle, Tacoma, Spokane, Portland and other centers.

A banquet was held; menu cards printed on three-ply cottonwood veneer were an unique souvenir of the affair.

E. C. Chrystal, president of the British Columbia Woodworkers' Association, occupied the chair most of the time at the joint convention.

On the left is the residence of M. E. Crouch, manager of the Porcupine Pulp & Lumber Co., at Hoyle, Ont. Next is a snapshot of Mr. Crouch himself and then the company's store and the new home of the cashier of the organization

Porcupine Company is Creating New Town

One of the busiest institutions in the north is the Porcupine Pulp & Lumber Co., Limited, of Hoyle, Ont., which is located on the T. & N. O. Railway, sixteen miles south of the busy town of Timmins. The "Canada Lumberman" on this page presents several views showing the activities of this organization which has been in existence for the last six years.

The Porcupine Pulp & Lumber Co. takes out several thousand cords of pulpwood each year and during the coming season will increase its usual amount by about thirty per cent. The company does not operate any camps itself but awards the contracts to jobbers who take the product either from the land owned by the Porcupine people or upon which it has cutting rights.

At Hoyle, Ont., the company has erected several buildings, including a rossing plant, general store, cookery and bunkhouses, residences for the manager and cashier, warehouse and other structures. Recently a new pulpwood conveyor was completed and new concrete piers have been placed under the rossing plant. The company owns about forty acres at Hoyle where all buildings are located. The mill rosses about some 125 cords of pulpwood in ten hours and is kept busy the greater part of each year.

It is the intention in the spring to erect several cottages for employees and it is likely that a sawmill will also be put up in order to make profitable use of the large quantities of poplar and birch which the company has on its lands.

Cutting rights are possessed on some 8,000 acres in all. The wood that is rossed is shipped to the Cliff Paper Co., of Niagara Falls, N.Y., of which the Porcupine Pulp & Lumber Co. is a subsidiary organization. It is brought to the rossing plant at Hoyle either by direct haul or by being driven down the Porcupine River.

The head office of the company is at Niagara Falls, N.Y., and the president is E. E. Mansfield. The manager of operations at Hoyle is M. E. Crouch, who formerly resided in Port Arthur and Nipigon and is an Ontario land surveyor, well-known throughout the north.

The company has various other plans in view for the development of activities at Hoyle and certainly has done a great deal during the last few years in creating a thriving settlement in the hinterland of Ontario.

Buffalo Hardwood Men Will Meet in Montreal

There is every probability that the Buffalo Hardwood Dealers' Association will hold its next annual gathering in the city of Montreal and a definite announcement to this effect may be expected during the next few weeks. The meeting takes place some time in January and all Montreal lumbermen will be glad to see their brethren from across the border. The weather at that time may be cold but they can be assured of a warm welcome at the Canadian metropolis. There will also be plenty of coal available as well as other hot stuff.

No More Big Sales Before Stock-Taking

During the last fiscal year there was sold by the Department of Lands and Forests of Ontario, timber areas totalling 1,593 square miles. Of this total 1,399 square miles was disposed of by the Drury Government during the portion of the year in which it held office. The Ferguson administration, since it came into the saddle, has sold only 194 square miles, all of which was composed of burned-over timber areas which required to be disposed of immediately if they were to be realized upon. The number of sales which the Department transacted during the past year was 47, 38 being under the Drury Government.

When Hon. G. Howard Ferguson came into power he made the statement that his Government would not alienate the public domain until a thorough stock-taking of the natural resources of the province had been carried out and a comprehensive plan formed for realizing upon them to the best advantage. That he has adhered to such a policy is indicated by the Department's statistics.

Seaman Kent Plant at St Agathe Burned

The hardwood flooring factory of the Seaman, Kent Co., Limited, at St. Agathe, Que., was completely destroyed by fire recently. The blaze broke out from an unknown cause in the boiler house about six o'clock in the morning, being discovered by the night watchman, and made such rapid progress that it was impossible to save the plant. The hardwood lumber in the yard some distance from the factory, and the office building were saved. The total loss is about \$200,000 and is fairly well covered by insurance.

The plant was acquired from the Standard Mills Co. some twelve years ago and had been operated by the Seaman, Kent Co. ever since. Hardwood flooring, principally of birch, was turned out to the extent of 7,000,000 board feet annually, the factory being a three-unit one. The product was sold largely in Quebec, the Maritime provinces and the New England States.

Frank Kent, of Toronto, president of the company, when asked if the plant would be rebuilt, stated that no decision had been arrived at as yet but that the orders of all customers would be well taken care of at the other factories of the firm in Meaford and West Lorne where overtime operations will be conducted in order to catch up with the demand.

Now that the congestion due to the Dock strike in London has been overcome, Cox, Long & Co. Limited, have resumed shipping freely from Montreal and Quebec to various U. K. Ports. Through the former Port, more than two million feet of white and red pine will be cleared, in addition to which nearly half-a-million feet of birch lumber is now being loaded. At Quebec, fully two million feet of spruce deals and birch lumber have been ordered down for shipment by the liners. They have just completed loading two steamer cargoes of spruce deals from the gulf and may be able to get another cargo away before the weather interferes.

On the left is seen the rossing plant of the Porcupine Pulp & Lumber Co., at Hoyle, Ont., and next are several thousand cords of rossed wood ready to ship to Niagara Falls, N. Y. On the right is the storage pond of the company

Lumber Concern Which is Forging Ahead

One of the newest and most successful organizations in Northern Ontario is the McCraney Lumber Co., whose headquarters are at Brennen, Nipissing district. The company which was launched a little over two years ago by Guy H. Long, of Hamilton, A. E. Graydon and P. A. Duff, of South River, secured part of the township of McCraney and erected a mill at Mileage 328 with a sawing capacity of about 20,000 feet per day.

There is estimated to be 10,000,000 feet of the finest birch in that area and much favorable comment has been received upon its character. Good trees produce good logs and when properly cut, good logs produce good lumber which accounts for the superior stock that the McCraney Lumber Co. has been producing. It is cutting a million and a half feet per year and estimates that it will take five years to cut out the stock. Cutting the logs principally to 16-foot lengths, makes the lumber easier to sell as the long lengths in birch are always sought after. There is a down-haul for the logs to the mill which is situated on a railroad siding and enables the firm to make quick shipments.

The McCraney Lumber Co., has its camp situation, building, saw-mill and piling ground one of the best sites in the north country.

Guy H. Long, Hamilton, Ont.

The piling ground is long and narrow and high and dry. The layout is picturesque, being situated by Round Lake which nearly surrounds the mill and makes the fire hazard practically nil.

The McCraney Co. shipped one car of 8/4 No. 1 common and better birch that, under N.H.L.A. inspection, showed 87 per cent FAS. and 79 per cent 14 feet and longer. The 10/4 shipped out by the firm showed practically the same and if anything a little better inspection and the company has now ready for the market approximately 1,000,000 feet. The McCraney Lumber Co. looks for an advance in birch in the near future, particularly for quality stock.

The personnel of the McCraney Lumber Co. has resulted largely in its success, the various members having special experience which qualifies them for effective work.

Guy H. Long, who is a partner of the Long Lumber Company, Hamilton and Toronto, President of the Consumers Lumber Company, Hamilton, President of the Ideal Lumber Company, Hamilton, and has been Hydro Commissioner for the last three years, is President of the McCraney Lumber Company, and looks after the selling of the company's stock.

A. E. Graydon, who has been in the North country practically all his life, is a practical lumberman. He was connected with the Graydon Lumber Company at Ravensworth and is an experienced National Inspector and saw-mill man. Mr. Graydon is secretary-treasurer of the McCraney Lumber Company and supervises the shipping and manufacturing of the stock.

P. A. Duff, who has been in the North country all his life, is an expert log-man. He has been producing logs for a number of years. Mr. Duff has charge of the logging operations and camp life.

Big Cut of Logs on Nashwaak River

The Nashwaak Pulp & Paper Co., whose operations constitute the bulk of activities on the Nashwaak River, will take out a big cut

during the coming season. Thirty million feet is the estimate and last year it was only a little better than half that. In 1921 a small cut of about five million feet was made.

As large a proportion as possible of the intended cut will be bud-worm killed timber as it is desirable to get it out as soon as possible. Its value decreases the longer it stays. The limits of the Nashwaak Pulp & Paper Co. received severe visitations from the bud-worm.

Warren Malone of Stanley has been in charge of the woods operations of the company for some time and is now making preparations. Mr. Malone has taken up his residence in Fredericton.

Will Permit Mills to Run Year Round

Residents of the parish of St. Cyriac, which will be submerged by the waters of the Kenogami dams which are being erected at that point by the Running Streams Commission of Quebec, have not yet accepted the offers made by the Commission. It is stated that work may be slightly delayed as a result of expropriation proceedings proving necessary. The total cost of purchasing the land now occupied by the residents, coupled with the indemnities to be paid to those affected, is expected to reach nearly \$1,000,000.

For the benefit of those who are obliged to move away the Running Streams Commission has placed at their disposal 800 acres of land on the heights at a short distance from the present village. This land is being sold by lots at a nominal price and through this means the commissioners expect that they will persuade the interested parties to come to an agreement without having to resort to expropriation proceedings.

Work on the dam is reported at the Running Streams Commission office at Quebec City as progressing very well, and the \$2,000,000 works located at the upper part of the Saguenay River, are expected to be completed within fifteen months. As a result of these works, the mills operated by the Price interests and by the syndicate headed by Sir Frederick Becker, will be kept in full activity during the whole year instead of partly closing down in the winter months, as they had to in the past. It is expected that in the fall of 1924, the work will have progressed sufficiently to allow those mills to benefit from the regulated water power, allowing winter operations.

Mr. Schierbeck Enters Upon New Position

O. Schierbeck has resigned his position as chief forester for Price Bros. & Co., of Quebec, and has been engaged by Frank J. D.

Otto Schierbeck, Quebec, Que.

Barnjum, of Annapolis Royal, N. S., to go to Nova Scotia to study forest conditions and possibilities in that province.

Mr. Barnjum intends starting a nursery at Annapolis Royal immediately under the direction of Mr. Schierbeck for the benefit of farmers and land owners of the province so that they may be provided with transplants and seedlings for the reforestation of the waste lands on their farms. A demonstration area in the vicinity of Annapolis Royal will also be set aside for this purpose.

Mr. Schierbeck was the winner of Mr. Barnjum's \$5,000 prize which was open to world competition, for the best method of suppressing and combatting the spruce budworm, bark beetle and borer.

Live Northern Firm Believes in Publicity

Does Not Miss One Insertion in Year in Local Paper Without Having Advt. of Some Description—Catchy Copy Which is Changed Often

The Kaministiquia Lumber Co., Limited, of Fort William, Ont., of which E. Sutcliffe is manager, is one of the live organizations that believes in effective and persistent newspaper advertising. The ads. are changed frequently and carry catchy headings such as "The Parlor in the Home," "A Ton of Coal Yields," "Ancient Methods in Millwork," "A Real Good Time," "Protecting Your Investment," "A House Cannot Be Warm," etc. The announcements are generally run in series and appear in the same place in the paper each evening so that they constitute a regular feature.

Mr. Sutcliffe says,—"We make a continuation of this kind of advertising and we do not miss one insertion a year in our local paper without having an ad. of some description in it. We know of quite a number of people who, even though they are not interested in buying lumber, are always interested in reading our daily ads. We feel that it pays us to advertise in this manner as it keeps our name before the general public all the time. Things have been very good with us this year and our volume of business has exceeded that of last year by a considerable margin."

The Kaministiquia Lumber Co. made an exhibit at the fall fair this year but not on such an elaborate scale as in 1922 as the firm gave part of its space to the Daughters of the Empire. The company made a miniature house and donated it to the Daughters. This diminutive dwelling was on display in a portion of the booth.

The Kaministiquia Lumber Co. say that they are well satisfied with this year's business and are also optimistic about the outlook for 1924. As far as the firm can see and judge by conditions prevailing at Fort William, a good year should result and it is anticipated that trade will keep up until late this fall. The millwork part of the business has shown wonderful increase and it will not be long before the Kaministiquia concern will probably have to double its capacity. It is thinking seriously of doing so the coming winter.

Some of the advertisements run in a late series by the Kaministiquia Lumber Co. are both instructive and timely and are reproduced herewith:

A Ton of Coal Yields

Ten thousand feet of gas. With the help of a set of our Combination Storm Doors and Sash, you will get the full value in heat from your coal. Chic designs, flawless glass, expert workmanship.

KAM LUMBER CO., LTD.

1005 Victoria Ave. For Service, Phone S. 314 or 1723

"The Parlor in the Home"

"Is greatly appreciated by English workers," according to questionnaires. Our superb service of ornamental Trim, Veneers, Moulding and Hardwood Floorings enables you to bring refinement to the home at minimum cost.

Ancient Methods in Millwork

Will not suit modern requirements. We maintain a rapid service of delivery in every branch of our lumber business. Your order for millwork will be completed and delivered without loss of time.

Large Stocks

Of every class of lumber is desirable in handling every class of millwork at a saving all round. We maintain complete stocks of suitable lumber for all classes of millwork. It saves all round. We can meet your needs in Lumber and Millwork.

For Logging Camps

We have some special bargains in strong durable Roofing and Lumber Supplies. A warm camp means health and better results in the day's labor. Let us quote on your bill.

Quebracho

Is the utility wood of Argentina. Very hard and durable. It is almost exclusively used for ties and fuel. It gives a wood distillate for tanning. Our lumber is utilized for economic building.

A House Cannot be Warm

Without a good roof, Heat rises, cold descends. A good roofing means comfort and saving in fuel. We have camp

roofings, strong, durable, moderately priced, Headquarters of good roofings.

A Real Good Time

Is the present for getting your house in a good state of repair for the winter. We have large stocks of lumber. Superior millwork, service and reasonable prices. Get our quotations on your bill of material.

A Poultryman's Views

Comfort and freedom from direct draughts are essential to winter laying," says an expert on winter egg production. Let us show you how to provide winter comfort at a small outlay in Lumber and Material.

Floorings

Hardwood floors are the most economical when longevity and service are taken into consideration. The polished surface lends distinction to furniture and gives comfort and joy to a good housekeeper. Headquarters for good floors.

Canada's Description

By Mr. Lloyd George is "a land growing hard corn and hardy men." Also Hardwoods and Pine. We have full stocks of all classes of lumber, lath and shingles. Headquarters for quality and quantity.

Protecting Your Investment

In a car, is keeping it well housed for the winter. We can supply you with any class of lumber or material for a garage. It costs you nothing to get our quotations on your bill of materials.

Planermen Get Close to Machine Capacity

It is possible with a high-speed matcher running on flooring to turn out 250 lineal feet per minute, which is 15,000 lineal feet per hour or 120,000 lineal feet per eight-hour day. Possible, it is, but unquestionably it is highly improbable that any crew will ever do it for such a maximum run would mean that everything—lumber, machinery and men—had to be perfect for 480 consecutive minutes, and such perfection is extremely doubtful. Sometimes, however, men come close. The planing mill crew at the Peninsula Lumber Company, Portland, Ore., has been coming close. Here are the facts: says the "Four L Bulletin."

Superintendent McMillian of the above named plant saw an advertisement which told of a record made by a five-man crew at the Raymond Lumber Company, when under the direction of Guy H. Cagley, planer foreman, the Raymond millmen ran 93,600 lineal feet of 1 x 4 lumber through a No. 404-B. S. A. Woods matcher in seven and one-half hours.

"Some hustlers," said McMillian. He hunted up the Peninsula planer foreman, E. J. Fully and had him read the advertisement. "It is good stuff," remarked E. J., "but not good enough to make us blush. We can beat that any day your old sawmill gives us enough good lumber. Fact is, think we have bettered it several times already."

"Give me the figures," was McMillian's polite rejoinder.

He did. McMillian passed them on for all planing millmen to shoot at.

In seven and one-half hours of an eight and three-quarter hour day, January 30, 1923 (which this plant works regularly, taking a halfday off on Saturday), one planing mill crew working on an American 77-A matcher, manufacturing 1 x 4 flooring, put through 107,670 lineal feet.

The eight and three-quarter hour cut for that day was 125,621 lineal feet

The seven and one-half hour figure is offered as against Mr. Cagley's crew record of the same time. That figure, the full day's run, or an eight-hour portion are offered for any crew to punch at.

To demonstrate the efficiency of this crew planer foreman Fully figured the lost time during the day in question and found that this machine came within 19 minutes and 32 seconds of maximum capacity for the seven and one-half-hour period,

Brighter Outlook in Shingle Market

President of Shingle Manufacturers' Association of British Columbia Believes Demand Will Improve

J. A. Edgecumbe, of Vancouver, president of the Shingle Manufacturers' Association of British Columbia, spent several days recently in Toronto and other cities in the East. He says that the shingle situation is growing brighter and he believes that the demand will improve from this out. The Shingle Manufacturers' Association of B.C. has been putting on a lively publicity campaign in favor of "Edg-Grain" Shingles and is strongly urging dealers and consumers to use the thicker shingle, believing that it is the most economical and satisfactory in the long run. It is pointed out by the Association, both for the retailer and the home builder, that a roof is only as good as its weakest shingle and, therefore, a parallel or vertical grain red cedar shingle, which will not warp under adverse weather conditions because the stresses and strains are equal, is the cheapest in the long run.

"Yes," continued Mr. Edgecumbe, "we intend to push B.C. red cedar shingles more widely than ever and there are some facts connected with the industry which the people in Ontario and the East do not know. Fully 50 per cent. of the shingles sold in New York, Pennsylvania and the New England States are B. C. red cedar shingles. These are placed on houses costing all the way from \$6,000 and \$7,000 up to \$250,000, and are an evidence of the faith which the builders have in their worth and durability as roof covering. The better quality of shingles, too, is being used on these houses such as Eureka's, Perfections and Royals.

"We tell the dealers that, while the superior brands with the thicker butts and consequently better body, cost a little more, they are the most economical in the long run. They can be laid with greatest surface to the weather and the cost per 100 square feet is practically the same as the cheaper grades. This applies to covering surfaces alone and does not take in the added length of life of the straight grain shingle with the thick butt.

"We believe that red cedar shingles to-day are standing the test as never before. About 85 per cent. of the output of British Columbia mills is sold across the border, so thorough is the appreciation of the "Edg-Grain" shingle, and the other 15 per cent is disposed of in Ontario and in Eastern Canada. We admit that the manufacturers and also our Association have not been as persistent and aggressive in the matter of making known and pushing red cedar shingles in the East as we should have been, but we are remedying this and expect to increase greatly our sales in Ontario during the coming season, and in this respect are closely co-operating with all dealers."

Touching upon the question of stained shingles, Mr. Edgecumbe, who is head of the Edgecumbe-Newham Co., of Vancouver, stated that his firm has recently put on the market what is known as the "Edham Colored Shingles." This product has been enthusiastically received and the company, which turn out about 800,000 shingles a day, are behind in orders at the present time. The demand for stained shingles, which make a home most attractive and beautiful, is increasing rapidly, and not less than 500,000,000 red cedar shingles were treated and colored in Tonawanda, N.Y., plants last year for the building trade in the Eastern and New England States.

Stained Shingles Coming to Front

The colored shingles turned out by the Edgecumbe-Newham Co., are taken direct from the dry kilns, which are operated in connection with their mills, to the staining machines. The shingles are still warm and thoroughly dry, the pores of the wood being open and receptive to color pigments. The method of impregnating red cedar shingles with color ensures that each and every shingle is thoroughly saturated from tip to butt, coloring the wood in a manner that seems to emboss the grain, causing it to stand out and assuring durable, permanent tints that are rich and soft in tone. The shingles come in standard colors of tile red, moss green and bungalow brown, special colors to suit the individual taste may be secured promptly. Mr. Edgecumbe says that such a roof possesses not only long life and good appearance but adds distinctiveness and individuality to any home.

The company are seriously considering establishing a plant in Toronto within the next few months for the purpose of staining shingles in special blends which may be desired by architects, home builders and others. The standard colors will still be turned out by the firm in Vancouver but the special demands will be met by the eastern plant.

"The stained red cedar shingle is the most welcome additional architectural feature which has come to the front during recent

years and the future is exceptionally bright with promise of an augmented demand," concluded Mr. Edgecumbe.

Says Lumber Industry is Taxed to Hilt

At a recent sitting of the pulpwood Commission in St. John, N.B., some of the leading witnesses were—J. W. Brankley, general posed embargo. The farmers in his section, he said, all have woodlands and they cut pulpwood, all of which goes to the mills in the United States. It would be a mistake to put the embargo in force until there was some other place for them to ship to. Mr. Jones said that his holdings covered about 36,000 acres which were mostly abandoned farms. Reseeding and other reforestation methods were not necessary if fires were kept down.

Mr. Jones complained strongly against the piling up of taxation on the lumbering industry. No other activity could exist under such conditions. He complained particularly against the Workmen's Compensation Act which R. W. McLellan, one of the commissioners in the pulpwood investigation, said would have to be corrected this year or many lumbermen would have to go out of business. The tax was 8 per cent. in New Brunswick as compared with 3½ per cent. in Nova Scotia. Mr. McLellan added that industries other than lumbering were not bearing their fair proportion.

Lumbermen Behind New Railway Project

Application is being made to the Quebec Legislature for incorporation for the purpose of constructing and operating a railway under the name of the Great Lakes Railway Co. from a point on the Canadian National Railway at or within the vicinity of Bell River to a point at or near Twenty-one Miles Bay, Grand Lake Victoria, on the Ottawa River, or at a point at or near Rabbit Lake on the Ottawa River. The incorporators of the company are Hon. George Gordon, of North Bay; Hon. George Bryson, Fort Coulonge, Pontiac County, Que., John B. Fraser, of Ottawa, lumber merchants, and George E. Fauquier, railway contractor, of Ottawa.

The company is empowered to own, purchase and acquire timber limits and timberlands, to build and operate steamboats, vessels, etc., and carry on the business of lumbering, manufacturing and disposing of forest products of all kinds as well as pulpwood, pulp and paper.

Stump Puller Which Does Good Work

Ever since the problem of clearing bush became a factor in agricultural life, stump pullers of one kind and another have been invented and tried out with more or less success. The Easthope stump puller and donkey, which is manufactured by Easthope Bros., Vancouver, B. C., is a machine which has been doing exceptionally good work. With a 5-in. cable, this machine, run by a 1½ h.p. gasoline engine, has been pulling out big stumps with the greatest ease, taking every last root and not leaving any snags to be a source of trouble afterwards.

The operation of the steam puller is simple. By the invention of a novel method of speed reduction, the multiplication of spur gears and the use of worm gears is avoided. On low gear only one pair of gears is employed yet its speed is 650 revolutions of the engine to one of the cable drum. The machine gives a smooth, steady pull of several tons on low gear, and if put to the test could develop more than the cable could stand. Fifty cents a day is said to cover all operating costs for gas and oil while the compactness of the machine makes it easy to handle.

British Columbia Loggers Win Big Suit

By decision of the judicial committee of the Privy Council affirming a judgment of Mr. Justice Murphy, seven British Columbia loggers have been awarded damages, expected to aggregate \$1,380,000, against the Canada Timber & Lands Ltd., of Toronto.

J. C. Clausen and six other loggers entered into a contract with the company for the purchase of cedar timber limits on Toba river. The price would have worked out at about \$600,000.

At the end of the year's operations the company cancelled the contract by notice and on behalf of the loggers this was accepted as a repudiation of the contract and suit was entered in the Supreme Court, claiming damages for breach.

Mr. Justice Murphy decided the cancellation was not justified and awarded the loggers damages against the company. The damages are based on the difference between the cost of logging and the market price of the logs, and this, according to the successful plaintiffs, will approximate \$1,380,000.

The action has taken nearly a year and a half to progress from its inception in Supreme Court in Vancouver to the judgment of the Privy Council.

What Grade Standards Will Mean to the Trade

Movement is Both Practical and Useful and Should Make for Stable, Orderly and Profitable Business—Steady Expansion of the Movement

With a view to explaining practical elements of lumber standardization and to stress the economy and business common sense which its adoption will mean to lumbermen, generally, the Central Committee on Lumber Standards has issued the following statement of Dr. Wilson Compton, chairman of its Consulting Committee Washington, D. C.

"The sound basis of the lumber grade standardization movement has promptly appealed to men interested in the lumber industry because they want to stay in it, not because they are trying to get out. It is not a new idea. It is only a logical development of an old idea—as old at least as the oldest lumber organization. That it is practical, useful and profitable is demonstrated by the experience of the lumber industry itself and of other industries under similar circumstances.

"It is somewhat of a surprise therefore to witness statements recently published with evident editorial approval in behalf of important lumber interests not now participating in the organized standardization activity, suggesting that lumber standardization, upon which they have been themselves engaged for more than twenty-five years, is inherently impractical and useless.

"The lumber standardization to which the lumber industry has been accustomed during the past twenty or thirty years is regional standardization of sizes, grades and inspection, a movement inaugurated at a time when lumber distribution and lumber competition were also largely local or regional. The pending program of Lumber Standards proposes nothing more than the extension of regional standardization into inter-regional or national standardization due to the obvious circumstance that lumber competition is now primarily inter-regional. In fact, the inter-regional character of the competition is the one great outstanding difficulty encountered in the development of this program.

"The idea, however, that this is a new proposal in the lumber industry and that it involves any fundamental principle different from that upon which the lumber associations have themselves been acting for twenty-five years, is not correct.

"Each association which has published and administered grading rules for lumber has no doubt in its own experience found definite limitations to the extent to which it could accomplish the regional standardization of its grades and sizes. That circumstance, however, has not resulted in any belief that regional standardization is impractical or not useful. The effort to catch up with the changing economic conditions by developing a reasonable measure of inter-regional or national standardization, will in the same way encounter definite practical limitations which those who have given the matter careful study have anticipated. That, however, does not mean that the principle of inter-regional standardization corresponding to the inter-regional character of the distribution of lumber and the competition in the sale of lumber is impractical, unsound or without value.

"It is just as sensible and just as important now to have intelligible and reasonably uniform inter-regional lumber standards when we have inter-regional competition as it was to have intelligible and reasonably uniform regional lumber standards when the competition was essentially regional or local in scope.

No Localization of Lumber Demand

"There is no sound or logical escape from this reasoning or this conclusion, unless it be assumed that lumber competition will become less and less inter-regional in character. To entertain such a view with respect at least to the principal lumber consuming markets in the more populous parts of the United States, would do violence to common sense and to the experience of the lumber industry itself.

"There ought in this to be a sufficient appeal to our economical intelligence and our desire for stable, orderly and profitable business. Needless to say the common sense and practical experience of lumbermen will, as it always has done, sufficiently assert itself as soon as lumbermen are able to distinguish between what the standardization program is and what it is not. Opponents or skeptics of those simple, logical and sensible measures in the interest of greater economy, avoidance of waste and greater convenience and profit in the manufacture, distribution and utilization of lumber have in some instances succeeded in clouding the fundamental issue by constant

elaboration upon possible consequences if the proposed standardization were something different from what it is.

"So far as the interests of the industry as a whole are concerned from producer to consumer, this is nothing but the fighting of wind mills. It is but little short of an absurdity to impute complete absence of practical sense to the forty or fifty deliberately selected representatives of lumber producers, distributors and consumers, who constitute and have energetically acted upon the Central & Consulting Committees on Lumber Standards and their various sub-committees. To challenge as impractical and valueless the basic proposals which after careful study have commended themselves in most instances to the virtually unanimous approval of these men, is to forget that most of them have grown up on the lumber pile or have, given the most conclusive practical demonstration of their practical sense, namely, the successful and profitable conduct of the business of producing, distributing or using lumber.

An Appeal to Common Sense

"The program of lumber standardization is simply an appeal to common knowledge, common sense and the desire for orderly and profitable business. If we would bring the same sensible viewpoint to bear on the pending program as we do on other practical lumber problems, there would be less concern over these boggy, straw men which are constantly being set up in order to be knocked down.

"The issue in principle is clear cut. Fundamentally, it is the decision whether or not the lumbermen intend to adapt the conduct of the lumber industry to the changing conditions of lumber competition and distribution brought by the vast increase in the extent to which widely scattered sources of lumber production are supplying the same people in the same markets with lumber for the same uses.

Held Log Sawing Contest on Fair Grounds

At a recent log-sawing contest which was held at the fair grounds, South River, in the Parry Sound district, there was an attendance of about 500 persons, consisting principally of lumbermen and those interested in the lumber camps. The diameter of the maple log sawn was 18½ in. and the Maple Leaf saw, which got first prize, cut through the log in 32 seconds. The sawyers were Messrs. J. and W. Toney. There were five other competitors who took from 37 to 60 seconds to cut through the log. It might be added that the Maple Leaf saw also captured the second prize. These saws are manufactured by the Shurly-Dietrich Co., Limited, of Galt, Ont., which firm is about to celebrate its fiftieth anniversary.

Pass It On

There is a story of a man who was known to all the folks of his community as the village tightwad. In fact, this man was so close he walked on people's front lawns instead of the sidewalks to save shoe leather. And when the doctor advised him that his wife's life was in danger, unless she were taken to a warmer climate for a few months, he suggested buying her a hot water bottle instead.

This little story on selfishness hits the nail squarely on the head. If you have hit upon a novel method of performing some part of your work more quickly and accurately, or if you have invented some handy, homemade contrivance around your sawmill, planing mill or lumber yard send it along to the "Canada Lumberman" and let your friends in the trade benefit by your experience and insight.

Probably you will see somebody's else's idea that you can use to advantage, so send yours along and start the ball rolling.

The Armistice—And After

Five years ago on November 11 the great Armistice was declared. What a shouting for joy, what a relaxation from that awful tenseness of feeling that had got on everyones nerves as the war continued unabated. But everyone was happy and the question of how the final settlement was to be made was laid aside. Then a feeling of optimism swept this Continent with the expectation of big things ahead. Europe would need large supplies of every kind, more especially lumber, wheat and steel, for reconstruction purposes, which, for the time being, could only be supplied by this Continent, at least, so it was presumed, and so for nearly two years we went merrily along and prices soared.

Then, all of a sudden, the market stopped short and orders ceased and we commenced to realise that everything was not all right. This cessation set in nearly two years after the armistice. From that time to the present, there has been a continued deflation in the volume of business and more especially in the amount of finance, especially credit, available for industrial purposes, with a continual series of liquidations in every line, and we are not yet certain what course commerce in general is about to take.

As we look back on the four years of the war and the five of peace following we are tempted to ask which was the worse, the shock of war or the effects following. It is like a man who has been struck down by a sudden accident in a moment of time, which requires months or years to repair. That we are yet on the way to permanent recovery is quite open to serious doubt and the difficulties of reconstruction become more and more apparent as we see conference after conference fail on world questions and as we realise that the financial conditions of many of the "powers" involved becomes worse instead of better. A writer of some note says that the necessary agencies for obtaining peace are science, finance and the press, but unfortunately science is more hopeful of perfecting poison gas than curing the world's ills, capital in dividends than pay rolls, and the press is not unalloyed inasmuch as it is likely to serve the varied interests only.

It is easy to be pessimistic but it is also unwise to be optimistic without sound reasons. The two years following the armistice, full of optimism, have been greatly discounted by the three following, so that a few reflections on the present position of the world's trade may not be out of place.

Let us hold in mind the fact that all business depends upon finance under our present system of commerce and, if financial conditions fail there is disruption. This was so in the case of Russia. It is pretty certain that Germany is to be broken up, and Poland is

on the threshold of a similar disaster through falling currency, so that finance has more to do with the morals of a nation and stability in general than we have hitherto accorded it. Lloyd George has taken occasion on his recent visit to the American continent to warn of the grave dangers now present in Europe. The Italian writer Guglielmo Ferrero, who ever since the armistice has preached failure, says that Europe has entered on a new era of barbarism.

In England, financiers like Hon. Reginald McKenna and Sir Arthur Balfour are divided as to the best method of dealing with the monetary situation there, one advocating inflation of currency and the other deflation. Ramsay Macdonald, the labor leader, declares that the problem of unemployment will remain as long as the present system of capital continues. With these conflicting forces at work what then may we expect? As we approach the sixth year after the armistice, the atmosphere in the European house is charged with explosive material and England is in the adjoining apartment. It may happen that an endeavour will be made to combine the forces of Europe, both politically, commercially, financially and socially, for there must be either combination and construction or disintegration and destruction.

But of what interest is this to the Lumberman? The answer is that there is too great a tendency for us to take it for granted that, because of our natural resources and their political values, our path from now on is safe and secure. We forget that the first week in August 1914 awoke only too many out of their slumbers and there is a possibility if we are not careful of again being taken by surprise. Let us look the matter squarely in the face, for the trade of the Empire as a whole may rest largely upon the decisions now made at the present Imperial Conference. The political situation remains kaleidoscopic. The past twelve months have shown marked changes in the world's affairs and it looks as though we all are on the eve of yet more far reaching changes. Conditions in both Great Britain and on the European Continent call for speedy action owing to the large amount of unemployment and lack of finances. These conditions may force the issues at stake more quickly than is generally anticipated. It therefore, behooves us to awake to the possibilities of the situation, remembering that, under our present system of commerce, we cannot live alone as a nation but that what affects other nations will also affect Canada.

Dealers Should Give No Special Discounts

Should the retail lumber dealer grant a special discount to contractors other than 2 per cent 30 days or net 60 days? This is a question which has been frequently mooted and no satisfactory solution appears to have presented itself in many cities and towns of Canada. It is generally conceded that once a special discount is granted to certain customers, in the way of contractors, carpenters or private individuals, then trouble of all kinds looms up. Misunderstandings arise and suspicion reigns where mutual confidence and trust should prevail.

To reverse the customary order of things, it might be asked if a contractor ever thought of giving the lumber dealer part of his profits on a job, particularly when, it is considered, that the dealer has frequently tipped him off to live prospects. By getting a pointer in time, the contractor has secured the work, but did he ever reward his retail friend? Echo alone reverberates "when?"

It may be also pointed out that no other body of retailers as a class has established selling prices to bring a lower net return per dollar for sales than the average yardman. He invests heavily in premises, factory, equipment and stock and is alone entitled to any profits arising from his sales. He cannot afford to grant special concessions and there is no earthly reason why he should.

The manager of one of the yards in a neighboring city recently pointed out that the contractor also has a considerable investment in tools and equipments and is entitled to a legitimate profit on his operations which he usually secures. If he does not it is because he is incompetent or makes a slip but his intentions are right.

The custom of contractors to furnish materials as well as labor, is almost universal: and, of course, the contractor will complain that he is entitled to compensation for the extra labor and expense thus caused, which he would not have to bear if furnishing labor only. This we will grant. But who should pay it?

Now right here is the dealer's best argument. When the contractors furnish the material, they are following a custom born of the impracticability of the owner's buying materials with which he is not familiar and getting the right materials and in right quantities. He is performing a service for the owner, is in effect, his purchasing agent: and from the owner, and him alone, should come the commission or profit on the transaction to which the contractor is entitled. To expect the dealer to pay it, or, as is more frequently the case, for the contractor to exact his pound of flesh from both sources, is a gross violation of every principle of justice, and will not be tolerated by the aggressive dealer.

Another Lumber Legislator Passes

Many friends in the lumber trade will learn with regret of the death of Auguste T. Leger, M.P., for Kent County, who passed away recently at Campbellton, N. B. He was 71 years of age and had represented Kent in the Federal House since 1917.

Mr. Leger who carried on a lumber business for many years,

The late Auguste T. Leger, M. P. for
Kent County, N. B.

had an active and varied career. For a long period he was postmaster at St. Louis and was later high sheriff for the County of Kent which post he filled acceptably until 1908. He was born in Cocagne, N. B., on January 4th 1852 and was of Acadian and French-Canadian extraction. He fought many political fights in the Liberal cause and although defeated several times, always conducted a fair-minded and honorable campaign.

Budget of Briefs from Busy East

The Fraser Companies, Ltd., are not expected to cut heavily on their own holdings, absorbing instead the cuts of burned timber from other holdings.

At Three Brooks the manufacture of some 50,000 hardwood ties will be undertaken, and there is a possibility that a similar order may be filled.

G. F. Burden, of the chief scalers branch of the Department of Lands and Mines recently returned home after an official tour, which included Grand Falls, the Tobique and other sections of the province. He said that the labor problem in these sections is working itself out as many farmers are joining the crews. The general impression in the sections that he visited was that the winter's operations in the woods would be fairly extensive.

According to present predictions the lumber cut on the Tobique this season will be twenty million feet for the Stetson, Cutler firm alone. It is expected that practically all of this cut will be absorbed by the Fraser Companies, Ltd., and will consist chiefly of marketable timber, which has been affected in the burned areas. J. E. Waugh is carrying on the operations for the Stetson Cutler interests. He expects to cut about two million feet in the vicinity of Longley on the Transcontinental.

A report from the New Brunswick Fire Underwriters show that losses sustained by fire in the province in 1922 were as follows:—Sawmills 22, value \$261,291. Manufactured lumber 23 fires, estimated loss \$412,631.

For the first six months in 1923 the loss was as follows:—

Ten saw mills valued at \$67,805

Six fires in manufactured lumber, value, \$48,023.

This report does not take in the millions of feet of lumber, which fell a prey to the ravages of the forest fires, but has reference only to manufactured lumber stored and insured.

It is expected that the daily output of newsprint at the International Paper Company's mill at Three Rivers, Que., will soon reach 320 tons which is about 80 tons more than the original plant was planned to produce. The Canadian mill, which is one of the most up-to-date and is electrically operated throughout, has not suffered from low water conditions. It is one of the lowest cost producers among the different units owned by the company. Power is secured from the Shawinigan Falls Water & Power Co. nearby

and the location makes it possible to float logs to the mill from the 3,000 square miles of timberlands behind it.

A report received from Campbellton, N. B., says that twenty-four vessels loaded lumber from that port during the season. The cargoes of long lumber shipped aggregated 30,123,522 feet, in addition to 19,870,000 laths. There was also 1,815,000 cedar shingles shipped as well as thousands of cords of rossed pulpwood. The majority of the lumber shipped was for European and South American ports, the largest quantities going to Birkenhead, and Manchester, England, and to Buenos Aires in the Argentine Republic.

Recent rains have caused the St. John River to rise over two feet and in some places it is reported even higher. This is a boon to operators. In some places reports say that everything in the nature of logs have been rafted, but, in other sections, there are many stranded and it will mean a saving of a large sum of money to have this additional water. The rain did not come soon enough for the Nashwaak Pulp & Paper Company who had been carrying on extensive operations on the Nashwaak river. They completed work for the season a few days ago and therefore lost the benefit of the rain fall.

The demand for woodsmen in New Brunswick is great and operators are anxious to secure experienced men. The scarcity of labor is being keenly felt due to the prospect of an extremely large cut. S. J. Burlock, M.L.A., of Gordonsville, Carleton county, when recently interviewed said that \$75 to \$85 per month were prevailing prices offered for woodsmen on the Nashwaak. The continued scarcity of men, he said, placed many of the smaller contractors in such a position that unless they were able to secure the necessary labor shortly that many would be forced to throw up their contracts. Those, who had contracted early in the season before the boom in wages was experienced, are feeling the situation keenly.

From Harcourt, N. B., comes word that the local lumbermen are ready for what promises to be a busy season. Some have already taken their crews to the camps and have begun the winter programme. Robert Shirley has contracted for a large cut for Fraser's, Limited, on their lot on the Salmon River; James Fahey with a large crew will operate in the vicinity of Canaan; McCleary Brothers are cutting for Sayre & Holly, of Chipman, on Salmon River. Andrew Robinson and John Brown have taken their crews to the northern part of the province where they have been engaged to yard a large number of logs, while B. L. Keswick expects to continue operations this winter at Lower Main River where he has been sawing for two years.

A judgment was recently given in the Supreme Court of New Brunswick sitting in St. John in favor of J. A. Gregory Plaintiff against four insurance companies for loss on insured lumber in the Westfield district. The amounts of the judgment were as follows: Palatine Insurance Company \$2,363.05; Yorkshire, \$1,417.83; British Crown, \$945.22; Merchant Marine, \$945.22. The action was brought by Mr. Gregory, after refusal of the companies to pay his claim, on the ground that the lumber in question was within 300 feet of an open burner and that this fact had not been disclosed when the policies were issued. The judge ruled that there had been no misrepresentation or deliberate non-description on the part of the plaintiff and therefore gave his verdict in favor of the plaintiff.

Lumber operators are having so much difficulty securing help that many who contemplated starting cutting have been held up although they were all prepared to start some time ago. In one section of New Brunswick an operator reported that thirty-five men were all that could be secured for five camps, and as a result only a small part of the anticipated operations have been started. It is said that construction work in Ontario has attracted much of the labor, which formerly went to the bush. Gloucester County in particular is said to have sent many to Ontario. Search for men in the southern part of the province has not been any too successful. However, improvement in this condition is expected as the autumn advances when construction work is curtailed and men are out of that line of employment.

A report from along the North Shore of the Province of New Brunswick shows that there has been an increase in the export business to the United States in the period from July 1 to September 30. A list of lumber shipments follow:—

Pulpwood peeled and rossed ...	9,392	\$176,069
Hemlock bark	114 m. s. feet	1,260
Hemlock lumber sawn	195 m. feet	4,913
Pine sawn	488 m. feet	14,398
Spruce planed	5,782 m. feet	170,114
Spruce—rough sawn	3,575 m. feet	149,504
Laths	32,328 m. feet	184,313
Shooks, packing box	99 m. s. feet	1,793
Wood pulp chemical	2,975 tons	172,188

Total value\$873,552

Angus McLean on New Brunswick Conditions

Writing to the "Canada Lumberman" recently, Angus McLean, president of the Bathurst Company, Bathurst, N. B., outlines his personal observations of conditions with the mills in that district. He says:—The movement of lumber in our district at the moment is quite large as we find that practically all the mills through the east this year have followed the practice of moving their lumber almost as fast as it is produced, with the result that, now the sawing season is practically over and a great many of the mills are shutting down and the stocks of lumber on hand are very much below normal at this time of the year. The free movement of lumber, however, has had some effect upon prices as is quite natural to expect but we feel that the price situation is bound to improve in the immediate future and as soon as these heavy shipments from the small producing mills all over the country is stopped.

Furthermore the production of lumber all through the Maritime Provinces is not over 50% of normal this year and we understand that this same condition applies more or less to all the producing districts through the Province of Quebec. So far as our own production is concerned it is only about two thirds of normal and is less than 50% of what it was four or five years ago.

Regarding the woods work this winter, there is not going to be the heavy production that was expected sixty days ago. This is owing to the fact that men are scarce, wages are high and the depression in trade has influenced a great many producers to curtail their operations. We are not going to have the quantity of logs coming out this winter that was anticipated a short time ago. Taking all these things into consideration we believe that we are bound to see a strong and active market before next spring and that there is really going to be a shortage of lumber. We have advice from friends of ours in British Columbia and they tell us that conditions out through that district are much the same as they are in the east. That is, that all producers there have been shipping their lumber more freely than usual with the result that stocks on hand at the end of the sawing season are smaller than they were last spring when the sawing season opened.

As to our paper mill, we are glad to be able to advise you that we are running very successfully and our mill is in operation every day. Our production this month, up until the present, averages better than 55 tons per day and last month, the first month that we run a full month, our production was just about 50 tons per day. We expect for the month of November that we will get our production up to 60 tons per day. We consider this is pretty good for a mill with a marked capacity of 50 tons per day.

Construction Contracts Keep up Well

During October, construction contracts awarded in Canada, according to MacLean Building Reports, Limited, amounted to \$30,078,100, compared with \$23,382,100 in September, and \$24,270,300 in October, 1922. Residential buildings accounted for 28.1% of the October total, and amounted to \$8,434,600. Business buildings amounted to \$4,345,600, or 14.4%; industrial buildings, \$1,329,800, or 4.4%; public work and utilities, \$15,968,100, or 53.1%. The value of contemplated new work during October was \$33,968,000.

It is gratifying and re-assuring to consider the accomplishments of the year to date as compared with last. The Dominion total for ten months is \$277,114,600, while the same period of 1922 was \$237,917,500. This is an increase of 16.5%. The increase is contributed by all forms of construction with the exception of residential buildings, although the decrease here is but 5.5%, and represents a drop of \$4,958,100. This drop from a monetary viewpoint is negligible, but an analysis of the figures reveals a social problem that demands a speedy solution.

The number of houses erected to date this year is 15,988, as compared with 18,083 for the same period in 1922, a drop of 11.6%. In view of the fact that the drop in cost is but 5.5%, and that material prices have remained approximately stationary, here is incontrovertible evidence that the building of workers' homes has fallen off, while that is the type most needed to relieve the housing shortage. The non-union worker cannot make the initial payment on a home costing \$4,500 or over, and if he can, he is unable to carry the burden of interest, taxes and principal payments without sub-letting. This condition defeats the principle of home owning. If wages cannot be increased then the structural problem of erecting houses or flats which can be sold or rented at decidedly lower prices than those existing to-day, cries out for solution.

Shortage of Labor in Ontario Camps

"There is a great shortage of help in the lumber camps. Two thousand more men could be taken on in Northern Ontario if they were available. The call has been sent out by the owners of the

camps to the cities and towns but the men in these places even if out of work are slow in accepting positions in the camps despite the fact that lumbering today is different and more congenial than it was years ago." Henry Scheel, of Kitchener, Ont., said regarding a three weeks' trip to the Ottawa Valley and Northern Ontario which he completed recently.

Mr. Scheel made the trip in the interests of Messrs. J. M. Schneider and Sons Ltd., of Kitchener, Ont., the first point visited being Ottawa whence he went to his old home town Arnprior. The trip to Northern Ontario took him to Dalton which is on the C.P.R. line west of Sudbury. Business furnished the occasion to visit the lumber camps, the insight into the life of the lumber jacks being enjoyed. The modern conveniences and comforts under which the men in the camps live, including comfortable sleeping quarters, excellent food and attractive dining rooms with faithful and happy waitresses, were a revelation.

Thirty Million Feet Shipped From Campbellton

Although the port of Campbellton, N.B., has not been the scene of so great activity in shipping this season as was the case last year, some twenty-four sea going vessels loaded long lumber, laths, shingles and pulpwood for foreign ports during the summer. The cargoes of long lumber shipped, aggregate to 30,123,522 feet. Besides this some 19,870,000 laths were shipped from the port, 1,815,000 cedar shingles and many thousand cords of rossed pulpwood.

According to the shipping records of the Customs Office at Campbellton the bulk of lumber shipped last summer was for the European and South American markets, large quantities being shipped to Birkenhead and Manchester, England and to Buenos Ayres, Argentine Republic.

Shipping activities began early at Campbellton, the first steamer docking shortly after ice ran out of the Restigouche and although there was not a steady run of vessels loading, the harbor was a busy spot at times with as many as five large vessels loading together. This extra work was valuable in supplying work to many who might otherwise have been unemployed and the large quantity of long lumber shipped contrived to make room in the crowded lumber yards of several local firms.

How Lumber Industry in East Has Grown

The total lumber cut last year on both Crown and private lands of New Brunswick was about 350,000,000 feet.

Pay roll for saw mills, \$5,700,000.

Pay roll for logging, \$5,200,000.

Pay roll for pulp mills, \$1,640,000.

Invested in pulp and paper mills, \$16,310,952.

The production of pulpwood in New Brunswick in 1922 was as follows:

	Cords	Value
For local mills	204,965	\$2,089,000
For export	144,693	1,527,776
	349,604	3,616,776

There are about 600 saw mills, large and small, in New Brunswick. They employ about 9,000 men. In the woods in winter about 12,000 men are engaged.

The investment in the lumber industry in 1922 was set down as \$38,879,983.

Uruguay Buys Eastern Canada Spruce

Acting Commissioner, P. W. Cook, in a recent letter to the Commercial Intelligence Journal, Department of Trade and Commerce, Ottawa, said:—

Uruguay has been a fairly steady buyer of Canadian lumber, particularly white pine and Eastern Canada Spruce. Last spruce quotations from St. John, N. B., were \$60 (merchantable), steamer cargoes, and \$57.60 sailor cargoes. Oregon or Washington spruce, merchantable, ex Seattle or San Francisco, is quoted rather lower, roughly \$54. On the other hand, West Virginia spruce ex New York was recently quoted at high at \$74.

A common spruce assortment is in percentages as follows: 10 per cent, 1 x 3; 10 per cent, 1 x 4; 10 per cent, 1 x 5; 30 per cent, 1 x 6; 10 per cent, 1½ and 2 x 12; 20 per cent, 2 x 3; 5 per cent, 3 x 3; 5 per cent, 3 x 4. Lengths 12 feet and up with 15 per cent 10/11 feet.

However, spruce shipments are meeting with strong competition from Brazilian pine shipped from the state of Rio Grande do Sul. This is at present being quoted (all boards) at about \$47 c.i.f. clear. A common assortment, at a somewhat lower price is in percentages 5 per cent, 1 x 3; 5 per cent, 1 x 4; 40 per cent, 1 x 6; 25 per cent 1 x 12; 10 per cent, 1½ x 12; 5 per cent, 2 x 12; 5 per cent, 2 x 3; 5 per cent, 3 x 3.

Varied Activities in Canadian Lumber Arena

Fire destroyed the dressing mill of the Canadian Lumber Co., Limited, Stewiacke, N. S., causing an estimated loss of \$15,000.

The Dingwell mills at Fortune, P. E. I., near Charlottetown, were destroyed by fire recently causing several thousand dollars loss.

W. Barclay, of the United Grain Growers' Sawmills Limited, Hutton, B. C., spent a few days in Toronto and the East lately.

A new sawmill is being erected at St. Felicite, P. Q., at a cost of about \$5,000, by Alfred Ducase, St. Felicite.

The erection of a new sawmill is contemplated by Francois Coulombe, at St. Appoline de Patton, Que.

The Aleza Lake Mills Plant and timber at Aleza Lake, B. C., has been reported sold to Blackburn & Hasselfield of Bannock, Sask.

The Murphy Grant Lumber Co., Yennadon, B. C., has been succeeded by the Grant Lumber Co.

D. A. Webster, of Boston, Mass, Eastern States representative of Edward Clark & Sons, spent a few days in Toronto on business.

Shelvin, Carpenter & Scranton Co., Limited, 511 McArthur Bldg., Winnipeg, Man., was recently incorporated to manufacture and deal in all kinds of forest products. Capital \$4,500,000.

Herbert Patterson, who resigned as sales manager of the British Columbia Spruce Mills (Ltd.) has been appointed sales manager for the Union Lumber Co., Winnipeg.

Alex. M. Koroleff, Fellow in Lumbering, Yale University, New Haven, Conn., was in Toronto recently and called upon a number of members of the trade.

There is a brisk demand for horses from the lumber camps around Sault Ste. Marie, Ont., this year. One dealer has brought seven carloads of horses to the Sault from points in old Ontario. Another has brought in over 130 horses.

Harry Blackburn and P. Hasselfield, of Bannock, Sask., have purchased the sawmill at Aleza Lake formerly operated by A. K. Shives. They will start logging operations this winter and will open the mill next season.

A. Ferguson, who for a considerable period was a clerk in the Records Branch of the Department of Lands and Forests of Ontario, has been promoted to the position of assistant to Walter C. Cain, Deputy Minister of the Department.

Logging operations will be brisk in the north this year, one company, the Northwest Lumber Company, laying plans to cut 30 million feet. They cut 16 million feet this year. This company operates at Edmonton one of the most modern lumber mills in Canada.

George M. Cornwall, of Spokane, Wash., who for many years has been secretary of the Pacific Logging Congress, has resigned and has recommended to the Board that a full-time secretary on salary be employed.

Lumbermen's educational classes are being conducted in Vancouver. The last meeting was held in the Commercial Building of the University of British Columbia when Mr. Perry, assistant professor of the Forest Products Bureau, addressed the members on the strength and stress of the various species of timber.

The Western Retail Lumbermen's Association is now maintaining an Arbitration Committee who settle all disputes arising out of transactions which may occur between manufacturers, wholesalers and retailers of western Canada. The association fees for this service is ten dollars.

U. C. Fitzgerald, who for several weeks was woods superintendent for the Conger Lumber Co., Parry Sound, Ont., is now occupying a similar position with the Bishop Lumber Co., Nester-ville, who have put in five camps this season. Mr. Fitzgerald is widely known in lumbering operations in Northern Ontario.

The Royal Commission on Pulpwood will hold sittings in Toronto from November 13th to the 17th at the Parliament Buildings. There will be two sessions daily, one in the forenoon and one in the afternoon. It is the intention to conduct hearings later at North Bay, Cochrane, Sault Ste. Marie and Port Arthur.

G. W. Grier, of G. A. Grier & Sons, Montreal, who is vice-president of the Canadian Lumbermen's Association, spent a few days recently in Toronto and reports that stocks of dry spruce throughout the province of Quebec are scarce and that prices are firm with a good demand.

In addition to offering to lease at public auction on the 30th instant, blocks of timber limits in the Basin of the Manicougan River, on the north shore, extending on 2,500 square miles, the Government will also dispose on the same day of special permits on burnt timber for three years in the Abitibi and the Saguenay regions. The area

of these last mentioned timber limits totals about 140 square miles.

Hon. James Lyons, Minister of Lands and Forests, paid a visit to Iroquois Falls recently. He was accompanied by W. C. Cain, Deputy Minister, E. J. Zavitz, Chief Forester for Ontario; T. E. Simpson, M.P., Sault Ste. Marie; Charles Fullerton, Director of the Northern Development Branch; Cyril T. Young of the C.N.R. district staff and others.

Lumber production in the Prince Rupert district, B. C., is increasing. The monthly quota of half a million feet from northern mills for export was exceeded last month by 100,000 feet. It is stated that there is every prospect of continued activity in the interior mills and that in the near future they may be able to run up a monthly output for export to 1,000,000 feet.

A new magazine entitled the "Monthly Bulletin," has been issued in connection with the Quebec Retail Lumber Dealers' Association. This is a distinct publication from that issued by the Ontario Association and should interest all Quebec retailers, as one of the interesting features lies in the fact that it is printed in both French and English, the copy in each case being identical.

Thompson & Heyland Lumber Co., Toronto, who specialize in pulpwood, have entered into contracts to supply 67,000 cords of wood within the next six months, about one quarter of which will be exported. As soon as snow arrives in the north and the wood can be hauled to the railway sidings, the company expect to be shipping out the product at the rate of 600 cords a day to various points.

The Campbell River Lumber Co. at White Rock, B. C., recently completed a handsome new office building, 38 ft. x 54 ft. The downstairs was given over to the various offices with a private room for the manager. Sleeping quarters for the office employees are located on the second floor where there is also a large recreation room completely fitted up.

Any proposal for power development on the Pigeon River will be a matter for the consideration of the International Joint Commission, according to C. A. Magrath, Chairman of the Canadian section of the Commission. The attention of Mr. Magrath was drawn recently to a Washington despatch regarding the application of the Pigeon River Lumber Co., of Wisconsin Rapids and Port Arthur for power rights on the Pigeon River in Northwestern Ontario.

The sale of the Home Bank properties in Western Canada and the possibilities of disposing of the timber limits in British Columbia which are listed as Home Bank assets are being considered by the liquidators' and the depositors' committee. A meeting was recently held in Toronto to discuss the sale of the western holdings but no decision was arrived at and there will be further consideration of the subject of the disposal of lands in the West.

A meeting of the officers and directors of the Ontario Retail Lumber Dealers' Association will be held at the Board of Trade Rooms, Toronto, on Thursday December 6th, when important matters will come up for discussion and further preparations be made for the annual convention which will be held at the King Edward Hotel, Toronto, on Wednesday, Thursday and Friday January 16, 17 and 18.

H. J. Terry, former chairman of the Wholesale Lumber Dealers' Association, Toronto, and Bert Fonger, of Grimsby, Ont., attended the last sad rites of W. E. Kelsey, of W. E. Kelsey & Son, wholesale lumber merchants, North Tonawanda, N. Y., who passed away recently. Mr. Fonger was one of the pallbearers at the funeral. The late Mr. Kelsey was well known in the lumber arena and had a large number of friends among the trade in Ontario.

The importance and the value of the Manicougan timber limits to be leased by auction was further demonstrated when it was announced that the successful bidder will have to be in a position to pay a minimum of \$1,162,500, when he has been awarded the lease. This amount comprises an adjudication bonus of \$1,000,000, a ground rent of \$6.50 per square mile and the bid over the tariff of stumpage dues in force in Quebec.

The Cameron lake forest, regarded as one of the greatest of Vancouver Island's scenic attractions, is doomed. Managing Secretary George I. Warren of the chamber of commerce, Victoria, B. C., informed directors of that body lately that the Canadian Pacific railway had given notice that the logging company which recently took over the big timber, had decided to commence cutting during the next two months. In view of the provincial government's attitude, the chamber of commerce despair of saving the famous timberland from destruction.

Mr. Nicholson Speaks on Woods Operation

"We have combed the country from Gaspé to Winnipeg for sufficient men to fill our camps and have not been able to secure the number that we require. We are paying \$50 a month and board to good bushmen and if any want to work by the piece, they will be afforded the opportunity to do so and they can earn up to \$100 a month," said George B. Nicholson, of Austin & Nicholson, Chapleau, Ont., who was in Toronto recently on business. Mr. Nicholson said that the labor scarcity was very pronounced in the woods, and in the camps north of the Georgian Bay along the Canadian Pacific, the Canadian National Railway and other lines from 5,000 to 8,000 men were still required in order to have all the cutting, skidding and road-making completed by the first of January which is the usual practice in connection with logging operations.

The cut of Austin & Nicholson at their three mills located at

George B. Nicholson, Chapleau, Ont.

Nicholson, Dalton and Devon, Ont., has been greater than last season and they are endeavoring to operate in the woods to the same extent as they did in 1922-23.

Mr. Nicholson says that, based on the increase in wages alone, operating costs will be 25 to 35 per cent. higher than last year. He pointed out that a manufacturing lumberman must go ahead in connection with woods activities as his overhead continued. He had a large investment in horses, camps, etc., which must be kept up and full use made of their facilities. Unless this was done it was very difficult and expensive to create a new organization and it was only by uninterrupted service and operation that overhead costs could be kept down to a reasonable basis.

Austin & Nicholson, during the past season, took out about 10,000 cords of pulpwood and will during the coming year cut some 15,000 cords, all of which is taken by the Spanish River Pulp & Paper Co., at Sault Ste. Marie. Last season about 1,150,000 railway ties, (principally sawn, although some were hewed), were produced and disposed of and during the present period practically the same quantity will be cut.

When asked what his opinion was in regard to an embargo on the export of pulpwood, Mr. Nicholson replied that so far as his own personal interests were concerned, he was naturally against such a move but from the standpoint of Canadian citizenship he thought that an embargo should be imposed and he placed citizenship higher than his own immediate interests. He added that many Canadians were not any too well informed on leading issues and particularly on the preservation and perpetuation of the timber resources of Canada. Mr. Nicholson was of the opinion that from a national, patriotic standpoint the export of pulpwood should be prohibited.

Operation of New Federal Sales Tax

The secretary of the Ontario Retail Lumber Dealers' Association has sent out to the members an interesting memorandum regarding the sales tax which becomes effective January 1924. It is stated that other instructions and regulations are likely to be issued between now and the first of the year. The latest data in connection with the operation and collection of the tax is as follows:—

Licenses:—The annual fee for a license required under the Act

will be \$2.00, payable on the first day of April in each fiscal year.

Returns & Payment of Tax.—Everyone subject to license shall make a monthly return, showing the total amount of his taxable sales and the tax payable thereon.

Each return shall be delivered to the Collector of Customs & Excise, and the amount of the tax shall be paid to him on or before the last day of the next month succeeding the month covered by the return.

Books & Records.—Licensed manufacturers or producers, or licensed wholesalers or jobbers, who also conduct a retail branch or branches, shall keep separate records for each of their branches; and the license of such manufacturers, producers, wholesalers or jobbers, shall not be used in connection with purchases or importations by the retail branch or branches.

Invoices.—Licensed manufacturers and licensed wholesalers, when selling to retailers or consumers, shall not show the tax as a separate item on the invoice.

Custom work performed for a licensed manufacturer or a licensed wholesaler is not subject to the tax, provided the licensed wholesaler quotes his Sales Tax license number on the order for such work and certifies thereon that the goods are for resale.

Freight.—Consumption of Sales Tax is not to apply on the charge for freight for transporting the taxable article from a licensed manufacturer or producer to the purchaser, provided the charge is shown as a separate item on the invoice on which the tax is accounted for by the manufacturer or producer.

Instructions.—The Collectors of Customs & Excise will be required to forward to all persons, firms or corporations subject to the provisions of the Act, the following:

- (1) Copy of Office Consolidation of The Special War Revenue Act, 1915, as in force 1st January, 1924.
- (2) Copy of regulations and instructions under The Special War Revenue Act, 1915, as amended, dated 15th October, 1923.
- (3) Notice to keep adequate books and records for the purpose of the Act.
- (4) Chart showing the application of the Act.

In regard to the regulation mentioned above that the tax shall not be shown on the invoice, the Canadian Manufacturers' Association have employed the best legal counsel available and have been advised that this regulation is ultra vires and beyond the power of the Minister. This regulation, therefore, may be subject to further change. It would be wise on the part of our members not to consider this regulation as definitely established as yet.

More Progress on Lumber Standards

The Central Committee on Lumber Standards at its meeting in Chicago on October 31, 1923, approved specific final recommendations to the Department of Commerce on matters and has transmitted a copy of recommendations to Secretary Hoover as follows:

Standard lumber sizes, including minimum thicknesses, and widths, and lengths.

Standard basis of lumber measurement.

Standard basic grade names (not including the detailed grade specifications).

Shipping provisions.

Gets Four Years for Burning Sawmill

Four years in Kingston Penitentiary was the sentence imposed upon Walter J. Moore, formerly of Meaford, by Magistrate Creasor at Owen Sound.

Moore had been remanded five times for sentence after pleading guilty to a charge of arson on September 27.

The offense to which Moore pleaded guilty was perpetrated in August, 1922, when the sawmill of the Euphrasia Lumber Company in Euphrasia township was burned to the ground. Moore was alleged to have ordered one of his employees to do the work.

Large Lumber Cut on Tobique River

Twenty million feet is the cut which has been predicted for the operations which will be conducted this season by the Stetson-Cutler Company on the Tobique river district alone. Practically all of this cut will be absorbed by the Fraser Companies, Ltd., it is expected, and will consist chiefly of marketable timber which has been affected in the burned areas. At Three Brooks the manufacture of some 50,000 hardwood ties will be undertaken, while it has also been rumored that another contract for a similar amount has been secured by another operator in that section in addition to the contract secured by Mr. Rogers of the former firm of Rogers & Forest. The Fraser Companies, Ltd., are not expected to cut heavily on their own holdings, absorbing instead the cuts of burned timber from other holdings.

Mr. Bell Issues Challenge to Mr. Barnjum

Editor of the Canada Lumberman:—

On October 17th last F. J. D. Barnjum addressed an open letter to the Chairman of the Royal Commission on Pulpwood, which was given wide publicity by the Press of Canada. This letter which purported to be an explanation of his failure to appear before the Commission, read more like a political manifesto than anything else, and was admirably and effectively answered by the Commission in a statement given to the Press at Bathurst on Oct. 26th.

Mr. Barnjum's letter, as usual, contains several sweeping assertions that have no foundation in fact or truth, and for the benefit of those of your readers who may not have had an opportunity of attending the hearings of the Pulpwood Commission, perhaps you will be good enough to allow me sufficient space for a few brief observations which, under the circumstances, seem pertinent.

Mr. Barnjum says:—

"So far the majority of witnesses have been handpicked by American interests."

At the date Mr. Barnjum's letter was written the Commission had only just completed its hearings in Nova Scotia so that his statement applies only to this Province, and the inference of course is that the majority of witnesses testifying in Nova Scotia were prejudiced on the question by American influence exerted directly for that purpose. Such a statement constitutes a direct reflection on men like Hon. R. M. Macgregor, Hon. Davidson Hill, C. W. Anderson, M.P.P., J. H. Livingston, T. D. Pickard, Walter McNeil, Alfred Dickie, Rufus Dickie, Frank C. Whitman, H. T. Warne, A. M. Gates, Charles Sprague, David Embree, Arch McColl, Rev. Father Cormier, Warden H. MacKenzie of Victoria County, and many others; whose names have slipped my memory.

I challenge Mr. Barnjum to name the majority of handpicked witnesses.

Mr. Barnjum says:—

"Their testimony thus far amounts no more than to an expression of personal opinion, their opinion being that their pocket books and those of the American interests they represent are likely to suffer if an embargo is placed on pulpwood."

What do Mr. Barnjum's statements in favor of the embargo amount to?—No more than his personal opinion—and is it any more valuable than that of many of the men in the above list?

Is not Mr. Barnjum the President of MacLeod Pulp & Paper Company, Limited, and does not this Company buy a very large proportion of its wood supply from small owners at \$5 to \$7 per cord?

Would an embargo have any bearing on the value of this Company's undertaking? I press for Mr. Barnjum's direct and explicit reply to this question.

The facts are of course that Mr. Barnjum is as prejudiced in his point of view in favor of an embargo as are any of those who have testified as opposed to it.

Mr. Barnjum goes a step further. He says:—"No real facts have yet been put before you."

It would take too much of your valuable space to quote extensively from the actual facts and figures that were submitted by these witnesses, but let us use just one or two examples:—

It was said that local pulpmills in Nova Scotia are paying only \$5 to \$8 per cord for their wood and that Nova Scotians producing pulpwood for export are getting \$9 to \$12 per cord.

Does Mr. Barnjum say that this is not a fact?

It was said that in 1908 Canada produced approximately 1,400,000 cords of pulpwood of which, roughly speaking, 900,000 cords were exported and only 500,000 were consumed by Canadian Mills. That in 1922—14 years later, Canada produced 4,000,000 cords of pulpwood—approximately 3 times as much as in 1908—and that of this 4,000,000 cords approximately 1,000,000 cords were exported and 3,000,000 cords consumed by Canadian Mills. In other words, our exports increased only 12% whilst our home consumption increased 500%. Or, in 1908, 65% of our total pulpwood cut was exported, whilst by 1922 natural economic conditions had forced such a development in pulp and paper manufacturing in Canada that only 25% of our pulpwood cut was being exported.

Does Mr. Barnjum say that this is not a fact?

It was said that of the total timber cut in Canada approximately only 5% is exported as pulpwood, and that a large portion of that 5% is poplar, for which there is practically no market in Canada.

Does Mr. Barnjum say that this is not a fact?

In his vicious attack on the Government because it failed to proclaim an embargo without due investigation, such as is now being made by the Royal Commission on Pulpwood, Mr. Barnjum says:—

"The people of Canada are not permanently to be bamboozled by the politicians."

I would suggest that the present situation could be more aptly described by the phrase:—

"The people of Canada are not permanently to be bamboozled by an interested propagandist"—posing as a public benefactor,—no matter how great his wealth and his consequent capacity for publicity.

Very truly yours

Ralph P. Bell.

Boulderwood, Halifax, November 1, 1923.

Not Enough Interest on Pulpwood Issue

The pulpwood situation, coupled with the investigation in progress by the Royal Commission appointed by the Federal Government to inquire into the question of exporting pulpwood into the United States and the effect of the proposed embargo, are questions which are the cause of considerable interest, says the Quebec correspondent of the "Canada Lumberman."

There has been a very large shipment of pulpwood from the district of Quebec during the spring and summer season to the American mills which has given the idea that a big cut of this wood will be made this winter to meet prospective demands. In this regard jobbers who have made their sanguine calculations, are likely to suffer to some extent a disappointment. The high cost of labor has caused the purchasing interests in a number of cases to amend their estimates. It is said that the Brown Corporation, with other similar important paper-manufacturing interests, have refused to submit to the abnormal increase in the demands of labor for higher wages, and have not only decided to curtail their operations, but in some cases to make no cut in pulpwood this winter.

It is believed by many who claim to know the labor market situation, that there is no just cause for the story of shortage of labor; that just as soon as the winter season sets in to compel a shut-down of the large private and public works construction in the cities and country districts of the province, a large body of labor, who have sought work in the woods during previous winter seasons, will be released from their present employment to resume their winter calling. The big pulp and paper interests of Quebec can afford to wait for another year in independence of labor exactions owing to the fact that they have sufficient stocks of pulpwood in storage to keep their mills going for another year or more.

There is a strong feeling growing in every avenue of trade in which capital is the predominating factor, that labor (which is only eight per cent of the entire population) has become too arrogant in its ideas and continued increased demands.

Canadian pulp mills who manufacture large quantities to sell their output to the United States paper mills, have come to realize that they must reduce the cost of their operations on account of the drop of \$7.00 per ton on raw pulp in the United States made possible by the recent floods and ample water in the American rivers, etc., which allow the American mills to float their pulpwood to their mills.

The apparent apathy of the general public in the investigation proceedings of the Dominion Government Royal Pulpwood Commission is the cause of much comment in the city of Quebec. It would appear, from the want of interest taken by the people who should be interested in the forest resources of Canada, that the Commission will be unable to eventually make a report of their conclusions otherwise than one-sided from the evidence so far adduced. An impression seems to prevail to account for this apathy that the pulp and paper industry in Canada is dominated by American capital which in verity only represents twenty per cent. of the total capital invested.

At the end of 1921, according to figures compiled by the Dominion Bureau of Statistics, there were outstanding in Canadian securities to a par value of \$404,768,480 of the various pulp and paper industries or companies. Of this total \$277,357,811 or sixty-eight per cent. were held in Canada. Another \$74,079,235 were held in the United States, or eighteen per cent. of the total. British investments totalled \$11,936,785 or less than three per cent., while in other countries holdings totalled \$41,394,649. But this included \$27,257,979 of unapportioned securities, such as bearer bonds where the actual ownership is not easily determined. A high proportion of these would be held in Canada, bringing the actual Canadian ownership close to seventy-five per cent.

Of stocks outstanding to the amount of \$320,898,700, Canadian holdings total \$236,767,346, United Kingdom holdings \$4,796,354, and American \$56,929,400. Of British bonds outstanding to the amount of \$78,599,847, Canadian holdings total \$38,714,286, (in addition to bearer bonds) United Kingdom holdings \$6,876,431, and American \$16,517,135.

Up to the present time the witnesses, who have been heard by the Pulpwood Commission, have apparently been interested parties engaged in the export of wood to the United States and American mill representatives which do not represent the true interests of the important question in the issue as presented to the Canadian public by the Dominion Government in regard to the proposed embargo of pulpwood to foreign countries to the detriment of Canadian industry and the psychology of Canada conserving its raw material for manufacturing development and the employment of labor as well as building up of population.

Those, who believe that Canada can afford to export its forest raw material ad libitum should take into consideration the vast amount of forest resources cut yearly to acquire a supply of pulpwood needed to keep the American pulp and paper mills in operation. Those who believe that the timber supply of Canada will be replenished by the planting of trees artificially will, no doubt, be surprised to learn from figures recently issued by the Canadian Forestry Association, that during the past five years Canadian citizens, through their own recklessness, have destroyed over 3,600,000 acres of merchantable timber growing on publicly-owned lands, while in the whole Dominion only 6000 acres have as yet been artificially planted with forest trees. This does not apply to private and company limit-holders' reforestation and the fact that there are 150,000,000 acres of soil in Eastern Canada better adapted to tree crops than farm crops.

The hopelessness of catching up with forest fire losses in the Dominion by reforestation is hereby clearly illustrated in evidence of the fire losses throughout the Dominion by human agency. It goes to show that if the people of Canada think it worth while to conserve their own industries and keep them in constant operation, they must give more attention to the exploitation of Canadian forests for the benefit of foreign manufacturing industries as well as better protection against losses by fire. They must ponder over the seriousness of continual depletion of timber by the wholesale that will tend to increase the price of lumber which has doubled with the past fifty years in comparison to prices of other commodities. Every increase in lumber means dearer construction of private dwellings and furniture, as well as other wood products, and makes it impossible for the salaried men and the working classes to own their own homes.

These are questions for the Pulpwood Commission to take into consideration as well as the lumberman and general interested Canadian public who are refraining from going before the Commission to give evidence, instead of leaving the question altogether in the hands of the selfish interests of the American purchaser of Canadian wood or their selling agents.

Pulp Association Advocates an Embargo

An embargo on the export of pulpwood from Canada "offers a prospect of a considerable improvement in forest conservation, and is constitutionally and economically feasible," reads a statement made by Edward Beck, Montreal, Secretary of the Canadian Pulp and Paper Association, before the Royal Commission investigating the Canadian pulp and paper industry, at its session in Ottawa recently.

Mr. Beck read a long, printed statement, illustrated with a number of charts, giving statistics of Canadian pulp and paper business and drawing deductions relating to consumption and destruction of forests. An embargo of the export of the raw product, it was contended, would mean the establishment of mills in Canada by American paper interests. Canada now gets some \$10 a cord out of the pulpwood export, half of which goes to the railway. If manufacture were carried on in the Dominion instead of outside of it the value to Canada would be \$50 a cord instead of \$10.

It was admitted in Mr. Beck's statement that it is difficult to

interest owners or licensees of timber limits in replanting trees which will give no return for 50 or 100 years. And so far as fire protection went, the system adopted had to be general over a large area to be of any value. Thus fire protection and forest renewal must eventually become the responsibility, in great part, of the Government. The protective legislation in the four Eastern Provinces ought to be uniform, it was contended, since fire and pest are likely to be common to all.

The policy of settling men on forest lands was regarded as questionable. The land was often stripped of its forest, and then abandoned by the settler, who proceeded to a new area to repeat the operation.

The milling of Canadian pulpwood within the Dominion, it was computed, would bring about a capital investment in Canada of some \$150,000,000. This would be sufficient to keep 33 pulp and paper mills busy, each producing 100 tons a day, with employment for 8,250 operatives earning \$11,140,500 in wages. American concerns, furthermore, would be far more interested in forest preservation if the forest were at the door of their mills instead of in a foreign country.

Hector Authier, M.P.P., Amos Que., was the first witness before the commission. He said the residents of his constituency were at present opposed to any restriction of pulpwood export. This, he contended, was the main business of settlers in the Abitibi district, which he represented. Prices for pulpwood had been very low in past years, he said, and the demand from the United States had helped to improve them. If Canadian manufacturers would co-operate with the Government in paying a "fairly reasonable" price, however, said Mr. Authier, the objection to an embargo or other export restrictions would be considerably less pronounced.

Lumbermen Give Evidence in the East

At a recent sitting of the Pulpwood Commission in Newcastle, N. B., some of the leading witnesses were—J. W. Brankley, general manager of the Miramichi Lumber Co., Chatham, N. B., Hon. J. P. Burchill, of South Nelson, James Robinson, ex M.P. of Millerton, J. L. O'Brien, of South Nelson, and others. Mr. Brankley said that he had opposed the embargo imposed by the Provincial Government on Crown Lands, and stated that, no one ever expected this would be applied to fee lands, as it would hit the farmers hard and cause a general slump in the industry for several years at least. His company has under license 612 square miles and owns 312 square miles of fee land, employs 95 men in the rossing mill at Chatham and about 400 in the woods in connection with the pulpwood business. Their fire losses have been small. They employ a constant fire patrol of six men who follow every train. For the past six years they have cut nothing on their own lands except timber affected by bud-worm.

Mr. Brankley stated that the expenditure on labor in rossing pulpwood was greater than in sawing lumber. The nearest pulp mill to them was the Fraser mill at Millbank which will not take any supplies from his company. He did not know of any water power of any value in the vicinity and the Fraser mill used steam.

James Robinson, former M.P. of Millerton, thought that an embargo would ruin competition. He favored leaving slash in the woods for fertilizer as it held the moisture and caused young trees to spring up. It cost \$2.50 per thousand to destroy slash. The Government regulations in regard to burning slash were not observed by lumbermen. There was no market for poplar except the United States. The forests were being destroyed by lath mills more than by pulp operators, he said. The lath mill took all the wood from good saw logs to small trees that were unfit for pulp.

Hon. J. P. Burchill has about 140,000 square miles of licensed lands on the Miramichi and produces 5,000,000 feet of lumber yearly. Budworm and borer have done great damage to his woods yearly. He thought an embargo at present would be inadvisable, as it would interfere with the operations of small farmers and there was the necessity of salvaging timber attacked by budworm, as for the danger of retaliation by the United States he thought this was an open question.

Ontario's Future as Pulp Producing Province

Hon. James Lyons, Minister of Lands and Forests, recently delivered an address before the Canadian Club at Fort William. He pledged the Ontario Government to a policy of development in Northern Ontario.

Referring to the forest resources of the province, Hon Mr. Lyons said that the great menace was from fire and that his department was going to work to use more efficient methods of protection and he believed that better protection could be given at less cost,

Victrola No. 50 (Portable) \$62.50

Put a Theatre in Your Camp

Let the greatest performers in the world turn dull evenings into cheerful, happy ones for your men. And you can, simply by bringing a portable "His Master's Voice" Victrola, Model No. 50 to camp.

If your men like jazz, famous Paul Whiteman and his orchestra will play for them, if they want popular ballads, there's Billy Murray waiting their pleasure, then to feature the entertainment there's world famous Sir Harry Lauder and his inimitable talent. Why really there isn't a famous artist in the world you can't call upon to entertain your men once you have a portable Victrola.

You'll find you never spent \$62.50 to greater advantage. You'll see discontent replaced with content—get a better day's work, have a better morale all through the camp.

"His Master's Voice" Victrola "The theatre" and "His Master's Voice" Victor Records "The performers" are a combination that ought to be in every camp. Any "His Master's Voice" dealers can put this "theatre" and "performers" into your camp—the moment you say the word.

HIS MASTER'S VOICE, LIMITED

Ontario had lost a million acres of forest in three years, sufficient to make a strip of timberland one mile wide from Halifax to Winnipeg.

The city of Fort William was deeply interested in pulp manufacture; in Ontario there were now \$140,000,000 invested in pulp and paper plants and by 1925 this would have grown to at least \$190,000,000. It was hoped by the government that it would be able to link up the establishment of new pulp mills with new settlement areas, each industry serving as a nucleus for an agricultural settlement. They had propositions from ten or twelve firms seeking pulp limits and they would consider the advisability of granting their requests as they needed the capital, the labor and the settlers which they will bring in. They intended to get these so that they could maintain their position as the premier province of the Dominion.

Alluding to the establishment of pulp and paper industries in the Thunder Bay section of the province, Mr. Lyons said that he was of the opinion that no pulp or paper company should receive any special privileges from municipalities. The pulp and paper industry is one of the basic industries of the district and should be able to stand on its own merits, without any aid from the cities. He reminded the audience that the government was very deeply interested in the pulp and paper industry, having control of the vast areas that contain the raw material, and the government did not want to be mixed up in any family feuds between municipalities. From this he drew the moral that Fort William and Port Arthur should unite under one municipal government for their own good.

Mr. McLean Before Pulpwood Commission

At a recent sitting of the Pulpwood Commission in Bathurst, N. B., one of the most important witnesses was Angus McLean who is president of the Bathurst Co. and also president of the Canadian Lumbermen's Association. His evidence covered all phases of the subject, and when asked his opinion regarding an embargo, he said,—"My strong conviction is that such legislation would be a serious mistake and should not be enforced. So far as Nova Scotia and New Brunswick are concerned, there is a surplus of pulpwood. In this district it is going to waste and the prohibition of export would mean a still greater loss. There is no shortage in this part of the province. There is a surplus, and if the United States is cut off, it would be very serious to the farmers and dealers. They would have nothing but the local market which would greatly depreciate the price of their product.

"If we developed to the limit of possibility, so far as power is concerned, there would still be plenty of wood. There is not the power needed to manufacture paper extensively. All that can be made until we get additional power is pulp, and the only market for this in the world today is the United States, where we have to compete with Germany and the Scandinavian countries which are almost putting us out of business.

What Pulp Companies Mean to North

The "Broke Hustler" which is published weekly by the Abitibi Power and Paper Company, Ltd., Iroquois Falls, Ont., takes the position that the power and paper companies are doing a lot of very necessary pioneer work in the newer regions of the country, and asserts that, were it not for their operations, the opening up of the forested regions would be delayed many years. Pulp companies pay millions to the settlers every year and it is this money in the first few years of homesteading that enables the settler to get far enough ahead to become a farmer. The pulp and paper companies provide a market for the settler the minute he steps on his lot axe in hand, and it is only through these companies that the settler is enabled to carry on the first few years while he is clearing his land and before he begins to farm in earnest. One company in the past decade has paid practically a million dollars a year to men working in the bush, many of whom were settlers close to the location of the mill. Mill operations involve the purchase of immense quantities of supplies and in this way the pulp and paper companies are a source of much income to distributors in the older sections of the country.

How Export of Pulpwood Piles Up

Canada's exports of wood pulp during the 12 months ending September 30 totaled 17,704,999 cwt., with a value of \$46,973,825. For the preceding 12 months the exports of wood pulp were 16,125,538 cwt., value \$40,283,920. Exports of pulpwood for the recent 12 months were 1,403,532 cords, value \$13,571,733, compared with 910,591 cords, value \$9,562,266 in the 12 months ending September, 1922. Exports last month were somewhat below those of August.

Exports of newsprint paper rose to 22,016,217 cwt., value \$81,950,919, in the 12 months ending September last, while the previous

12 months period they were 18,068,956 cwt., value \$66,248,004. September's exports were 1,818,591 cwt., as compared with 2,091,352 cwt. in August.

Total exports of paper and manufactures of paper of all kinds for the 12 months ending September totaled \$89,743,780, as against \$72,220,581 for the previous 12 months.

Big Purchase of Nova Scotia Property

The Albery Perforated Wrapping Paper Company, the second largest of its kind in the United States, has purchased 60,000 acres of pulp and timber land properties from the Harbor Lumber Company, of Nova Scotia, according to an announcement by Premier E. H. Armstrong.

The contract calls for a mill output of 25,000 cords of pulp wood monthly. The organization is to consist of 75 men in the mill and 200 lumberjacks in the woods.

The plant costing \$250,000, is expected to be completed next May. Electric power consumed annually by the mill is estimated at 21,000,000 kilowatt hours. The Nova Scotia Power Company will furnish the power.

Quebec Development Will Hold Residents

Ten million dollars will be spent in the development of timber limits in the basin of the Manicougan River in the Province of Quebec within the next few years, according to the terms of a lease which the Government will auction at the end of November.

The scheme under which the limits will be exploited is also expected to provide a practical solution of the pulpwood difficulties, and to do away in some measure with the need for an embargo as far as the Province of Quebec is concerned.

The limits referred to are located next to those leased last year by the Ontario Paper Company, and are provided with water powers nearby which, when developed, will facilitate the desired development. One of the objects in view in offering such an important area of forests is to check, if possible, any further exodus of Quebec residents to the United States, by supplying here the industries necessary to keep the people employed.

Erect Big Mills in Ancient Colony

H. J. Crowe intends developing his waterpower at Bay d'Espoir, Newfoundland, and in connection therewith plans the erection of a paper mill with an ultimate capacity of 500 tons a day. Mr. Crowe has a large tract of timberland at White Bay where he will install a rossing mill and also put up a sawmill which will give employment to a large number of men. He hopes to cut from 25,000 to 75,000 cords of wood annually. During the erection of a paper mill on the south coast the wood will be exported to the United States but, after the completion of the mills, however, Mr. Crowe proposes using his White Bay supply of wood to help furnish raw material for the south coast paper mills where he owns a tremendous waterpower with a fall of 523 feet at one step. He has for a number of years been purchasing pulp lands for his south Coast project.

Great Possibilities for Canadian Pulp

Great possibilities for the development of the pulp and paper industry were seen by Olaf Kjellstrom, one of the leading pulp and paper manufacturers of Sweden, who passed through Toronto recently en route to the Orient. He has visited the main centres of pulp and paper production in Canada and the United States and will spend some time in the Orient investigating the markets there and re-organizing the company's branch offices in Tokio and Yokohama.

"It is thirteen years since I visited this continent and I must admit I am surprised to find prosperity and enterprise apparent on all sides," he added. "You people out here have the best opportunities for establishing a tremendous trade with the Orient, and I have, of course, noticed that this is the country where we are going to meet very hard competition."

Frank Anson Joins Silent Majority

Frank H. Anson, president of the Abitibi Power & Paper Co., Limited, whose plant is located at Iroquois Falls, Ont., died on November 1st in the Montreal General Hospital, at the age of sixty years. He was removed to that institution only a few days before from his home on Peel St., Montreal, after having been taken ill during the week end while returning from a trip to New York. He was suffering from peritonitis and an operation was performed which resulted fatally.

LUMBER TRADE CONDITIONS

Halifax Reports That the Outlook is Good

The British market has not yet recovered from the severe reverse it suffered in the late summer, and exporters of spruce deals have very wisely refrained from shipping except in completion of old orders, writes the Halifax correspondent of the "Canada Lumberman."

Past experience has shown that nothing has a more demoralizing effect on a weak market than heavy arrivals of unsold stock, and in the present instance shippers have shown a commendable restraint. The recent improved condition reported in the British market, though it is not very pronounced is undoubtedly due in large measure to the small arrivals.

Late advices from Liverpool, while not announcing any advance in price, report an improved tone to the market, and forecast a gradual improvement. Accumulated stocks of Nova Scotia and New Brunswick spruce at Liverpool and Manchester Canal rose from about 10,000 standard on August 1st. to almost 16,000 standards on October 1st. With an average consumption of about 5,000 standards this represents roughly three months' supply, so that with arrivals very much reduced, it should not be very long before depletion of stocks brings about a natural improvement in market.

Liner space out of Halifax is very difficult to obtain for deals at present owing to heavy demands for apple shipments. The steamship companies show a preference for apple cargoes, and as long as the rush lasts, deal shipments are bound to be light.

Stocks of spruce and hardwood in first hands are also practically exhausted, and it does not seem improbable that by the time the new cut is coming out along about the first of the year the demand should be good at fair prices.

Compared with last year, spruce is selling on the English market at about the same price, while the rate of Sterling exchange is up about 10 points.

Taking everything into consideration, manufacturers seem to be satisfied with the outlook, and for the most part are preparing for a good average cut, although very little trading is being done at present prices.

Labor conditions are regarded as satisfactory in some places, while others report a scarcity. Wages are high, but with nearly all the crews made up, an improvement is looked for from now on.

Americans now seem to realize the scarcity of sawn stocks of Eastern spruce and hemlock, and are bidding higher for what limited quantities are offering. As it will be two or three months before the new cut is ready to ship, further advances would not be surprising to those in touch with the situation.

The West India market has been quite good during the summer. Recent advices say the market is well supplied for several weeks' demands and there will probably not be much shipped by cargo until the opening of navigation next spring. In the meantime small parcels can always be sent forward by liner.

The price of laths still kept at a good level and the sawing of laths from round wood is a permanently established industry giving employment to a large number of men, where a few years ago all the laths produced in Nova Scotia were sawn from slabs.

Active Demand for Spruce in Montreal Market

The spruce market continues healthy with good activity and prospects continue bright. The yards are pursuing a conservative policy and refrain from advancing prices unduly, notwithstanding the big demand, a safe profit being more acceptable than a risky account. There is very good building activity in all sections of the city both in residential work, offices and other large buildings and this will no doubt continue until well into the new year. In the face of the general opinion regarding scarcity of money it is refreshing to find that there appears to be plenty of private funds available for good investment in the building line at the rate of 7%. Whatever may be the conditions elsewhere this is so in Montreal and notaries' offices are kept busy in this class of transactions. The chief drawback just now is the scarcity of labor and at this late season there is not much likelihood of a change.

The Boston Spruce market is also very firm which helps to sustain prices here and the following from the "Commercial Bulletin" of Boston gives a good idea of conditions in the New England section: "For spruce either of specified or random lengths and whe-

ther sawed in New England or the Provinces the tone of the market continues strong. Not only are all recent advances easily maintained but others of equal or greater importance are quite generally thought to be very near. Buyers returning from visits to the Provinces corroborate all that has been affirmed of late about the supplies in first hands being very light and say that the advance in prices were, therefore, easily explained and justified. Some observers declare that still higher prices are inevitable. Others content themselves with saying that they are highly probable.

Spruce lath is also firm, \$6 being readily paid F.O.B. cars mill for No. 1. This price may advance further during the next few weeks as there are plenty of buyers.

The hardwood flooring market continues good but there is a tendency to somewhat easier prices. This is possibly due to the fact that we have now more hardwood flooring mills in operation than a year ago and consequently the supply is getting ahead of the demand.

B. C. fir shows a decided weakness, dimension stock having declined to about \$54.50, a drop of \$3 per M. ft. since the last report. A good sized contract was closed a few days ago at something below this figure, for delivery f.o.b. cars Quebec, and since that time lower prices are indicated. Freight rates by water from the Pacific Coast to Montreal are obtainable at about \$12.50 per M. ft. which, against a rail rate of 90 cents per hundred lbs. figures out very much cheaper and this is no doubt having an influence on prices.

B. C. clears also remain easy with further cars in transit.

No new orders have yet been placed on the Coast for Japanese account so that the expected advance in price has not yet materialized.

Export trade in spruce is quiet from all ports; in hardwoods the demand from the United Kingdom is also small and little moving. White and red pine retain their position as first class sellers and have it almost their own way; indeed all liner space to the United Kingdom ports has been booked up by the pine shippers to the close of navigation which will shortly be upon us.

Quebec Export Shipments Have Been Good

With the approach of the closing of the 1923 season of navigation of the St. Lawrence, it may be said that taking into consideration every phase of the European political situation and the dockers' strike during the busy summer shipping season at the various British seaports, the shipments of timber and sawn lumber from the port of Quebec from May 15 to the beginning of November, while not up to expectations, have been remarkably good.

The shipment of timber and sawn lumber during the month of October to the United Kingdom was 1,210,084 feet, b.m., or a total of 11,893,103 feet, b.m., during the season up to October 31st, leaving two more months for shipment during which time it is expected that, approximately, 2,000,000 more feet of lumber will be shipped by the various Quebec exporters to the United Kingdom. One of the large Quebec shipping firms, W. & J. Sharples Co., Limited, have completed their shipments for this season, while the firm of John Burstall & Co. have not as yet completed their orders and will continue to ship during the entire month of November. The British firm of Cox, Long & Co., with extensive lumber interests in Canada and their office located at Montreal, have shipped large quantities of birch logs and sawn lumber through the agency of MacLean & Kennedy and the port of Quebec. These shipments have come from the Ottawa district by rail and loaded on C. P. Ry. Empresses and C. P. R. freight steamers sailing from the port of Quebec. The last shipment towards the month of October was over 200 standards of deals shipped by the C. P. "Empress of Britain."

Price Bros., Limited, have done an extensive shipping business during this summer season with the American market, the wood goods going direct from this big firm's mills by railway transportation into the United States. The St. Pacome and the Power Lumber Co., have also done a big shipping business during the summer with the American market. The Louise Lumber Co. and the St. Lawrence Lumber Co. with mills located at Rimouski, have also had a successful season. This export trade to meet the American market demands, has been keeping the Quebec mills in steady operation for the past three years to counteract the slump in the European markets

Better Bread for Your Men
Use—

Quaker Flour

Always the Same—Always the Best

Bread counts for a great deal in the lumber camps. Hard work in the open makes keen appetites and there's no food so satisfying as bread—when it's made with Quaker Flour. Quaker Flour is particularly adapted to camp use, for it is high in quality, yet very economical. Milled from Manitoba Hard Wheat. It ensures the best results at low cost. Ivory Brand, our second patent, also made entirely from Manitoba Hard Wheat—popular among lumbermen and bakers.

"Buy a

CAMPBELL

and keep going"

ANNOUNCEMENT

We have recently bought out the Campbell Marine Motor Co. of Minneapolis and in future this well known 4 cycle Gasoline engine will be manufactured in Canada.

These engines have been on the market for nearly a quarter of a century and we have yet to hear of one that has not given satisfaction.

We will be prepared to make delivery on heavy and medium duty engines from 5 to 60 H.P. by January 1st next.

In future the following "Campbell" engines will be Standard Equipment in our Warping Tugs.

The 25' Power Winch Boat—14 H.P. 2 cyl. Engine.

The 34' Single Drum Motor Head-Works—28 H.P. 4 cyl. Engine.

The 37' Double Drum Motor Head-Works—40 H.P. 4 cyl. Engine.

and keep going"

and is likely to continue in activity for another year at least and probably for several more years.

Although no authentic statistics of the shipments of wood from the ports east of Quebec are available, the Quebec export firms interested, including the R. H. Goodday & Co., report that the business is good. In this connection the shipping of lumber commenced late in the season, nevertheless the shipments have been extensive, especially from Campbellton which has been experiencing an unusually busy season.

Quebec limit-holders and exporters to European markets, seem to be in a quandary as to the prospects for overseas shipments in 1924. Some leading interests approached for information are non-committal in their statements. They admit that they have practically completed their estimates but that their operations so far decided deal in the main with the goods required for the American market. While agreeing that there is a possibility of the European political situation being cleared up by the coming new year, they are not inclined to cut largely in timber for shipment to the United Kingdom. Viewing the situation from all angles in their deductions made from the information they receive from their European agents, they are holding back in their intentions until later in the season.

A few of the many questions which confront them in their study and judgment are the increase in operation in the woods, the scarcity and increased wage demanded by the woodsmen and the advance in cost of the stumpage tariffs. The chief cause for the scarcity of labor is to a great extent due to the construction work in progress in the country districts, the development of water powers and making of good roads whereat the farmers' sons and countrymen, accustomed to work in the woods during the summer months, find employment at a \$3 per day wage, that keeps them constantly near their home comforts. Take, for instance, the water power developments at the Land Discharge and the Kenogami in the Saguenay district where there are three thousand men at work close by their homes, many of whom accustomed to labor in the woods, are not likely to give up their present employment as long as it lasts to go to the bush.

Quebec operators admit that the price of labor is not as high as is generally reported in the daily press. They state that while they have to pay their foremen a high figure, they are hiring men for \$50 to \$60 per month with board.

Although the complexities of the political situation in Europe, which regulates the economic problems to be solved are extraordinary and will require the utmost, delicate precaution on the part of the diplomats to take part in the conferences, there are indications that the difficulties in question will be ironed out and a comprehensive policy adopted to ensure the beginning of an end of the dire disastrous situation before the beginning of the new year.

In the meantime the reports received and confidential advices from the European agents of the Quebec lumber interests do not encourage the Quebec limit-holders and exporters to go in for a heavy cut of logs on speculation for the United Kingdom this winter. Although the advices are by no means pessimistic, there is a ringing note of caution which cannot be ignored. Even if the political situation is cleared up by Christmas, it will take Europe some time to recover from the economic thralldom which she has gone through, especially in regard to deflation of the money values of continental Europe and the rates of exchanges, not to speak of the radical communistic tendencies of continental Europe.

There has also to be taken into consideration the scarcity of money in Europe and the competition the Canadian lumber trade will have to meet from the Scandinavian wood countries; Finland, for instance, evidently so hard up that the wood shippers are beginning to cut prices in their shipments for the cash they so need. This is a situation for the Canadian trade to study, especially the limit-holders in realization that with strict conservation of Canadian forests, every stick of timber will enhance in value before many years.

While the tone of the wood market in England in October was hopeful, communications received from European agents point out that there was the utmost difficulty on the part of English exporters to their continental customers, in getting a reasonable profit on the spring figures, and the advances requested by shippers had the effect of forcing buyers to close up their contract books for the time being.

The exchange difficulty on the continent is raising the cost of imports to a prohibitive level. This naturally will affect the purchasing of the English importer early this winter or when the question of price will determine the action of the buyer and naturally will guide the Quebec lumber operator in his cut in the woods this winter.

It is admitted in England that the basis of wood values for 1924 is extremely uncertain. Political changes will, of course, have an immense influence. A continuation of the present unrest in Europe will hinder general trade from expanding and thereby reduce the general consumption of wood goods, but the most important factor is the question of supply and demand. France and Germany have

cut deeply into their forest resources, the Scandinavian countries are doing likewise and are ahead of their system of reforestation in this regard, while, it is generally admitted, that England will need a bigger import next year to meet the demands for housebuilding which shows every sign of being conducted on a large scale for some years to come.

In the meantime, the governments of Europe, influenced by the determined stand taken by the British Prime Minister, are getting together with a view to adjusting the European political tragedy with every chance of France and Belgium agreeing to concessions which will result in a settlement by Christmas as already prognosticated in the "Canada Lumberman," that will lead to better conditions in economic relations in general to the trade and commerce of the world, and put an end to unrest and the spirit of Bolshevism in Germany and Central Europe in general to warrant a true spirit of optimism which has never ceased to prevail in the British business public mind in which the Canadian lumber trade is destined to share in all advantages.

Stiff Prices for Random Prevail at St. John

That the market for provincial random promises to be exceptionally good in the United States next year was a statement made recently by Alexander Wilson on his return from a visit to Boston and New York. He is a member of the firm of Wilson Bros., St. John, N.B., and had been attending a meeting of the Box Makers Association. He found that there was a feeling of optimism among builders, who explained that they were behind with their building programme this year. The situation was so urgent that it would be absolutely necessary to undertake a very large programme next season. In consequence they all predicted a good market for provincial lumber next season.

Many buyers from United States lumber dealers have visited the province during the last few weeks. They find that the price of random continues to hold strong and in some instances have increased. This is due to the supply in first hands being very light and they agreed that the advance was, therefore, easily explained and justified. Some predicted that still higher prices are inevitable.

One of the large lumber producers of New Brunswick recently received orders for random at \$38 and \$39, but refused to fill them unless he received \$40. From this price must be deducted the cost of shipment and the commission. Shipments by rail average \$7.50 with \$1.90 for commission, while by water the price is \$6.00 with \$1.90 for commission. The prices quoted in St. John shows a range from \$28 to \$40.

A number of orders are being filled for 2 x 3 and 2 x 4 at \$29. There is a scarcity of 2 x 8, which is being held by local mills at \$34. This price is firm and an increase may follow. The price of 2 x 10 is also firm at \$37 at the local mill yards and this is being disposed off in the States for \$45.

Dealers, who expect prices to take a drop this season now that the mills have practically all stopped cutting, are due to be disappointed. Where the men in the woods were receiving \$30 and \$35 they are now getting as high as \$60 to \$70. Even at this rate there is great difficulty in securing experienced men.

The price of laths at present is \$6.50 and these are being quoted in the Boston and New England markets at \$9.50 for 1½ inch, while the 1½ inch are being sold at \$8.

Shingles are still holding although there may be a small falling off in the price of seconds as the season advances. First grade shingles are still firm and from all indications will so continue.

Domestic Trade in Ottawa is Fairly Active

A falling off in orders from American yards, and the continued shortage of labor to man the woods camps, characterized the Ottawa lumber market, during the first two weeks of November. Domestic trade, however, was fairly active, and this helped to tide over an otherwise slow business period.

Orders and inquiries from the eastern American yards were about as scarce as the proverbial hen's tooth, and it was the general opinion of manufacturers that trading with the eastern U. S. yards would remain dull until such time, as western U. S. manufactured stocks, which are underselling Canadian grades, are gotten off the market.

Lumbermen stated that they at the present could not afford to cut prices to meet those of the western U. S. manufacturers, unless they were prepared to accept a substantial loss. Meanwhile the Ottawa Valley lumbermen intend to sit back and bide their time, until a season arrives to take care of their stocks. The manufacturers maintain that their stock have cost them good money to produce, and they cannot see the policy of slaughtering prices for the

Linn Logging Tractor in operation by Austin & Nicholson, Limited, of Chapleau, Ont.

LINN LOGGING TRACTOR

The above illustration shows what we believe to be the largest and heaviest sleigh train of logs ever hauled at any time, anywhere.

Austin & Nicholson, Limited, will be operating their Linn equipment on the same operation (back of Esher, Ont.) during the coming haul and these same sized trains, each loaded with a thousand logs, can be seen every day during the hauling period making their regular trips—one hour and ten minutes going with a load and fifty-five minutes returning with the empty sleighs—hauling distance not less than 6 miles—with a steady up grade of $4\frac{1}{2}\%$ over a distance of four miles.

The photograph, from which the above half tone was made, was taken about four o'clock in the afternoon, and when making the half tone the faces of the men were indistinct and were re-touched—otherwise the half tone is the same as the photograph.

And, in proportion to your grades, the performance pictured above, is no greater than can be found on any Linn operation during the hauling season.

The above train contained ten sleighs, and the loads consisted of one thousand green jack pine logs—averaging approximately thirty-two feet per log, or thirty-two thousand feet green timber to the train.

“Ask the logger who uses one”

MUSSENS LIMITED

Philips Place Building

Montreal

sake of meeting the competition of the U. S. Western state manufacturers.

Some of the trade was inclined to the view that the over production of the western manufacturing companies had been occasioned by having to cut over extensive areas which had recently been visited by forest fires. Until this lumber is off the eastern U. S. market, any great activity in the buying of Canadian or Ottawa Valley stocks is not looked for.

Local trade was reported as being fairly active, the chief demand being for mill culls, dead culls, and spruce of the lower grades. Building in Ottawa during October picked up considerable. 110 permits calling for new construction having an estimated valuation of \$633,365 were issued. October was the second best building month of the year, from the standpoint of estimated valuation of the new work. For the first 10 months of 1923 there have been 764 permits issued as compared with 1,021 for all of 1922. The value of new structures so far this year is \$1,926,225, as compared with \$5,021,782 in the twelve months of 1922.

The scarcity of labor for the wood camps, which has prevailed for the last six weeks did not show any signs of improvement, and manufacturers, expressed doubt if they would all be able to fill all the camps they had hoped to. Wages however, did not show any advance, but in the Gatineau district, a few jobbers were paying as high as \$75 and \$85 per month with board.

One company, which last year imported a number of woodsmen from Gaspé, Only to have the majority of them decamp after they had spent but a short time in the bush, has pretty well decided that the source from Gaspé is not satisfactory and has gone further afield. This company at present has made application to the Minister of Immigration for permission to bring in half a hundred or more Russians or Poles, which a certain steamship company has already hired in the Old Land.

The only hitch in the arrangements so far is that the department of Immigration wants the employer to promise employment to the importations to the end of April, but the Company says that it will only guarantee work till April 1st, as its winter camps are broken around that time.

Other conditions effecting the market did not show any general change.

General Conditions in Ontario Somewhat Better

There is not much change in the general lumber situation except that in the spruce market there is a good demand at slightly higher prices. Retail yards report practically no change in conditions and, it is expected, that business with the most of them will be rather quiet until the beginning of the year. Practically all sawmills have closed down for the season and the cut is not as large at many quarters as was anticipated. Of chief interest to the trade at the present time is whether present prices will hold and what the outlook is for the coming year. Stocks with most concerns are much lower than they were a year ago as lumber of all kinds, owing to the active demand this spring and early summer, was shipped out more promptly than usual.

The output of nearly all the mills has been disposed of and logging operations will be carried on in most territories more extensively than during last season. It is hard to estimate the increased cost of lumbering during the present winter but owing to the scarcity of men and the advance of 25 to 33 1/3 per cent in wages, it is believed that the logs by the time they reach the mill, will cost fully 25 per cent over last winter.

In reference to the hardwood situation, one leading operator states that lower prices are not expected for the better end of the log and it is quite possible that the lower grades may be heavy. The hardwood demand is good all through even through the low grades are practically all cleaned out in some sections for the first time since the boom of 1920.

In conversation with the "Canada Lumberman" another operator stated that the present price offered for hemlock and spruce in Ontario did not warrant taking out very much stock. Others believe that next year will witness much activity in the building line and there is no reason why operations should be slackened.

One leading organization in Northwestern Ontario says that the output in their mills has been greater than any season that they have yet operated although producing during the last half of the season was difficult on account of labor unrest. All manufacturers make complaint of the scarcity and inefficiency of labor and say they have never found conditions so difficult in Northern Ontario. The lumberjack is very unsettled and restless and as a result efficiency is being reduced to a low level. Based on the difficulties in wages alone, operating costs will be about 25 to 35 per cent greater than a year ago but with the lack of efficiency added, it is difficult to

estimate what the result will be. The opinion is expressed by several lumbermen that it is doubtful if any possible advance in the price of lumber this year will take care of the added operating cost.

Another Eastern Ontario lumberman says that the cost of production this season will be at least 35 per cent greater than a year ago, and if firms in the Ottawa Valley are unsuccessful in securing sufficient help, the advance will be more like 50 per cent.

In reference to the advance in the value of lumber to take care of the extra cost, it is not thought that this will work out. It is beginning to look as if there would have to be a reduction in prices according to one authority, particularly in the middle grade white pine, in order to meet competition from the West Coast and the Western States. "We have been hoping," concluded the lumberman in question, "that the prices in the West would advance as they are surely selling their product as a loss, and if the Eastern lumbermen have to make any reduction in prices, it will mean quite a serious loss to them."

The lath market is rather quiet at the present time and several dealers have considerable stocks on hand. A number of sales, however, have taken place of late and prices at the mill remain fairly firm. The demand for spruce lath in the East is particularly good.

Speaking of the future and present conditions in the lumber arena, a leading Toronto wholesaler stated lately that dry stocks in Ontario spruce and jack pine were scarce at the present time and prices were ruling firm. Low-grade lumber just now is not plentiful and all available sources of supply have been pretty well combed for No. 1 and No. 2 mill culls. Common, box and dressing in white pine is not moving as freely of late across the border owing to competition from Idaho pine which has come down somewhat in price and is shutting out the Ontario product. "I have," he declared, "visited a number of mills in the north and they are all of the opinion that lumber will be a dearer commodity next year, not only by reason of the sales tax being doubled but also from the fact that it will cost from \$3 to \$6 more per M, b.m., to get out logs due to greatly increased wages and general inefficiency of labor."

"Now, the question arises, who is going to absorb this increase in the price of production? Will it be the mill man or the wholesaler? In the spring, if the market is active and the outlook brisk, the wholesaler will have to pay the extra amount but if conditions are stationary and there is no particular flurry, it would seem that the mill man would have to absorb this augmented outlay. You will thus see that the situation is a most interesting one from a speculative standpoint."

"It is just about a year ago now that the demand set in from the American side for softwoods and mill stocks, which were heavy, were shipped out rapidly. This lowered the various quantities and sizes in the different piling grounds almost to the minimum and the brisk demand last spring caused a free movement of lumber. The result is to-day that mill stocks of the usual widths, thicknesses and lengths, carried by northern manufacturers at this particular season, are considerably lower than is customary. Shipments have gone forward rapidly and the distribution was never more prompt and efficient than it has been for the past few months."

"It is only lately since the demand has fallen off but some mills have been replenishing their stocks. On the whole, however, I found a strong under-current of confidence in the future of the market. This is indicated by the fact that most companies are putting in more and larger camps than usual in preparation for a big winter's cut."

Big Contract for Hardwood Ties Awarded

A recent despatch from Campbellton, N.B., says that the Canadian National Railways have awarded a large contract to fill their requirements in the hardwood tie line to J. Wesley MacDonald, lumber dealer of Campbellton, and Herbert Grier, of Montreal. The transaction, which was completed recently, is known to be a large one. A smaller contract has also been awarded to J. H. Flemming, of Woodstock, N.B., and these two contracts will take care of the entire year's output of the new creosote plant at Newcastle.

The territory specified in the contract to be covered by MacDonald and Grier comprises the following districts: From Mont Joli to Moncton on the main line of the C. N. Rys.; from Campbellton to Limerick on the I.N.R., and from Newcastle to Blissfield in the central part of the province. The recently awarded contract further makes the above mentioned dealers the sole buyers of hardwood ties in these different districts.

The arrangement calls for four kinds of wood, namely: maple, birch, beech and elm and herein is presented a fine opportunity for smaller mills whose owners may be interested and desirous of entering this phase of the lumbering business.

The Beaver Lumber Co., Shaunavon, Sask., recently suffered a loss by fire.

The Black Island Lumber Co., Black Island, Man., is registered as a partnership.

The Plessisville Lumber Co., Plessisville, P. Q., was recently registered with H. I. Hymans as the principal.

The Vancouver-Iowa Shingle Co., Limited, with a capital of \$25,000 is a recent registration in Vancouver.

The Alliance Lumber Co., Denismure & Gage Aves., Hamilton, Ont., are enlarging their factory and extending office accommodation.

Louis Bester, who operates a sawmill just west of the town of Cargill, Ont., recently purchased the engine from the stave mill of Cargill, Limited.

The Canadian Pacific Railway to provide for the maintenance of their 20,000 miles of road will purchase shortly 6,000,000 ties at a cost of approximately \$4,000,000.

Gale H. Stalker, of Elmira, N. Y., was in Montreal recently investigating conditions regarding the hardwood flooring market with a view to establishing a mill this side of the line.

The F. Villeneuve Lumber Co., Limited, Ottawa St., Walkerville, Ont., are contemplating the erection of a new planing mill. The building will be one storey of frame construction and will cost about \$10,000.

McLean & McKay, sawmill operators, Cloverdale, B. C., have begun operations on the McKenzie property. The timber is being hauled by truck on the old McLellan road on the Pacific highway to the mill.

The erection of a plant to replace the sawmill of the B. C. Fir & Cedar Co., which was destroyed by fire some time ago, has begun. The mill will be located on False Creek at the foot of Laurel St., Vancouver.

The St. Regis Paper Co., Cap Rouge, P. Q., are contemplating the erection of a large paper plant at a cost of about \$1,000,000. A. P. McKinnon, Trust Bldg., Place D'Armes, Montreal, is the company representative.

John Bryan, for many years a clerk in the Forestry Branch, Ottawa, passed away recently. He leaves a wife, two sons and one daughter. Many beautiful offerings were received from the Forestry Branch and other representative bodies.

Over 3000 lumber camps are now in operation in the province of Quebec, employing in the neighborhood of 25,000 men. There is a scarcity of labor in some sections, consequently higher wages are being offered as an inducement to enter the bush.

George Schupe, forest ranger, whose headquarters are at Fernie, B. C., recently spent a few days in Cranbrook. He reports that many hunters have been after elk and sheep in the Elk Valley of late but have not met with very gratifying success.

D. Pluff, of Wrightville, Ont., had his scalp nearly torn off recently in the pulp department of J. R. Booth, Limited, Ottawa. He was working near one of the machines when a belt becoming loose from one of the pulleys, inflicted a long cut on his scalp.

Fred Burns, senior partner in Robert Cox & Co., Ottawa, Ont., sailed for the Old Country by the SS "Regina" from Montreal on October 27. He intends spending the next few months there cleaning up the season's shipments that have been made from this side.

Langlais, Limitee, Amqui, P. Q., is a new company recently formed to manufacture and generally deal in lumber, pulpwood, shingles, lath and other wood products. Capital \$49,000. G. Langlais and Joseph Vaillancourt, both of Amqui, are two of the incorporators.

George H. Millen, president of the E. B. Eddy Co., Hull, Que., recently celebrated his 85th birthday and is still in good health. He received the congratulations of a host of friends among whom he is very popular. Mr. Millen has been identified with the E. B. Eddy interests for over sixty years and rose from a humble position to the highest office in the gift of the company.

The Brompton Pulp & Paper Co. of East Angus, Que., announces its intention of redeeming on November 1st the balance of the issue of first mortgage sinking fund 6 per cent. bonds maturing in 1927, at 105 and accrued interest. This issue, which was put out in 1907 originally amounted to \$1,000,000, \$896,000 having been pre-

viously redeemed. The total funded debt of the company, as shown in the last annual balance sheet, was \$5,153,200, the bonds which, it is planned, to retire being the oldest of four issues. First consolidated sixes, due 1935, to the amount of \$104,000, are held in escrow to provide for the redemption.

First mortgage bond holders of Clarke Bros. Limited, of Bear River, N. S., have voted to accept an offer of purchase of company's properties as submitted by a group of Chicago and Milwaukee financiers. American interests will proceed at once with the reorganization of a new company to be formed under Dominion charter.

Supplementary letters patent have been granted, changing the name of La Compagnie Chas. A. Julien, Limitee, to Supreme Foundry Limitee, with head office at Pont-Rouge, Portneuf County, Que. The company is empowered to deal in lumber and operate a timber business in all its branches and to construct sawmills, lumber yards, etc., as well as develop electric power and make all kinds of machinery.

A recent despatch from Fort William says that the annual trekking of timber and pulpwood cutters to the woods has commenced, several of the larger concerns now having men and supplies on their way to the site of operation. The Fort William Paper Co. lately sent a large quota of pulpwood cutters to Yonde, their chief camp, 172 miles west on the Grand Trunk line to Sioux Lookout. The average wage is \$45.00 a month and board.

The Canadian Forestry Association, of Ottawa, is establishing local branches in Belleville, Brockville, Kingston and Cobourg. Fred. W. Brown, of the C.F.A. staff, was recently in Belleville enlarging the membership of the Association which represents a union of 15,000 Canadian citizens actively developing reforestation and forest fire prevention. Twenty educational campaigns are in constant operation including the use of railway exhibit and lecture cars, field lecturers, motion pictures and many other methods.

The Ontario Government recently awarded a timber area, some eighteen miles in extent, situated in Bond township, to the Hawk Lake Lumber Co., of Monteith. The area has been damaged by fire and the contractor for it will pay the following prices for pulpwood and other timber:—Spruce, poplar and basswood, \$4.76 per M ft.; for pine, \$3.76 per M feet; for tamarac and other timber, \$2.26 per M feet; for spruce pulp, \$1.31 per cord; for other pulp, 49 cents per cord; and for fuelwood, 31 cents per cord.

Attracted by the good wages paid in lumber camps near Ville Marie, Haileybury and Kipawa, by the Riordon interests, five hundred young farmers, residing mostly in Champlain county, left Quebec lately, for those Quebec-Ontario border points. They will spend the winter in that section, joining some two hundred residents of the district of Quebec, who recently left for the same point. This is a record number of men leaving Quebec at one time for lumber camps. The majority took their own horses.

P. W. Gardiner & Son, of Galt, Ont., have lost no time in commencing to rebuild the portion of their plant which was recently destroyed by fire. The debris has been cleared away and a one-storey fireproof brick storehouse for lumber for purposes of manufacture is being erected. The building is 160 x 100 feet and is situated north of the factory. In reconstructing the destroyed sections, the company plan a change in the layout of the buildings, with a view to not only greater safety but also for increased efficiency.

Immediate exploitation of the group of rapids on the Megiscane River has been decided upon by the syndicate which recently leased them by auction from the Government. The syndicate included L. N. Huard, of Levis, who represented certain interests said to include E. W. Tobin, M.P., of the Brompton Pulp & Paper Co., Limited. Work has been commenced, the plans decided upon including not only the immediate harnessing of all the water-power available but also the construction of a pulp mill at an estimated cost of \$1,000,000, as well as a newsprint mill at an additional expenditure of over \$1,000,000. The mills will be located in proximity to important timber limits in the Temiskaming and are expected to be in operation by the end of 1924.

The timber interests of British Columbia have for the past month or two been guessing at the amount of lumber that will be consumed in the reconstruction of the devastated Japanese cities. With the arrival of Takao Takata, millionaire financier of Japan, who has come to America to carry out detail work in connection with purchases of large consignments of lumber and steel, it is learned that approximately 100,800,000 feet is the approximate total number of feet that will be the Japanese order of lumber. Immediate building in Japan will only be temporary until the Government has drafted the new plans for both Tokio and Yokohama. For this reason there will be an immediate demand for cheap grades of lumber from Canada and most of the buildings in the wrecked cities will be of a temporary nature.

Co-operating with Crown Timber Agencies

Major J. I. Hartt, of Orillia, Ont., who recently entered upon his duties as inspector of Crown timber agencies and supervisor of operations for the Government, has been occupied during the past few weeks in visiting the different agencies and effecting a closer line of communication between these outposts and the Department. The attention of Major Hartt is given largely to natural reforestation and also to conservation by taking over large areas, already planted and well under way toward developing into a new forest, which will be ready for a new crop in the near future. Major Hartt declares,—"I can see where we can reproduce the white pine stands that we had in Ontario by careful watching and waiting and this work will receive my very best efforts." The new inspector of Crown timber

agencies is endeavoring to bring to bear on the Department and to the different agencies his experience gained through thirty years of constant connection with the lumbering industry and will try to establish something that will create a closer co-operation all along the line.

Recently Major Hartt received a letter from his old commanding officer, Gen. Alex. McDougall, of Montreal, who was in charge of overseas forestry operations during the war. Gen. McDougall said that he felt sure from past experience that the new inspector of Crown timber agencies would fill the post admirably and added,—"I am sure from my past experience that if the position is one that requires sound judgment and expert knowledge of lumber operations, you will be a great success."

Offers and Inquiries Invited

Edgings

Edward H. Moore, who was prominent in lumbering and the steel industry in Vancouver, died recently in that city aged 75 years.

The Rainbow Shingle Mill Co. Vancouver, B. C., have added two shingle machines to their equipment and now run the machines on double shifts.

L. T. Dwelley, former sales-manager of the Columbia River Lumber Co., Golden, B. C., has accepted a similar position with the B. C. Spruce Mills at Lumberton, B. C.

E. Kalbfleisch, of the Kalbfleisch Planing Mill, Stratford, Ont., and chairman of the Stratford District of the O.R.L.D.A., is enjoying a three weeks' deer-hunting expedition.

Emery Gatchell, well known to the Toronto retail lumber trade, has taken a position as yard superintendent for the Evans Co., Limited, building supply dealers, Sudbury, Ont.

A recent despatch from Ottawa says a chattel mortgage has been filed from the Gatineau Co., Limited, to the Riordon Pulp Corporation, Limited, for \$1,500,000. The Gatineau Co. gives all its property in Ottawa as security for the loan.

A charter has been granted to Lawson Paper Products, Limited, with a capital stock of \$250,000 and headquarters in London, Ont., to manufacture, buy, sell and deal in paper and any article which may be manufactured from pulp of any kind.

The Oliver Lumber Co. have erected an attractive new office building at the foot of Spadina Ave., Toronto, and have moved their Yonge St. office to their yard which is located at this point and is convenient for shipments, deliveries, etc.

The large shingle mill at Port Moody, B. C., controlled by the Northern Logging Co., may shortly resume operations under new management. Negotiations are under way for the lease of the plant to Barney Moore, lumberman, of Blaine.

George R. Hackett, vice-president and general-manager of Robertson & Hackett Sawmills Limited, Vancouver, B. C., spent a few days recently in Toronto and the East. Mr. Hackett is a director of the B. C. Lumber & Shingle Manufacturers' Association.

The Spanish River Pulp & Paper Mills have announced that they will build a new slip and wharves on the river front just below their general offices at Sault Ste. Marie, Ont. The slip will be about 800 feet long and 200 feet wide and will cost approximately \$400,000.

A party of 300 Russian woodsmen recently arrived in Quebec. They have secured employment with various lumbering firms in the provinces of Ontario and Quebec and were met on their arrival by employment agents who took them to their various destinations.

H. J. Borbridge, a well-known harness manufacturer who died recently in Ottawa, left an estate of \$229,000 to be divided among his children. The late Mr. Borbridge was well known in lumber circles having supplied many companies throughout Canada with harness for their woods operations.

The name of the Naylor-Osborne Co., of Sandwich, Ont., has been changed to the Sandwich Lumber Co. The alteration in the style was made recently to save confusion between the Naylor-Osborne Co., Limited, of Essex and Tecumseh and the Naylor-Osborne Co. of Sandwich.

It is stated authoritatively that the E. B. Eddy Co., Limited, of Hull, Que., is not a member of the recently formed Swedish match trust. The new trust controls the output of matches in some countries and several corporations are reported to have joined the merger but the Eddy Co. is not one of them.

The Stewart-Atkinson Co. who are operating a mill on the south shore at St. Romuald, Que., have completed plans for the installation of additional machinery and will embark in the manufacture of pulp and paper. The company intend to employ nearly 1500 men upon the completion of their present project.

The new newsprint mill of the Bathurst Co. at Bathurst, N.B., is now turning out 55 tons per day and it is expected that 60 tons will be turned out during the present month. This is a splendid record for a plant which began producing only a couple of months ago and the quality of the product purchased is of the highest type.

A miniature model bungalow is to be a leading feature of the exhibit of British Columbia timber products and manufactures to be shown at the British Empire Exhibition in London next year. The British Columbia Lumber Manufacturers' Association has been rendering the Government Forest Service every assistance in securing choice specimens manufactured and unmanufactured, in the rough

and finished. Every variety of timber ordinarily exploited commercially is included. The main object is to get together a representative exhibit which will show the Old Country people the architecture, materials and manner of construction of the wood frame house, as ordinarily built on this continent. Every sort of millwork, sash, doors, panels, frames, and moldings, as well as saw and scroll work and wood turning will be included in the exhibit.

Arrangements have been completed for the handling of an issue of \$5,000,000, 6 per cent., 20-year bonds for the Quebec Power Co. It is reported that the Quebec Power Co. will sell the waterpower to an important pulp company which will erect a mill near Quebec City. The name of the St. Regis Pulp Co. is mentioned in this connection.

The extension to the wood room of the Abitibi Power & Pulp Co. at Iroquois Falls, Ont., has been completed. Four new barking drums have been installed and are in operation. The new upper and lower water tanks are also finished. When the eight drum barkers are at work, the capacity of the plant will be double to what it was. When pressed the barkers will bark as high as 2400 cords a day.

A cargo of lumber recently went forward on the "Canadian Transporter" from Vancouver to Japan. The entire cargo was sent as a gift from the B. C. Provincial Government. The various mills gave the lumber at actual cost, the Government pro-rating the quantity each mill should give. Mr. Haskell was sent by the Government with the lumber cargo and he will devote his attention to the study of the prospects of further lumber requirements in Japan.

A charter has been granted to Sealofelt Limited, with head office in Souris, Man., and a capital stock of \$30,000. Among the incorporators of the company are William V. Anderson, Robert G. Knight of Selkirk, and others. The organization is empowered to carry on the business of merchants, manufacturers and dealers in paper, wall-board and other preparations and products from cereal straw, flax straw or any other fibrous material.

The Pulpwood Commission which recently held a sitting at Campbellton, N. B., which was the final session of that body in the Maritime provinces, heard several witnesses, all of whom were opposed to the proposed embargo. David Champoux, of Restigouche, who is second vice-president of the Canadian Lumbermen's Association and a large owner of timber limits both in New Brunswick and Quebec, was inclined to think there should be some restrictions imposed on too free forest exploitation.

The demand for experienced men to work in the bush continues to be more active than the supply, according to advices from St. John, N. B. The wages to be paid this year will be from \$45 to \$60 a month and is approximately the same as last year. Many skilled workmen in all classes of trade have migrated to the United States from this part of the country to take part in the boom now going on south of the border. This has made a noticeable gap in the ranks and is no doubt responsible for the high wages being paid.

How much unmanufactured timber was exported in the year from British Columbia? This was a question which was asked by Canon Hinchcliffe, member for Victoria, B. C., in an investigation to ascertain the difference between manufactured and unmanufactured timber. Last year British Columbia exported 72,000,000 feet of unmanufactured timber. There was a difference of \$15.00 per M. between manufactured and unmanufactured timber which would have meant an additional million dollars for the province if the timber had been sawn in British Columbia.

Ontario lumber interests are continuing to obtain good bushmen from the province of Quebec for the unusually active season expected in the lumber camps this winter. Recently a special Canadian National Railway train comprising four colonist cars and twelve cars, accommodating teams of horses and equipment, passed through Quebec City on its way to Smooth Rock Falls, Ont., where the men are to spend the next six or seven months. The Riordon interests recently organized another shipment of 300 men from Champlain County for its camps in Ville Marie, Haileybury and Kipawa.

The E. Burt Lumber Co. and the Doaktown Lumber Co., which companies are controlled by Elwood Burt, of Fredericton, N. B., with mills at Burt's Corner and Doaktown, have completed their sawing during the present season. The Doaktown Lumber Co. concluded its first complete season under new management with an output approximately of 3,000,000 feet, while the E. Burt Lumber Co. cleaned up all the available supply of logs and completed its season's output of more than 5,000,000 feet. Mr. Burt stated recently that his companies were preparing for about the usual cut of lumber during the coming winter for next season's sawing. About 3,000,000 feet of logs will be cut for the Doaktown Lumber Co. and between 4,000,000 and 5,000,000 feet will be the cut for the Burt's Corner mill, which, with the 700,000 or 800,000 feet of logs which did not reach the mill this season, will give a full year's operation.

WIRE ROPE

"We have the Right Rope for every purpose"

The contributing factors in making good Wire Rope are: 1. Men who know how. 2. The best grade of materials. 3. The most modern machinery. We have all three and are producing the goods. Give us a trial.

Horses, sleighs, tanks, horse jammers, steam and gasoline jammers, good relay rail. Write for descriptions and prices. Holt Timber Co. Ltd., Bolger Bridge, Ont. 20-23

Sale of Pine Timber

Tenders will be received by the undersigned up to and including Friday, the 30th inst., for the right to cut the Red and White Pine, 12 inches and over, in the Township of Regan, in the District of Sudbury.

Further particulars regarding sale may be obtained upon application to the undersigned, or to Mr. J. G. McCaw, Acting Crown Timber Agent, Sudbury.

JAMES LYONS,
Minister of Lands and Forests.

Toronto,
November 5th, 1923. 22

SALE OF TIMBER

Tenders will be received by the undersigned up to and including Thursday, December 6th, 1923, for the right to cut timber, part of which has been damaged by fire, on the Townships of Clouston and Buchan, District of Algoma, having an area of 81 square miles more or less.

It is understood that this is primarily a pulpwood proposition, considerable of the wood being damaged.

Tenderers may offer a rate for the different classes of burnt or damaged pulpwood on a basis of being permitted to export same and may also make an offer for the burnt or damaged pulpwood of different classes not to be exported.

Further particulars may be obtained upon application to the undersigned or to Mr. J. G. McCaw, Acting Crown Timber Agent, Sudbury.

JAMES LYONS,
Minister of Lands and Forests.

Toronto, November 7th, 1923.

No unauthorized publication of this notice will be paid for. 22

D. FLORENCE & SONS
Bethune St., Peterborough, Ont.
Dealers in Scrap Iron, Metals, Second-Hand Machinery, Pipes, etc. 2-24

New Canadian Company Organized

It is announced that a new Canadian company having the name Babcock-Wilcox and Goldie-McCulloch, Limited, has been organized to include Babcock & Wilcox, Limited, London, Eng., Goldie & McCulloch Co., Limited, of Galt, and Babcock & Wilcox Company, of New York. The head office of the new company will be in Galt, capital is three million dollars, and there will be branch offices in Vancouver, Winnipeg, Toronto, Montreal, and the Maritime provinces. The president of the new company is R. O. McCulloch, vice-president, A. R. Goldie, and Alex. C. Fleming, secretary. The chairman of the Board of directors is A. G. Pratt, of New York, and the other directors include Sir James Kemnal, managing director of Babcock & Wilcox, Limited, London, W. D. Hoxie, president of Babcock & Wilcox Company, New York, E. H. Wells, chairman of the board of the Babcock & Wilcox Company of New York, and A. W. Atwater, K.C., of Montreal.

The new company has acquired the Canadian business of Babcock & Wilcox Company, Limited, and of the Goldie & McCulloch Co., Ltd., with the exception of the vault, safe, and safety deposit manufacturing business of the latter company. The new company will continue the manufacturing of boilers, superheaters, economizers, stokers, boiler accessories, engines, pumps, turbines, condensers, etc.

Goldie & McCulloch Company, Ltd., will continue the manufacture of vaults, safes, and safety deposit boxes.

The Goldie & McCulloch business was started in 1859 by the late John Goldie and the late Hugh McCulloch. It was incorporated in 1891 with Hugh McCulloch as president and John Goldie as manager. In 1910, Hugh McCulloch Jr., became president and at his death in 1917 was succeeded by R. O. McCulloch. John Goldie, in 1896, was succeeded by his son A. R. Goldie, the vice-president of the new organization.

Ontario Government Sells More Timber Areas

Four timber tracts totalling in extent some twenty square miles were recently sold by the Ontario Department of Lands and Forests. The areas are in all cases burnt-over ones which require to be disposed of immediately if the merchantable timber on them is to be realized. They are situated in the districts of Temiskaming, Rainy River, Kenora and Nipissing. The successful tenderers for the lumber and the prices which they paid were:—

R. S. Potter of Matheson, has secured four lots in the township of McCann in the district of Temiskaming and will pay, for jackpine, \$3.50 per thousand feet; for spruce, poplar and basswood, \$4.00 per thousand feet; for other timber, \$3.00 per thousand feet; for spruce pulp, \$1.60 per cord; for other pulp, \$1.00 per cord; for fuelwood, 50 cents per cord.

W. J. Thompson of Emo, has secured five lots in the township of Bennett, in the vicinity of North Cedar Lake, in the district of Rainy River. He is to pay, for white and Norway pine, \$8.00 per thousand feet; for jackpine, \$6.00 per thousand feet; for spruce, \$4.00 per thousand feet; for poplar, \$2.00 per thousand feet; for pulpwood, \$1.25 per cord; for fuelwood, 25 cents per cord.

J. B. Hardy, of Fort William, has secured an area of 12 square miles near Valora, in the district of Kenora, and will pay, for red and white pine, \$6.60 per thousand feet; for poplar and basswood, \$5.25 per thousand feet; for other timber, \$2.65 per thousand feet; for ties, 25 1/2 cents each; for spruce pulp, \$2.20 per cord; for other pulp, \$1.20 per cord; for fuelwood, 75 cents per cord.

The prices tendered in all cases are inclusive of the usual crown dues.

The Three Goodhue Belts

"EXTRA" "STANDARD" "ACME WATERPROOF"

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions. When you buy a belt—buy a Goodhue. Prices and particulars on request.

The National Hand Fired Stoker gives particularly efficient and smokeless combustion with wood refuse either with or without fuel. It is practically fool proof

The National Stoker burns wood waste without expert firing. No careful spreading or placing is required. The downward sloping grates do away with the great labor of handling a big pile of refuse on horizontal grates. Dust and shavings can be blown in, while sticks or slabs may be passed through the fire door as usual. Refuse fuel and tan-bark may drop through the top of a short Dutch oven, being fed by a drag or screw conveyor. While the fuel moves down the grates through the action of successive Pusher Rods operated from the front of the furnace, under the hot arch, it is consumed completely, no fuel being carried over the bridge wall into the combustion chamber, thus ensuring practically no smoke. As the fuel is consumed, the ashes are worked down towards the dump plate and dropped into the ash pit without disturbing the main fire bed at all. Can be installed under new or present boilers.

The National Stoker is very popular in wood working plants and mills.
Let us send you an illustrated, descriptive booklet.

SPECIAL " " 10" to 36" Long
JUMBO " " 10" to 48" Long

All cut any required thickness from 1/4" to 3" and from 3" to 20" wide.

Cut either plain or quarter sawn, through the side or with the grain of wood, hence saw dust is like excelsior. Saw kerf 1/8". Round or quartered bolts may be utilized, as well as slabs and mill waste. Will cut 3000 feet of lumber per

man per day. Turns 80% of standing trees into finished product against 40% for the saw mill.

Average net cost of producing finished box lumber from small timber delivered at mill:

TIMBER \$ 8.00
SAWING & OVERHEAD 2.00

NET COST \$10.00 per M ft.

THE FORDSON

FOR THE LUMBERMAN

One of the most important problems which confronts the Lumber Dealer is handling costs. Cars must be switched and unloaded; there is always general yard work which demands attention and in many cases loads of lumber have to be hauled to and from outside points.

The Fordson Tractor with W & K Rubber Tired Wheels solves the problem. There are Rubber Tired Fordsons working in different Lumber Yards and without exception, these Lumber Dealers report that the work is being performed efficiently and at a substantial saving.

Let us show you how the Fordson can be adapted to YOUR needs.

W. C. WARBURTON & COMPANY LIMITED

670 Bloor Street W.

FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc.

We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "M.D. Elk"**

Holt "CATERPILLAR" northern logger hauling train of logs on the operation of Abitibi Power & Paper Company, Iroquois Falls, Ontario

You Want Proof?

The large number of "Caterpillar"* Loggers used in the northern woods, as well as in the logging operations all over the world, and the numerous repeat orders placed by satisfied users, are the strongest possible proofs of the practical value of the "Caterpillar" as compared with any other method. Winter work is always emergency in character; short logging seasons demand continuous operation and maximum output. The "Caterpillar" has established convincing records for dependable performance on the operations of many of the largest lumber and pulpwood manufacturers, as well as on the operations of contractors and loggers of smaller tracts.

The Anglo-Newfoundland Development Co. says:

"Last winter our two "Caterpillars", operating an average of 110½ days each, hauled 10984 cords of green pulwood over ordinary snow roads. We are convinced that "Caterpillars" provide great economy in this country and are reducing our hauling costs approximately 50%."

For their 1923-24 operations, the Anglo-Newfoundland Development Company have purchased six additional "Caterpillars". The Mt. Murray Woodlands Corporations, St. Fidele, Quebec after highly successful "Caterpillar" operations last winter, including comparative tests with other methods and machines, have adopted "Caterpillar" Tractors exclusively and purchased an additional fleet of four loggers for this winter's work. The Abitibi Power and Paper Company, Iroquois Falls, Ontario, had highly satisfactory results last winter, reporting a reduction of 50% over their previous hauling costs.

We can give you convincing facts and figures about "Caterpillar" operations in Canada. We are prepared to make immediate delivery of "Caterpillar" Loggers which contain many new and important improvements.

**There is but one "Caterpillar"—Holt builds it*

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

British Columbia Western Hemlock the Wood De Luxe

"Put British Columbia Western Hemlock in your yard—tell your customers about it and get them to buy the first time. The rest is easy. They'll all come again and again. Since British Columbia Western Hemlock possesses so many elements of good wood without tying up an excessive amount of either the dealer's or the user's capital, there can be little or no reason why there are still a few dealers who do not handle it."—Editorial in "Western Lumberman"

"Inquiries from all Over Canada"

About eight months ago, W. C. Warburton, & Co. Limited, Toronto, distributors for Fordson tractors and a trailer suitable for use in handling lumber in wholesale and retail yards, commenced a series of advertisements in CANADA LUMBERMAN.

We believed that through this paper we could put Warburton & Co. in touch with lumber dealers who would be interested in cutting delivery costs.

That CANADA LUMBERMAN has measured up well to its task is indicated by the letter reproduced here. Not only did it produce results in satisfactory volume in Warburton & Co.'s immediate territory, but letters asking for particulars about the delivery equipment they advertised came from the following widely separated points: Timmins, Ont., Winnipeg, Man., Campbellton, N. B., St. John, N. B., Pine, Ont., Charlton Station, Ont., Edmonton, Alta. and Ripples, N. B.

Surely this is proof of the national character of CANADA LUMBERMAN circulation, as it is also evidence of the lively interest that readers take in the advertisements that appear in this paper.

Gentlemen:-

Some time ago we decided that we would advertise in your paper in order to reach the retail lumber merchants in connection with some of the lines which we are distributors of, and it may interest you to know that the results have far exceeded our expectations.

We have received inquiries from all over Canada, as well as one or two from Newfoundland, which convinces us that your paper not only has a national circulation, but is read with interest by members of the lumber industry.

Yours very truly,

W. C. WARBURTON & CO. LIMITED.

Carson "Quality" Harness

CARSON Harness is made better to fit better, consequently horses can do a harder day's work with less exertion and the danger of breaking is minimized.

The best quality Oak Tanned leather is used exclusively and every section of harness thoroughly tested before leaving our factory. In short, it is a "Real" Harness with a reputation in the lumber industry that proclaims its worth. We also manufacture and carry in stock all kinds of Horse Goods and Equipment, such as, Saddlery Hardware, Horse Blankets, Horse Collars, Oiled Duck Covers, etc.

We also manufacture:
"Carson Quality Luggage," Trunks, Bags, Suitcases, Packs and Canvas Goods, Oiltan Moccasins.

Catalogues and price lists on request.

and Lumber Harness

Hugh Carson & Co.
LIMITED

72 ALBERT STREET, OTTAWA

The Sturtevant High Humidity Dry Kiln

is the one in which temperature, humidity, and, most important of all, the circulation, is under the constant automatic control of the operator.

It is self-contained and independent of outside atmospheric conditions—easily installed within any building, on any floor, convenient to the regular routing of the work.

Comes in individual units ready to set up inside of 48 hours with the labor of only one or two men.

Results? Quicker and more thorough drying of lumber, without degrade—more rapid turnovers, decreased overhead and greater profits.

Full description in Folder 601.

Coleman Quick-Lite Lantern

"The Light of a Thousand Uses"

Here's just the brighter, better light you need for use in Lumber Camps, Bunk Houses, Saw Mills and Lumber Yards. Always ready for any job, any night, in any weather.

The finest kind of a light for night sawing, skidding, night-hauling—for any outdoor job. You can carry or hang the Coleman anywhere. Gives you plenty of steady, dependable light where and when you need it.

Lights with Matches—no old style lighting torch needed.

Makes and Burns Its Own Gas from common motor gasoline. Gives more light than 20 old-style oil lanterns.

No Wicks to Trim—No Chimneys to Wash—no dripping oil. No smoky dimness, no soot, no odor, no dirt.

Won't Blow out in Wildest Storm. Has wind-proof and

rain-proof mica globe with metal reflector.

Can't Spill Fuel even if tipped over. Can't be filled while lighted.

Most Economical Light You Can Have—48 hours brilliant service per gallon of fuel used.

Built of Brass; Simple in Construction—Only one working part. Inspected, tested and guaranteed. Will last for years.

Dealers Everywhere sell Coleman QUICK-LITE Lanterns, Lamps and Lighting Plants. See for yourself the reasons for its wide use by loggers, lumbermen, contractors, farmers, hunters, fishermen, campers and outdoor men. If he can't supply you, write us to-day for descriptive literature, prices, etc. Address Dept. CL-99.

This Shows Good Housekeeping!

You can't see any oil on the timbers in this picture. The oil is on the bearings, where it belongs, and not on the timbers, where it is dangerous.

When timbers are pure white, glistening and clean, the oil can be seen at the first splash and wiped off immediately. That's good housekeeping that helps prevent fires and keep insurance rates down.

And to keep those timbers white and safe there is just one approved paint—Tropical Oil Resisting White.

The Only Oil Resisting White Approved by Insurance Underwriters

The Underwriters' Laboratories of the National Board of Fire Underwriters have tested and approved Tropical Oil Resisting White. The Rankin-Benedict Underwriting Company and the U. S. Epperson Underwriting Company fully endorse the use of Tropical Oil Resisting White to reduce the fire hazard. And the users include hundreds of the leading lumber companies of America such as The Long-Bell Company, Great Southern Lumber Co., Tidewater Hardwood Corp., Peavy Moore Lumber Co.

TROPICAL Oil Resisting White

We'll send you—

If you will mail us your name on the coupon below we will send test panels, insurance report and folder illustrating how prominent mills use Tropical Oil Resisting White.

LUMBERMEN'S

EQUIPMENT

If It's Production You Want Install This "Long" Band Resaw

Here is a machine that turns out a prodigious amount of work in a day—that is so well designed and balanced that it will run at top speed over long periods with scarcely any attention. It is indeed a triumph of mechanical skill, and we are proud it bears the name "Long". Let us furnish you with particulars of this and other "Long" equipment. A card will bring it.

WATEROUS SAWMILL MACHINERY

Mills Like This, Eighty Years Ago—

Earned for Waterous Sawmill Machinery the reputation which it enjoys today— of being the most up-to-date, most economical, and efficient equipment in the country. Many old time lumbermen will recall the famous old Waterous "Clipper" mills in those days when the lumbering industry was beginning to boom in Canada.

Sawmilling conditions and sawmill machinery have changed since then, but the reputation of Waterous equipment has remained the same. To-day, eighty years of experience are combined with the best engineering and mechanical skill to produce the Waterous Machinery that is being used in more than sixty per cent. of the sawmills of the Dominion.

We build everything from a Portable Outfit to a 200,000 ft. mill complete. Our catalogues and any information we can give you are at your service.

Waterous

BRANTFORD, ONTARIO, CANADA

Molson's Bank Building, Vancouver, B.C.

Winnipeg, Man.

A STURDY MEDIUM CAPACITY RESAW

This band resaw is considered the best of its type. One of its finest features lies in its capability to cut accurately. Takes stock up to 30 inches wide, 12 inches thick. Can be used for straight resawing, or by tilting the feed rolls, will saw bevel siding. Is an ideal machine for this purpose.

The yield rolls are at the left or outer side of the machine. The first infeeding roll at the left has an independent yield, which allows a thick board following a thin one, to be properly presented to the blade. Eight rates of feed 25 to 185 feet per minute are instantly available.

Upon request we will mail you circular which illustrates and outlines this machine fully.

"HAMILTON" LOG CARRIAGES

Above cut shows one of our **No. 2 HEAD BLOCK CARRIAGES** with knee opening 40" from saw line. Note the sturdy compact lines of this carriage, built for heavy but accurate service with weight properly distributed, and the dogs set low on the knees to insure gripping of the smallest logs.

We make these Carriages with pine or oak frames any length—having cast iron, or steel cast head blocks—with knee opening of 33", 40", and 54", and equipped with any number of head blocks of any spacing required. Hand or Steam Set may be used, and carriages are designed for either steam or rope feed. They are built of the best materials obtainable for fast and accurate cutting, are equipped with **NEW DESIGN AXLE RECEDING WORKS** and have carriage wheels 14", 16" or 18" diameter. We have installed hundreds of these carriages in Mills from Coast to Coast, and we guarantee them in material, workmanship, and design to equal any on the market to-day, and to give thorough satisfaction wherever used.

OUR CARRIAGE CATALOGUE IS YOURS UPON REQUEST

Consult us for any of your saw mill needs, and you will have a Plant looking after your interests that has been in the Sawmill Machinery game for over sixty-five years.

Hocken's Pine

Where Lacloches grand old mountains stand
To sentinel that northern strand
Where the big lake freighters ply each way
By the far flung shores of the Georgian Bay.

There inland our limits run many a mile
By river and lake and lonely isle,
And within those limits varied line
Grow many a stand of soft white pine.

They grow as far as the eye can scan
Its a pleasing sight to a Lumberman,
In fall and winter our Lumber Jacks
Fell these good white pines with saw and axe.

In Spring they are floated by lake and stream
To our modern mill which is run by steam,
Then up the jack ladder with headlong speed
To the carriage that's sped with a gun shot feed.

And this is the song the circular sang
I'm preparing a cant for the Kendall Gang
Now the Kendall Gang is a fine machine
With its numerous saws so fine and keen,
And the boards it makes the mill men swear
Are as true as if lined by a rule and square.

The edger and trimmer each do their part
And turn out a finished work of art.
And the Retailers business will never decline
If he keeps stocked up with our Mill Run Pine.

Planing Mill in Connection

Why

Dealers Prefer Red Deer Brand Hardwood Flooring

The popularity of "Red Deer Brand" Birch Flooring with the dealer rests on several things. Birch as a wood lends itself admirably to the manufacture of flooring. Muskoka-grown Black Birch yields the toughest of wood in four grades and colors. It offers the most economical solution to flooring problems for schools, offices and homes. Birch flooring takes all finishes well, and is more adaptable than any other hardwood. "Red Deer Brand" Birch is cut from selected stock and is absolutely uniform. It wears as well as the hardest maple and requires but little "matching-up."

BIRCH Maple and Oak

*An all-Canadian
Product*

Red Deer Brand Hardwood Flooring is easily laid and once down "stays put" and never opens up. This is due to the improved methods of manufacture. All flooring is uniformly cut. Joints fit perfectly without forcing. Milling gives clearance at the bottom and ensures close fit on surface. There are no knife marks, "brooms" or rough places.

These are some of the reasons for the popularity of "Red Deer" Flooring and an aggressive big-space advertising campaign is making the public—your prospects—acquainted with them. Write for particulars today.

A Permanent Lumber Service

AFTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually
6,000,000 ft. birch annually
2,500,000 ft. beech annually
2,500,000 ft. elm annually
900,000 ft. basswood annually
200,000 ft. ash annually
6,000,000 ft. hemlock annually
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

"I'm Thinking of Twenty-five Years From Now"

Capt. Robert Dollar, 80 years young
"Some of those guys sit back in their
swivel chairs and say, 'Let George do it.'"

said that veteran lumberman, Robert Dollar, in a recent address before a Pacific Coast Service Club. Vision is not denied the man whose faith and confidence is undimmed by years. The lumber industry of British Columbia was not built to its present splendid proportions in a day. With practically the whole world her market, the future is surpassingly bright.

Arm in Arm With this Development

in close touch with the men who are making history in the lumber industry in British Columbia are the advertisers in WESTERN LUMBERMAN. "The authority for 20 years."

Michael Angelo was right!

*"Trifles make perfection
but perfection is no trifle"*

Anything less than perfection was unforgivable to the master-artist. And he knew full well that the success of his efforts depended on careful attention to every detail.

In this age of specialization, industry produces the perfect product by having each man do one thing—but do that one thing well.

The manufacturing of "Big Chief" Lumber and Shingles is based on just such a policy. Perhaps that is why "Big Chief" Brands are so frequently in demand by those lumber merchants who take pride in handling products of unusual merit.

MAPLE FLOORING

Should be chosen for its uniform color

This wood is especially suitable for school work—or work where oil has to be used. It is a much harder wood than Birch. In the clear and number one grades of MAPLE, (which are the grades most called for) a more uniform color is secured. MAPLE FLOORING has only the light brown boards, whereas in Birch the boards come red and white which show a decided contrast. These red boards, when oil is applied, turn extremely dark, while MAPLE FLOORING retains its light color.

Secure uniformity by making sure MAPLE FLOORING is specified.

SIMONDS SAWS

The thousands of Simonds Saws (Band, Circular, Cross-Cut and Drag) which are being used throughout the United States, Canada and in fact all over the world, testify as to their popularity in the lumber industry. This is due to their exceptionally high grade steel and accurate construction. Simonds Saws hold their edge and retain their tension on all kinds of cutting jobs.

All kinds of saws for Mill, timber operation or woodworking shop are manufactured by Simonds and guaranteed.

Write for catalog and prices.

Many Representative Operators Review Conditions of Past Season and Express Their Views On Coming Year's Costs and Demand

The present and the future are always interesting in the lumber arena and, at the close of another season's activities in the forest products line when building contracts for the year and industrial buying have practically been completed, stocks shipped out and logging operations undertaken, it is perhaps well to survey conditions. There are many and varied reports regarding the quantities of lumber on hand in the various mill yards, the amounts sawn during the past season and the probable size of the cut during the coming winter months.

Another question which arises is how do lumbermen regard the future? What have they to say about present conditions and the outlook in the trade? How will prices shape up and will present values be maintained? These questions are, of course, largely speculative and cannot be answered with mathematical precision but it is interesting to learn the views of those, who are the leading factors in this national calling and present them firsthand.

Summary of Salient Points

The "Canada Lumberman" has interviewed a number of representative sawmill men in various parts of the East. It will be found, with scarcely an exception, that certain characteristics or features of the situation have obtained during the past season. Among these are that stocks are lower from 10 to 40 per cent at the present time than they were in the corresponding month of last year; that, in most centres, the amount of lumber cut was fully as large if not larger than in 1922; that operating conditions, so far as the fall weather is concerned, have been conducive to mills running unusually late; that lumber has been shipped out more promptly and regularly than in previous years; that distribution has been exceptionally favorable both by land and water; that present prices are holding in most instances and may be higher on certain grades next year; that there is a scarcity of low grades of lumber which are commanding a firm figure; that logging activities, in spite of an increase of from 25 to 33 per cent in wages and the general shortage and inefficiency of men, will be conducted on a somewhat larger scale than last year; that it will cost \$3 to \$6 more per M., b.m. to get out logs than it did last year, etc. The general opinion is that, taking all things into consideration, lumbermen will see a strong and active market next spring.

Another segment that presented itself was, that woods operations in not a few instances would have been much larger than they are—this applies particularly to Quebec and New Brunswick—if wages were not

How Do Stocks Compare with Last Year?—Will the Average Cut This Winter be Larger or Smaller?—What will be the Effect on Existing Values?—The Labor Problem is Thorn in Side of Most Producers

so excessive and men so scarce and restless. The fall depression in trade in several allied lines has also influenced some producers to curtail their activities.

Cut Will Be Greater

Letherby & Chew, of Midland, Ont., state that 1923 production was about 25 per cent. greater than 1922 and their stock is all sold. They have the same number of camps as last year but as they will have more men in them and have them located in a thicker and larger stand of timber, they hope to get out about 25 per cent. greater production in feet than during 1922-3. They have their camps pretty well filled with men but, generally speaking, those in the bush are not as efficient as in previous years and the rate of wages is about 25 per cent. higher. It is too far in advance of the time for establishing quotations for 1924, say the firm, to venture an opinion respecting the extent to which a price increase will be necessary to take care of ascending costs in production.

Stock is Considerably Less

The Fassett Timber Co. of Fassett, Que., state that the volume of stock shipped this year by them is, at least 50 per cent. greater than the previous year. The present quantity on hand is about 33 per cent. less than it was during the corresponding period of 1922. The company have five camps in operation and are very short of good men. The woods class of labor seems to be scarce in and around Fassett with wages very high. It is hard to say how much higher they will go but the firm estimate conservatively that they may jump up 50 per cent. above last year. Concluding, the company remark: "As to the estimated increase in the cost of production, it is too early yet to see what this will be, as undoubtedly, besides the increased cost of logging, there evidently will be an increase in manufacture. Under these conditions, we look for higher prices this coming year."

Good Season on The Whole

George Burchill & Sons, of South Nelson, N. B., state that all the mills in that district have finished their operations for the year. The season now drawing to a close has been

larger than the preceding year and consisted largely of deals for the British market. These have all been disposed of and what they have on hand consist of stocks suitable for the American market and some white pine, which they hope to move this winter. The entire stock is much less than in 1922. Quite a large business has been done in lath for the U. S. market.

Operations in the woods in the South Nelson district will be on somewhat larger scale than last season,—due principally to the fact that operators are making an effort to salvage as much as possible of the lumber damaged by the bud-worm and forest fires,—much of which if allowed to remain for another season will be practically valueless.

Men for the camps have, up to the present, been hard to obtain, and much of that obtainable is of an inferior quality, but with the closing down of mills and the return of harvesters, conditions are easier. Wages, however, are much higher than last season, probably 30% higher; and while some items which enter into log production are lower, the cost of production on the whole will be 10 to 15% over that of last season. Whether we will be able to obtain sufficient advance in price to meet this, remains to be seen.

The firm conclude "So far, we have had ideal weather for operating, and we hope conditions for the balance of the season will be as favorable. On the whole, the situation does not look any too bright as conditions are not good in Great Britain, where most of our lumber finds a market and where stocks have accumulated during the past two months—the consumption not keeping pace with the supply; but we are living in the hope, that before our lumber is ready for the market, an improved state of affairs may prevail in the British field, as well as in those of the U. S.

Ran Mill Until Very Late

The Bethune Pulp & Lumber Co., of Huntsville, Ont., ran their mill until the recent freeze-up. Their stock of softwoods will be smaller than in 1922 but they have a larger cut of birch and maple. The Bethune Co. have about the same number of men in the woods as last year and will devote most of their efforts to hardwoods as the prices offered for hemlock and spruce do not, in their opinion, warrant taking out very much stock. The advance in wages alone is approximately 25 per cent. and, so far as softwoods are concerned, no such increases have been offered in price. Hardwood is good all through, even the low grades, and practically all of these are cleaned out for the first time since the boom of 1920. In and around Huntsville the chief difficulty is the labor

shortage. Firms are away behind in shipping and the Bethune Co. has just managed to have enough men around to keep things going.

1924 Should Be Good

The Pearce Co., of Marmora, Ont., report considerable improvement in lumber conditions during the past year as compared with the preceding two years. The outlook appears to be promising and the firm believe that 1924 will be quite as good, if not better, than 1923. Prices have not been what they consider adequate for some classes but they have showed improvement. Wages for mill hands have been higher during the past summer and they will be much higher in the bush during the coming winter. Labor appears none too plentiful at the present time and as soon as the hunting season is over and all the harvesters get back from the West, this condition should be relieved to some extent. Operating costs will be considerably higher during the coming winter and prices must advance accordingly. The sales for the past year have been better than for 1922 and the Pearce Co. are carrying about the same amount of stock. They believe the hardwood market will stiffen considerably. Dry stocks in and around Marmora appear to be pretty well cleaned up.

Piece Work Not Satisfactory

The Mageau Lumber Co., of Field, Ont., intend cutting 100,000 white pine logs during the coming winter, this being about 20 per cent. more than last winter's cut. Continuing, the firm say, "Wages at present are from \$45 to \$50 in this section of the country, but it is very hard to get men to make logs, unless you job them out by the piece. This method we have found, so far, is a very unsatisfactory way of making logs. Some firms are paying as high as 35 cents a piece for a 16 ft. log skidded on the road, and they supply the jobbers with the horses and outfit to do the work. This brings the logs up to about 40 to 45 cents, and the logs are not nearly as well made as when they are made by day labor.

"Everything considered, we feel that lumber would need to advance in price if anything like a fit margin is to be made by the manufacturer. During the course of the summer, we have paid \$3.50 for ordinary labor at the mill, and have had to put two men in a great many places in the plant, where one did the work before this year.

"Summing the whole thing up, we find that wages would be reasonable enough, if the men would only do an honest day's work, but it is pretty nearly impossible to get a day's work out of an ordinary laborer this year. In fact, the output of the ordinary man nowadays, is a little over 50% of the man of four or five years ago."

An Advance in Log Cost

The Fraser Companies Limited, of Fredericton, N. B., remark that they have had a very good season in the lumber business during the past summer. The output was somewhat larger than a year ago and their present stock is larger than the corresponding period in 1922. They expect to be putting in as many camps this coming winter as they had last but are having a little more trouble in getting men and wages are higher. The firm do not know what the extra cost of getting out logs this winter will be but feel that there will be quite an advance over last season.

Too Many Men Jump Jobs

C. Beck Mfg. Co., Limited, of Penetanguishene, Ont., report that practically all their stock is sold but they had only about two-thirds the usual cut. They are putting in about the same number of camps as usual and so far men have been practically "useless." It is one of the serious problems of the lumbermen to find a way to overcome the tremendous labor turnover. From a labor standpoint the company say: "The men are exploited by unscrupulous hiring agents and taken up to the camps, absolutely unfit to do the work. Consequently the tremendous cost of hiring and transporting these men without a cent of return is awful. Every firm seems to be the same and yet they will not lift a finger to work together and help each other. The rate of wages is up about 20% and; on account of the poor start in getting men into the camps, it is probable that costs will be about 30% higher, and very little producing of logs had been done yet, missing October, one of the finest months we had in years."

In regard to increased prices taking care of augmented costs, the firm say that with business slackening off, there will be no jump in prices until there is a slackening in production.

Prices Are Up Twenty Per Cent.

The Riordon Pulp Corporation, of Montreal, in regard to their lumber activities during the past year at Calumet, Que., state that their production shows a decrease of 15 per cent. and unsold stock to-day is 90 per cent less than usual. Stocks on hand have increased 31 per cent. and their shipments decreased 48 per cent. compared with 1922. Brig. Gen. J. B. White, who has charge of the woods operations of the company, adds: "So far as our Calumet mill is concerned practically no unsold lumber will be carried over into 1924. The values have remained firm and prices advanced about 15% to 20% over 1922. Calumet operates largely on spruce, but the foregoing is practically the situation with regard to pine also. Mill run pine is not moving at present and prices are slightly lower than six months ago. Other grades are firm. Stock in the hands of retailers appear to me to be low. Most of them are working on a hand to mouth basis, the result being that the manufacturers are accumulating a considerable stock. The outlook, however, seems to be fairly good and we look for better prices next year."

Outlook in the Ottawa Valley

The Shepard & Morse Lumber Co. (Canada) Limited, of Ottawa, Ont., ran their mill until the freeze-up and had a most successful season. They cut more lumber this year than they did a year ago, with about the same quantities sold as last year at this particular time.

The Shepard & Morse organization are endeavoring to put the same number of camps in the woods this winter as they did last, but find bush labor very scarce and hard to handle. The rate of wages is about 30 per cent. more than a year ago and may go still higher. Continuing, the firm say: "The cost of production for this season in the woods, will be at least 35% greater than a year ago, and if we are unsuccessful in securing sufficient help, it will be more like 50% greater. With reference to the advance in price of lumber, to take care of the extra cost, we do not think that this will work out. Now, it is beginning to look as though there would have to be a reduction in prices, particularly in the middle grade white pine, in order to meet competition from the west coast and the western states. We have

been hoping that prices in the West would advance, as they are surely selling their product at a loss. If the Ottawa Valley Lumbermen have to make any reduction in their prices it will mean quite a serious loss to them."

Look for Advance in Lumber

The John Carew Lumber Co., of Lindsay, Ont., who last month closed their sawing operations at Lindsay and Haliburton after six months' operation, managed to turn out about 40,000 feet a day at Lindsay and 25,000 feet at Haliburton. They were busy shipping all summer and have disposed of practically their entire cut in ash, elm, birch, maple and basswood and all their railway ties.

The firm consider the past season has been a successful one with much better shipments than last year as at the period when they closed down they had a large surplus stock. The output of the company, with two plants, was about sixty per cent. more than last year but the stock on hand at the present juncture is not more than fifty per cent. of last year.

The John Carew Lumber Co. have put in five camps of about forty men each. Wages are about twenty to twenty-five per cent. higher than last year. They report that men are offering a great deal more freely recently and they had no difficulty in filling one camp within a few days. Lately they have been putting in two more camps and besides this about eight or ten jobbers working. The firm expect to take out about 9,000,000 feet this winter and will drive two extra streams next season which will give the company seven different drives to bring down. Considering the present market and the advance in wages, the firm cannot see where lumber will remain at the same price and look for an advance.

Will Take Out Bigger Cut

The Cleveland-Sarnia Sawmills Co. have had a decidedly busy season in their mill at Sarnia and are running their plant as late as they possibly can in the season on account of their stock being very low. The firm have approximately 4,000,000 feet less on hand than they had a year ago at this time.

W. A. Saurwein, assistant-manager of the company, returned recently from an extended visit to the northern operations of the organization. He states that they, as well as other lumbermen, had some difficulty in securing labor to get started but at present are operating three camps. In addition, they have a contractor who is logging by the thousand and has four camps running. It is the intention of the Cleveland-Sarnia Sawmills Co. to take out, at least, 5,000,000 feet of logs more than last year. Whether or not the objective will be reached, remains to be seen, as much depends on the weather and labor conditions.

The lumber business has been good and prices have been steady. While there have been considerable fluctuations in Idaho, Western and Southern pine, it did not seem to have much effect on white pine which is the principal product of the Cleveland-Sarnia Sawmills Co. The health of E. C. Barre, general-manager of the company, which has been none too good for a considerable period, is greatly improved and it is expected that in a short while he will again be at his desk.

Will Carry Very Little Over

Stanley Douglas, Limited, of Fredericton, N. B., observe that they finished sawing at South Devon some time ago and will be operating their resaw and planing mill until about the end of the year. "The season has been a fairly successful one with

FOREST AND MILL IN PICTURE

Hauling square and wane white pine timber on ice roads and showing loading by means of gin pole, block and tackle

us," continued Mr. Douglass, "and of our cut of about seven million feet we will carry very little over the winter. We are not putting in any camps ourselves this season but have contracted for and expect to saw about eight million feet next summer. Men for the woods are scarce and wages about \$20.00 per month more than last fall. This means, of course, more expensive logs and, unless the market advances considerably, the millmen of New Brunswick will be able to show very little profit on their next year's operations."

Say Stocks are Very Low

The Eagle Lumber Co., of Montreal, report that stocks in their section are very low and prices have already improved and there is a possibility of making a profit in lumber in the near future. Most mills were discouraged at the prices commanded by spruce during the last two years and have directed their forest operations on hardwood and pine. This should help the quotations on spruce to a certain extent. The company, who find bushmen very scarce and wages considerably higher than last year, intend cutting out logs enough to keep their mill running at full capacity, but so far have been unable to secure enough men to fill their camps.

Northern Labor Conditions Acute

Austin & Nicholson, of Chapleau, Ont., have had a good season and the output of their mills has been greater than any season they have yet operated. Logging conditions were exceedingly difficult particularly during the last half of the season on account of labor unrest. Continuing, the firm declare: "We are endeavoring to operate in the woods to about the same extent as we did last year, but again we are having very great difficulty. In our experience we have never found labor conditions so difficult in Northern Ontario. Men seem to be scarce, although we do get quite a number, but they never were so unsettled, and efficiency is, as a result, being reduced to the lowest level that we have any knowledge of. Based on the difference in wages alone, operating costs would be about 25% to 35% greater, but, with the low level of efficiency added, it is hard to estimate exactly what the result will be. We are doubtful whether any possible advance in the price of lumber this year will take care of the added operating cost, and, to be candid, we look upon the present condition as it faces the Northern Ontario Lumbermen as exceedingly critical, unless some change in the general attitude of working men takes place."

Very Few Complaints to Make

The Schroeder Mills & Timber Co. of Pakesley, Ont., regarding the past year's work, say they have very few complaints to make. Their sawmill has closed down for the season and their cut was about 20,000,000 feet. They have about 29,000,000 feet on hand in the yard as compared with 30,000,000 feet last year. Men, who have been scarce this fall, are coming in more plentifully of late. Wages are \$5 per month higher than last year and provisions are about the same. The cost of production will be a little more than last season, even if the same favorable weather conditions prevail which can hardly be expected, as last year was exceptionally good. James Ludgate, manager of the company, estimates that the cost of production will be, at least, 10 per cent. higher than last year. The firm will take out about the same amount of logs as in 1922-23. The Schroeder Mills & Timber Co.

shipped or rather handled more lumber for other people over the Key Valley Railway which they own and operate, and everything went along very smoothly.

Mr. Ludgate says that lumbermen might be interested to know that he went to Calgary and got a carload of horses and landed them in Pakesley, in the Sudbury district, for \$50 per head cheaper than he could secure them in Ontario. Breeders can raise a good horse in Alberta and sell him for \$75 to \$100. They can winter the animals there for about \$5 per head and have them fat in the spring.

The Demand Was Steady

Charles H. Nadeau, Port Daniel, Que., say that they have had a very good season and found lumber prices satisfactory with a steady demand. During the year they handled about 2,000,000 feet more than usual which represents about 30 per cent. over previous years. Their stock at the present time is low with only about half a million feet. They have been able to sell everything as it was sawed and that shipments were made mostly by water. Vessel freight rates were reasonable and a good supply of bottoms always available and the firm were able to get all the cars they required to take care of rail shipments.

Mr. Nadeau concludes:—"We intend cutting this year about four to five million feet, which will be an average cut, and wages have gone up fifty to seventy-five per cent. which will increase the cost of our logging twenty per cent. Men are also hard to obtain, compared to a year ago. At the present time, we do not find that lumber has gone up any the last few months and prices will certainly have to increase to take care of the additional cost we are put too in getting out our new cut. We have had a nice, dry fall for logging and prospects are still more favorable for a continuation without any snow for some time yet. Mostly all other operators through this section are getting an average cut, and we do not look for any larger surplus of logs being got out over previous years."

Piece Work Done at Sioux Lookout

G. E. Farlinger, of Sioux Lookout, Ont., declares that his operations and those of others in the district were considerably larger during the past season than in 1922. Mr. Farlinger expects that the increased cost of production of logs this winter will be offset by increased selling prices.

The labor situation has been anything but satisfactory but has improved some during the last two weeks owing to the return of harvest workers from the western wheat fields. The rate paid in the vicinity of Sioux Lookout to bushmen is \$45 per month, including board. A considerable portion of the logging operations is carried on through piece work methods; that is, the logs are cut and skidded by three men working in a party who do this work at a price per log. If this mode of operation was not used largely in the vicinity of Sioux Lookout, it would be impossible to take out the quantities required for next season's operations.

The weather conditions for drying lumber, freighting supplies to camps and the construction of camps could not have been improved on during the past two months. This has, of course, materially assisted operations.

The principal forest products taken out in the neighborhood of Sioux Lookout, which is on the Canadian National Railways west of Port Arthur, are railway ties and lumber,

there being very little pulpwood cut owing to the long freight haul to points of delivery where it could be manufactured into the finished article.

How New Brunswickers Feel

An eastern correspondent writes:—"The past season has been an active one, especially for lumber on the Miramichi. The old stocks have practically been exhausted and the new cutting of this season has found ready market in the British Isles and the United States. The W. M. MacKay Ltd., of St. John, purchased practically all the 3 in. stock that was available on the Miramichi, and with the exception of some small lots not sufficient to bring a steamer here for, it has practically all been shipped out.

The American market has taken all the 1 in. and 2 in. which has largely gone forward by rail, with the exception of about 13,000,000 to 14,000,000 on Frasers' Company yards at Nelson. The rest of the lumber yards show a deserted appearance. We have very little left on our yards with the exception of pine, and what we have in 1 in. and 2 in. spruce is all sold and will go forward as quickly as we can get cars. Just at the moment there is some difficulty in getting what cars are required. We would say that by January 1st, with the exception of Frasers' stock, there will be practically no stock on this river. We understand that the latter firm's stock is all to be shipped out as quickly as they can get cars, so it has evidently been sold.

For the present, woods operations will be about the same extent as last year. The scarcity of men will to some extent effect the output, as while some of the lumbermen have contemplated quite an extensive cutting they have been materially hampered by the shortage of help. A good many of the men that have gone to the woods are less efficient than our usual supply. Wages are running from 50% to 60% higher than last year and this has been paid to men not as well able to earn it. We would estimate that logs at the mill boom next year will cost \$3.00 a thousand at least more than last season. It is difficult to estimate if it will cost more to manufacture next year but we would almost judge that, with the increase in the winter's wages, that we will have to look for some advance in the wages paid the mill men next year.

The American market at the moment is fairly strong, but does not show any advance for real business over last spring. We, however, think that with the decreased stocks in sight and as old stocks are all now disposed of, that if there is an equal demand from the United States to what there was this year, that they will have to pay more money to the mills. Unless the manufacturers can get increased cost, it will certainly leave them in an awkward position, as there was no more margin of profit this year than what the manufacturers were fully entitled to.

Great Britain is getting a considerable supply of their timber from Continental and Baltic points, also Galatz and Central Europe via Hamburg, Rotterdam, etc., which makes a strong competition with our Canadian spruce as exchange is much in their favour. As the logs from Galatz, etc., run large, they are prepared to supply a large quantity of 9 in. and up.

We have discussed the matter with several manufacturers here and they feel that unless there is an increased price, —\$4.00 to \$5.00—a thousand, that next year will not be

a satisfactory one for the New Brunswick manufacturers.

Costs Are Up 25 Per cent.

The Herman Hettler Lumber Co., whose Ontario headquarters are at Midland, say that their business has been steady during the past season although perhaps a little slow. Their output and sales are about the same as for 1922. The company are not planning to carry on logging operations as extensively during the coming winter as last and find the supply of men and wages higher than a year ago. It is difficult to estimate the increased cost of lumbering but it will be, at least, 25 per cent. over last winter. There has been no advance in the price of lumber but instead a decrease.

Reports from Various Centres

The Searchmont Lumber Co., of Searchmont, Ont., are putting in one camp and two jobbers extra this year and expect to take out a very large cut.

The Geddes-Tyson Lumber Co., of Wiar-ton, Ont., say that there was very little change in regard to prices of logs and lumber from last season and there will be the usual cut taken out in that district.

F. M. Pope & Son, of Bury, Que., write that they have had a good season in the lumber line with an output of about one-third more than a year ago and stock about all shipped out. The company are putting in the same number of camps as in 1922-23 and

report that men are not plentiful and wages much higher.

What Other Concerns Say

The Brompton Pulp & Paper Co., of East Angus, Que., say they have made about the usual cut during the past season and the stock on hand is much less than it was in November 1922. They will cut about the same amount of timber this year as usual and believe that their costs of logging will be about the same as a year ago.

Keenan Bros., of Owen Sound, Ont., believe that the outlook for the coming year is good. They do not expect lower prices for the better end of the log but it is quite possible that the lower grades may be heavy. The company have two camps in the north and hope to take out about the usual stock. They are carrying about their regular quantity of dry lumber at the present time.

Have Shipped All Stock

Scotstown Sawmill Co., of Scotstown, Que., say that they find the supply of men to be more plentiful now than it has been for the past few months. Wages are from \$15 to \$20 higher than last year. The demand for lumber is rather quiet at present but the firm are of the opinion that the market for hardwoods will pick up later. They cut more during the past season than in 1922 and have shipped practically all their stock with the exception of their ash and bass-wood.

An Eastern Ontario firm say that their output this season will amount to, approximately, 23,000,000 feet which is about 2,000,000 feet greater than a year ago. The stock on hand is about the same as compared with this time last year. In regard to logging operations, the firm say they are endeavoring to take out 40,000,000 to 50,000,000 feet, bush scale, but owing to the labor situation, they fear that they may fall short somewhat unless they can fill their camps to capacity during the present month. Help is much scarcer than a year ago and wages run about 35 per cent. increase. It is too early yet, the firm declare, to estimate the increased cost of log production which may be from 25 to 30 per cent.

Their New Mill at Little Current

The Hope Lumber Co., of Thessalon, Ont., say that their cut at Thessalon, during the past season was 20,000,000 feet and their Little Current mill 12,000,000 feet. The latter is a new mill with a capacity of 150,000 feet in ten hours. This was not started until August.

C. N. Carney, manager of the company, says that they will have the same number of camps as last year and the cost of logging will be considerably higher. The help situation is bad and the company cannot get enough men to fill the camps. Bushmen do not stay very long at any place. They are coming and going all the time and wages are higher than last winter.

Wholesalers Hear Talks Regarding Sales Tax

"What's new on the sales tax?" was the familiar question heard around the Albany Club, Toronto, on Friday night, November 16th, when the Wholesale Lumber Dealers' Association held a lively monthly gathering.

A. E. Gordon, chairman, opened by calling upon the various committees. L. D. Barclay, chairman of the Entertainment Committee, reported that the committee had decided to postpone their dance until after the Christmas season. A. C. Manbert and A. E. Eckardt of the Legislative Committee were invited to give the members the latest developments on the sales tax situation.

Mr. Manbert said there was nothing exactly new about the proposed tax, except that the government was determined to impose the measure as outlined in the amendment of the Special War Revenue Act of 1915. He explained again, as he had done before to the members, the intricacies of the levy and what the government recognized as a finished manufactured product. Shingles and lath had definitely been tagged as finished products.

Hugh A. Rose asked Mr. Manbert if the product of a planing mill was considered a manufactured article. Mr. Manbert replied that, undoubtedly, under the new ruling, any product through which a saw or a knife is run, will be considered by the government, a manufactured product. He repeated what qualifications a wholesaler of lumber must have, before being required to take out a license, viz., fifty per cent of the year's business must be sold to licensed manufacturers. He also explained the recent ruling of the government in regard to refund upon material.

Licensed wholesalers, who desire to make application for deduction of the sales tax

Many Points Relating to the Interpretation and Application Yet to be Cleared Up—Business Conditions Are Improving and Statistics Disclose Evidences of Industrial Expansion—Attitude Towards New Canadians Should Be Cordial

paid on materials on hand on the 1st of January 1924, as provided for in Section 19-B.B.B., Subsection 8, in respect of goods which have been, are being, or are to be used in, wrought into or attached to articles to be manufactured or produced for sale, which articles are subject to sales tax, shall signify their intention of so doing in writing on or before December 1st to the Collector of Excise and Customs of the district. The second letter should contain a resume or summary statement of the firm's business inventory, which should be forwarded not later than March 31st. And before June 1st the actual claim should be made. A copy of the act is available and can be obtained by each member of the industry from the Collector of Excise and Customs stationed in each district.

Mr. Manbert touched upon another point that had evoked considerable controversy among the different lumber associations in the ruling by the government that the tax shall be shown separately on the invoice. He told the members what the Canadian Lumbermen's Association had done in opposition to the ruling and stated there was a political reason for trying to conceal the tax as much as possible from the general public. Taxes are always obnoxious and the

fewer, who know they are paying them, the better for the government. A. E. Eckardt, in commenting further upon the tax, stated he had given the problem considerable thought. It was his opinion, that if it were at all possible for a wholesaler to refrain from taking out a license, it would be to his advantage, as there would inevitably be considerable, burdensome record-keeping in connection with a license.

On the Threshold of Prosperity

Following the business programme, Chairman Gordon introduced to the members J. F. Mackay, treasurer of the Loblaw Company, Toronto. Mr. Mackay gave a spirited and optimistic address on business prospects in Canada. He said in part:

Canada is to-day unquestionably in an advanced stage of convalescence, and the correct attitude for every virile business man to take is that of unfailing and unfaltering courage. Without stopping to deny that we have serious problems on our hands it can truthfully be said that all signs point to the fact that we are on the threshold of a period of prosperity that will, at least, equal and may even surpass anything experienced in the past.

Perhaps our most complex and difficult problem is that of railway transportation. Even this requires but a cursory examination to show that rapid progress is being made by the authorities in bringing revenue and expenditure into close relationship to each other. In fact, two years ago no one could have believed that by the elimination of competing trains and lines and the unification of management such economies would have been effected. Increased vigor on the part of the officials in securing and handling of traffic and other changes have resulted

in showing an operating surplus of over Two Millions of Dollars for six months past. I am optimistic enough to believe that it is but a matter of a few years when the publicly owned roads of the country will prove a handsome investment. This can only be done if the management of the roads is given authority entirely free from political wire pulling. It is up to Canadians to show they are in a mood to deal sternly and quickly with the politician who endeavors to throttle our railways by manipulation and juggling. Now is the time for business men and citizens generally to make their influence felt on this matter. The possible consequences may prove disastrous to our whole economic life.

The Country's Growing Trade

We do not have to theorize to-day as to our growing trade. The figures speak for themselves. Automobile licenses issued in Canada this year are ten per cent greater than in 1922; merchandise entered for consumption in Canada for six months ending Sept. 1923 were valued at \$464,330,317 as compared with \$363,915,736 for same period of 1922. Exports of Canadian product were \$453,769,440 compared with \$388,233,296 for 1922; the total trade showing an increase of about \$150,000,000 for the six months. The figures quoted are for six months of 1923. A statement issued the other day for the Government's fiscal year, 1922-1923, shows a slight decline in value although a healthy increase in volume. The value doesn't make much difference so long as the cost of living declines accordingly.

For the twelve months ending June, 1923, the Dominion was a world trader to the value of 1.844 Millions whereas the world trade of the United States during the same period totalled 7,738 Million dollars. To put it in different form, while our population is roughly one-twelfth that of the U.S. our foreign trade is almost one-quarter that of our neighbor. In other words, we are the largest foreign trader in the world per capita.

In 1900 there was hardly a dollar of U.S. capital invested in Canadian enterprise; today not less than 2,500 millions of American capital is working in Canada, an amount almost equal to British investments.

In 1900 the gross value of products manufactured in Canada was 481 million dollars. Twenty years later the figure stood at four billions and nineteen million, of which one-half was made in Ontario. The ratio of manufactured and semi-manufactured goods to our total exports is fifty-two per cent; in 1890 the percentage was six per cent of the exports.

Canadian do not need to apologize for the manner in which they have met the industrial captains of the world on common ground.

Our mineral production for first six months of this year is valued at \$87,152,000, an increase of 44% over the same period of 1922.

The Wheat Crop of West

Canada will reap this year a crop equal to, if not greater, than any in her history. The average acreage under crop during the pre-war five years was just under ten million acres; during the war this rose to 18,240,000 acres, while the present acreage is 22,162,000.

The most reliable estimate of the wheat yield of the three Western Provinces this year is for a crop of 452,503,169 bushels, exceeding the record crop of 1915 by 75 mil-

lion bushels. Eastern Canada's crop is at least, up to the average on the whole. We may look for substantial reductions on debts that have accumulated during lean years in Western Canada.

Immigration is once more turning in a substantial tide to our shores, the figures for July last showing an increase of 80% over the corresponding month last year, about 100,000 having arrived this year.

Canada has few questions of such far-reaching importance as that of immigration. The bringing in of hundreds of thousands of industrious people from the over-populated countries of Europe will do more to solve the railway problem and lower our tax rates than almost anything else.

One of the encouraging signs of recent months is the activity displayed at Ottawa in regard to immigration. We must exercise a certain amount of caution as to the class of settler we admit to our country, but it is possible to be over cautious on this point. First and foremost our welcome must be to our own kith and kin of the British Isles or their descendants from the United States, but there are many other countries of the world from which good hardy people can be had if they are gone after in an aggressive, business-like manner. This year's crop should prove a magnet to tens of thousands of new comers. Let us look well after these people when they arrive in Canada.

The policy of indifference that has pre-

vailed in the past has lost us thousands upon thousands of good citizens. We must lay ourselves out to make the newcomer feel that his hopes for himself and his family can be realized if he applies himself diligently in this, the land of the second chance. From June 1901 to March 1921 Canada received from all sources 3,577,311 immigrants. The official census return for those two decades shows that the population increased by 3,417,026 or 160,285 less than the immigration for the same period.

Speaking generally I can say, that after having made a somewhat hurried survey among financiers and industrial leaders, that business to-day is at least on an even keel. There have been some flurries in the financial circles recently, but, serious as these are to those directly concerned, we are thankful that they have not been on a scale sufficiently large to disturb seriously the financial fabric. The recent over-subscription by \$28,000,000 of the \$200,000,000 refunding Dominion Loan, followed immediately by the absorption of an Ontario loan of \$40,000,000 by the Canadian people themselves constitute events of the highest importance. The savings and demand deposits today reach the stupendous total of almost Two Billion Dollars and are increasing rapidly, being 24 millions greater than at this time last year. United States savings are seventeen billions, to equal ours the figure should be twenty-three billions.

Retail Lumbermen Elect New Men

Toronto Members of the Trade Hear Discussion on Important Matters and Decide to Hold Monthly Gatherings—New Blood Infused in the Organization and More Vim in the Proceedings

The Toronto Branch of the Ontario Retail Lumber Dealers' Association, held its annual rally at the King Edward Hotel, on Friday, November 16. Thirty-six dealers representing every part of the city and suburbs gathered around the festive board and the evening was spent in a spirit of good fellowship.

After supper nominations were received for chairman and vice-chairman to preside at forthcoming gatherings in 1924. George T. Reid, of Reid & Co., was elected chairman, and W. E. S. Savage, Mimico, vice-chairman.

George T. Reid, Newly Elected Chairman

John B. Reid, veteran dealer of Toronto, was present and witnessed the election of his son to the chair, a position which he held for several years when retail lumber association work was in its infancy. He addressed the members and assured them of the sincerity of his son in the progress and welfare of the association, and to make that body even more worth-while than it had been in the past. He asked the members to stand behind the new officers and so add to the prestige and influence of the organization.

Following the address of the chair, five directors to form an Executive Committee were chosen. The new committee includes W. B. Tennant, William Warren, Thomas Paterson, F. J. Cummings and T. E. Rathbone. Horace Boulton was elected secretary-treasurer by acclamation.

Chairman George T. Reid called upon Mr. Boulton to give the members some information regarding the new sales tax. The secretary stated as far as the lumber industry was concerned, most everyone was in the dark as to how things were going to work out. Until the act was actually in force, no one could decipher the many intricacies that it will create in the lumber industry.

In reference to retail lumber dealers, the act says that if a retailer manufactures more than \$10,000 worth of material a year, he will be required by law to take a license for which he pays the sum of \$2. If a retailer does not manufacture and is not required to take out a license, the situation is compar-

Member of the Executive

F. J. Cummings, Toronto
Member of the Executive

atively simple. But if a license is required, the manipulation of the tax becomes complicated. Two sets of books would, ostensibly, have to be maintained to furnish the government with the information which, they say has to be on record. In the case of the licensed man, the government says he is conducting two businesses, manufacturing and retailing, and he must show them, therefore, that the tax is being taken and how.

In regard to the retail lumber business, the tax will cause many inconveniences as explained by Secretary Boulton. If a manufacturing retailer has run short of the material he bought for manufacturing purposes, and on which he did not pay a tax, and he wishes to take some lumber from his retail yard, upon which he did pay the tax, he, therefore, must sell the yard lumber to his mill and keep tab of other similar transactions. If anyone could imagine anything more complicated than this, they should let the government know about it.

In regard to obtaining refunds for material on hand at January 1st 1924, retailers,

who are also manufacturers and who desire application for deduction of the sales tax paid on materials on hand, as provided for in Section 19-BBB, subsection 8, in respect of goods which have been, are being or are to be used in, wrought into or attached to articles to be manufactured or provided for sale, which articles are subject to sales tax, shall signify their intention of so doing in writing to the Collector of Excise and Customs in each district on or before December 1, 1923, and shall make an inventory of the goods upon which claim is to be filed. Such inventory shall show a description of the goods and trade number, if any, and the quantity and value of each kind of goods. Such value, being the value upon which the tax was paid, or payable, shall be regarded as goods on hand. This summary statement must be in the government official's hands by March 31 and the actual claim by June 1, 1924. In conclusion the secretary advised the members that copies of the new act could be obtained from the district Collector of Customs and Excise.

Alex. Rhind spoke on the value of

assembling once a month and hearing one other interpret the signs of the times in an orderly, business-like way. He was strongly in favor of association work, if for no other reason than to take part in the good fellowship spirit which prevailed at gatherings composed of men who enjoyed the identical pleasures and disappointments in earning their daily bread. Mr. Rhind suggested the association meet every first Tuesday in the month.

W. E. S. Savage, the vice-chairman, echoed the spirit of Mr. Rhind, but stated that the middle of the month would be more satisfactory to all concerned. Before each session the executive would have to come together and make arrangements for the general meeting. Having the gathering on the third Tuesday would enable everything to be completed in the same month and not dragged over into two. The suggestion made by Mr. Savage was finally adopted. Excepting for the month of December, the Toronto branch will meet, at some central point in the city, on the third Tuesday of each month.

Why White Pine Has Advanced So Much In Price

It is always interesting, if not satisfactory, to compare costs. There are different methods of arriving at results. Conceptions of values, overhead, disbursements, etc., will naturally differ. It has been asked by some interests why the price of Ontario white pine is so much higher to-day than it was ten years ago and are present values justified by increased cost of skidding, toeing, sorting, driving, manufacturing, etc.

A number of lumber firms have been kind enough to supply the "Canada Lumberman" with data respecting the advances in the different activities during the past decade. This was in response to a questionnaire sent out.

The first query was,—What was the cost of standing white pine timber in 1913 as compared with the cost to-day on a given area? One lumber firm states that ten years ago it was \$10 to \$15 per M and to-day the cost is \$20 to \$22 per M. Another firm asserts that the advance according to loca-

tion is all the way from 100 to 150 per cent, while another concern places the figure generally around 70 to 75 per cent.

The second query was,—The approximate cost of skidding logs to-day as compared with 1913? Ten years ago the figure was \$4 to \$5; to-day \$8 to \$10. That is what is given by one firm. Another company turning out another kind of wood, says that it cost them \$10 in 1913 and in 1923 \$28, an increase of 250 per cent higher. Much, of course, depends on the type of timber cut.

How Board Bill Has Climbed

The cost of camp supplies was the next item dealt with, and an interrogation was made respecting the cost of these in boarding men, per day, in 1913 and the approximate outlay to-day. Here are the different figures given by representative firms:—1913, 20 to 30 cents, 1923, 75 cents to \$1; 1923, 43 cents, to-day 55 cents; 1913, 50 cents, to-day \$1; feeding teams 1913, \$1; to-day \$1.50.

Cost of hauling logs in 1913 and the cost to-day? Here are some:—1913, \$3 to \$4; 1923, \$6 to \$8; 1913, \$14; 1923 \$32, or an increase of 250 per cent. These figures vary, of course, according to the length of haul, character of roads, timber handled, etc., but the percentages of increase are not so widely different as at first might be imagined.

One Central Ontario firm, states that the cost of turning out logs complete, would vary according to location. Possibly one tract could be operated for half the cost of another location, but they find their logging expenses are about 250 per cent higher. This, they believe, is practically caused by location and partly by the lower efficiency per man which they figure about 50 to 75 per cent.

The next query dealt with was the cost of driving logs to the mill in 1913 and the cost to-day per M plus loss in towing, which might be estimated as the same as far as

(Continued on page 60)

Mr. Todd Injured in Street Car Collision

In a collision recently outside of Windsor, Ont., when two cars of the Windsor, Essex & Lake Shore Railway telescoped near the Devonshire race track, the motorman on one car was killed instantly and several persons injured.

J. T. Todd, of Toronto, who was a passenger on the northbound car, was severely shaken up. The base of his skull was fractured and he suffered a compound fracture of one of his arms as well as internal injuries. Along with others he was taken to Grace Hospital, Windsor, where it was a long time before he regained consciousness and for some days his life was despaired of. He is now slowly recovering.

Mr. Todd is the eastern representative of the Adams River Lumber Co., Chase, B. C., and has an office in the Federal Building, Toronto. He had been to the Windsor district on a business trip.

James T. Todd, Toronto

Mr. Todd came to Toronto some two years ago from the West and has taken a deep interest in the affairs of the Wholesale Lumber Dealers' Association and other organizations. For many years he has been associated with the Adams River Lumber Co., one of the largest Mountain manufacturers. Mr. Todd is also representative of the Associated Mills, Limited, of Vancouver, and the Edgecumbe-Newham Co., Limited, shingle manufacturers, Vancouver. His many friends in the lumber industry sincerely hope that he will recover completely from the effects of his misfortune.

Quebec Firm Report Good Season Trade

A. G. Auger, of the firm of Auger & Son, Limited, of Quebec City, was recently in Montreal on a business trip, looking over prospects for future development, which he considered encouraging. The firm are principally engaged in handling railway ties, poles and pulpwood and may enter the Montreal market with a view to securing some of the retail trade in the lumber line. Many years ago Auger & Son did quite a business with the Old Country in lumber and also in the hay and grain trade but competition in the latter line became too severe to make it a paying undertaking.

Auger & Son have also a transportation line of steam and sailing craft from Quebec to points in New York and New Jersey, carrying chiefly lumber. Mr. Auger stated that trade in this line during the past season had been satisfactory and the prospects good for next season. In this connection there is also a good demand for tonnage of any kind on the Great Lakes and several firms had been doing a fair business in grain and others were in the market for new tonnage to supply the increasing demand for space as during the war much of the old tonnage was sold off. After concluding his business here, Mr. Auger left for New York City.

Japanese Government Awards Big Contracts

The Japanese Embassy has advised the National Lumber Manufacturers Association that the Japanese Government has awarded contracts for 97,150,000 feet of lumber for use in building dwellings for Japan's homeless in the area devastated by the earthquake.

The Japanese Embassy said negotiations had been closed with these lumber companies: Douglas Fir Exploitation and Export Company, representing 108 West Coast mills, for 96,400,000 feet of Douglas Fir and Pacific Hemlock; and Bratile Bros. Mill Company, of Ridgefield, Wash., for 750,000 feet of red cedar. The Embassy said that no information could be given by the Japanese Government at this time concerning the amounts involved in the contracts.

The successful bidders have given assurances that the lumber called for by the contracts will be moved to Japan as speedily as possible. This will depend in large measure upon the ability of the lumber manufacturers to turn out from the mills the particular grades and sizes of lumber of various kinds, in accordance with the Japanese specifications. The Embassy said today that no further bids would be asked for, pending further instructions from Tokio.

National Hardwood May Meet in Canada

Will the next annual meeting of the National Hardwood Lumber Association be held in Toronto or Montreal? It certainly will be if the Canadian members can swing the final decision of this important assembly which will convene in June 1924.

The N.H.L.A. is an international body, the membership of which has been growing very rapidly and many Canadian firms belong to it. W. Frank Oliver, Toronto, is on the board of directors and presided at a well-attended meeting of Canadian members which was held at the National Club, Toronto, on November 20. Considerable business was transacted and the following resolution was enthusiastically passed:—

"We, the Canadian members of the National Hardwood Lumber Association, are pleased to extend to the National Hardwood Lumber Association an invitation to hold their next annual convention in Canada, either at Montreal or Toronto."

A number of other important matters were discussed and the outlook reviewed. It was generally agreed that, while trade was seasonably quiet just now, there would be a distinct revival at the beginning of 1924 with a tendency toward increased prices due to the higher costs in woods operation. The feeling generally with respect to the first six months of 1924 was particularly optimistic.

Some Business Maxims Applied to Lumber

J. P. Eastman, of the Eastman Lumber Co., Limited, Hamilton, Ont., who specializes in California white pine and redwood, has been doing some unique advertising. The company handle both Canadian and American woods and, in issuing lead pencils, the name of the firm and various expressive and catchy phrases are printed thereon. Among these are:—

"Everybody makes mistakes; we correct ours."

"Quite often our lumber is as represented."

"We are not always right, neither is the other fellow."

"Business like golf, ceases to be a game when we cheat."

Mr. Eastman, who has been in the lumber line all his life, brought the first car of California redwood into Hamilton ten years ago. Then the war came on and interrupted deliveries but of late a growing quantity has been purchased, both in shop and clear. The wood is used largely in new houses for interior trim as well as for sash, doors, tanks, silos, pipe lines, etc. One of the outstanding characteristics is its fire-retardance and rot-resistance. Canadian softwoods are also handled in an increasing quantity by the Eastman Lumber Co., who report business as fair at the present time.

Dr. Howe Addresses Women's Council

Speaking before the Local Council of Women in Toronto recently, Dr. Howe, dean of the Faculty of Forestry, University of Toronto, stated that when Canada's timber resources are exhausted, there was no other country to which she could go. The condition of the forest supply of the Dominion had, therefore, become a matter of the utmost importance as trees died of disease and from old age. People should guard against carelessness in the cutting of the forests and the ravages created by fire.

In regard to cutting, Dr. Howe stated that the capital must be kept intact and only the annual growth drawn upon, as interest or dividends. In addition, the creative power of nature must be directed into economic channels, as there is very little commercial lumber in a virgin forest. The forester can not only increase the amount, but improve the quality.

Statistics which were presented by Dr. Howe concerning the distribution and amount of potential forest land showed that 40 per cent. of the area of Canada is not timber-bearing. Of the 1,900,000 acres of potential forest land, 1,000,000 have been burned.

A Home of Georgian Colonial Design

A Georgian Colonial house of frame and face brick veneer is provided in this plan. The house is designed by Electus D. Litchfield & Rogers, architects of nation-wide reputation, in the construction of buildings of every character, and is one of a group of eleven built in Pelham Parkway Gardens, New York.

The house has seven rooms and one bath. One enters through a simple Colonial door into a hall. The living room is on the right and runs the entire length of the house. There is a dining room and a kitchen on the left. The kitchen has laundry facilities. Four large bedrooms and a bath are on the second floor. Nine windows are on the front of the house.

There is a side porch on the right and a back porch. The house, which is 22 x 35.6 feet and has a cubic content of about 22,000 feet, may be built from \$14,500 to \$15,500.

Inquiries regarding these plans and specifications should be addressed Home Owners' Service Institute Inc., 35-37 West 39th St., New York City, N. Y.

Outline of Specifications

Masonry—Foundation walls to be of stone laid in Portland cement mortar in the most approved manner and of dimensions shown on drawings. All footings to be concrete 12 inches thick, 6-inch projection.

Entrance and side porch, floors and steps to be of concrete with Portland cement topping laid over brick foundations.

Carpenter Work—Framing lumber to be hemlock, pine or spruce, sized to dimensions. Finished floor, first storey, $\frac{7}{8}$ x 24 $\frac{1}{4}$ -inch plain oak, blind nailed; second storey, white pine, planed joints in second storey and scraped in first storey.

Interior trim of pine, basswood or white wood for all standing trim. Doors of solid pine, approved Colonial design.

Lathing and Plastering—Three-coat plaster work. Basement ceiling to be plastered.

Roofing—Cover all roof with British Columbia clear edge grain red cedar shingles, stained in fading greens and purples if possible.

Sheet Metal Work—Copper leaders, gutters, downspouts and flashings are recommended.

Painting—Strictly pure white lead and linseed oil in proper proportion shall form the basis of all paints, unless otherwise specified; all colors to be selected by owner.

Hardware—All finish hardware shall be of the owner's selection.

Electric Work—Wire for lights, base plugs and switches and all openings as per plans. Equipment to meet approval of the National Fire Protection Association, subject to the local board of inspection.

Plumbing—Complete sanitary and rain-water drainage system, with hot and cold water supply; brass piping for the hot water system is recommended.

Heating—The heating shall be one-pipe, steam, at option of owner.

Canadian Lumbermen Will Assemble in Buffalo

The sixteenth annual convention of the Canadian Lumbermen's Association will be held at the Hotel Statler, Buffalo, on Wednesday and Thursday, January 30th and 31st. This will be the first time in the history of the organization that the C.L.A. has assembled across the line. This move is in deference to the international character of the membership and the hearty invitation which was extended the Canadian delegates, at the session in Montreal last January, to come to the Bison City. An invitation was presented on behalf of the Buffalo Chamber of Commerce, the Buffalo Lumber Exchange and the White Pine Association of North Tonawanda, for the Canadian lumber parliament to assemble at the Hotel Statler, Buffalo. M. F. Preisch, former president of the National Wholesale Lumber Dealers' Association of the United States, extended greetings so sincerely and attractively that the invitation was accepted.

The new Hotel Statler, which has 1100 guest rooms, is the latest addition to the Statler system and R. L. Collison is the convention manager. He states that every preparation is being made for the reception of the Canadian visitors and their ladies and all facilities and appointments of this splendidly equipped house will be at their disposal.

R. L. Sargent, of Ottawa, secretary of the Canadian Lumbermen's Association, will pay a visit to Buffalo in the near future in order to complete arrangements for the sixteenth annual gathering.

The Canadian Lumbermen's Association has two American directors in the persons of Spencer Kellogg, of Chas. C. Kellogg & Sons Co., Utica, N.Y., and R. E. Stocking, of Power, Moir & Stocking, New York City. At the last gathering in Montreal a large number of American members and visitors were present from Buffalo, Philadelphia, New York, Boston, Rochester, Detroit and other points.

The national lumber bodies of America have paid a compliment to Canada many times in the past in electing Canadians on their board, and this courtesy was reciprocated two years ago by the Canadian Lumbermen's Association.

Now the latter body has out of appreciation of its many friends and members on the other side of the line unanimously decided to foregather in Buffalo on January 30th and 31st 1924. Further particulars regarding the social and entertainment features will appear in an early edition of the "Canada Lumberman."

Ontario Retailers Getting Ready for Convention

A meeting of the Executive of the Ontario Retail Lumber Dealers' Association will be held in the Board of Trade Rooms, Toronto, on Thursday December 6th at 10 A.M. It is expected there will be a large attendance as many matters connected with the forthcoming annual convention will come up for consideration.

The date of the provincial gathering which will take place at the King Edward Hotel, Toronto, is Wednesday, Thursday and Friday, January 16th, 17th and 18th. A meeting of the Toronto committee, which has the entertainment in hand, was held on November 21st, and among those present were R. A. Laidlaw, Thomas Paterson, T. E. Rathbone, Toronto, W. E. S. Savage, Mimico, and K. J. Shirton, Dunnville, president of the Ontario Association.

It was decided that there would be a theatre party on Wednesday,

January 16th and on Thursday evening January 17th there will be a dinner-dance tendered the visitors at which there will be special features. The programme for the visiting ladies has not been drafted in detail as yet but arrangements are being made for a luncheon and theatre party on the afternoon of Thursday January 17th. The prospects for a large and representative attendance from all parts of Ontario are exceptionally bright.

Bush Operations Will Cost Much More

The Bay of Fundy Lumber Co., of which Hon. W. E. Foster is president and G. B. Hatfield, managing-director, report that the lumbermen in and around Parrsboro, N. S., appear to be active at the present time and are making preparations for a fairly large-sized cut. Regarding prices, they say it is too early yet to make any predictions respecting next year but they believe that it is going to cost forty per cent more to operate during the coming season than last. As there has been considerable trans-Atlantic business during the past summer, everyone is looking forward for shipments principally to the English market in 1924.

Forests Must be Guarded to Offset Famine

Our forest resources will last us a goodly time yet, but it is significant that the curve of our lumber production has had a downward slant ever since 1911. Why travel through to the bitter end before entering upon plans for the future? We might with profit realize on the experience of other people. The economic results of timber mining are inexorable. We cannot escape these results any more than any other nation. Why not look after ourselves, and the work can be done more easily and more cheaply now than later. We are particularly fortunate in that in the main the land itself is publicly owned; our governments do not have to buy it back from private owners, as in the eastern United States, before beginning to grow crops.

By the growing of timber crops I do not mean planting trees, but the putting of forest land to continual use. The most urgent move towards such a policy is to concentrate still more on the work of protection of our forests from fire. Adequate protection of Canada's forests can never be accomplished with the appropriations for that purpose made today. It will require twice the expenditure at least.

But the real expensiveness of our forest fires is less the timber they destroy than the trees they prevent from growing. They wipe out the oncoming forests which would replace our disappearing virgin timber. It is imperative that we give the young growth on our cut-over lands a chance, if we are to have a basis for permanent prosperity, both locally and nationally. We should, without delay, segregate all our large areas of young coniferous growth, designate them as reserved for our future needs, and thoroughly protect them. Of late years there has been a greatly increased interest in the matter of how long our supplies of lumber and pulpwood may last. The information would make little or no difference in our rate of cutting. The timber is mature and only the pressure of price will slow up the consumption. To take an inventory of our timber resources would be of little value unless accompanied by a decision to make use of the estimated duration interval in taking steps to guarantee the next crop.—Dr. J. H. White, Professor of Forestry, University of Toronto.

A section of the new lumber city of Longview, Washington, showing some of the many attractive houses which have been built and are now occupied by the employees of the Long-Bell Lumber Co. The athletic stadium may be seen in the background.

Believe Embargo Unwise Move at Present

Witnesses Before Pulpwood Commission Declare That Ontario Must Have Outlet for its Poplar for Which There is no Local Consumption—Does United States Market Govern Pulpwood Prices in the North?

At the sittings of the Royal Commission on Pulpwood in Toronto, several witnesses were heard. The general opinion expressed was that if an embargo was placed upon pulpwood at the present time it would be detrimental to the settlers and small farmers of Northern Ontario and the development of that part of the country. One constructive suggestion was made that the embargo might be put on in a few years' time thereby giving United States buyers an opportunity to erect pulp mills in Canada. One witness stated that it would practically kill the Ontario market if it was decided to impose the embargo in the near future. It was also strongly contended that the United States market governed the pulpwood prices in Canada.

A. E. Wicks, of Monteith, president of the Hawk Lake Lumber Co., in the course of his remarks said that there is a great field to be opened up by Ontario pulp mills in the use of poplar in making paper instead of spruce exclusively.

Further he said that: "Ontario pulp mills do not use one stick of poplar. U. S. mills do and I believe some is used in Quebec. All the poplar cut in Ontario is therefore exported. And we have whole townships of solid poplar which now are of no use to our mills."

Farmers cutting wood receive for it about as follows: \$5.50 to \$6, rough, on river banks; \$6.75, f.o.b. cars; and up to \$9.50 peeled, practically all of which is exported. Of the 33,000 to 50,000 cords handled annually by witness' concern, one-quarter to one-half is exported, although it controls 150 square miles on lease from the Crown, 6,000 acres freehold. Purchases for their export trade are made from settlers occupying an area equal to the above. Forty per cent. of their wood handled in the past four years has been exported.

G. W. Lankin, Utterson, said Muskoka and Parry Sound would be ideal places for reforestation operations in pulp bearing woods owing to the unsuitability of the land for agriculture. He favored the transference of settlers in these non-arable areas to the Clay Belt timber areas, under auspices of the Provincial Government, so that new lands may be cleared of timber and at once opened up for farming.

Where Poplar Stands Abound

R. T. Robinson, buyer for the Johnsonburg Pulp & Paper Mills, Johnsonburg, Pa., spoke of conditions existing in the area to the east of North Bay. In that district, approximately 75 per cent. of the timber stand was poplar. Prices for poplar ranged as high as \$8 a cord at present, but if an embargo were declared the settler would have no alternative but to dispose of his poplar for firewood at \$3.75 a cord. Witness thought that the settlers would be unable to carry on if the latter conditions prevailed.

Similar evidence as to the embargo was given by Thomas Conway, Barry's Bay, and A. W. Watt, Bracebridge.

A. H. Howard, South River, said if the Government saw fit to put an embargo on pulp wood within the next two or three years it would give the United States buyers a chance to build mills in Canada.

"If the embargo were to be placed now, what effect would that have?" queried the chairman. "It would mean," witness believed, "that the farmers would practically have to shut down operations. They would have to take up other classes of work in order to make a living."

"Don't you think putting the embargo on now would force the Americans to come over?" witness was asked. "You would naturally think so," he replied, "but I think that just now the embargo would be detrimental to all concerned. It would be better to put the embargo on in a few years' time." In answer to further questions witness said the American buyers were using up the pulp as fast as they could get it. None was being placed in stock. There was no shortage of cars. The difficulty was in securing labor, although wages of \$50 and \$60 a month and board were being offered.

Mr. Howard claimed that not a few of the forest fires in Ont-

ario were caused by careless fishermen and hunters. He would put them in jail for such offences. Some of them got a few drinks and did not seem to care what happened.

Why Pulpwood Has to be Exported

James Thompson, of the Thompson & Heyland Lumber Co., Toronto, in appearing before the Pulpwood Commission, gave an interesting and complete analysis of the pulpwood industry in Ontario. When he had finished his evidence the members of the Commission had few questions to ask him, so thoroughly did he cover the ground.

At the beginning of his evidence Mr. Thompson stated that personally he preferred to deal with Canadian mills. There were, however, a number of natural causes why pulpwood had to be exported to the United States. His company exported to the Virginia Pulp & Paper Co., of Tyrone and Williamsburg, Pa., 15,000 cords of poplar each year. He stated that poplar reproduces in fifteen years for cutting as pulpwood and deteriorates in thirty years. Another interesting statement was that poplar grew from three to five times as fast as there was a market obtainable. If the sale of this wood were confined to Canadian mills there would be a serious deterioration and waste.

Mr. Thompson explained the usual practice of the farmers in marketing their rough wood. They receive approximately \$4.50 to \$4.70 for rough wood loaded on cars and \$11 to \$11.50 for peeled wood loaded, from American mills around Niagara Falls, N. Y. He pointed out the situation which would obtain if an embargo were placed on pulpwood. A settler living, say, fifty miles from a certain paper mill and two hundred miles from another Canadian mill, had only one market for his wood—the nearest mill. This would be inevitable because there are not enough paper mills in Canada to absorb all its pulpwood, and there would, therefore, be no competition between them for the settlers' wood. With the American market available there is always an outlet for this surplus. Mr. Thompson stated that last year 300,000 cords of all pulpwoods were exported to the United States from eastern Canada. One-third, or 150,000 cords of this, was poplar.

In giving his evidence on the subject of conservation and perpetuation of the Ontario forests, Mr. Thompson produced figures showing that last year in Ontario 340,000 acres of forest wealth were destroyed by fire. This figure represents about four times the consumption for the same period. In British Columbia Mr. Thompson stated that conditions were even worse than in Ontario when fire destroyed twenty-two times as much timber as was taken out in lumber operations. He pointed out to the commission that the forests would perpetuate themselves if forest fires were eliminated.

In reference to the burning of slash, Mr. Thompson referred to the experiences of Henry Ford who is now conducting his own lumber operations in Michigan. Mr. Ford has placed the cost of burning of slash at \$2.50 per M. But on account of logging being facilitated by the removal of this debris, the automobile magnate figured that seventy-five cents is redeemed. This, according to Ford, places his slash disposal cost in his operations at \$1.75 per M. The chairman of the Commission asked Mr. Thompson when he considered the best and safest time to carry on slash burning. In the early spring, was Mr. Thompson's answer.

Cannot Estimate Loss of Pulpwood

E. P. Heaton, provincial fire marshal for Ontario, in giving his evidence before the Royal Commission investigating the pulp and paper industry, explained the duties of his office. Unless any destruction of created property followed a fire, he said that no investigation was made.

In giving his suggestions with a view to the prevention of forest fires, Mr. Heaton said that he would not care to express his opinions which might involve questions of policy as he was a servant of the province. He said, however, he would gladly place any facts before the Commission in an endeavor to answer any further questions,

which means might be adopted with a view to preventing forest fires.

Upon the remark of J. Picard, chairman of the Commission, that there was ample room for improvement in the prevention of fires, involving the destruction of large quantities of pulpwood, Mr. Heaton said that it was difficult to get accurate figures showing the destruction of pulpwood by forest fires. Many of the latter occurred in unorganized districts and there were numerous instances, where no fire insurance was carried. It was, therefore, he pointed out, only possible to find out the exact losses wherever insurance was carried. From these it had been gathered that in 1920 there were 31 pulpwood fires in Ontario, involving a loss of \$217,000; 38 fires in 1921 with a loss of \$195,000; 8 in 1922, excluding Northern Ontario, with a loss of \$80,000, while for the present year which had been unusually fortunate, there had been only 8 fires with a loss of \$7,280.

Fred Hoad, forest engineer of Newmarket, Ont., had nothing complimentary to say about Ontario lumbermen in conducting their operations in the bush. "There is a tremendous waste in our woods," he said. "I have seen cut-over areas that looked as if they had been mowed down by artillery fire instead of being cut down by lumbermen." Mr. Hoad did not think an embargo on pulpwood was necessary, his observation being that no other industry had made more progress in Canada during the last ten years than pulp and paper-making.

Chief Forester Speaks on Woods Protection

E. J. Zavitz, Chief forester of Ontario, appeared recently before the Royal Commission on Pulpwood in Toronto and made some interesting observations on the use of aircraft in forest protection, the burning of slash and the adoption of standard fire protective regulations. Mr. Zavitz said that the more general use of aircraft operated by the Government and the enforcement of slash burning regulations would constitute the largest factors in the further and more adequate protection of the forests of the Dominion.

Answering questions as to whether or not the Ontario Government inserted slash-burning clauses in its timber contracts, Mr. Zavitz intimated that legislation might be introduced at the next session of the Ontario Legislature along that line. He informed the commission that the most recent sales made by the Government carried in the contract a clause binding the timber operators to burn all slash that in the opinion of an officer of the department was a fire menace.

"Slash that is left around the lumber camps or lying on the side of tote roads, is a grave menace," stated Mr. Zavitz. "The Government, under the new rules, has the right to order any such dangerous slash burnt."

The chief forester stated that the public interest in fire protection in Ontario was more or less detached owing to the fact that the large proportion of the population live so far from the forests. He admitted that the feeling would be different in New Brunswick, owing to the fact that the people of that province lived practically close to the woods and were nearly all more or less interested in lumber operations.

Asked what he thought of the introduction of standard fire protection regulations for all provinces, Mr. Zavitz stated that in his opinion it might work out successfully if it could be brought about. He added however, that the present protection acts were practically alike, extracts being taken from various acts by all provinces.

The enforcement of slash-burning operations might possibly increase the cost of paper, in the opinion of Mr. Zavitz, although he had not given the question study from that viewpoint.

During the year 1922 the province spent \$700,000 in fire protection, while for the fiscal year of 1923, which embraced the big northern fires, the expenditure had risen to \$1,100,000. Over \$150,000 of this amount had been spent in new equipment; \$60,000 had been spent on pumps in six weeks.

Pulpwood Inquiry is Wide in Scope

It is understood the Pulpwood Commission which held sittings recently in Toronto, has a mass of material to which it wishes to give specific consideration before proceeding with the hearing of further evidence. Much of the data will be classified and reduced to concrete form. As one of the commissioners said, "We have considerable work of our own to do before proceeding with further hearings. We will resume after the Christmas holidays with sessions at North Bay and Cochrane after which we will proceed to British Columbia where we will spend some time. The weight of evidence presented so far has been against an embargo on pulpwood but the work of the Commission is broader than a mere inquiry into the pulpwood resources of the country

Breezy Notes from the Busy East

That reproduction is very fast in the budworm area was a report recently made by Chief Scaler A. T. Murchie, who was returning to Fredericton, N. B., following an official visit to sections of Northumberland County. In one section, where he travelled for some miles in areas which ten years ago were devastated by the budworm, he said the second growth of valuable timber appeared in height from two to ten feet with every appearance of more rapid growth as time went on.

He also reported that on the Tabusintac, the Snowball Co. is carrying on large operations in the burnt-over areas, which had been scorched by fire last summer. It is estimated that 4,000,000 feet will result from these operations.

Asked about the reported labor shortage, he said, that men are now offering in large numbers. The men are hired at a monthly rate of \$55 to \$60 and these prices are attracting lots of experienced men. Rumors from different parts of the province were to the effect that wages were higher, but in the majority of cases they were unfounded.

Reports from different points throughout the province indicate that lumber companies are buying up all of the available cutting for a similar action took place some years ago. Lands that are for a similar action took place some years ago. Lands that are unsuited for saw-logs are being gone over for pulp wood and lathwood.

There is a report that a former York County councillor has successfully negotiated a sale of cutting rights on a property he holds for \$21,000, from which, it is said, he sold the stumpage only three years ago for a then reported price of \$20,000. In explanation it is said that, on the first transaction, a payment was made, but the buyers later got into financial difficulties before they completed the deal. This time there is no question of him receiving his money for the buyers are already operating on the lands.

Competition for the purchase of the timber license for Berth No. 78 on White Rapids Brook, north of Blackville, containing three square miles, drove the bidding from the upset price of \$20 to \$85 per square mile. The sale took place recently at the Department of Lands and Mines in Fredericton. James W. Smith was the successful bidder.

Berth No. 79 was sold at the upset price of \$20 per square mile to H. A. Craig. This berth is located on the Bonny River, Charlottetown County, and contains three square miles.

Stetson, Cutler & Co. recently loaded three of the largest sailing vessels afloat at Campbellton. An unusual feature was that all three were loading at the same port at practically the same time. The vessels were the four masted bark Caledonia, the four masted bark Marlborough Hill, and the four masted bark Fennia. Their tonnage ranged from 2412 to 2729.

The saw mills of the Miramichi have all closed for the season, according to J. W. Brankley, of the Miramichi Lumber Co., Ltd., Chatham, N.B., who visited St. John. In conversation with a representative of the "Canada Lumberman," he said, that the crews are now nearly in the woods and the mild weather was ideal for operations. Asked as to the extent of his company's cut this year, Mr. Brankley said that it would be small, not exceeding fifteen or sixteen million feet. Last year they cut about twenty million, but about one half of this cut was being carried over.

With reference to the market conditions, he said, at present it was not good and the chaotic conditions in Europe, to which is now added the British election, are features which have a disturbing effect.

Logging Costs in East Will be Higher

J. & A. Culligan, of Culligan, N. B., say that the past season was a very good one in the lumber line and that their stock has all been sold and practically all shipped. Their cut during the past summer was about 25 per cent greater than in 1922 and this coming season they expect to increase their output over that of 1923 by 20 per cent. At the beginning they found men scarce but at the present time are getting all the help they require. Wages in and around Culligan run about \$50 per month, with board, during the logging period. Last year the firm paid around \$30, and the increased cost of production in the local territory will, therefore, be around 25 to 30 per cent. The firm add that present prices are not sufficient to take care of the augmented outlay, and to make a fair profit this season, producers should get, at least \$35.00 for merchantable stock, f.o.b. mills. Unless this figure is obtained, it is not thought there will be much margin for 1923-24.

No. 23

What is a "Mill Run Grade?"

For many years now there has been a persistent effort on the part of lumber manufacturers and lumber dealers generally to arrive at a definite understanding regarding grades and to do away, if possible, with the old system of each mill having its own particular style of grading. Whilst this has been done to a large extent, there is still room for improvement, more especially respecting the difference still made in grades between the various provinces. This can only be accomplished by continued efforts to bring the manufacturers and dealers in each province more closely together in every way.

An inquiry has recently been put forward by an Ontario firm to several Quebec firms asking what the term "mill run grade" signifies in spruce lumber in the province of Quebec? This at once suggests that a difference in grading exists between Ontario and Quebec for spruce, and yet if we remember, that by far the larger portion of northern Quebec spruce finds its market in Toronto, one might suppose that, by this time, any divergences in grading as applied to these sister provinces, would have disappeared.

As a matter of fact the term "mill run grade" is quite ambiguous and would be differently interpreted in different localities. In some instances it would mean "clears out and mill culls out;" in another case "all the product of the log from 4th quality and up;" yet another would say "everything that the log yields in mill culls and better," and a fourth would determine this as "the whole product of a mill, dead culls out." These answers have come from equally reliable sources. Examining the phrase from a strictly technical standpoint, "mill run grade" might be interpreted as simply meaning the full run of the log in any one particular grade.

Such a term is unsatisfactory unless there be something else in the contract to define just exactly what is being bought, and, in contracts made by millmen, it should be properly established what is being sold and bought; for instance, in buying a cut of spruce if described as "1 in., 2 in. and 3 in. thick, 4th quality and better," "full product of the log in these grades," it would establish the fact that nothing above those grades was to be taken out and nothing lower in grade was to be included.

In these days when lumber has become so valuable and everything must be carefully watched, any ambiguous statement of quality in buying or selling should be carefully avoided. If this is done, it would eliminate much trouble and expense and also loss of time waiting upon a settlement.

Another item that might be touched upon at this juncture is the selling of lath. A month or two ago a certain wholesaler sold to

another wholesaler a carload of No. 2 spruce lath, the point of shipment not being stated; that is to say, whether it was Quebec, New Brunswick or Nova Scotia lath. On arrival at destination the car was refused as not equal to No. 2 quality, so the matter was placed in the hands of competent authorities for arbitration. After adjudicating, the decision given was that, the buyer had consented to or tacitly permitted the supplier to ship the lath from any point he might choose, he, (the buyer), exposed himself to be supplied with lath from any province. In this instance, the buyer, no doubt, had in mind No. 2 Quebec quality lath, but as same was not so stated, either verbally or in the contract, according to the arbitrators, he was liable to accept from any province whatever lath called by that name.

To overcome such difficulties as described, greater care and watchfulness should be taken when either buying or selling, and this more especially in the case of small mills where greater variation in qualities is apt to be found.

Work of the Pulpwood Commission

At the recent sittings of the Pulpwood Commission in Toronto those, who attended, were favorably impressed with the thoroughness and impartiality of the inquiry and the business-like way in which the proceedings were conducted.

It must be remembered that the Commission, as constituted, does not take sworn statements or testimonies and has not the power or authority of a judicial body in this respect. All hearings are widely advertised and any, who wish to give evidence, are cordially invited to do so. The number of persons, who come forward voluntarily and do anything in the public interest, is never large. All the more credit is due, therefore, to public-spirited and fair-minded men, who travel a considerable distance at their own expense, spend time in studying the whole situation and in delving into conditions pertaining to present and future supply and outlook. The majority have no selfish interest to serve. They are prompted by loyal intent and doing something from a broad, patriotic standpoint.

While all are not agreed or do not see eye to eye regarding the proposed embargo on pulpwood, many important facts have so far been brought out. Apart altogether from the question of the export or non-export of freehold wood, a wider knowledge is being gained regarding forest resources, ranging, fire protection, reforestation, slash burning, insect devastation, land settlement, perpetuity of supplies, different uses of wood and other phases of vital moment relating to colonization, settlement and development.

Disinterested spectators, who attended the hearings of the Commission, appreciated the earnestness with which the commissioners are investigating a national question of far-reaching importance and the concentration they are bringing to bear upon every aspect of the conservation of our vast natural resources.

Attempts have been made in certain quarters to cavil at the personnel of the Commission, by intimating that there is on the Board only one lumberman, Mr. Sutherland, of Clyde River, N. S. This is misleading as Mr. Anstie, of Vancouver, has been associated with timber and milling propositions for many years. Mr. McLellan has been closely linked up with lumber and pulpwood activities all his life. He is secretary-treasurer of the New Brunswick Lumbermen's Association, and has also given the pulpwood question consideration from many standpoints. The chairman, Mr. Picard, of Quebec, and Mr. Kerr, of Toronto, judging by the information which they sought from the various witnesses, have gathered practical ideas on the whole matter of forest products and are approaching a solution of the pulpwood problem with an open mind.

The Commission has completed its hearings for the present in Ontario and after the Christmas holidays, will journey to the northern part of the province and then to the Coast where further evidence will be presented.

As already pointed out, the Commission has no vested authority to subpoena witnesses. If more of those interested have not come forward to give evidence and outline their views, it is not the fault of the Commission who have cordially invited everyone who wishes "to have his say." Witnesses have been fairly treated and are allowed to present the fullest information on the whole question and give their views in extenso. There are no catch or mystifying questions or legal technicalities in the way of free expression of speech. The wide scope afforded should, upon the preservation and safeguarding of the pulpwood and other timber resources of Canada bring to the front maturity of thought, vision and foresight.

A power-feeding device on a machine is also a safety device, and helps prevent accidents as well as to speed up production and lessen the burden of work.

Ruling in New Federal Sales Tax

A ruling in connection with the new sales Tax, as applied to stocks bought by licensed manufacturers and paid for on pro forma before January 1st, 1924, has been given by the Department of Customs and Excise, in reply to an enquiry from the Eastern Canada Box Manufacturers Association.

The enquiry sent to the Department was from a box manufacturer who had purchased from a wholesale lumber dealer who, it was presumed, would be an "unlicensed wholesaler" after the 1st

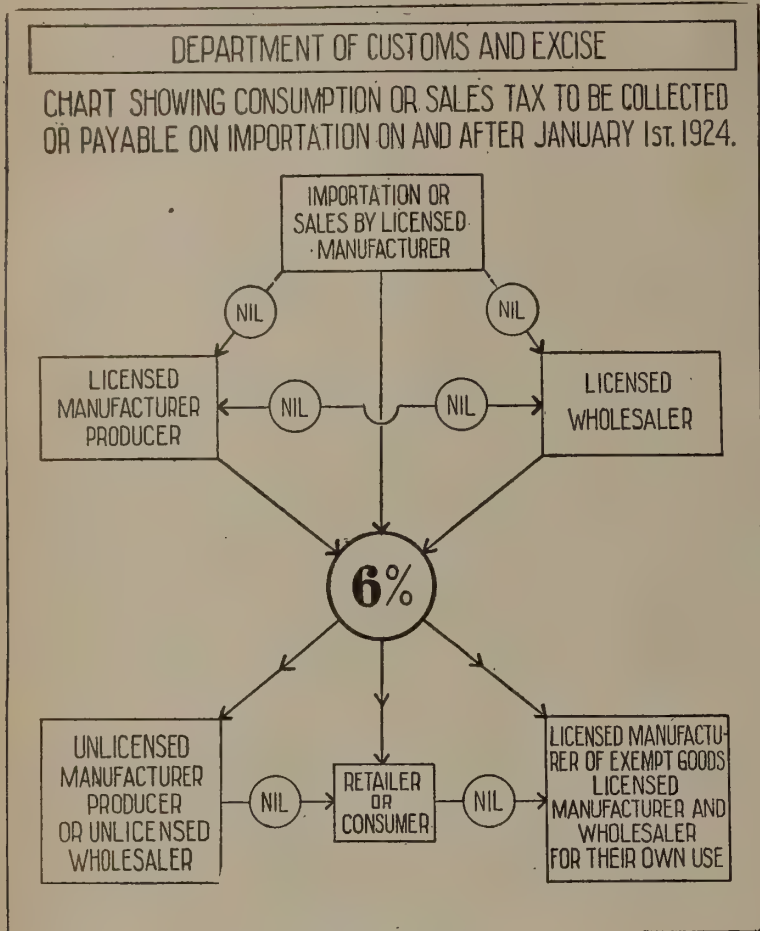

Diagram illustrating application of tax

of January. The Department was asked whether, in case of stocks paid for on pro forma before January 1st, but not delivered until after that date, the tax would be on the 3% basis or the 6% basis. The Department replied as follows:

"If a payment has been made on goods invoiced on pro forma prior to the 1st January next, the tax at the rate of 3% would apply, if the goods are in the condition of lumber, provided the lumber has been set aside or determined, and is held at the responsibility of the purchaser prior to the 1st January. In other words, if the ownership legally transfers to the purchaser prior to the 1st January, tax applies at the rate of 3%. Where the ownership legally transfers on or after the 1st January, the tax would apply in accordance with the Act, which becomes effective on that date."

Ontario Forests Are on the Toboggan

Dr. C. D. Howe, dean of the Faculty of Forestry, University of Toronto, delivered a forceful and timely address before the recent convention of the Ontario Associated Boards of Trade which was held in Hamilton. He said that the people were getting what they deserved in having to pay big prices for lumber imported from the United States or transported by expensive rail haul from British Columbia. Ontario was on the toboggan slide in regard to forest products and Mr. Howe wanted to know why the present generation could not profit by the lessons of history. There was only enough pine left in Ontario for from twenty to thirty years and the supply for all practical purposes would be exhausted long before then. Dr. Howe declared that the same destructive policy was being followed in respect to pulpwood.

The Government could not be blamed for the rapid depletion of timber. Forest fires were the greatest contributing cause. Ninety per cent. of all forest fires were due to human carelessness over which the Government had only partial control. Only by a sane and aggressive forest policy could the gap in production be bridged and this

policy must be based on common sense and aimed at maintaining a continuous production of timber. Unlike a mine, a forest is a restorable factor. The forests, if properly handled, could be made to yield enough revenue to pay fully one-half the expenses of the Government.

A. J. Young, North Bay, said the present method of disposing of crown timber reserves was quite wrong. It carried an incentive for the owner to squander nature's resources. Owners had no permanent interest. They cut and slashed to make their profit, regardless of the conservation of young growth. The government should restrict cutting to mature growth.

James Keenan, Owen Sound, and A. J. Young, North Bay, then submitted the resolution of the Owen Sound board of trade, which called on the provincial government to take upon itself reforestation of waste lands in a large way of buying and fencing the land, planting it with young trees, and recouping itself for such expenditures by issuing long-term bonds.

A kindred resolution was submitted by the Brantford chamber of commerce. It was felt, however, that the matter might be more thoroughly dealt with. For that reason it was left to the executive council to frame a new resolution.

A resolution submitted by J. A. Hussey of the Sault Ste. Marie board of trade called on the provincial government to amend the act so as to provide for the manufacture of hardwood logs within the province in all instances where such logs are sent from crown lands, either under leases now existing or to be issued in the future. It was adopted.

The Tariff of Quebec Stumpage Dues

To obviate any misunderstanding which might arise in the minds of persons connected with lumber operations regarding the tariff of stumpage dues adopted by the Quebec government in the early part of October, the "Canada Lumberman" publishes the official circular issued by the Department of Lands and Forests, and dated October 29, 1923.

It will be observed that the prices set forth in this article published in the November 1st, edition of the "Canada Lumberman" were those quoted for the cutting of spruce, balsam, fir, jack pine, white birch, poplar or aspen, which should have been read \$1. instead of \$1.10. This error was due to the fact that the information secured at the time from an officer of the Limit Holders' Association, must have been misunderstood. It may be said, however, that until the official information was given out by the Department of Lands and Forests, the lumber operators in Quebec were not posted regarding the reduction prices.

It may be added that the reduction based on the 1920 tariffs is, approximately, 6 per cent in the cutting in these burnt areas and, as already stated do not apply to the cutting of green wood even in the burnt areas.

The official circular is as follows: Please note that the tariff of stumpage dues adopted in October 1920 is now in force and will remain so until future notice.

Please also note that by a decision, dated October 11th, 1923, the dues on burnt wood which will be cut during the winter 1923-24, will be as follows per thousand feet, b.m.

- | | |
|--|--------|
| (a) White pine..... | \$2.00 |
| (b) Red pine, elm, ash, basswood, yellow birch, maple and tamarac..... | 1.75 |
| (c) Spruce, balsam, fir, jack pine, hemlock, white birch, poplar or aspen..... | 1.50 |

In order to benefit by this reduction, it will be necessary, as provided by article 1597a, that a plan showing the burnt-over territories, be transmitted to the Department of Lands and Forests, before the beginning of the operations. With an application to obtain said reduction and the authorization to cut clear the fire-killed trees, we must call your attention to the fact that this permission does not include the right to cut the green trees situated within the area of burned trees. Moreover, all the fire-killed timber must be piled, measured and reported separately.

Yours truly,
(Signed) G. C. Piche,
Chief of Forest Service.

Quebec, October 29th, 1923.

The optimist salesman, having a few hours decided to dine at the village hotel.

One of them turned to the pretty waitress and asked:

"How's the chicken?"

"Oh, I'm all right," she blushed. "How are you?"

Probably the biggest load of pulpwood ever hauled on one sled by one team of horses. There are 12½ cords of peeled pulpwood in the load which was pulled over an ice road on Higgins Bros. operations at Dennysville, Maine.

Largest Load of Pulpwood Ever Hauled

It is said that the load of pulpwood shown in the illustration is the largest ever hauled on one sled by a team of horses. There are about 12½ cords of wood in the load which was pulled on an ice road on an operation of Higgins Bros. at Dennysville, Maine. Mr. Higgins states that the load was of peeled spruce and fir wood, four feet long, and was hauled 2½ miles on a regular road from the woods to the siding where it was placed on the cars.

The load was 32 feet long between the stakes and piled 12 feet high from the bottom of the sled. The spread of the stakes gave a little more than 12 cords. In the pile were 170 trees but, of course, being cut for pulpwood they were not as big as trees that the firm cut for logs. Mr. Higgins adds that the roads were all plowed and iced and that the team, which hauled the wood, weighed about 3400 lbs. The weight of the load would be something over 18 tons as the wood would run about 1½ tons to the cord.

This winter Higgins Bros. say they have about 10,000,000 feet of timber to move and if conditions will permit, they are going to try and pull a larger load than they did last winter which so far as they know was a record in the state of Maine.

Veteran Tells of Square Timber Days

A large number of children, grandchildren and great grandchildren and other relatives assembled recently in Toronto to celebrate the 92nd birthday of Martin Bailey. Mr. Bailey resides at the home of his daughter and a most enjoyable evening was spent.

Mr. Bailey is a veteran lumberman who can recall many interesting reminiscences and early associations. He is bright and interesting in conversation and the picturesque incidents of pioneer days are presented by him very vividly. Mr. Bailey began lumbering on the Ottawa River and its tributaries in the early 40's but, when a lad his father was drowned and he had to start making his own living. He and several others spent the winters on the Nation River which is a tributary of the Ottawa, cutting and squaring timber.

In the spring they bound it into cribs with withes. In making these withes, they used birch or blue beech saplings a little over one inch thick. These were twisted in a machine until they were like rope. The timbers were squared and holes were bored in the ends, through which the withes were slipped to bind them together. A stick of timber was often 100 feet long and the crib would be from 40 to 60 feet wide. The Nation was a small river and the cribs were floated one ahead of the other until they reached the Ottawa. Then the raft would be widened out by putting the cribs side by side. The timber would be taken on to Quebec for export to Europe. Mr. Bailey made the trip with the timber cribs to Quebec nine times.

Paper Men Using Up Forests Too Fast

George Carruthers, president of the Interlake Tissue Mills Co., Toronto, recently addressed the members of the Canadian Paper Club at their regular meeting in Montreal. Mr. Carruthers, who is vice-president of the Canadian Pulp and Paper Association and will next year guide the destinies of that body, as presiding officer, told his fellow-manufacturers some plain truths regarding the need of conservation.

He has long been an ardent supporter of every move that will tend to preserve and perpetuate the wooded wealth of Canada, and among other things is waging a campaign against the destruction of young trees for Yuletide decorative purposes, the cutting of which he says results in an appalling loss to the forest wealth of the nation. To offset this unnecessary devastation, the Interlake Tissue Mills

are conducting a widely advertised competition for the best Christmas tree screen, to be made out of crepe paper. Much interest has developed in the contest.

In Montreal Mr. Carruthers did not mince matters and frankly told the paper men that they were using up the Canadian forests much faster than the forests could produce trees, and that unless efficient co-operation for forest conservation is organized between the two interests, there were inevitably bad times ahead for this great Canadian industry. His address made so strong an impression that steps are being taken to have parts of it broadcasted by radio in pursuit of the forest protection propaganda.

Announces Conditions Relating to Sale

Conditions have now been officially given out by Hon. H. Mercier, Minister of Lands and Forests for the province of Quebec in connection with the sale on November 30th of blocks of green timber limits in the Metapedia and Gaspé region, and also in the disposal of burnt timber in the Abitibi, Charlevoix and Lake St. John district. The conditions provide that the cutting permit is for three years and the rental for the same period is to be paid at the auction. The auction will bear on the stumpage dues, which are at present \$1.50 per 1,000 feet.

The limit holder is supposed to have examined the territory which he secures and to have seen whether the fire-killed timber is exploitable so that there can be no argument to reimburse the amount paid on account of the fact that the fire-killed timber proved to be exploitable. At the auction, there must be a deposit of \$200 per square mile as a guarantee.

Western Shingle Mills Resume Operations

Several of the shingle mills that closed down in October when the market went to pieces have resumed operations in Washington. Wholesalers, however, who market the bulk of the output are protesting, claiming that it is an unwise business move. It is asserted that with 15 to 20 per cent of producing capacity there are enough mills in operation to meet all current requirements. Besides, old transits are not selling, carload lots are going on demurrage, there is a feeling of weakness among buyers and with transits selling at West Coast costs at reconsigning points there should be no incentive at this time, it is stated, to make matters worse. Passage of anti-shingle ordinances in Berkeley and Oakland, Calif., with prospects for similar action in Los Angeles, is wiping out a profitable shingle market for all time.

Mr. Roberts Resigns Commissionership

A. E. Roberts, who for nearly two years past has been B. C. Lumber Commissioner for the East, with headquarters at 51 Yonge St., is resigning that post toward the end of December. He has taken a position with the Edgumbe-Newham Co., of Vancouver, and will look after the firm's interest in Ontario, Quebec and the Maritime provinces.

The Edgumbe-Newham Co. have recently put on the market what is known as the "Edham Kolored Shingles." Mr. Roberts, who has had extensive experience both as an architect and as a wood products man, will supervise the sales, distribution and propaganda work of the firm in the East. A warehouse will be opened up in Toronto for supplying dealers throughout the country with stained shingles, and it is likely that a coloring and bending plant will be established in Toronto for the purpose of staining shingles

special blends for architects, home builders and others. The standard colors will all be turned out by the firm in Vancouver, but the new plant will look after individual ideals and interests.

A. E. Roberts, Toronto

Many friends will wish Mr. Roberts, who will shortly pay a visit to the Pacific Coast, in order to discuss matters fully with his firm, every success and happiness in his new sphere of activity.

Maintaining Traditions of the Business

In every walk of life we find men knocking or belittling the calling or profession in which they are engaged. In the ranks of many large firms there are employees who have not an appreciative word for the boss, the management or the policy of the organization. There are also men residing in every country who see no future for the land of their birth or adoption, and in each community there live citizens whose chief delight seems to be to engage in destructive criticism, so far as their own town is concerned, and declare that it is a dull, slow, pokey centre. Many other illustrations might be furnished of what are known as the "knockers." They belong to the anvil chorus and imagine that, by striking loud and frequently, they are winning applause or making friends.

So it is with the lumber line. Like every other line of activity there are those who assert that it is the last business on earth, except the undertaking line, in which any live-wire, red-blooded man should engage. When asked why they are in the business, they state it was wished upon them, they inherited it or are the victim of circumstances from which there was no escape. If they had to begin all over again, they would take mighty good care to separate themselves as widely as possible from timber activities. They declare that it is the most hazardous business on earth; greater chances have to be taken in it than in any other, that prices are slashed and competition is world-wide. They also point out that while a few men have become wealthy in its pursuit, the vast majority have lost fortunes and, in some instances, the accumulation of a life-time has practically disappeared overnight. It may be stated, however, that the men who seriously and persistently condemn or criticize the lumber business are in the minority and are annually growing less.

Lumbermen, on the whole, have faith in themselves and faith in their calling. They believe that the lumber business is on a higher pinnacle today than ever and represents the best traditions, ideals and expressions of a great basic industry one that has played no small part in the upbuild and welfare of Canada ever since the advent of Confederation.

Most lumbermen who have succeeded have not done so without many setbacks. At times the difficulties have apparently been insurmountable and barriers have loomed up on all sides but by courage and boundless effort these men have pressed on and in the end have triumphed. They afford examples of steadfastness of purpose and achievement that are worthy of emulation. They have caught a vision far beyond the immediate cut of the present year, the probable price for next spring and the amount of stock on hand at the end of the next few months. They have peered into the future beyond ordinary ken. They have planned accordingly, and

while reverses may have come, prices decreased or losses proved heavy, they have never once failed in pressing forward toward the mark of the high calling which represents success in all its broadest and deepest meaning.

Predicts Softwood Famine in New Brunswick

Before the Royal Commission on Pulpwood in Fredericton, N. B., A. E. Hanson, C. E., of Fredericton, land surveyor and timber owner, predicted a softwood famine in the Maritime Provinces within eighteen years at the present rate of cutting. To prevent the occurrence of such a famine, he urged that educational methods be employed for the purpose of preventing cutting of undersized softwood trees. He pointed out that it requires 50 trees of six inch diameter to produce 1,000 feet of logs, whereas 62 trees of the same diameter are required to produce 1,000 feet of pulpwood, 768 feet being the equivalent of a cord. In principle, he said, an embargo was the right thing, but market reasons cause him to oppose an embargo.

Professor A. V. S. Pulling, head of the university of New Brunswick Forest School, told the Commission that in order to prevent a repetition of the recent heavy losses sustained through the operations of the bud worm New Brunswick's softwood stands must chiefly consist of spruce. This condition, he said, must exist when the bud

Albert V. S. Pulling, Fredericton, N.B.

worm returns within the next fifty years. According to Professor Pulling there is at present a too great tendency to the natural reproduction of balsam fir, amongst which the recurring outbreaks of the bud worm moth have their origin. Without the food supply afforded the pest by the pure balsam fir stands their numbers, ever present, will be reduced to a minimum.

That softwood growths in New Brunswick are slower than those of Nova Scotia was pointed out to the Commission by Prof. B. E. Claridge, assistant professor of forestry in the U. N. B. Forest School. Tests conducted on the 3,600 acres of forest land owned by the University revealed an annual increase from 2.2 to 2.4 per cent. Growth figures from Nova Scotia exceeded this fractionally, due perhaps to the difference in atmospheric moisture. The only method of absolute control of the insect pests or fungi diseases, said Prof. Claridge, which he had seen in Europe consisted of taking out the diseased tree.

Big Veneer and Plywood Convention

A convention of the National Veneer & Panel Association will be held at the Congress Hotel, Chicago, Ill., Tuesday, December 4th. The meeting will be under the auspices of the National Hardwood Lumber Association, and a program of exceptional interest is being arranged.

Every manufacturer and wholesale distributor of veneer and plywood is cordially invited to attend this meeting, and the invitation is also extended to all such to be the guests of the National Hardwood Lumber Association at a dinner and entertainment to be given at the Congress Hotel, Tuesday evening, December 4th.

Subjects of vital importance to the veneer and plywood industry will be discussed by able authorities.

Varied Activities in Canadian Lumber Arena

R. S. Potter, Matheson, Ont., contemplates rebuilding his saw-mill, which was burned some time ago.

Veillard-Gagnon Lumber Co., Hudson Bay Junction, Saskatchewan, have dissolved.

The Red River Lumber & Construction Co., Limited, Shelbrook, Sask., was recently incorporated.

Dan. McLachlin, of Arnprior, Ont., has been elected vice-president of the Ottawa River Power Co., Limited.

Alexander Gray McMillan, a native of Grenville, Que., and a retired lumberman of the Ottawa river, died recently at his home in Vancouver.

J. P. Johnson and A. K. Johnson, of Toronto; Thomas Patterson, of Hamilton, and others returned lately from an enjoyable hunting trip in the Haliburton district.

H. F. Culhoun, of Bienville, P. Q., has started the erection of a new sawmill at Hadlow Cove, County Levis, P. Q. The new plant will cost in the neighbourhood of \$25,000.

Joyce Bros., Limited, who are dealers in builders' supplies, lumber, lath, etc., at Bronte, Ont., are erecting a planing mill and are in the market for new and used machinery.

W. L. Davis, of the Linton Lumber Co., Toronto, recently spent an enjoyable holiday hunting in the vicinity of Bobcaygeon, Ont. The party secured its full quota of deer.

Alex. Greig and Charles J. Brooks have removed their wholesale lumber office from the Manning Chambers, Toronto, to 23 Jordan St., where they have more central quarters.

Terry-Nicholson-Cates Limited, Toronto, will early next month remove their offices from the Confederation Life Building to Rooms 303-4-5-6 in the new Federal Building, where they will have more commodious and attractive quarters.

L. C. Walker, of the Forest Products Market Extension Bureau of British Columbia, who has been spending the past year in Toronto and the East intends returning to Vancouver at an early date where he will spend five or six weeks.

Mrs. Fox, wife of W. Norman Fox, secretary-treasurer of Edward Clark & Sons, wholesale lumber dealers, Toronto, won the ladies' first prize recently at the Parkdale Canoe Club Masquerade. She appeared as a charming lady in crinoline.

N. C. Hocken and H. L. Hocken, of the Hocken Lumber Co., George Sparling and William Holtby, Toronto, have returned from a successful deer-hunting expedition in the vicinity of West River, Ont. The members had an enjoyable outing and secured their full complement of deer.

It is likely that Charles S. Anglin, who is a member of the S. Anglin Co., wholesale lumber dealers, Kingston, Ont., will be the next Mayor of that city. He has already announced his candidature for the office. Mr. Anglin has been a member of the city council for several years and is well known in the retail lumber ranks.

The Gill & Fortune Lumber Co., of Trenton, Ont., are this season operating two camps located about sixty miles north of Trenton. It is understood that the firm are considering the erection of a stationary sawmill in Trenton during the coming season but no definite decision has been reached as yet.

A. N. Dudley and T. E. Rathbone, of Toronto, have returned after an enjoyable hunting and canoe trip to the Ground Hog River in the vicinity of Tionaga, Ont. They travelled about 150 miles and stayed north until the streams leading to James Bay were frozen over.

L. L. Brown, of Victoria, B. C. Lumber Commissioner, and Mrs. Brown sailed from Montreal on November 26th for London, Eng., where they will spend several months. Mr. Brown will have full charge of the splendid display in the forest products line which will be made by British Columbia at the British Empire Exhibition in Wembley Park, London, from April to October 1924. William Turnbull will be acting B. C. Lumber Commissioner in Victoria during the absence of Mr. Brown.

R. G. Chesbro, of Toronto, who for several years has been eastern sales representative of the Victoria Lumber & Mfg. Co., Chemainus, B. C., received word during the past week that the fire, which visited the plant a few days ago, had destroyed only the saw and planing mill. The lumber in the yard and the sheds, amounting to between 10,000,000 and 15,000,000 feet, escaped the flames and

outside business will in no way be interrupted. It is likely that the Victoria Lumber & Mfg. Co. will rebuild at an early date.

George R. Hackett, general-manager of the Robertson & Hackett Sawmills, Limited, Vancouver, B. C., who has been spending some time in Toronto, Montreal, New York, Boston and other lumber centres, recently returned to the West. He said that the production of lumber in British Columbia for the first eight months of 1923 was 20 per cent. higher than the best previous record. This would easily be the best year in the history of the lumber industry in the Pacific Coast province.

As a result of Fire Marshal J. A. Thomas' decision that only surplus mill waste burners of the down-draft type will be permitted in future, no more permits for the old type of burner will be issued in Vancouver, as the present old style burners wear out they will be replaced by the new style. Smoke inspector J. Reynolds has plans and specifications of the new type of burner which is now used extensively in the United States. It is claimed that the down-draft burner is the less expensive of the two.

W. S. Ewens has been appointed manager of the Ontario District Sales Organization of the Sangamo Electric Company of Canada, Limited, and the Wagner Electric Manufacturing Company of Canada, succeeding Mr. R. M. Scrivener who has been appointed special agent for the Wagner Electric Corporation, St. Louis. Mr. Ewens is a graduate of McGill University and has spent many years with the Canadian Westinghouse Company and the Northern Electric Company.

Major J. R. Cosgrove, who is at present city engineer for Trail, B. C., has been appointed B. C. Lumber Commissioner for the East and will have his headquarters at 51 Yonge St., Toronto. He succeeds A. E. Roberts, who recently resigned to take a position as eastern representative of the Edgcombe-Newham Co., Vancouver. Major Cosgrove had had experience in both the logging and lumbering line and was for some time with the Vancouver Lumber Co. and later with the Pacific Coast Inspection Bureau. He is expected to take up his new duties in Toronto about the middle of December.

James W. Sewall, the Forest Engineer, of Old Town, Maine and Washington, D. C., reports that the usual seasonal quiet in his business of cruising, valuing and mapping timberlands, has failed this year to materialize. Both in number of different jobs and in size of areas covered, the year 1923 has been the largest the Sewall organization has yet encountered, and no lull is in sight. From this it may be deduced that there is considerable activity in timberland circles, and also that owners and operators are coming more and more to want exact information on their timber and resources.

That splendid progress is being made on the construction of the Great Lakes Paper Co. at Fort William, Ont., is evidenced by the fact that an order was recently placed for the steel for the lower yards of the plant. The order is for 10,000 feet. It is expected that the company will also accept delivery of pulpwood this winter. Steel rails as soon as received will be placed on railway ties and this will make possible the economical reception of much of the mechanical equipment which has been ordered for delivery this winter.

The Robinson Lumber Co., of Fort William, Ont., in reference to charging for deliveries of lumber, say that any cartage inside the city limits is figured in the selling price. Outside the corporation boundary the company endeavor to charge enough to cover cost, the levy depending upon the distance. H. W. Robinson, manager of the firm, said that in basing the selling price on all deliveries, large and small, they try to make the figure so that they can give the big purchaser a nominal discount. "Price-cutting, either in price or grade, is the biggest drawback in this district at the present time," he concluded.

A charter has been granted to a new pulp and paper organization with headquarters in Montreal. The name of the company is the Steele-Tremblay Paper Co., Limited. The authorized capital is \$10,000,000, and among the incorporators are James John Steele, pulp manufacturer and engineer of Montreal; Adelard Tremblay, contractor of Metabetchouan, Roberval, and George Wilbert McFarland, manufacturer of Brampton, Ont. The company is authorized to manufacture, deal, import and export logs, lumber, timber, pulp and pulpwood. All the principals are well known in business circles and have many friends.

Will Market Shingles on Better Basis

J. A. Edgecumbe, Vancouver, B. C.

J. A. Edgecumbe, president of the Edgecumbe-Newham Co., Limited, Vancouver, and head of the British Columbia Shingle Manufacturers' Association, in a recent letter to the "Canada Lumberman" states that, at a meeting of the Association held lately, it was decided that the mills close down during the first half of November. Practically 90 per cent of the plants in the province were temporarily idle. Those on the American side, which shut down early in October, were inoperative for a month or more. The curtailment on the American side was from 85 to 90 per cent of the total normal production. Mr. Edgecumbe adds that the manufacturers of red cedar shingles on the Coast are convinced of the necessity for carrying on a progressive advertising and educational campaign in the East which, he believes, will result in an even larger and more progressive one than has already been launched. It will be conducted by the manufacturers during the coming year. In addition, the shingle producers are beginning to realize that it is necessary to change their methods, with the result, that Mr. Edgecumbe expects before very long, shingles will be marketed on a more business-like basis than in the past, a basis whereby continual fluctuations, such as have been the case with the product during the past year, will be discontinued and more stable prices maintained.

New Planing Mill Starts at Haileybury

The new planing mill of the Haileybury Lumber Co. at Haileybury, Ont., has been completed and started operations. The new plant is on the site of the former Riordon pulp mill on the Lake Shore Road and will be in connection with the lumber yard of the Haileybury Lumber Co., which was established last spring. Up-to-date machines for the manufacture of flooring, siding and interior finish have been placed in position. All the equipment is set on a solid concrete base and is driven by individual motors. The planing mill has been placed between two tracks of the Railway so that rough lumber may be brought in on cars at one side and after passing through the factory, the finished product can be loaded direct on cars at the other side. A complete blower system has been installed.

How Forests of Norway are Insured

It is understood that the forests in Norway have been insured against fire for several years. The Norwegian forests are in the hands of many owners, perhaps to a larger extent than in any other country. The greater part of the forest is owned by the peasantry. The management and working of the forests takes place chiefly in winter, when transportation is easiest. In spite of the severe winters the temperatures in summer are very high in Norway, the consequence being that the country has always suffered from severe forest fires. It is, therefore, easy to understand why the question of forest-fire insurance has long interested Norwegian forest owners. Since this kind of insurance was an innovation, the first steps were necessarily taken in the dark. A company was formed in 1912 and during the last six years has achieved results that fully safeguarded its future.

Way Lumber Concern Selected Its Name

The Norwood Lumber Co., Hamilton, composed of M. B. Zimmerman, B. L. Harper and Daniel Webster, who started in the wholesale and retail lumber business on Sherman Ave. North, nearly two years ago, have met with encouraging success. They have built up an active connection with the trade and handle all lines of softwoods, shingles, interior trim, flooring, etc. Their site of 2½ acres is conveniently situated on the Canadian National and C.P.R. tracks and recently Leslie Newton joined the staff as city salesman.

The company intend to make extensions to their dressed lumber shed and, while no equipment has been installed as yet beyond a rip saw and a sticker, it is likely that as business expands, further additions will be made to the plant. The yard and roadways have

been filled up and as the location is in the busiest manufacturing district, deliveries to these concerns are promptly made.

The selection of the name "Norwood Lumber Co." was an appropriate one. "Norwood" is suggestive of northern woods in which the firm specialize. When the business was launched each member placed in a hat the name under which he thought they should operate. Mr. Webster wrote "Norwood Lumber Co." on his slip and this happened to be the one drawn.

The Real Causes of Timber Losses

Editor of the Canada Lumberman:—

If it is true that our forest resources are being depleted at a rate that threatens total extinction, it would seem as if the sensible thing to do would be to make careful study of the situation with a view to ascertaining what are the chief contributing causes.

Evidently that is just what the Government had in mind in appointing the Royal Commission on Pulpwood.

If such an investigation should disclose facts anything like what have been stated by one of the strongest advocates of the embargo, viz:—"That the amount of the annual cut is not over one-tenth of the amount of destruction by bugs, fungi, fire and wind," and that:—"If we had only the annual cut to contend with, and there was no loss from the above-mentioned causes, there would today be just as much timber in Canada as there was when the country was first settled."

And if it should show, as the undisputed evidence on the records of the Pulpwood Commission does show, that only 16% of the total timber cut in Canada is pulpwood—and only 26% of this 16% is exported—(less than 5% of our timber cut).

And when these figures had been totalled they appeared approximately as follows:—

Standing timber destroyed annually by bugs, fungi, fire and wind	90. %
Standing Timber cut by all forest industries other than for Pulpwood	4%
Standing Timber cut as Pulpwood for use in Canadian Pulp and Paper Industry	1.1%
Standing Timber cut for Pulpwood for export ...	5%
	100. %

Would it not seem that conservation of importance could best be realized by controlling either wholly or in part the causes that result in 90% of our annual loss, viz: bugs, fungi, fire and wind?

And would it not seem that interests that urged the immediate and paramount necessity of curtailing or stopping altogether the source of our decimal five per cent (.5%) annual loss, viz:—the exportation of pulpwood, must have some private or special reasons for concentrating their campaign on such an insignificant factor in the situation.

Yours, etc.,

RALPH P. BELL.

Boulderwood, Halifax, November 17th.

The Sturdy Oak is Now Languishing

Canada is rapidly losing its oaks. For some reason the storied tree of old England falls a victim to the march of modern civilization. Commissioner Chambers, of Toronto, told the Parks Committee that hundreds of oaks had died in Toronto and that all the others were slowly dying. Apparently nothing could stop the decay. Tree surgeons had tried in vain to doctor the oak against this disease of civilization.

Not only were the old monarchs of the forest dying, but it was almost impossible to replace them, the commissioner said. In all Canada not 500 young oak trees fit for planting could be procured from the nurseries, he added.

Government May Take Over Powers

"There are a couple of powers the Government may soon have to take over," said Hon. James Lyons, Minister of Lands and Forests. "They have drawn off so much water from Dog Lake to supply their power plant that the level of the lake has been reduced by thirteen feet more than is allowed by their lease from the Government. The result is that lumbermen are refusing to go into the woods in the district for their winter operations, because there will not be enough water to carry their spring drives."

"As a further result, Ontario will lose the lumbering dues from the operations that are being held up. Already there is a tug on Dog Lake 200 yards from what was formerly the shore line, stranded on dry land. Thousands of logs are also lying high and dry. This condition means a huge loss to the lumber operators, through no fault of their own and it also means a great loss to the province."

Belgo Adds to Ground Wood Capacity

The groundwood pulp output of the Belgo-Canadian Paper Co., Shawinigan Falls, Que., has been augmented and two new groundwood machines were recently put in operation, increasing the output by about 40 tons a day. A portion of the product is being marketed although the full amount will likely be used in the Belgo plant itself when the last of the newsprint machines is running. Something of a record was set up in putting in the new groundwood machines, as the contract was only let during the month of August. Another addition to the company's properties that has just been completed is a spur track to bring in logs by rail. The logs brought in this manner supplement the supplies of pulpwood floated down the St. Maurice River. The spur is something new in pulp and paper manufacturing, and it runs out over the river where the logs are dumped into the water and carried up the usual system of conveyors to the sawroom and thence through the mill.

Will Make Art Silk From Pulp

Two hundred and forty acres of land known as the "French Farm," have been purchased on the shores of the St. Lawrence River at Cornwall, Ont., by Courtaulds & Co., Limited, of London, England. The firm are large manufacturers of artificial silk and it is understood they intend opening a branch in Canada. Plans for the various structures are being prepared. The company have several branches in England and two in the United States and the enlargement of the market in Canada requires the location of a plant in the central part of the Dominion.

It is understood that about \$2,500,000 will be expended in buildings and machinery and that construction will begin next spring and the new industry be in operation early in the fall. It will employ about 500 hands. C. R. Tetley, Montreal, is the architect of the various buildings.

As the required pulp will be imported from the Scandinavian peninsula, Mr. Tetley was asked as to the possibilities for using Canadian pulp. He replied it could not be adapted to the fine work required in yarn manufacture. It was entirely too coarse. The imported pulp, on the other hand, was obtained from trees grown on prepared land and cut when not yet full grown. This resulted in a finer grade. Mr. Tetley thinks that within the next ten years Canadian pulp would be produced to fill the needs of the silk manufacturers.

Quebec Dealers Had Splendid Season

The shipment of pulpwood from the district of Quebec has practically come to a halt for the present, indicating that the American mills have been well supplied with wood this summer and are of the opinion that the proposed embargo on the export of pulpwood from Canada to the United States, is not likely to be enforced for the present, at least.

Quebec pulpwood shippers gave out the statement that they were perfectly satisfied with the business done this year with American mills. They had very little difficulty in procuring the necessary railroad cars for export shipment up to the first week of October when the demand from the American plants commenced to slacken. It is computed that fully eighty per cent more pulpwood was shipped into the United States this season than in 1922.

It is generally accepted in wood circles that the Quebec Provincial Government, possessed with the knowledge that 150,000,000 cords of pulpwood were destroyed by fire and insects in the province, has in mind the introduction of legislation at the coming session of a measure to meet this menacing situation.

Quebec has 515,625 square miles of forest lands of which 203,490 are accessible. Besides the privately owned lands, there are 2,031 square miles under location tickets in the possession of colonists, 9,897 square miles Crown Lands, leased to lumbermen, and 312 square miles Crown township forest, leaving 121,875 square miles not leased.

It is pointed out that the revenue received from the provincial forests amounts to approximately \$4,000,000 per annum. Only a com-

paratively small fraction of this amount is employed for protection against fire and insect destruction, while one-third of the revenue, at least, should, it is contended be utilized for the protection of Quebec's forest inheritance and the safeguarding of the interests of future generations.

It is estimated that over \$15,000,000 in value of forest properties has been lost in the past several years by fire and insect destruction, and in face of the fact, the Quebec Government should lose no time in passing rigid measures for forest protection. The Government is reminded that it spends large sums of money yearly for colonization and it is sad to relate that these colonists, with other human agencies, have, by their carelessness, been largely responsible for many forest fires and the resultant destruction. Some colonists seem to have no regard for the consequences in the work of their land clearances by fire and the burning of slash. The Government realizes the big losses on stumpage dues by fire and insect destruction and the need of a more perfect system of protection, says the Quebec correspondent of the "Canada Lumberman."

Restrict Export of Hardwood Logs

At a recent meeting of the Associated Boards of Trade and Chambers of Commerce held in Hamilton, the following resolution in regard to the manufacture of all hardwood logs on Crown lands within the province was adopted:—

"Whereas the Sault Ste. Marie Board of Trade has submitted the following resolution to the Government of the Province of Ontario:

"Whereas there are situate in Northern Ontario large tracts of hardwood timber; and

"Whereas large quantities of hardwood logs are now being exported from Canada; and

"Whereas the manufacture of hardwood timber within the province would provide employment for a great number of men and add considerably to the prosperity, not only of the regions in which these tracts are situate, but to the manufacturing, the distributing towns and cities in Southern Ontario; therefore be it

"Resolved that the Ontario Boards of Trade request the Ontario Government to amend the Act so as to provide for the manufacture within the province of all hardwood logs taken from Crown lands either under leases now existing or to be issued in the future; and

"Whereas it is the opinion of the Ontario Associated Boards of Trade and Chambers of Commerce that the manufacture of such timber within the Province of Ontario will inure to the benefit of the province as a whole; therefore be it

"Resolved that the Government be urged to review the considered opinions of the Sault Ste. Marie Board of Trade as expressed above."

May Float Large Bond Issue

It is reported that the Quebec Development Corporation which is developing water power at Grand De Charge, near Lake St. John, in Northern Quebec, will shortly float a bond issue. The Quebec Development Corporation represents the interests of Sir Wm. Price and James B. Duke. It is anticipated that the bond issue will be of large proportions. About \$14,000,000 will be spent on the first 2,000 h.p. at Grand De Charge.

The first power which will be ready from January 1925, will be used by Price Bros. & Co., in their new mill at Kenogami. It takes a tremendous amount of power to drive groundwood and paper machines and in addition Price Bros. & Co. will generate steam from electrical power, an interesting development that also has been undertaken at Laurentide and Belgo plants.

Price Bros. & Co. now have a capacity of about 275 tons of paper a day at their Kenogami mill. Two machines are under construction. One will come into production about the end of January and another in October next. This will increase the daily capacity to 500 tons.

Why White Pine Has Advanced So Much In Price

(Continued from page 47)

percentage is concerned. One lumberman stated that the disbursement for driving varies according to location. Towing, driving, etc., has advanced about 150 per cent. Another organization gives figures and says the cost in 1913 was \$1 to \$150 per M, to-day \$3 to \$3.50. One other places the figure at \$1.75 to \$2.25 ten years ago and at the present juncture \$4 to \$5.

Labor Outlay Has Doubled

The labor cost of manufacturing logs into lumber in 1913 and the cost to-day brought forth the following comparisons:—1913, \$2 per M, 1923, \$4.50 per M; 1913 \$2.03 per M, to-day \$4.48 per M; 1913 \$2 to \$2.50, to-day \$4 to \$5.50.

Then came the outlay for mill repairs per M feet in 1923 and that of to-day. One company says 39 cents in 1913 and now 72

cents; another northern company declares that it was 50 to 75 cents ten years ago and to-day runs from \$1.50 up.

The overhead costs of 1913 as contrasted with that of to-day was the final matter dealt with. One organization observes that overhead cost twice the amount to-day that it did in 1913. Another concern places the advance at from 100 to 200 per cent on account of the large charges for Workmen's compensation and other levies. A third firm says that the overhead cost per M in 1913 was \$3 to \$3.50; to-day it is \$4.50 to \$5.

It will thus be seen from these representative figures which have been selected at random from a number of replies, that while wholesalers and consumers may think the cost of lumber has advanced disproportionately, costs in all lines have been climbing steadily during the last decade. The labor element has played an active part, and when it is considered that this is the largest cost factor in the production of forest products, it is only logical that the householder,

consumer or distributor has to pay more for the finished article.

The Attitude of Persons

Of course in this world much depends upon the viewpoint, whether one is buying, wholesaling, retailing or distributing lumber. There is the view of the man on the outside looking in and the gaze of the fellow on the inside looking out. Then there has to be taken into consideration the individual with a heavy stock, who has to meet his pro formas or is being asked by the bank to liquidate. On the other hand, there is the fellow with the light stock who is in a good financial position and can afford to hold on. Then there is the speculator who is willing to take a plunge, the wight, who is always fearful of the future, the chap who never wants to sell except at the highest figure and various other classes in the different avenues of the business, all of whom are necessary to keep the wheels in motion and play their part in the great lumber arena and its world wide distribution.

How Loans Are Repaid in Building Societies

The rule which is practically universal among Building and Loan Associations is to require a monthly payment equal to one per cent of the original debt. This payment covers the interest and also a portion of the debt. Some Associations credit the portion of the payment above the accrued interest to the borrower's stock permitting the debt to draw interest on the full sum of the loan and until it is wholly paid, giving the borrower dividends on the sums credited to his stock. The larger Associations apply the

part of the payment in excess of accrued interest to reduce the principal of the loan at each semi-annual or quarterly settlement, computing the interest on the next settlement on the portion of the debt remaining unpaid. Borrowers may make additional payments in excess of the required one per cent per month and can repay the loan in full and have securities released at any time.

It is thus evident that such Associations are assisting in financing homes above the amount loaned by first mortgage compan-

ies. Usually they will loan an amount considerably larger on a first mortgage than the real estate companies. This makes the financing of the second mortgage easier. Experts join in the opinion that the solution of the home financing problem in the smaller communities lies in local building and loan associations where the officers are local business men who know the borrowers personally, and where the depositors are also local people well acquainted with the working of their Building and Loan Associations.

The Grave and Gay as Seen in Human Nature

"George," said his father, "I am sorry to hear that you were among those present at that disgraceful party at the Drinkwells' last night."

"Father," pleaded the young man with somewhat bleary eyes, "I can assure you that I was there as an observer."

"Yes," replied his parent, "so I heard—and Tom was the pilot and the table was the airplane."—

Mr. Ham (to applicant for position): "What is your name, boy?"

Boy: "Jule, sir."

Mr. Ham: "Don't you mean 'Julius'?"

Boy: "Yes, sir; that's it."

Mr. Ham (to next boy): "What is your name?"

Boy: "Billious, sir."

A street beggar, noticing that a pal was trailing a citizen, fell into step and inquired: "Why are you following that man?"

"I heard him say," explained the pal, "that he was on Easy street."

This explanation was mulled over for a block. And then: "What if he does live on Easy street?"

"I just wanted to locate it. I've always thought I'd like to work the back doors along that boulevard."

"An' what's your job around here, young feller?" asked a farmer of an official in a big city railroad station.

"I'm the train caller," answered that dignitary.

"Well, call me one, then. I'm in a hurry."

Mother was entertaining a few friends and young hopeful was being duly shown off, and resented it, as all young hopefuls do.

"Who do you like best?" asked one friend.

"Mother," was the reply.

"Who next?" asked another.

"Little sister."

"Who next?"

"Aunt."

Father, who was seated at the back, opened his mouth and said: "And when do I come in?"

"At 2 o'clock in the morning," was the reply.

The solemn man in the smoker said never a word for many a mile. Finally, however, he turned to his seat mate and remarked: "There is much unrest in the world just now, my friend; much unrest."

"You're right."

"I hope you are not unmindful of the

fact that we each have a duty. We must combat this unrest."

"I'm doing my best," said the other man.

"As to how, my friend, as to how?"

"I manufacture mattresses."

A 15-year-old girl of Detroit has written these slogans for automobilists:

"Drive right and more pedestrians will be left."

"Watch your 'step on it'."

"Taking the other fellow's dust is better than 'to dust returneth'."

"Six feet have awaited many a driver who wouldn't give an inch."

Two girls were talking over the wire. Both were discussing what they should wear to the coming party. In the midst of this important conversation a masculine voice interrupted, asking humbly for a number. One of the girls became indignant and scornfully asked:

"What line do you think you are on anyhow?"

"Well," said the man, "I am not sure, but judging from what I have heard, I should say I was on the clothesline."

"My daughter can do anything with the piano!"

"Could she lock it up and drop the key in the river?"

How Retailers Co-operate With Farmers

Some Practical Pointers Which Yardmen Can Hand Out to Rural Customers on Constructing Implement Sheds and Better Care of Machinery in General

Many paragraphs have appeared on the economy and necessity of taking proper care of farm machinery. In giving space to another article on this timely topic, the "Canada Lumberman" is aware that a great truth must frequently be driven home in order to bring about conviction or incite to action. It is one important and outstanding theme that can bear repetition, and if presented in an interesting way, should arouse interest on the part of those directly and indirectly interested, and provide effective argument for retail lumber dealers in their business relations with the growing trade of farmers in the surrounding country.

With the advance of agriculture the increase in farm tools, implements and machines has been great. A century ago, an axe, a scythe, a spade and a saw formed a large part of the equipment of many farmers. These few simple tools were probably the most useful in working the small areas of land under process of clearing. The development of the farms brought improvement in tools and a gradual development toward the modern type of farm machines.

Tools were valued in the early days because such were hard to get. There was no waste of farm equipment then; the spade and the scythe were valued as much as the shot gun. Conditions have changed during the past century; the progress is now marked by an abundance of tools, implements and machines for every purpose in agricultural production and harvesting, an abundance of machines so great that we see waste on every hand; plows, tillage machines, and harvesters neglected and exposed to the weather, rust and wear out before giving half service.

The waste of tools, implements, machines and articles of farm equipment amounts to many thousands of dollars each year. Neglect to put machines under cover, to apply weather proofing paint, to sharpen all cutting parts, to oil or otherwise lubricate all bearings is reducing the efficiency and shortening the period of usefulness of equipment in which many millions of dollars of farmers' money has been invested. The machine or tool is not the only loss, since the power, either of horse, motor or man is also reduced through having to work with a tool or implement not in the best condition. This double liability, while fully appreciated by the most efficient or business type of farmer, is a matter that should be appreciated by all who own or work with farm tools.

In the hands of good men a grain binder has been known to last and do 100 per cent. efficient work for thirty years. In the hands of careless men, grain binders have been known to have been racked to pieces in less than five years through such treatment as neglect to oil and keep bolts tight. The reward for efficiency might here be expressed as the saving of the price of five binders over a period of thirty years.

The waste of implements noticeable over the country side at all seasons of the year is to be seen on every side. In the winter plow handles are noticed sticking up out of the snow, or the hayrake or seed drill, half buried in a snow bank along some distant fence row, or beneath a tree, tell of somebody's neglect. At the Provincial Plowing Match and Farm Machinery Demonstration held in 1922, one of the winning plows was an implement imported from Scotland early in the last century and had seen seventy-five years of service on Ontario farms. This plow had turned thousands of acres of land. It is still sound and good for many more years. Some men will wear out and break up a good plow in five years. If good care on the part of a thrifty Scotsman will keep a plow in good form for a century, and make it earn its cost over and over again, it should be a good practice for every farmer to follow.

Shelter will prevent waste. Weathering elements soon destroy the wood or metal parts used in implements, perhaps not fast enough to excite the owner into action, but nevertheless slow, sure and steadily the wood will decay, and the metal will rust, until the implement becomes too weak to stand the strain of use. Neglect to provide shelter for implements is generally more noticeable in the newly settled parts of the provinces. Such should not be the case considering the abundant material at hand suitable for sheds. A humble structure made of poles and bark will give good protection to the

few implements required by the settler until such time as he can afford something better.

Implement sheds should be so designed that the accessibility of the implements stored therein will always be easy. Wide implement sheds are generally not as convenient as the narrower structures unless designed with doorways on both sides, or alleyways kept clear to facilitate the movement and storage of the implements. The storage of implements in the farm barn or any other expensive building is not economical, first because the implements need protection only from weather, which can be furnished by a comparatively cheap structure; secondly, time is saved in getting in or out when the implements are kept in a building devoted to implement storage only.

The implement shed should be so located that time will not be lost in travelling more steps than is absolutely necessary with or to get implements either going to or returning from work. Where horses are used as the main farm power, the implement shed should be located near the stables, at a point where the teams can conveniently pass on the way from stable to field. On many farms the implement shed can be located at a point between the house and barn, a very desirable location especially if the building is to be used for the motor car and also for the workshop. The approach should be sufficiently wide to permit the backing of wagons into or out of the shed.

with the necessary machinery, a shed 60 feet long and 24 feet wide is generally amply large. Different types of farming call for different tools and implements, so before deciding on the size of building to erect, determine the floor space required for each tool or machine and plan a shelter large enough to cover all.

The implement shed being a light structure does not require a heavy foundation. A light cement wall under the sills or small pillars under the posts is all that is required. Small pillars of cement can be made by filling a half barrel, a nail keg or special form with a one to six cement and gravel mixture. If the foundation used is to go below the surface, care should be taken to have such below the frost line. Foundations set on the firm soil after the top vegetable mould has been removed are generally satisfactory in all parts of Ontario.

A dry earth or gravel floor is all that is necessary if the shed is located on well drained ground. Cement is desirable where the cost of such is not excessive. Sand floors are objectionable. If an earth floor is decided on, the use of narrow boards under the wheels and runners of implements that are to stand any length of time is advised.

The implement shed wall need only be heavy enough to support the roof and keep out the sun and rain and strong enough to give rigidity to the structure. Vertical boards and battens on a 2" x 4" frame will provide such at low cost. A covering of matched drop siding over a ship-lap sheathing will give a more durable and better appearing wall at a higher cost. Corrugated galvanized sheets or siding does very well and has the additional advantage of fire-proofing the structure. Cement block and brick walls, if on good foundations, are very desirable from the durability standpoint, but too expensive for the general farm. Walls made of poles and cedar bark will serve the purpose of protection to the bush farmer's implements until he can afford lumber for building purposes. Log buildings, if made of peeled logs and set on stones, will last for many years if given a brushing over with creosote to keep out the beetles. Insects and the absence of waterproof foundations are the main causes of early decay in log buildings. Walls may be constructed of small, straight poles or logs pinned together with long spikes or firmly held by setting small, vertical posts in double line the width of the poles apart at intervals of eight feet.

For narrow implement sheds the wide roof board and batten or galvanized sheets are the best coverings at low cost. Prepared paper coverings of tar or asphalt felts are very desirable, and have an advantage in that such are dust proof. Prepared papers are more expensive than the wide roof board and batten. Shingles make a very acceptable covering for roofs of greater than one third pitch.

CURRENT LUMBER PRICES—WHOLESALE

Toronto Hardwood Prices

The prices given below are the average quotations for carload lots, F.O.B. Toronto, from wholesalers to retailers, and are based on a good percentage of long lengths and good widths without any wide stock having been sorted. The quotations under plain and quartered oak refer to soft textured oak. Hard southern oak is usually quoted at \$10 less per M than soft oak. Dry weight white ash averages 3,800 lbs. per M. feet; birch 4,000 lbs.; basswood 2,500 lbs.; chestnut 2,800 lbs.; maple 4,000 lbs.; elm 3,000 lbs.; red gum 3,300 lbs.; hickory 4,500 lbs.; plain white and red oak and quarter cut white oak 4,000 lbs.

Mill Yard Stocks are Not Large

Stocks generally are considerably lower than they were at this time last year, lumber having been shipped out more promptly and regularly, while transportation facilities were unsurpassed. Values in all lines are holding well, and while trade is spotty, there is an undertone of confidence that 1924 is going to be one of the best years in the lumber arena.

Statistically, physically and economically, conditions are all that could be desired. Bearing this in mind, the man who sits down and philosophically reviews the situation, can come to no other conclusion than that there will be a big movement in the spring with demand steady, basic conditions sound, credits improved and uncertainty, to a large extent, removed. The European situation by that time will likely have been cleared up, the British elections will be over and other foreign distributing factors eliminated.

Much more data might be presented regarding the state of things in the lumber line and how manufacturers regard the situation, but a symposium of their views will be found in another column covering all the ground admirably. It will be noted that, with the bulk of producers stocks are lower, producing costs higher and bush operations greater than was the case last season. The majority take a confident view of the future.

Ottawa Reports Camp Labor More Plentiful

A much needed improvement in the woods labor situation took place with Ottawa lumbering firms and companies during the closing period of November, when the camps began to fill up and the supply of woods labor, both local and foreign became more plentiful.

Some lumber companies if anything put something over on the woods camps "hold outs," who up to the middle of November had refused to go into the bush at the existing rate of wages, and had been playing the old "I won't work stunt," until more money was forthcoming.

Several companies, who had exhausted about all the patience they owned, and had been face to face for weeks with the nightmare of only partly filled camps, put in requisitions to the Government for the importation of woodsmen from Russia. They got them and these importations to the number of more than three hundred are now in the camps of the Valley companies and more are on their way across the Atlantic.

The importations are being paid the existing rate of wages, and have been rated by the shipping company which brought them over, as experienced bushmen in their own countries. The importations are chiefly Poles and on the average they are a large boned and husky looking lot, and apparently quite capable, if they so desire of getting out a full day's production. Another favorable feature with them is that practically all were supplied with sufficient money to meet existing needs.

To secure the men from the other side the different lumber companies employing them put in requisitions, for the fellows on the other side of the Atlantic and the shipping company brought them into the country, without any interference from the Immigration officials. Their arrival surely filled a big hole in the woods labor shortage.

With the arrival of the importations the lumberjacks, who had previously been inclined to hold out, reconsidered in many instances their prospects. In not a few cases, the made-over plans led them to the employment office or the shipping boss and they joined the procession for the woods. There were also more farmers and farmer's sons offering to go to the bush, so that officials of the different companies state that the acute danger period of a shortage of labor has seemingly been passed. Though there has been already a lack of production, at the woods end, it is hoped that this will be caught up with.

The American and domestic demand did not show much general change and prices did not alter. Rail and water transportation remained good. Conditions with the woodworking plants and factories did not show much change.

B. C. Mills Find Water Market Good

Recent advices from the Coast are to the effect that the mills are all very busy on export business. Most of those favorably located prefer the water market. There has been plenty of good cutting business for some time in the water market and most concerns look for their orders from this source rather than the rail route, for the obvious reason that the former yields a larger return.

Regarding the effect of the Japanese disaster on West Coast trade, there has been a considerable volume of business from Japan and other countries at a higher level of prices than obtained before the earthquake. Boards had not been shipped previously to Japan on account of the Japanese duty on small sizes, but the government

of the Flowery Kingdom has removed these restrictions and B. C. mills are now able to move some board accumulations to Japan at favorable prices.

It is understood that on the prairies there is practically no business at present and any orders that do develop are going at very low prices.

Some Vancouver mills report the local market as being quite active right along and as being instrumental in removing a large amount of No. 2 Common, that has been accumulating, practically green from the saw. Assortments of fir uppers are now in a little better condition with some firms, although even these are considerably below normal as regards stock. The last summary of B. C. stock shows that fir uppers are 31 per cent. up as compared with a year ago and fir lower grades are 25 per cent. down. The stock of hemlock uppers is still a surplus in some instances with the mills. One firm state that they will have to keep after hemlock clear orders right along, and they expect to saw considerable of this wood during the remainder of the year.

In regard to the situation from other countries, a leading western firm in writing its eastern representative, gives the following interesting summary:—

Australia purchased considerable quantities of their usual merchantable specifications a month or so ago, but since the Canadian Government Merchant Marine removed from their Australian service a number of their ships, the mills are not cutting a great deal of Australian specifications because the facilities for shipment are not very good. We understand it will be around January before the C.G.M.M. will resume the Australian service actively.

South Africa has purchased some very desirable specifications. South Africa and the United Kingdom, for instance, require a lot of 3 x 9 and 3 x 11 R/L merchantable plank, which is comparatively easy cutting.

The Atlantic has been lagging behind the other markets as regards price, although there have been considerable inquiries for the usual dimension and board schedules. The Atlantic market has not yet got to the point where they will pay the figure for hemlock boards that the Japanese are.

California has been buying quite actively lately, although most of their business is with the Puget Sound mills, owing to facilities for shipment to California being better than the service from Vancouver.

St. John Says That Buying is Not Brisk

Reports indicate that buying at the present time is restricted. Retailers are displaying caution and this is said to be due to their desire not to be burdened with a heavy stock at inventory time, which is not far away.

Just what the real cause is said to be is a matter of conjecture but there is no denying that business in random is quiet at the present time. Prices are firm and as is shown in the market report in some instances are higher.

2 x 3 and 2 x 4 is quoted at \$30 dressed one edge. Nice lengths are in demand and the price remains firm. The supply of 2 x 4 is larger than that of 2 x 3.

The demand for shingles at the present time is off, but confidence is expressed that it will not be long before an improvement will be shown.

The call for laths has fallen during the last couple of weeks, but despite this, large orders have been filled at various parts of the Maritime provinces.

Laths are being quoted at \$6.50 for 1½ inch, but caution seems to be the by-word among the buyers and, as a result, there are no immediate prospects of large sales, aside from orders being filled.

On the whole there is little activity apparent in the general lumber situation at the time of writing and it is doubtful if there will be any marked improvement for some little time to come.

Stocks are Reasonable and Demand Restricted

The past month showed more general inquiry for woods on the Liverpool market but, on the whole, business for fall delivery is not very satisfactory. Imports generally were light with consumption accounting for fairly substantial quantities. Stocks are now reported to be in reasonable limits and values have been maintained at fair levels.

The latest information sent out by Farnsworth & Jardine in regard to Canadian woods is as follows:—

Quebec, Yellow pine timber.—Business ruled quiet. The only movement was from Manchester stocks, which are now fairly light.

Waney pine.—First-Class.—Manchester received 5,000 cubic feet on Contract. Consumption fair, and the total stocks in the Mersey District, which includes Second-Class, only amount to

Quaker Flour

Always the Same—Always the Best

In the camp kitchen, Quaker Flour will be found unequalled for its all round baking qualities. Not only does it effect an appreciable economy, but it is an ideal grade of flour, for general use, giving the utmost satisfaction in baking, a feature that has made Quaker Flour famous throughout the land. Try Quaker Flour once, and you will want it always.

Every sack of Quaker Flour is sold under a guarantee—which means invariable quality.

Ivory Brand, our second patent, also made entirely from Manitoba Hard Wheat—popular among lumbermen and bakers.

"MILKSTOCK"

Powdered skimmed milk in 50 lb. and 100 lb. drums. Used for all cooking purposes.

97,000 cubic feet. Second-Class.—The demand is restricted. Stocks are ample.

Square pine, Red pine.—No change. Stocks have been exhausted for a considerable time, but there is practically no enquiry.

Oak.—Small consumption which leaves stocks low.

Elm.—A parcel imported to Manchester. Demand quiet. Stocks are unimportant.

Pine deals.—The import was about an average for this time of the year. Consumption shows improvement, leaving stocks about on a par with last year. Values remain firm.

Spruce.—Small import with disappointing consumption. Stocks, however, are not heavy.

New Brunswick and Nova Scotia Spruce and Pine Deals, etc.—The import came to 4,850 standards, mostly to the Liverpool district. With consumption steady, absorbing 3,840 standards, stocks are not increased to any appreciable extent and are quite reasonable for this period of the season, viz., 15,110 standards. Values continue more or less firm.

Pine deals.—Stocks almost exhausted.

Birch.—Logs.—No arrivals. Moderate deliveries reducing stocks to 25,000 cubic feet, all held in Liverpool. The Manchester market is bare.

Planks.—The import was small, viz., 17,000 cubic feet to Liverpool. 57,000 cubic feet was accounted for by deliveries with the result that stocks have been reduced to 140,000 cubic feet. Values are fairly steady and strengthened towards the close of the month.

Quebec Wood Exporters Want Preference

The wood export interests of Quebec held a meeting the latter part of October to discuss matters dealing with the export trade and its general welfare when the question of preferences awarded to the Dominion by the British Government was advanced. It was then conceived that, while almost every business interest in the Dominion of Canada was being brought before the Imperial Conference in London, the Canadian export lumber business with great Britain had no place on the Conference agenda. In this connection it was felt that, though the time was short, the Quebec Wood Export Association should at once get into communication with the Canadian delegation and urge upon it to take cognizance of the Canadian lumber interests, pointing out that, due to existing conditions, foreign wood shippers had the advantage in British markets as against Canadian shippers; that this applied equally to the British departments, railways and large manufacturers who could secure a share of wood imports from Canada and, thus encourage reciprocal trade relations, instead of encouraging the wood shippers of Finland, Sweden and Russia, who threaten Canadian dislocation.

After some discussion on the proposition the meeting decided to cable the Canadian Prime Minister on the matter. The following is a copy of the cablegram despatched to Right Hon. Mr. King, October 27th, which was followed by letter:—

Rt. Hon. W. L. Mackenzie King,

Imperial Conference, London, Eng.

The Quebec Wood Exporters Association hope you will represent to the British authorities that, owing to the existing conditions, the foreign wood shippers have at present great advantage in British market as against Canadians; also that the Government departments, the railway companies and large manufacturers could give a greater share of their wood imports to Canada and thus encourage reciprocal trade. The wood export trade to Great Britain is threatened with dislocation chiefly on account of Russian competition.

(Signed) C. V. Norris,
Secretary.

The Canadian Prime Minister replied as follows:—

C. V. Norris, Secretary, Quebec Wood Exporters' Association.

Representations your cablegram just received. Will have careful consideration.

(Signed) Mackenzie King.

It is not known what representations, if any, have been brought to the attention of the Imperial Conference by the Canadian Prime Minister or his colleagues on the delegation to the conference. The subject does not appear in the cabled list of preference concessions which have appeared in the Canadian newspapers. It may be, however, that the question was brought before the conference for consideration and left in abeyance.

Though far from being jealous, speaking for Quebec, the timber and sawn lumber shippers find it strange that so little attention is given the Canadian wood import and export trade in the timber trade journals of England. The activities of the shipping from the Scandinavian countries of Finland, Sweden and latterly Russia, are extensively featured. Canadian subscribers frequently express their surprise in this regard, which gives the appearance that Canada has

gone out of the wood business. Exporters, says the Quebec correspondent of the "Canada Lumberman," point out that the export of Canadian wood to the United Kingdom is a very large business and worthy of more notice by the British journals for the promotion of trade within the Empire. In this respect trade publications in the Old Country would be performing a duty to the British wood importer if they would inaugurate a campaign for a reduction of the freight tariffs on Canadian lumber cargoes by the steamship lines trading in the St. Lawrence route during the season of navigation, which would allow Canadian shippers to compete with foreign wood interests and shippers from Finland and Sweden, as well as Russia into the United Kingdom in discrimination against Canadian woods.

He Urges Wider Marketing for Lumber

Hon. G. P. Graham pressed the case for Canadian lumbermen at the economic conference recently in London, England. These lumbermen, he said, were anxious for wider marketing and urged this fact be given earnest consideration.

The conference had discussed a resolution, which was adopted, urging the various governments of the empire to give favorable consideration to the resolutions passed by the empire forestry conference held in Canada in July last. These, among other things, urged the governments of the empire to adopt a definite forestry policy so that the timber needs of the empire should be supplied from within the empire. On behalf of Canada it was pointed out that only in certain provinces were the natural resources under the jurisdiction of the federal government, but the recommendations would be submitted to the competent authorities.

Would Reforest All Ontario Waste Land

At the recent session of the Associated Boards of Trade held in Hamilton, many matters of importance were discussed and several resolutions were passed. Among them were the following:—

"Whereas it is believed that the province should take cognizance of the following facts:

"1.—That the present civilization is based upon a continuous and adequate supply of timber in the shape of fuel, lumber, wood, pulp, etc.

"2.—That the existing standing timber is being destroyed, not alone by the axe, for current use, but many times more by fire, and further by disease and pests;

"3.—That while reforestation is admittedly a remedy, yet the people are not conscious of it being a duty devolving on them, and it would take years to arouse public opinion sufficient to get results;

"4.—That it is admitted by all, that, not alone for the value of the timber involved, but for the necessity of providing watersheds for protection of our rivers and streams, for our fields, as well as our crops, reforestation on a large scale is necessary.

"5.—That while the government is doing well, and planning wisely, yet all the money which can be spared from current revenue should be expended in preserving, as far as possible, existing forests from fire and other destroying causes; therefore be it

"Resolved that this association petition the Ontario Government to take upon itself reforestation of our waste lands in a large way, by buying and fencing the land, and planting it with young trees and recouping itself for the expenditures by issuing long-term bonds, based on the forests so planted which will be security many fold for the cost of planting, long before the forest comes to maturity."

The Brantford Chamber's resolution follows:

"Resolved that the Ontario Associated Boards of Trade and Chambers of Commerce recommend to the county council in each county in Ontario the wisdom of taking advantage of the arrangement made possible by the Ontario Government in regard to reforestation."

Timber Order That Was Not Too Large

A timber merchant was sitting in his office one day musing sadly over the general depression in trade, when a quiet-looking young man entered.

"Do you sell beechwood?" asked the stranger.

"Yes, sir," replied the timber man, rising with alacrity, and hoping devoutly to book a large order; "we can supply it either in the log or the plank."

"Oh, I don't want as much as that," said the young man, shifting his feet uneasily. "I just want a bit for a fiddle bridge."

Linn Logging Tractor in operation by Austin & Nicholson, Limited, of Chapleau, Ont.

LINN LOGGING TRACTOR

The above illustration shows what we believe to be the largest and heaviest sleigh train of logs ever hauled at any time, anywhere.

Austin & Nicholson, Limited, will be operating their Linn equipment on the same operation (back of Esher, Ont.) during the coming haul and these same sized trains, each loaded with a thousand logs, can be seen every day during the hauling period making their regular trips—one hour and ten minutes going with a load and fifty-five minutes returning with the empty sleighs—hauling distance not less than 6 miles—with a steady up grade of $4\frac{1}{2}\%$ over a distance of four miles.

The photograph, from which the above half tone was made, was taken about four o'clock in the afternoon, and when making the half tone the faces of the men were indistinct and were re-touched—otherwise the half tone is the same as the photograph.

And, in proportion to your grades, the performance pictured above, is no greater than can be found on any Linn operation during the hauling season.

The above train contained ten sleighs, and the loads consisted of one thousand green jack pine logs—averaging approximately thirty-two feet per log, or thirty-two thousand feet green timber to the train.

LUMBER TRADE CONDITIONS

Montreal Reports Spruce Stocks as Scarce

It is quite certain now that there is practically no stocks worth speaking of in the hands of the manufacturers, that is, as far as spruce is concerned. Some wholesalers have been out in their various districts searching for new lots to purchase but can find only an odd car here and there and then the specification is a poor one or the price asked much too high to speculate on. There is no fear, however, of anything in the way of a decline from present high levels. The mild weather during the past few weeks is making everyone feel good and keeps builders busy. The New York, New Jersey and Maine markets are strong and the quantity of construction work shows a surprising increase over last year's figures for the same period, so that altogether the situation is most promising for active fall trade that should carry well into next year.

The pine market continues high but there is not much likelihood of any advance as should the same be attempted, buyers must of necessity find other woods as a substitute.

The hardwood market is also strong as local building continues heavy and the mild weather experienced during the last few weeks has helped very materially to get ready inside finishing so that there is a somewhat larger demand for flooring and inside finishing.

The export market in spruce, pine and red pine is reported somewhat easier, due, of course, to present political disturbances in Europe. Having held steady for the past two months in the face of much uncertainty, a weakness is now becoming discernable, which is accentuated by the desire of buyers of Baltic lumber in England not to have any lumber left over in Russian ports for the winter as anything might happen with such stocks if not moved before the ice appears. Hardwoods, however, remain firm and Old Country buyers asking for New Brunswick and Nova Scotia birch as the price is so much more reasonable.

Quebec Exporters Receive Unexpected Orders

As an evidence of Great Britain's business stability, notwithstanding the complexity of the European political situation, Quebec wood exporters in the beginning of November were in receipt of new orders from the United Kingdom customers which brought about unexpected shipments of timber and deals during the latter two weeks of the month, with the prospects of new business to occasion shipments during the first half of December.

In a previous trade letter to the "Canada Lumberman" by its Quebec correspondent, it was stated that one local firm had finished shipping for this season of navigation to the United Kingdom. Since then, however, the unexpected has happened. The firm has received an order for the shipment of 200,000 cubic feet, b.m., waney pine timber and several parcels of sawn lumber, the former to be shipped through the port of Quebec and the latter through both the ports of Quebec and Montreal. In the meantime another Quebec concern has secured an order to ship through the port of Quebec one thousand loads of waney pine timber to meet the demand of its United Kingdom customers.

The latest reports received from the European agents of Quebec export lumber firms is not in the least discouraging. These advices are sanguine in their opinions that the political horizon of Europe will be clear of its ominous dark clouds within the next few months to encourage the stabilization of business. Alluding to the British general elections, they say that no matter, which party is returned on December 6th, the British public, by a unanimity of purpose, will compel the Government-elect to lose no time in calling a conference of European Governments to force a settlement of the Franco-German difficulty. If such a conference does not meet with favorable response, England will act alone, if not in concert with the United States, in extricating the British nation from the turmoil of European chaos.

Expert students of prevailing conditions do not, however, despair regarding the necessity for drastic measures on the part of England. They point out the desperate state of conditions, which has cornered the French Prime Minister Poincare, in such a manner as to force him to seek a compromise, which is expected to materialize before the end of the present year. This will result in practical negotiations for an understanding that will lead to a final settlement to allow the world to recover, and when this occurs

Great Britain will be the first European nation to profit by the released tension and quickly recover normalcy.

In the meantime, according to statistical reports from the United Kingdom, trade conditions in England are fifty per cent. below normal. This applies to the shipping and manufacturing interests on account of the unparalleled deflation in European exchange and decreased demand for commodities by the depreciation in the purchasing powers of all European and continental countries. It would appear, however, that the lumber trade in the Old Country is not the hardest hit. The market in London was fairly good during October and the first weeks of November and the business in this particular respect fair in the various centres of England. This is due to the house-building in progress, as well as railway and other public works, to meet obligatory conditions.

Quebec lumber export firms, generally guided by their export agents and advices, are looking forward to a settlement of the reparations question and the political situation, in the near future, to cause a rejuvenation of the timber markets of the United Kingdom in 1924. In keeping with their impressions in this regard they have concluded to be ready to meet the situation by an enlargement of their estimates in connection with operations in the woods this winter. This conclusion has been reached from the fact that the stores of timber for export shipment have been pretty well exhausted by demands and the desire of shippers to cultivate and maintain the United Kingdom as well as the American market.

Heavy Shipment of Lath From Quebec

An industry which has been carried on between the port of Quebec and New York all during the summer months and which has, perhaps, been given little attention on the part of Quebecers, but which is proving most important to the local lumber interests, is that of the exporting of laths by canal boat from Louise Basin. It is estimated by the local shippers that over thirty million laths have been sent forward in this way during the present season of navigation, while several shipments have also been made by rail, but these have been of a negligible quantity as compared with the exportations by water.

Recently it was noticed that unusual activity was prevailing at the inner Louise Basin in this respect. The quay was piled high with hundreds of bundles of spruce laths, while the canal boat, "Blanche Peslin," of New York, commanded by Captain Peslin, was at the same time loaded to capacity.

Captain Peslin stated that his boat would carry some 860,000 laths for discharge at points on the Hudson River. It was further stated that his principals have handled twenty similar cargoes of the same nature during the past summer, while other interests, also engaged in traffic, have exported some fifteen boat loads. The information was also given that the laths are brought to this port by schooner from Baie St. Paul and other points in the Saguenay River, unloaded here and transferred to the canal boats.

Ontario Trade Quiet But Outlook Good

The tendency at the present time is for consumers to restrict buying as much as possible in order that their inventories may not show up too large at the end of the year. Only such lumber as is required for immediate consumption is being bought at the present time, but business on the whole is better than it was six weeks ago.

The tension, so far as help for woods operation is concerned, is less taut to-day than it was a few weeks ago. Owing to the cessation of certain outside construction and the return of the harvesters from the West, the supply of men has become greater. Cutting is proceeding satisfactorily in most camps. Practically all Ontario sawmills have shut down for the season, some having had an unusually long run.

So far as the spruce market is concerned, conditions continue very firm and the demand is active. In speaking of the conditions in this line, an authority says that, with the prevailing scarcity of labor, the high prices for some building materials and the approach of winter, caution should be observed in buying, more especially as the export demand is not brisk and there may be large wintering stocks left in Canada that may be offered for sale at any time.

In white pine, cull stock is scarce and stiff in price. Mill run is not moving so freely but is holding up very well in values.

Edgings

Harold Joyce, wholesale lumber merchant of Montreal, was in Toronto recently, calling upon the trade.

Moreault & Cote, Limited, Chandler, P. Q., was recently organized with \$20,000 capital to manufacture and generally deal in forest products.

A new boiler room and dry kiln will be installed by D. Kemp Edwards, Limited, at their plant on Bayswater Ave., Ottawa. The building will be one storey, 44 ft. by 22 ft. of frame construction.

L. H. Cantin, Limited, Montreal, was recently granted a provincial charter with a capital of \$49,000 to deal in lumber and wood products. L. H. Cantin, Verdun, P. Q., and J. O. Asselin, Bromptonville, P. Q., are two of the incorporators.

The Hammond Cedar Co. will construct a \$200,000 mill within the next few months at Port Coquitlam, B. C., and will employ 100 men. A by-law will be submitted to the ratepayers granting the company a flat rate of taxation of \$750 a year for ten years.

A. W. Dela Plante, who has been manager of the Beaver Lumber Co., Hamilton, Ont., for several years past, has resigned and will likely go into business for himself. Chas. Dela Plante succeeds him as manager of the company.

A delegation of the Timber Industries Council recently waited upon Hon. T. D. Pattullo, Minister of Lands for British Columbia, protesting against the eight-hour law and asking for a reduction in timber royalties. The deputation was headed by W. McNeill, managing-director of the Council.

A provincial charter has been granted to the Glengarry Pulp & Paper Co. with an authorized capital of \$250,000 and headquarters in Cornwall. The company is empowered to carry on in all its branches the business of manufacturers and dealers in pulp, pulpwood, paper of all kinds, lumber, timber, etc.

Chipman McFarlane recently took over the holdings in Curryville and Demoiselle districts, N. B. owned by J. L. Peck, M.L.A. There are about 7,000,000 feet of timber in the area and it is reported that the purchase price was in the vicinity of \$25,000. Mr. McFarlane has begun logging operations and will, possibly, get out 1,000,000 feet this season.

Thompson & Heyland Lumber Co., Toronto, who specialize in pulpwood, have entered into contracts to supply 67,000 cords of wood within the next six months, about 25 per cent. of which will be exported. As soon as snow arrives in the north and the wood can be hauled to the railway sidings, the company expect to be shipping out the product at the rate of 600 cords a day to various points.

Fire recently destroyed the main mill of the United Shingle Co.'s plant on the waterfront at New Westminster, B. C. The loss of \$50,000 is said to be covered by insurance. J. A. McKernner is head of the company which intends to rebuild immediately. The mill was a six-machine one. The kilns which were burned in 1920 and again a year later, were all saved on the present occasion along with the boiler house and shipping shed.

Mr. and Mrs. John B. Reid, of Toronto, left recently for their winter home at 621 Boone's Court, St. Petersburg, Florida. Mr. Reid, who is honorary-president of the Ontario Retail Lumber Dealers' Association, expects to spend the next few months in the sunny South where his time is actively taken up in bowling, golfing and sightseeing. He also takes a prominent part in the activities of the Canadian Club of that city.

The question of the prohibition of the export of pulpwood and unmanufactured logs was brought to the attention of the British Columbia Legislature recently when Premier Oliver replied to the question of J. Hinchcliffe, member for Victoria, by stating that the provincial government was furnishing evidence to the royal commission appointed by the Dominion Government which will hold hearings in the western provinces early in the new year.

An important conference on immigration and colonization between federal officials and representatives of the various provinces of Canada was held in Ottawa lately. The object was to consider the best means to get the most people from Europe and the United States to help tap the resources of Canada's forests, fields and mines. Representatives were present from every province and a number of conferences were held with officials of the various transportation companies.

R. W. McLellan, of Fredericton, who is secretary of the New Brunswick Lumbermen's Association and a member of the Royal

Commission on Pulpwood, which lately held a sitting in Toronto, has gone on a trip to Ireland and will be absent several weeks. The visit is one of a purely business character as Mr. McLellan is a director of the Brookfield Linen Co., of Belfast, one of the largest linen manufacturing concerns in Ireland and the annual meeting will be held early in December.

During the past three months 72 new names were added to the list of members in the Millwork Cost Bureau, Chicago, making a total membership of 592 firms. The heaviest increase occurred in the West, there being 45 new members there of which 8 are in British Columbia. An active campaign for membership is being conducted at the present time. There are 24 members of the Millwork Cost Bureau residing in Canada, Saskatchewan having 3, Quebec 2, Ontario 8, Manitoba 2, British Columbia 8 and Alberta 1.

A recent despatch from Quebec says that the demand for increased wages made by lumberjacks and bushmen which in some cases is excessive, may bring about a curtailment in operations in both the lumber and pulpwood camps. The large interests see no justification for the greatly increased wages. They claim that conditions compared to last year do not warrant such radical advances. It is pointed out by the lumber people that they are providing their men with lodging and board and that the wages paid are practically clear of all other expenses.

Hon. Dr. Sutherland, Minister of Public Works for British Columbia, recently announced that the damage done to public highways by the trucks of logging companies must be paid for by the companies themselves. This statement was made in connection with the announcement of the new regulations governing traffic of British Columbia roads. These require that logging companies using heavy trucks on the highways will have to advance bonds to the Government and from this money repairs to the road will be financed. The regulations apply to trucks over four tons in weight.

A deputation of lumbermen recently gave evidence before the Pulpwood Commission in Ottawa. Representative lumbermen were present from Arnprior, Braeside, Pembroke and other points in the Ottawa Valley. The deputation was headed by Dan McLachlin, of Arnprior, former president of the Canadian Lumbermen's Association. Mr. McLachlin told the Commission there was no such a thing as insurance of standing timber. The chief menace to forests, he added, was the destruction of young growth by fire. The only way of remedying the situation, he added, was through personal education and the imposition of heavy penalties for setting fires.

The purchase of the Skillings, Whitney and Barnes Company lumber yard property by A. H. Coplan, president of the Hull Steel Foundries, Ltd., of Hull, Que., for use in manufacturing steel grates, fire boxes and other parts for locomotives, was announced recently at Ogdensburg, N. Y. The price was between \$15,000 and \$20,000. The property purchased consists of 48 acres, all buildings and railway sidings, and a number of residences, together with 1,200 feet of dockage, and extends 800 feet back from the river. The new industry promises to develop into one of the largest in that section, employing several hundred men. Mr. Coplan will organize an American company to carry on the American business.

Word received from Harcourt, Kent County, N. B., says that local lumbermen have taken crews to the camps and have all began their winter's work. Robert Shirley is taking out a large cut for Fraser's Limited on their lot on the Salmon River. James Fahey is operating in the vicinity of Canaan. McCleary Bros. are cutting for Sayre & Holly, of Chipman, on the Salmon River. Andrew Robinson and John Brown have taken their crews to the northern part of the province where they have engaged to yard a large number of logs. B. F. Keswick is continuing operations at Lower Main River where he has been sawing for two years. Wages are averaging considerably higher than for two years past.

Angus Graham, a graduate of Oxford University, employed by Price Bros. in Rimouski; A. B. Yberg, Polytechnic School, of Zurich, Switzerland, chief forestry engineer of the Riordon Corporation, Limited, stationed at St. Jovite; G. H. Edgecombe, Toronto, University graduate, of the St. Maurice Paper Co., and W. C. Hugson, Toronto University graduate, Ottawa, were admitted lately as members of the Association of Forestry Engineers of the province of Quebec. All privileges, exclusive to the forestry engineers, were extended to the four new members on a decision arrived at by a special committee of examiners of the Association, comprising Messrs. Gustave Piche, Avila Bedard, O. Lussier, George Maheux, S. L. Carteret and Henri Roy. The corporation was organized in 1921 and this in the first instance that its membership is extended to outside graduates after special examination. Forestry engineers who wish to exercise their profession in Quebec, must in future be admitted to the corporation, which has been extended a special charter to that effect. There are now nearly one hundred qualified forestry engineers on duty in the province of Quebec.

More Dams Will be Built in Quebec

Three new dams will be built shortly in the province of Quebec if the plans of certain companies materialize and the permission of the Provincial Government can be secured. The construction of one of the dams will necessitate the erection of a large hydro-electric plant in the town of Chicoutimi and will contribute greatly to the development of that region.

Price Bros. Co. now have the plans for the largest of the dams under consideration and it is expected that the work will go forward shortly. It is also understood that the new hydro-electric plant will be started as soon as work on the new dam is finished.

A second dam will be constructed on the Asksetisk or Asberish River by W. W. Thomas, proprietor of the seignior of Lake Temiscouata. With the construction of the dam on the Asksetisk River the cantons of Raudot and Hocquart, in Temiscouata County, will be inundated.

The third dam will be constructed on the head waters of Lakes Thomas and St. Vincent in order that the Donnacona Paper Co may continue its lumbering operations.

Double Suspension Arches for Boiler Furnaces

Until a few years ago an arch was considered merely the roof of a furnace and the highest development in arch construction was the single suspended arch. This type of construction had two advantages over the sprung arch, viz: It presented a flat surface over the fuel bed assuring a more even burning out of the fuel due to the uniform heat reflection; and made repairing a more simple process, conse-

quently less costly. Notwithstanding the advantage gained by these improvements, the flat suspended arch still retained some of the weaknesses of the sprung arch.

The Liptak Double Suspension Arch, as manufactured by the Liptak Fire Brick Arch Company, 20th and Prairie Ave., Chicago, Ill., is a distinct improvement in furnace arch construction and embodies all the advantages of other types of arches together with several added features, making for lower cost of upkeep and better furnace construction. A refractory arch of some type is required in most boiler furnaces to assist in the ignition and combustion of the fuel as it is fed into the furnace.

The Liptak Double Suspension Arch is really two arches in one—a main arch exposed to the fire and a reserve arch above, from which this main arch is suspended. This makes it possible to burn out practically all of the main arch before it is necessary to make repairs and still leaves the reserve arch intact as a protection to the iron work.

Timber Licenses Sold at Auction

Competition for the purchase of the timber license for Berth No. 78 on White Rapids Brook, north of Blackville, N. B., containing three square miles, drove the bidding up from the upset price of \$20 per square mile to \$85 per square mile at which price it was sold by the Department of Lands and Mines to James W. Smith, of Underhill, N. B.

Berth No. 79, was sold at the upset price of \$20 per square mile to H. A. Craig. This berth is located on the Bonny River, Charlotte County, and contains three square miles.

Edgings

H. H. Reid, Sussex, N. B., dealer in lumber and building materials, is now known as H. H. Reid, Limited.

The Fall Brook Mining & Developing Company, Limited, Woodstock, N. B., was recently organized to conduct development projects and to manufacture and deal in forest products.

Alex. Rhind, manager of the Simpson Planing Mill, Toronto, was recently re-elected secretary of Ward 8, Ratepayers' Association, which position he has filled acceptably for several years.

Guy H. Long, of the Long Lumber Co., Hamilton, Ont., who has been a member of the Fox Lake Hunt Club at Ravensworth, Ont., returning home recently after a most enjoyable outing in the bush.

W. C. Laidlaw, of Toronto, and Chester H. Belton, of Sarnia, who were members of a large hunting party at Portage Lake, Ont., have returned home. They had a splendid holiday in the bush and got their complement of deer.

C. R. Burgess, of Robert Bury & Co. and W. C. Gardiner, of the Satin Finish Hardwood Flooring, Limited, Toronto, have returned from a successful deer-hunting expedition in the Haliburton district. They secured their full quota of deer.

An addition to the men who will work in the lumber camps of Ontario and Quebec was made recently when 300 Russian woodsmen arrived from overseas. They have already accepted employment with various firms in the two provinces.

John J. Walsh, for many years foreman at Reid's lumber yard, Toronto, died recently at his home 188 Logan Ave., Toronto. He was in his 63rd year and had lived all his life in Toronto, being born at the corner of Dundas (then Beech St.) and Sumach Sts.

The Ontario Paper Co., of Thorold, Ont., who have already a large area of limits in the vicinity of the Manicouagan River in the province of Quebec, will likely be one of the bidders for the leasing of 2,500-square miles of timber limits located on that stream.

The sudden death occurred at Donald, Ont., lately of Ephraim John Edwards, storekeeper for the Standard Chemical Company. The deceased, who has been a resident of Donald for seven years, was a former resident of Deseronto, and is survived by his wife, three daughters and one son.

Workmen cutting timber on the farm of J. B. Friedler at Carrollton, Ohio, found 22 \$2.50 gold pieces imbedded in a large oak tree. A hole had been bored in the tree, the gold coins deposited and a plug used to cover the hole. The bark of the tree had grown on over the plug obliterating its scar.

A sawmill at Prince Rupert, B. C., with large timber tracts nearby, held by the Prince Rupert Holding Co., Limited, are reported to have been sold to a group of California and Iowa capitalists for approximately \$500,000. The purchasers, it is believed, intend to develop a pulp and paper industry. The sawmill has a cut of about 125,000 feet a day.

Lumbering activity and camp developments on a big scale in the almost virgin forest areas along the Robertson River are in prospect as a result of the decision of the MacDonald and Murphy interests which have been operating several big camps farther north on Vancouver Island, to operate in this heavily wooded Robertson River area tributary to the south shores of Cowichan Lake.

Work on the new pulp plant of the Great Lakes Paper Co. at the western limits of Fort William has passed the preliminary stage and good progress is now being made on the foundation. John F. King, resident engineer of the company, has established an office in the vicinity of what will be one of the main buildings of the plant. It is hoped that construction work can be carried on all winter.

It is reported that a contract has been let for the cutting of the heavy timber that will be required for mill construction at the Crown Reserve Mine, and marks the first step towards milling at this rapidly developing gold property at Larder Lake, Ont. As it is planned to erect a mill of at least five hundred tons daily capacity a large amount of timber will be required. This will be secured in the neighborhood of the mine.

Two additional small timber limits have been disposed of by the Ontario Government. The larger one is in the township of Rennie, comprising 36 square miles, which is principally a tie-cutting proposition, cutting rights for which have been disposed of to Austin & Nicholson of Chapleau. The tie price is 11½ cents each. The

other berth is in Shedden township, and the purchaser is Graham & Wilkinson, Spanish Station.

A. P. Costigane, secretary and engineer of the Ontario Pulp & Paper Makers' Safety Association recently spent a few days at the mills at Sault Ste. Marie, Espanola and Sturgeon Falls. He reports that the officers of the Spanish River plants are taking a deeper concern in safety work and the employees are being educated and organized along the line of safeguarding life and limb in their daily duties. Every effort is being made to reduce the accident hazard to the minimum.

George Carruthers, of Toronto, vice-president of the Canadian Pulp and Paper Association, is an ardent conservationist and strongly favors reforestation in order to ensure the perpetuity of the timber resources of Ontario. Recently he paid a visit to Simcoe County which is the pioneer county in reforestation work. With an ultimate aim of planting 100 acres in trees annually, 600,000 yearling seedlings are now being transferred from tree nurseries, while 30 acres of the Simcoe county area are being planted in three-year-old seedlings.

Alex. Smith, of Chicago, has been elected president of the Abitibi Power & Paper Co., Iroquois Falls, Ont., to succeed the late Frank H. Anson. This action was taken at a meeting of the directors held recently in Montreal. W. A. Black, vice-president of the Ogilvie Flour Mills Co., Limited, was elected vice-president of the Abitibi Co., of which he had been a director; E. L. Pease, vice-president of the Royal Bank of Canada, was elected a director, and L. R. Wilson, formerly secretary of the company, was appointed general-manager.

The Backus-Brooks Co., expect to have their first paper machine in their newsprint plant at Kenora before the end of the present year. The groundwood pulp mill is turning out 80 tons a day which is sufficient for the 100 tons of newsprint that will be forthcoming from the new machine which was built by the Dominion Engineering Works, Montreal. After the newsprint mill is in operation it is the intention of the organization to construct a sulphite pulp plant. The company will add 100-ton units to their newsprint mill until it has a capacity of 500 tons or more daily.

H. W. George, C. F. Schmidt, J. E. Littleton, of the R. Laidlaw Lumber Co., Toronto, J. A. Fraser, manager of the Pine Lake Lumber Co., Pickerel, Ont.; J. A. Carter, accountant, and Harry Grier, mill foreman, of Pickerel, who were hunting on the Wolfe River, which is a branch of the Pickerel, had a most enjoyable outing. They killed their full quota of deer, which were reported plentiful, and also a number of partridge although the latter were rather scarce in that section. Mr. George succeeded in killing a big black bear.

The returns at the Crown timber office, New Westminster, B. C., for the month of October were practically double those of the corresponding month a year ago, according to Crown timber agent, Ed. Walmsley. During October 1923 the returns totalled \$40,614, while for the same month last year the amount was \$21,793. For the first seven months of the year there was a considerable excess in the amount collected over the corresponding period in 1922, a gain of over \$70,000. The amount collected comprises the royalty on timber cut on Dominion lands which amounts to approximately 87,000,000 feet, so far this year as compared with 66,000,000 feet for the same length of time in 1922. Practically all the timber was cut within 80 miles of New Westminster.

The Ottawa River Power Co., which will carry out a big development at Bryson, Que., will be a subsidiary of the Ottawa and Hull Power Co., Limited. The board of directors includes J. B. Fraser, Ottawa; A. J. Nesbitt, Montreal; Hon. George Bryson, Fort Coulonge; Rt. Hon. Sir Robert Borden; E. R. Bremner, of W. C. Edwards & Co., Ottawa; D. McLachlin, Arnprior; P. A. Thomson, Montreal; W. H. Dwyer, of W. H. Dwyer & Co., Ottawa; J. B. Woodyatt, vice-president, Southern Canada Power Co., Montreal. The engineers' plans call for the development of the water power at Bryson under a 61-foot head and the ultimate capacity of the plant will be from 60,000 to 75,000 horsepower.

Exporters of lumber from British Columbia report increasing demands for Japanese squares as well as for shingles and other building material. Large bookings are reported of Atlantic business in dimensions and specified materials from Puget Sound mills. The shippers of Vancouver state they could place 10,000,000 to 15,000,000 feet of Japanese squares if mills could guarantee delivery before January 1. The mills, however, are booked for two or three months ahead, and owners are not willing to put on extra shifts. It is understood that brokers handling Scandinavian lumber are trying to land this business, quoting delivery prices \$2 to \$3 per thousand and below current quotations on Douglas fir.

We Specialize in Milling in Transit

Our mill is situated on the G. T. R. with C. P. R. connections. We also supply Mixed Cars of sash, doors, frames and house trim.

Any work entrusted to us will receive our careful and prompt attention.

Good General Store for sale or exchange on saw mill property or block of standing timber. For further particulars write Card Brothers, Mountain Grove, Ont. 23-2

Each Lumberman Has His Difficulties

We listened in on a very interesting conversation recently between a good friend of ours who is manager for a line-yard organization in a pretty good sized town and another friend who is proprietor of his own establishment, as to the relative qualifications of Manager and Proprietor, says "Lumber."

"You don't know what real trouble is," exclaimed the Proprietor. "You don't know the constant worries that beset the man who must be his own general manager, sales director, advertising man, collector and general man about the place, to say nothing of struggling with the banker in the matter of finances to keep the business going."

"Your problems are settled by your General Office. You don't have to worry about meeting notes and payments due wholesalers and manufacturers. You always have plenty of money to operate on—or can get it at a moment's notice. You can concentrate on the producing end of the business—the selling end."

"I admit that this is partly true," replied the Manager. "But I think there are one or two phases of the manager's side of the proposition that you've overlooked. For instance, you are always free to carry out plans and methods which you think are good. I can't always do that. If I have what I think is a good idea, I've got to submit it to a half dozen different executives on as many occasions, and listen to all the objections which conversation or economy can manufacture. By the time I've done this, I am usually cold on the proposition myself, though I know that if it could have been undertaken while enthusiasm was high, it would have proved a winner."

"I am obliged to conduct myself and my business largely according to policies that come ready-made from the General Office. Many times they do not fit conditions in my particular community. But I've got to overcome these handicaps and make good in spite of them."

"And as for making good, how would you like to have an eagle eye constantly watching the total column figures on the office calculator? And someone to check you up on every mistake you make? No one checks you up unless it is yourself, and you are perhaps inclined to be rather lenient with the offender. At least, you have a chance to straighten things out. I don't. I've got to be efficient—and productive—or take the consequences."

Beautiful plans and lofty dreams lose their value unless they are in some way built into action. The things people would do "if they had time" are not the things that are feeding the hungry or pushing the world along.

When You Buy a Machine

Do You Pay for CAPACITY or PRODUCTION?

***Initial Costs and Rated Capacity—or
Low Upkeep and Proven Long Run?***

T. H. Hancock, Ltd., writes (following the installation of a 77a)—

"On looking up the records of work this machine (No. 77a) is doing, we find it has been running continuously on $\frac{3}{8}$ " and $\frac{7}{8}$ " flooring, and we have had no repair bills whatever.

One of the reasons for purchasing this type of machine was from the fact that about ten years ago we installed a machine of the same type, No. 77, Softwood, and if this Hardwood Machine holds up to the record of the Softwood Machine, we will be more than pleased."

It Will, as it is Doing Elsewhere

This is the
No. 77a
Hardwood
Flooring
Machine
that will
stand the
test of the
continuous
run, day-
in-and-
day-out
for years

As to Production—In the plant of E. L. Bruce Co., Memphis, Tenn., there are several of these machines—Read these figures obtained by the Bruce crew—

137,300 lineal feet in 11 hours—one day's run—averaging for the day 208' feet per minute.

124,000 lineal feet daily average over a period of one month—including all stops, changes, etc., averaging for this period 187.8' per minute.

Can you afford to consider first cost in face of these facts?

GARLOCK MACHINERY LIMITED

320 BAY STREET, TORONTO

CRANE "RAILROAD" UNIONS NEED NO GASKETS

Many piping systems can be simplified and their installation and upkeep costs lowered by using Crane *Railroad* fittings. For working steam pressures up to 200 pounds, these *Railroad* fittings are supplied in fourteen approved types, combining a brass-against-iron

union and fitting in a single unit. No gaskets are ever needed. *Railroad* union connections can be broken down and reassembled to a sealed joint many times. Like all Crane valves, *Railroad* fittings are hydraulic tested before shipment to insure high quality.

Crane "Barracks" Lavatories

"Brazel Patent" SNOW PLOWS

Known in every Camp from the Atlantic to the Pacific as the most satisfactory Snow Plow made.

Combination Model, Lumberman's Snow Plow can be used either with or without Rut Cutter.

One man to operate. Adjusting wheels close together made change for light or heavy work in an instant. Wings placed to throw snow 9 ft. wider than sleigh track or narrower if desired. Height of mouldboards prevent snow falling back on track. BRAZEL PLOWS cut 6 in. wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure heaps from an ice road, leaving a clean roadbed. Roll and push entirely away from the road, 12 inches of loose snow each time the plow passes over.

Holt "CATERPILLAR" northern logger hauling train of logs on the operation of Abitibi Power & Paper Company, Iroquois Falls, Ontario

Haul Your Logs the Most Economical Way— The "Caterpillar" Way

We invite your inspection of logging operations the "CATERPILLAR" way during the coming winter on any of the following companies' operations:-

Company	Place	No. Machines
Anglo Newfoundland Development Company	Bishop's Falls, NFD.	10
Abitibi Power and Paper Co.,	Iroquois Falls, Ont.	1
Bathurst Company Limited,	Bathurst, N. B.	2
Mount Murray Woodlands Corp.	St. Fidele, P. Q.	5
Spruce Falls Company	Kapuskasing, Ont.	2

The above mentioned companies after a thorough investigation of costs and dependability as between the "CATERPILLAR" way and other methods, have standardized "CATERPILLAR" equipment owing to the "CATERPILLAR'S" ability to operate continuously on either snow or iced roads under the most severe winter conditions.

Write us for convincing facts and figures about "CATERPILLAR" operations in Canada. We are prepared to make immediate delivery of "CATERPILLAR" loggers which contain many new and important improvements.

**There is but one "Caterpillar"—Holt builds it*

THE FORDSON

FOR THE LUMBERMAN

One of the most important problems which confronts the Lumber Dealer is handling costs. Cars must be switched and unloaded; there is always general yard work which demands attention and in many cases loads of lumber have to be hauled to and from outside points.

The Fordson Tractor with W & K Rubber Tired Wheels solves the problem. There are Rubber Tired Fordsons working in different Lumber Yards and without exception, these Lumber Dealers report that the work is being performed efficiently and at a substantial saving.

Let us show you how the Fordson can be adapted to YOUR needs.

"Buy a CAMPBELL and keep going"

ANNOUNCEMENT

We have recently bought out the Campbell Marine Motor Co. of Minneapolis and in future this well known 4 cycle Gasoline engine will be manufactured in Canada.

These engines have been on the market for nearly a quarter of a century and we have yet to hear of one that has not given satisfaction.

We will be prepared to make delivery on heavy and medium duty engines from 5 to 60 H.P. by January 1st next.

In future the following "Campbell" engines will be Standard Equipment in our Warping Tugs.

The 25' Power Winch Boat—14 H.P. 2 cyl. Engine.

The 34' Single Drum Motor Head-Works—28 H.P. 4 cyl. Engine.

The 37' Double Drum Motor Head-Works—40 H.P. 4 cyl. Engine.

MAPLE LEAF SAWS

Made in Canada for 50 years

THERE is no substitute for quality in saws. The best is always the cheapest, as every logging operator and mill superintendent knows. Maple Leaf Saws are made from the finest razor steel, specially tempered and processed by skilled craftsmen. They are the world's finest saws, and as such are used by leading mills everywhere.

It is especially significant that after one trial of Maple Leaf Saws they become the accepted standard for all operations.

Try one yourself

**Made in
Canada**

**Since
1873**

Shurly-Dietrich Co. Limited

A Canadian Firm Controlled by Canadian Capital
GALT CANADA

Branch in Vancouver
Agencies throughout the world

Relieve the Box Shook Shortage By the use of Gerlach Box Board Mills

For the cutting of

BOX, CRATE, CHAIR, FURNITURE, CABINET and other dimension stock, LATH, HANDLE MATERIAL, Etc.

These machines are built in three sizes:—

CHAMPION for stock 10" to 24" Long
SPECIAL " " 10" to 36" Long
JUMBO " " 10" to 48" Long

All cut any required thickness from 1/4" to 3" and from 3" to 20" wide.

Cut either plain or quarter sawn, through the side or with the grain of wood, hence saw dust is like excelsior. Saw kerf 1/8". Round or quartered bolts may be utilized, as well as slabs and mill waste. Will cut 3000 feet of lumber per man per day. Turns 80% of standing trees into finished product against 40% for the saw mill.

Average net cost of producing finished box lumber from small timber delivered at mill:

TIMBER	\$ 8.00
SAWING & OVERHEAD	2.00
NET COST	\$10.00 per M ft. B. M.

FIRE BRICK

AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "M.D. Elk"**

Write for copy of our catalogue,

Rubber Goods FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "P. M. S.," "Special Drive" and "Lion" are our leading brands for power transmission.

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable.

Hose for Steam, Water, etc., in various grades, made especially to give satisfactory and economical service under different conditions.

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion.

Rubber Footwear We make a complete line of Lumbermen's boots. For over 25 years, our Maltese Cross Brand has been the leading line in Canada. Make sure you get this old dependable brand.

LUMBERMEN'S

EQUIPMENT

A Reliable, Efficient Bandmill

"Long" equipment has won for itself an enviable reputation for reliability, and this is particularly true of the Bandmill. Years of experience went into the design and construction of this machine and it shows many improvements and refinements over other makes.

These include columns of full hollow box section, connected at the bottom. Very sensitive, floating tension. Tension mechanism fully enclosed—easily accessible. Guide Blocks adjustable in all directions; quick opening, non-breakable pattern. Upper and lower bearings the same size and interchangeable; chain oiling, water cooled, adjustable in all directions. Protected steam cylinder to operate upper guide. Dake engine to handle upper wheel.

Write for full particulars.

Steel Carriages

**Over 450
Waterous
Carriages
Installed in
Canadian
Mills**

WATEROUS Steel Carriages are being used in the largest, best equipped mills in Canada today. Built for fast cutting, for accuracy, and to give operating service, they are carefully put together of the best materials obtainable—they stay right.

Increase in cutting efficiency and the increase of cutting speed have been taken care of in the design of these carriages. Improvements in the knee and head blocks and in all moving parts to overcome lost motion; a new setworks—our No. 4—(which may be attached to Steam Setter, or be replaced by trout Power set works) which absolutely prevents and will not develop slack; new style, inserted tooth; quick and easy operating dogs; a friction receder that is operated with the Setworks—these special features are what keep the Waterous Steel Carriage at its place at the head of the list of “Up-to-date Sawmill Equipment.” We build our Steel Carriages in sizes of 36” to 72” knee opening, in any length and with any number of head blocks—screw or rack motion. They are adaptable for rope or gunshot feed.

BRANTFORD, ONTARIO, CANADA

ATKINS

STERLING QUALITY SAWS

Good Saws, Saw Tools and Machine Knives

are necessary for speed, economy and efficient production.

They are the deciding factor in the success of any sawmill, furniture factory or woodworking plant. Thousands of saw users know, because they have convinced themselves, that the installation of Atkins Saws, Tools and Machine Knives means more and better work with larger profits.

Give Atkins a Trial

We will make good with our products and convince you that they are what we claim in our slogan,

"The Finest on Earth"

Leading manufacturers of Saws, Saw Tools and Machine Knives, also Atkins-Coleman Feed Rollers. Use Acrolite and Ferrolite Wheels for your saw gumming and knife grinding. Increase your belt efficiency by using Cantol Belt Wax.

To all we offer our cordial wishes for a bountiful Christmas and a New Year of health, wealth, and happiness.

— When You Sell

Maple Flooring

You have the satisfaction of providing your customers with every required quality of modern flooring. Not only is it without superiority for hardness, but it keeps a uniform color and retains its smooth even surface: Maple flooring is adaptable to all classes of building, and realizes a profitable trade for the lumber dealer. For years

SEAMAN-KENT HARDWOOD FLOORING

has been building up business for the dealer. Prompt deliveries are always assured from our factories, and intelligent and courteous service given with every order. Are you selling our Maple Flooring? We can give you many more reasons for its ready sale. Write us.

The Long Lumber Company

TORONTO OFFICE: - - - HEAD OFFICE:
25 Toronto Street - - - Hamilton, Ont.

A Permanent Lumber Service

AFTER several years of inactivity we are now cutting on our modern fully equipped mills at Manistique and Little Lake, Upper Michigan. The timber behind these mills was purchased many years ago by the Stack interests from the then "unlimited" supply. Its quality, particularly the maple and birch, is the envy of northern mill men among whom this tract is famous.

This timber will run the mills to full capacity for fifteen to twenty years. The 40,000,000 feet annual cut will run:

15,000,000 ft. maple annually
8,000,000 ft. birch annually
2,500,000 ft. beech annually
2,500,000 ft. elm annually
900,000 ft. basswood annually
200,000 ft. ash annually
6,000,000 ft. hemlock annually
3,000,000 ft. white pine annually

the balance in Spruce and Tamarack.

Our exceptional service, grades, and manufacture will be maintained.

"Low freight rate shipments by water to Toronto, Montreal, Owen Sound, Port Arthur, and other Great Lakes and St. Lawrence River Ports. Conveniently located also for rail shipments to inland points by C.P.R. or Soo line."

We will be pleased to hear from old friends and from new ones who can understand and appreciate what permanent connection with such a source of supply would mean.

RED CEDAR SHINGLES

Send
for this
Book

EVERY DEALER should have one of these books, "SHINGLE SUGGESTIONS in HOME-BUILDING." Its 100 pages contain many interesting and instructive facts regarding BRITISH COLUMBIA EDG-GRAIN INSPECTED RED CEDAR SHINGLES—the shingle that can't cup, warp or curl. It gives illuminating figures regarding the durability and cost of EDG-GRAIN SHINGLES as compared to substitute roofing; its chart shows the comparative fire hazards between EDG-GRAIN SHINGLES and Patent Roofing; supplies information which every lumber dealer should have at his command; it gives definite plans and instruction in the construction of thatched roofs; it contains dozens of actual photographs of beautiful homes that have used EDG-GRAIN SHINGLES for roofs and side walls. We are sending thousands of these books to prospective home-builders—some of them live in your community. You should have one of these books on your desk. We will gladly mail you a copy upon receipt of request on your business stationery.

ONTARIO

Canada's Banner Province

Ontario's timber production last year valued at \$26,774,937 or 40% of Canada's total output.

Pine production, 905,442,000 ft. B.M
Pulpwood, 246,282 cords.
Railway Ties, 5,704,459.

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

For maps and full information regarding Ontario, apply to

Greetings

from DOUGLAS A. STALKER

In greeting you again at this time with the season's compliments, we would like to express our thanks also for the spirit of goodwill and friendliness which has been shown by our patrons during the year just closing. Our hope is that we may be able to render even more efficient service during the year 1924.

Cedar Posts and Poles

This advertisement is our first attempt in this journal, and we do it now to increase our sale of POSTS and POLES and to advise you that we make a specialty of this trade.

Our POSTS and POLES are graded and sorted and loaded exactly, and with as much care as lumber.

We do this because we have found that it pays to give a customer exactly the size and length he orders. The usual custom has been to sell posts, "4½ and up." Most of the time you got very few "UPS." But you did get a lot of crooked under-sized posts and not a few dead ones.

We will have this year about 100,000 of them, all sizes and all lengths, and if we get orders in time can cut any special length required.

We also welcome inquiries for any of the other forest products we manufacture.

SIMONDS SAWS

The thousands of Simonds Saws (Band, Circular, Cross-Cut and Drag) which are being used throughout the United States, Canada and in fact all over the world, testify as to their popularity in the lumber industry. This is due to their exceptionally high grade steel and accurate construction. Simonds Saws hold their edge and retain their tension on all kinds of cutting jobs.

All kinds of saws for Mill, timber operation or woodworking shop are manufactured by Simonds and guaranteed.

Handling Hog Fuel on Efficient Link-Belt Conveyors

Here are two types of Link-Belt Conveyors which have proved their effectiveness in handling hog fuel and sawdust.

On the left: a Link-Belt Belt Conveyor.

On the right: a Link-Belt "H" Class Chain Conveyor.

Let us tell you more about the Link-Belt method of conveying. As a first step, send for our new 112-page book "Link-Belt Chains and Equipment for Saw Mills".

Effects of Rate of Growth on Strength of Canadian Hardwoods

by J. D. Hale

Forest Products Laboratories of Canada, Montreal

In "The Effect of Growth Rate on the Strength of Softwoods" published in the "Canada Lumberman," January 15 issue, the strength of softwoods in relation to growth rate was discussed. The general conclusion was reached that, where maximum strength is required, timber of moderate growth rate is usually to be preferred to material of very fast or very slow growth.

The hardwoods present a slightly different aspect. They differ considerably from the softwoods in structure and difference in their rate of growth do not influence their mechanical properties in the same way that similar variations affect those of the softwoods. Trees, which have broad leaves, are usually known as "hardwoods" are thus distinguished from the coniferous, needle-leaved trees or "softwoods." Though some hardwoods are softer than certain of the conifers, our very hardest woods are included in the broad-leaved group so that the description name is appropriate. The wood of hardwood trees is more complex in structure than softwood and is somewhat more difficult to season. The constant difference between the two classes of lumber lies in the structure of the wood—a variation which explains the differences in physical and mechanical properties of these natural groups.

Wood Composed of Tube-Like Fibres

Wood, like the bodies of all plants or animals, is composed of various kinds of cells. Wood cells are commonly called fibres and

features. The length of softwood fibres varies roughly from a twenty- in a piece of some length.

If in no other way hardwood could be distinguished from soft- by their continuous end-to-end arrangement, like lengths of miniature vessels are often very short—usually shorter than wood fibres—but fifth to a third of an inch and the diameter may be one fiftieth to one hundred and fiftieth of the fibre length. Hardwoods, however, have a greater variety of cells. In general, hardwood fibres are shorter than softwood fibres and probably are never much over a tenth of an inch in length. In addition to the true fibres, of which the bulk of the wood is composed, there are in hardwoods certain tubes, of relatively large diameter, called vessels. Their function is to conduct

Spr: Springwood

water from the soil through the wood of the tree to the leaves. These pipe, they form long channels in the wood so that it is possible, in certain woods, to blow through dry sticks several feet long. In straight grained red oak it is even possible to see through the vessels wood by the presence of the vessels. Packed closely together, or scattered among the true fibres and parallel to them, vessels appear in cross-sections of the log as tiny round holes which are often easily visible to the naked eye, (See Fig. 1). On account of the appearance of vessels in section they are often called pores.

New Wood Layers Added Annually Outside Previously Formed Wood

If wood cells were all of uniform dimension, wood-structure would appear homogeneous and the different annual layers would not be distinguishable from each other. The seasonal changes in northern latitudes, however, exert a marked effect upon cell growth, an

Figure 2

have the appearance of tiny tubes with closed ends which are more or less pointed. Packed closely together with their long axes more or less parallel, these fibres constitute wood and by the sum of their properties, determine the characteristics of each kind of wood.

Softwood "fibres" are practically all alike in their more general

effect manifested by a decrease in the size of those wood cells which are formed during the latter part of the growing season.

All Canadian timber trees which add a new wood layer yearly display the successive layers of wood in transverse sections of the trunk as a series of concentric rings. Each ring, representing as it does the amount of wood added in one year, is called an annual ring.

In the spring growth is fast and the cells formed at that time are frequently of large diameter. Those formed later in the season (during the summer) however, are of smaller diameter and have thicker walls. The wood formed in summer, being composed of cells with comparatively small cavities, is denser and harder than the wood formed at the beginning of the growth period. As during the winter the tree is dormant and no additional growth takes place the successive annual layers are usually differentiated by the contrast in texture and color between the hard summerwood of a previous ring and the contiguous softer springwood of the subsequent year's growth.

Hardwoods Divided Naturally into Two Classes by Pore Arrangement

There are two main classes of hardwoods which are characterized by: the arrangement of the vessels or pores. Transverse sections of

Figure 3

Ash—Transverse Sections x 15

Ring porous wood of three different rates of growth.

A—With wide ring is from wood weaker than sample represented by B.
C—With narrow rings and large pore content is weakest.

one class show the pores nearly uniform in size throughout the annual ring. This condition is typified in the photograph of birch cut transversely, shown in Figure 1A. This illustration, showing the end view of the polished surface of a portion of a birch log (magnified 19 diameters) shows the distribution of pores known as diffuse arrangement. Figure 1B shows another arrangement of the pores (in oak) the large ones being confined to the early spring wood. As a row of large pores in the springtime wood makes a continuous ring of these "water tubes," woods with this arrangement of vessels are called ring-porous woods and are readily distinguishable by the large pores which are visible to the naked eye on surfaces cut at right angles across the grain.

Ring-porous woods include some of the strongest North American hardwoods such as hickory, locust, oak, elm, and ash, while diffuse-porous woods, which form the greater part of the North American hardwood lumber cut, include basswood, beech, birch, gum, maple, poplar and many others. With the exception of oak most of the valuable furniture woods are in the diffuse-porous group.

Thickness of Annual Layer Affects Density of Wood

In constructional operations and in much ordinary woodwork strong material is essential. The strength of wood is known to be approximately proportional to its weight when dry. Determination of weight is usually not feasible under practical conditions. If, however, the width of the annual rings could be used as an indication of the strength the selection of suitable timber would be simplified as the

Figure 4

rate of growth is easily determined by examining and counting the number of rings on the end of a board. There are few indeed to whom the appearance of the concentric wood rings is not familiar.

Fig 2 is a curve showing the relation between the width of the annual rings and the compressive strength of two ring-porous woods.

The tests of which the results are embodied in these curves were made on green wood by the Division of Timber Tests of the Forest Products Laboratories of Canada, Montreal. The curves for the wood here represented may be accepted as typifying generally the effect of rate of growth on the strength of all ordinary ring-porous woods. Wood of very fast or very slow growth is weaker than that of intermediate growth. Reference to Figure 3 explains why this is so.

Fig. 3 (A, B, and C) show photomicrographs of three thin transverse sections of a ring-porous wood (ash). The sections were cut from wood showing widely different rates of growth and are magnified 15 diameters. The fast growth section (Figure 3A) with a very wide ring, shows one complete annual layer with a zone of large pores in the spring wood. The later formed summer wood in the rest of

Christmas Eve at Camp Four

A Yuletide Story Redolent of the Spirit of the Bunk House in the Canadian Bush at the Glad Festive Season

By Charles J. Brooks

ENGLISH Jack was not long over. He had been deposited by the economico-social ebb and flow at Mackie's number four camp on the upper waters of the Nashwaak. He didn't belong. There was no doubt whatever about that. The lumber jacks with whom he came in, all agreed to the proposition. Foreman McPherson asserted it profanely.

English Jack had come into camp sans "turkey" or blankets and wearing spats. That, in itself, was enough. He had hired in the city as an expert axeman, and had been sent up to number four with a half dozen other recruits.

Foreman McPherson greeted the newcomer with exclamations that might have been pious—but were not; including in his remarks certain references to employment agencies that are, perhaps better imagined than revealed.

"A joke is a joke," he said.

English Jack possessed the national will-igness to tackle anything, in due degree. He had always managed to "muddle through;" and certainly felt that his rough work of the woods was not beyond his self-admitted powers. To take an axe and knock down a tree—it was simple. Nothing to it.

So when McPherson, to test his proclaimed ability with the tools of the woodsman, handed him a double-bitted axe and requested that he remove a leading spruce that overhung the tote road just a few yards from camp, English Jack gracefully accepted the challenge and moved towards the scene of action with, at least, outward equanimity. He had never seen a double-bitter before.

As fortune favors the brave, he did not inflict any mortal wounds on his personal lower limbs with his first wild swings; his going into action was unobserved as McPherson, to give him a fair show, had ordered the grinning lumber jacks to the bunk-house and withdrawn himself to the sacred precincts of the office, being mindful of the demoralizing effects of critical observation.

The blows of English Jack's axe as he attacked his first arboreal victim, did not ring through the air in approved style, being mostly glancing, but his earnest grunts needed no amplifier as he went at his task with an expenditure of energy that was, perhaps, five per cent. efficient.

Ten minutes flitted by while expectancy, standing on tip-toe, suffered muscular cramp before McPherson strode forth to inspect. He approached the perspiring axeman, amazed to find that the pearl-colored spats showed no stain of blood,—silent because his mouth was wide open in astonishment at the apparent results of labor done. Had the operator not been present, he would have sworn that a beaver had come to take this tree away for his own purposes; for English Jack's axe had gnawed a shallow, ragged, scar completely around it.

However, the frosty air was rapidly cooling the inner side of the "quid" tucked away

in his left cheek, and the sensation brought him back from the unreality in which he had been wandering, to the present and actual.

"Say," he gasped, still struggling for self-possession, "How's she goin' t' fall?"

Mildly English Jack paused, drawing deep breaths as he rested on his axe, and turned an enquiring eye upon the foreman.

"Not being a bloody prophet, I really can't say," was his answer. All of which explains why English was duly elected as flunkey at number four camp, on the day before Xmas.

When we remember the high authority behind the statement that the human heart is deceitful above all things and desperately wicked, we should not be surprised that certain man-made "Thou shalt nots" are honored more in the breach than in the observance. The foot of the law had been set upon the national container of alcoholic bev-

"Do yore talkin' in th' bunk'us," he ordered, "yuh come in here t' eat—not talk."

erages, but it seemed that there were seepages at the toe and heel and along the sole, which had been collected and artfully conveyed to camp four, that the holiday might not pass without lubrication.

Foreman McPherson was not ignorant of the situation. It was his business to get out logs for the company and he knew that, if the "liquid damnation" were confiscated, there would be a general exodus to the city over a hundred miles away, and two or three weeks in which the camp would have to work short-handed before he could get a full crew together again. So a five gallon can, presumably containing "coal-oil," had disappeared from the last load of supplies without comment; and an unusually large consignment of prunes and raisins on the cook's requisition were admitted under his official O. K. Things at camp four were "all set for a blow out."

English Jack, his spats reverently laid aside, decorated with a gunny-sack apron, was scrubbing the floor of the cook-house when the crew came straggling into camp from their work in the "brush."

"Git a move on, you," ordered the cook,

"supper'll be ready in half an hour, an' them lumber jacks don't want t' be kept from their grub by no green flunkies." The cook's constitutional pessimism was made manifest in his drooping mustache.

English Jack said nothing, but dug a splinter from beneath a finger-nail and went on with his job. The adaption of organism to environment was proceeding but not without pain.

"Them hellions has got likker," went on the cook morosely as he dumped an immense pile of "french fries" into their bath of hot lard; "best keep away from th' bunk'us t'night, English, 'less yuh wants a maulin'. Bad actors, some o' them fellers, 'specially that Frenchman they calls Joe Gallant; allus picks on a new flunkey—he does."

"A-o-w," drawled English.

"Yah, 'a-o-w'" mimicked the cook, "chases new flunkies outa camp regular, does Joe. An' yuh can't look fer no help from th' foreman. Men wanta fight 'mong theirselves its their business, he says. Anyone can flunkey but it takes a good man t' swing a axe. Yuh'd best stay in here with me; yuh can sneak out an' git yore blankets while th' men's eatin'."

"A-o-w," said English Jack.

Meanwhile, in the bunk-house, as the men washed up for supper, English Jack's advent contended with candlestine supplies of an illegal liquid for the most prominent part in conversation.

"Jest like a blank, blank beaver—yuh can see it t'morra," said Angus McLeod to his partner of the cross-cut, made him flunkey, McPherson did —"

"An' 'me Lud' comes inta camp wearin' spats," interjected one of the new arrivals.

"T'ell yuh say," came an incredulous chorus from a dozen quarters.

"Yah," went on the informant, proud to hold the centre of the stage for his brief moment, "he figgers he can do any rough work—dontcher know—that any ordinary laborer can handle; claimed t' be an all around bushman till th' foreman showed him up."

Joe Gallant rubbed reflectively behind his ears with a very ragged towel.

"Wear de spat, eh?" he sneered, "I'll tak he apart an' see wat mak her go after supper; meantime, wat 'bout de leetle drink 'fore we eat?"

"That's the stuff, Frenchie," hollered Angus McLeod, "who's got the can?"

"She's under ma bunk," replied Joe, "no fear anyone touch him dere;" and he threw out his big chest to impress all and sundry that, by virtue of strength, he was cock of the walk.

"You crawl under an' git him," he ordered one of the new arrivals, who implicitly obeyed.

"Strangers in de camp tak de first drink," directed Joe when the five gallons of whiskey had been produced and opened. He tilted the can, allowing a man-sized drink

to gurgle into the tin dipper, and handed it to the nearest of the newcomers who threw back his head and gulped it down, only to drop the dipper and splutter.

"Gee-rusalem, I'm pizenened."

"Wassamatter," said Joe, "don't she be good likker?"

"Not bad, at that," returned the first victim, wiping his eyes after his spasm of near-strangulation,—“Rye ’tis, but ’pears t’ be flavored with coal-oil.”

"Is that all?" said Angus McLeod disdainfully, "thought by the fuss yuh was makin' must be gasoline er suthin'. Ole George Stevens' likker allus tastes o' coal-ile—yuh'll git usta it."

"How about invitin' 'his ludship' in fer a snifter?" Spike Taylor volunteered.

"Not till she's be done her work after de supper," vetoed Joe. "Dat cook need de help, an' she's bad beesness t' give likker t' de man while she's workin'; we'll fix up her Christmas tree bimeby—no fear for dat," and Joe grinned widely in anticipation of the evening's entertainment.

So the dipper went its rounds with much smacking of lips and profane appreciation, just completing its course as English Jack, directed by the cook, belted the steel tri-

Of course, nothing was scheduled to happen at supper-time. One of the new arrivals found himself quickly and sternly brought to book when he ventured a remark that could be heard all over the room; for the cook who was standing, glowering, at the kitchen door, bawled him out on the spot.

"Do yore talkin' in th' bunk'us," he ordered, "yuh come in here t' eat—not talk."

This, having the sanction of custom and being backed by the authority of the foreman in person, the culprit immediately felt himself to be the object of an adverse public opinion and, choking on a breadcrumb, withdrew from the cook-house in a state of confusion; while, apart from the active rattle of table-ware, the meal was concluded in silence.

In the bunk-house, under the soft glow cast by the oil lamps, the men sat on the deacon-seat or reclined in their bunks smoking and talking intermittently of work and grub, drink and play. Back in one corner of the long room lined on either side with double-decker bunks, a small crowd were discussing with French Joe Gallant the prospective torment of the new flunkey.

At the table in the centre, just back of the big wood stove, Angus McLeod and his

to furnish the main entertainment of the evening and must be humored. His money had mostly paid for the hootch anyhow.

Joe was helping himself to a concluding drink when the door opened and English Jack strode into the bunk-house, carrying his spats in his hand. There was complete silence on the instant. Pipes paused halfway to mouths and lighted matches, forgotten, burned down to sear hardened fingers.

French Joe, standing by the table on which the can of refreshments was seated, slowly lowered the dipper which he had just raised to his lips.

"By gar," he chuckled, "here's Eenglesh wit de spat come t' de party—Here, have leetle drink, Eenglesh," he stretched out the dipper to the full extent of his thick-muscled arm, and his tone was an insult.

The attitude of the flunky to his superior in strength or authority is usually suppliant, and the men silently awaiting the expected amusement, heard the answer to French Joe's combined invitation and threat with a sneer of contempt.

"A-o-w, y'-a-a-s, I'll take it," he said—and he did.

The snicker that went around the room was quickly lost in a gasp of astonishment:

The "Canada Lumberman" at this Yuletide period extends to all its readers heartiest greetings and sincerest wishes for a happy holiday season. May the year 1924 be one of Peace, Prosperity and Plenty to each and every one associated in any way with forest products activities. May good fortune wait upon you all during the coming days and may you enjoy bountiful returns as the reward of industry, initiative and intelligence, and uphold the highest ideals of Canada's great pioneer vocation. ❧ ❧ ❧ ❧ ❧ ❧ ❧ ❧ ❧ ❧ ❧ ❧ ❧ ❧

angle hanging outside the cook-house, with an iron belt as the signal for "come and get it."

In the cook-house English Jack officiated as head-waiter in the absence of the other flunkey, who had gone out for Xmas and whose return was problematical. At this work he got along nicely for this was no short-order restaurant. Heaping plates of the various eatables were piled on the long tables before the crew was admitted, and his duty was simply to keep these replenished which, in itself, was a fair sized job; for the quantity of grub that fifty earnest lumberjacks, who have just partaken of an appetizer, can consume in ten or fifteen minutes, is by no means small.

During the meal English Jack was, as it were, the cynosure of all eyes but he seemed to be blissfully unconscious of the appraising stares of the diners. Even stage whispers of "More beans, me Lud;" "Will yore highness kindly renew the 'punk'?" "May we have more pie, your spatship?"—were unable to penetrate the hard shell of his reserve, as, fitted out with an old apron of the cook's, he strode manfully about the room ministering to his would-be tormentors.

partner with their two historic opponents played a concentrated game of cribbage; the droning of their successive counts sounding like the murmur of a restless bee-hive.

"Fifteen two, fifteen four, six, an' a run o' three's sine, an' a pair's 'leven," moodily intoned Angus, as he threw his hand into the discard and pegged industriously.

"Here! let's see that mit," said one of his black-browed opponents suspiciously. Angus flared up immediately.

"Wotinell yuh mean t' 'nsinuate—I'm cheatin'?" he roared belligerently as they both made a dive for the cards.

But a probable fistic encounter was swept aside by a greater fistic and more overpowering interest; for at the moment when hostilities were about to commence, French Joe stood up grasping the big-bellied can affectionately and opined that it was time for "everybody she's now have leetle drink," and the tin dipper was started on its rounds amid universal approval.

"Hey, Joe," shouted Spike Taylor, "yore drinkin' outa yore turn."

"Shut up," returned Joe promptly, "me, I be bartender an' I drink when I like,"—which was all of that. Joe was counted on

for, instead of drinking, English Jack with perfect calmness, threw the contents of the dipper fairly into French Joe's face, laid the dipper on the table and went unconcernedly over to deposit his spats on the bunk that had been assigned to him.

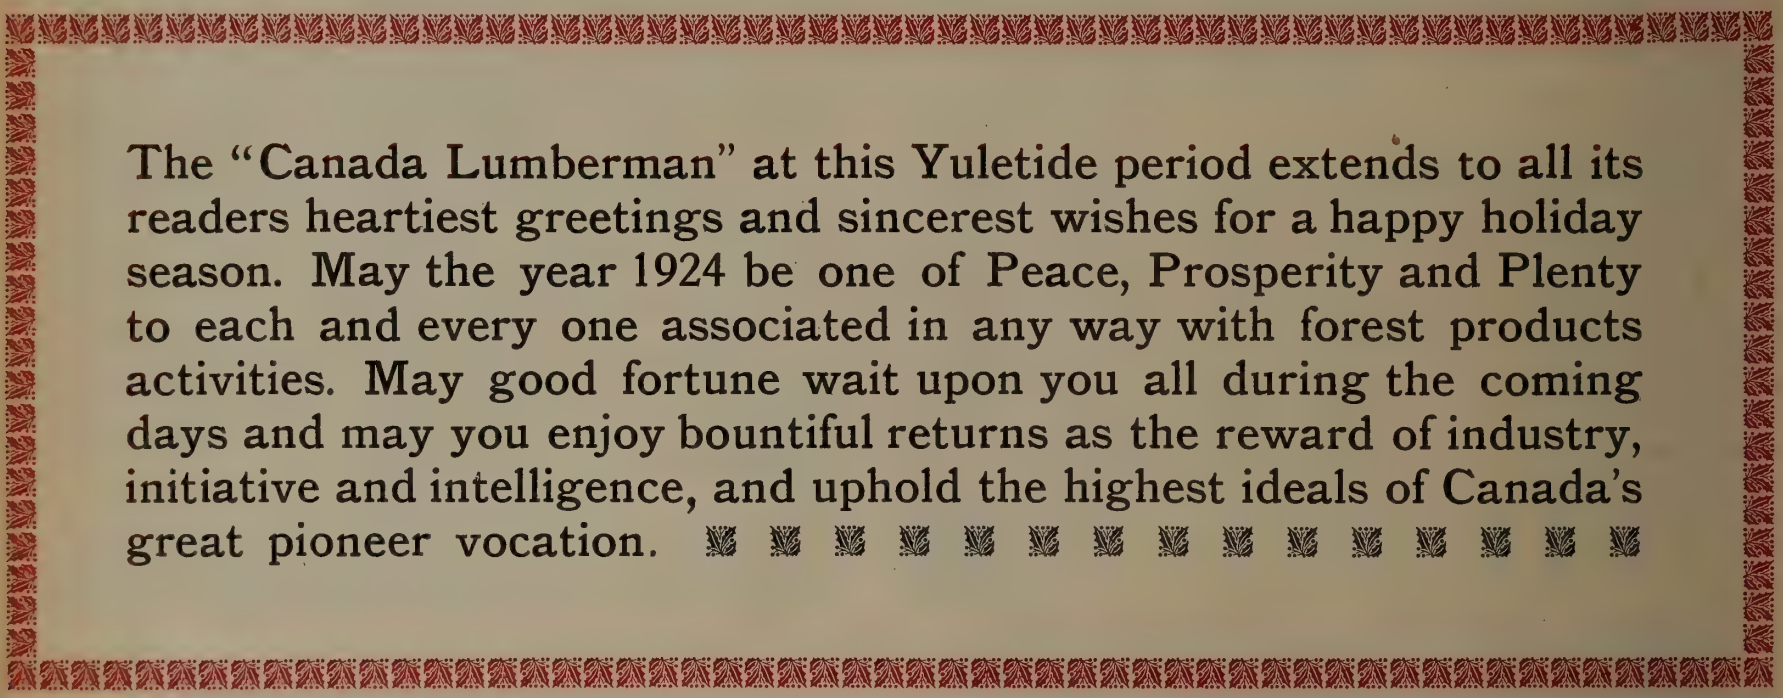

"Didya see that?" gasped Spike Taylor, admiringly, nudging Angus McLeod in the ribs with his elbow. Spike had, himself, been unmercifully hazed by the big Frenchman on his arrival in camp.

"Yeh," returned McLeod, "dang his hide, he's went an' done it. Hell of a Christmas around here with a corps in the bunk-house."

"I don't know," said Spike, "that English lad, he's wiry—"

Further speculation on the outcome of the inevitable battle was suspended by the commencement of the war itself. French Joe had sponged the whiskey out of his eyes and from his face with a big red handkerchief, and he teetered from toe to heel, devastating wrath exuding from and enveloping his gorilla-like form, as he roared,—

(Continued on page 64)

Buffalo Will Welcome Canadian Lumbermen

Active Committee Appointed and Many Important Features Planned—Five Hundred Visitors Expected at Great Gathering Next Month in Bison City

The sixteenth annual convention of the Canadian Lumbermen's Association will be held in the Hotel Statler, Buffalo, on Wednesday and Thursday January 30th and 31st. Every preparation is being made for the important international gathering and already matters pertaining to it are well under way.

It is confidently expected that the forthcoming assembly will be the best and biggest ever held in the history of the association and, from the standpoints of business, fellowship and pleasure will strike a new high-water mark. Many interesting topics will come up for discussion, and divers matters relating to the development and trend of the industry during 1924 will be considered.

Ganson Depew, president of the Buffalo Lumber Exchange, whose offices are at 794 Ellicott Square, states that the members expect to do everything possible to make the convention of the Canadian Association thoroughly enjoyable.

Harry L. Abbott, of the Atlantic Lumber Co., has been appointed chairman of the Entertainment Committee, while the Finance and other committees are already at work.

On the first day of the convention, Wednesday, January 30th, the Buffalo Lumber Exchange, together with the Tonawanda Ex-

change, also extends greetings to the Canadian delegates and adds,—“The Buffalo and Tonawanda lumberman are looking to this convention with a great deal of delight.”

R. L. Collison, convention manager of the Hotel Statler, says that definite arrangements for the entertainment and other affairs in connection with the convention of the Canadian Lumbermen's Association, are being effected.

Much more might be stated regarding the features, both business and social, at the forthcoming convention on January 30th and 31st. It is satisfactory to know that everything is progressing admirably.

As indicative of what is being done, the Buffalo correspondent of the “Canada Lumberman” writes:—

The members of the Buffalo Lumber Exchange are making preliminary arrangements for the entertainment of the Canadian Lumbermen's Association, which will hold its annual convention at the Hotel Statler on January 30th and 31st. The programme of entertainment is not yet ready for announcement, but it will include a number of special features, of which it is reported that a theatre party will be one.

It is expected that about 500 people will attend the convention, including the Canadian lumbermen and their ladies, as well as representatives of the industry in Buffalo and the Tonawandas. This will be the largest lumber convention to be held here in a long time. On account of its international character and the importance of the subjects to be discussed, more than usual interest attaches to the meeting. The lumbermen of the Niagara Frontier are large buyers and sellers of Canadian lumber of various kinds, and some are owners of timber lands across the border.

During the past few days the lumber exchange announced the membership of two committees to look after details in connection with the convention. These are on entertainment and finance, as follows:—

Entertainment:—Harry L. Abbott, chairman, William P. Betts, George A. Mitchell, Elmer J. Sturm, Orson E. Yeager, Fred M. Sullivan, James P. Wall, Charles N. Perrin and Harry A. Plumley.

Finance:—Hugh McLean, chairman; C. Walter Betts, Clark W. Hurd, Gabriel Elias, Maurice M. Wall, Millard S. Burns, Harold Hauenstein, Frank T. Sullivan, Horace F. Taylor, John McLeod, Le Grande S. DeGraff, North Tonawanda.

The convention will be the first large annual convention of lumbermen to be held at the Hotel Statler, which was completed several months ago. The Chamber of Commerce and the Buffalo Lumber Exchange are both energetic organizations which realize the value of conventions to a city, and it is expected that many other large lumber organizations will in future decide to come to Buffalo and the Hotel Statler for their annual gatherings.

Heavy Lumber Cut on the Miramichi

All the sawmills on the Miramichi closed down some little time ago, the last one to cease operations being that of O'Brien's, Limited, at South Nelson, N. B. This mill was the first to start in the spring, beginning operations on March 22nd. The plant ran continuously for eight months which constitutes something of a record. During the winter O'Brien's, Limited, will operate their planing mill using some of their summer cut as well as the cut of other mills on the river.

Fraser, Limited, are cutting laths at their mill at Chatham Head as well as operating their planing mill and will continue operations throughout the winter.

Geo. Burchill & Son will operate their planing mill at Nelson, during the winter months, as well as their sash and door factory.

W. S. Anderson & Co., in addition to their sash and door factory in Newcastle, will also cut laths during the coming winter, and Y. B. Creaghan is making arrangements to saw laths at his Millerton mill.

Ganson Depew
President of Buffalo Lbr. Exchange

change, expect to give the ladies a luncheon at the Hotel Statler, followed by an automobile drive throughout the city. In the evening the Buffalo lumbermen will entertain the delegates and their wives to a theatre party which will be followed by a supper-dance at the Hotel Statler.

On the afternoon of Thursday January 31st Mrs. McLean, wife of Hugh McLean, Buffalo, who is a brother of Angus McLean, of Bathurst, N. B., president of the Canadian Lumbermen's Association) will give a tea to the ladies.

The annual banquet of the C. L. A. will be held on the evening of January 31st at which there will be leading speakers, one from the United States and the other from Canada.

M. E. Preisch of New York, formerly of North Tonawanda, N. Y., was the gentleman who extended the invitation to the Canadian delegates assembled in Montreal last winter, to foregather in Buffalo in 1924. In a letter to the “Canada Lumberman” he says,—“I am sure that the annual meeting of the Canadian Lumbermen's Association will be a big success and that all the Canadians will like Buffalo as a convention city. We are looking forward to meeting all the lumbermen with pleasantest anticipation.”

Harry A. Plumley, vice-president of the Buffalo Lumber Ex-

Trees—All Good Citizens Love Them

By Zane Grey

An English philosopher said that one of the most tragic spectacles of the historic present was the blind and indifferent rush of Americans toward ruin. Money, luxury, excitement, speed—these it would seem are the goals worshipped by the majority of the people of our great free wonderful country which has been caught in the maw of materialism.

One of the melancholy things to contemplate is the ruin of our forests. The tabernacles of the stately trees! All true citizens love trees. How could they help it? The woods is an inheritance. But they do not think. Most of the people flock to the cities. And meanwhile the havoc is wrought on all sides.

That lumber is a necessity no sensible person can dispute. But that forests should be destroyed by commercialism is a vastly different matter. The sentiment of dreamers, artists, lovers of nature can be left out of the reckoning. These are the first to see the hand-writing on the wall, but their personal grievance and sorrow need not be considered. The terrible fact is that the life and soul of the nation are in peril.

Can any nation progress without beauty, religion, wisdom? These are as essential to greatness as bread. Trees are as important as wheat fields. It would be better that we return to mud huts like the troglodyte than lose our souls. All of life cannot be measured in dollars.

Surely it can be proved that Christ loved the earth, the waters and the living inhabitants thereof. Abraham watched the stars that shone on the lonely Arabian desert. Shakespeare saw beauty as well as character. Tennyson's poetry is flooded with the light, the dream, the glory of nature. Tagor perfected his wonderful philosophy in the forests of India. As a boy and as a man Abraham Lincoln found something in the solitude of the woods—under the maples, hickory, sycamores, elms, chestnuts.

If the government have any honest, wise, statesmen, if the people have any desire to preserve for the children something of what is left of our forests, they will compel the destroyers to leave one tree standing, and plant another for every one they destroy.

The trees, then, of our native land have a profound significance and importance. Every boy and girl ought to know that, even if all cannot play and study under the rustling leaves.

What Forests Really Mean in Daily Life

A leading contractor, speaking the other day, pointed out that the cost of almost every article in daily use was affected by the prices of lumber or pulpwood. He stated that it was no use to expect houses to be built at less cost than they are at the present time. On the contrary, the tendency was toward increased prices and a variety of reasons contributed to this. Fire, budworm, storms and other causes are constantly decreasing the available forest assets. Present lumber prices would hold during the next few months but as it was costing \$5 to \$6 more per M to get out the timber and convert into the finished product, this cost would be passed on to the consumer.

The speaker went on to say that Canada's forest resources were vanishing rapidly, the situation was becoming critical and the consumption enormous. The following figures, he declared, would prove of much interest:—

The figures are:

Causes of annual consumption	Feet board measure.
Lumber cut in Canada annually	4,000,000,000
Pulpwood cut in Canada annually	2,000,000,000
Timber cut for fuel annually	4,000,000,000
Shingles, ties, poles, etc.	1,000,000,000
Fire destruction annually	8,000,000,000
Destruction by budworm and other pests annually	5,000,000,000
Total annual consumption	24,000,000,000
Canada's estimated total forest resources ..	986,000,000,000
Annual consumption	24,000,000,000
Less annual reforestation, not more than 25 per cent. annual cut	2,750,000,000

Yearly and unreplaced depletion

Continuing, the speaker said:—

"The figures on fire consumption are based on the destruction during the last five years, which averaged 5,779 fires at a cost of \$14,500,000 annually, and covering 10,000,000 acres. In British Columbia, it is estimated that the fire destruction is 22 times the amount logged. By far the greater proportion of the annual pulpwood cut is exported, and the United States at present depend on Canada for 40 per cent. of its pulpwood, most of which is obtained in eastern Canada. It is estimated that in less than ten years the forests of the United States, west of the Rockies, will be exhausted. It is startling to reflect that the destruction annually exceeds the cut by almost one-fifth, or that for every eleven feet cut 13 feet are destroyed.

"The full significance of this subject," he went on, "has not yet been grasped by the general public for the simple reason that the man in the street does not realize how pulpwood and lumber affect

his life. The house will cost more to build, furniture will be dearer, almost every article of food will cost more to put up, while the same applies to every commodity we use. That is unless boxes, paper wrappers, cardboard boxes and so on, can be replaced by something else. In fact we can link up almost everything in connection with our daily life with lumber and pulpwood.

Habits of Progressive Business Man

"Habits of a Man of Business," which was written by Wm. Gauld, Inspector and Dock Foreman of the Laidlaw-Belton Lumber Co., Limited, of Sarnia, Ont., contains many items of timely interest and value. The points made by the writer are worth considering and might well be cut out for future reference. Here they are:—

A sacred regard to the principles of justice forms the basis of every transaction, and regardless the conduct of the upright man of business.

He is strict in keeping his engagements.

Does nothing carelessly or in a hurry.

Employs nobody to do what he can easily do himself.

Leaves nothing undone that ought to be done, and which circumstances permit him to do.

Prefers short credits to long ones, and cash to credit at all times, either in buying or selling, and small profits in cases with little risk to the chance of better gains with more hazard.

He is clear and explicit in his bargains.

Leaves nothing of consequence to memory which he can and ought to commit to writing.

Keeps copies of his important letters and has all letter, invoices and business documents put away in an orderly manner, so that on any occasion they may be easily referred to.

Is always at the head of his business well knowing if he leaves it, it will leave him.

Holds as a maxim that he whose credit is suspected is not one to be trusted.

Avoids as much as possible all sorts of accommodation in money matters and law suits where there is least hazard.

He is economical in his expenditure, always living within his income.

Keeps a memorandum book in his pocket in which he notes every particular relative to appointments, addresses and petty cash matter.

Is cautious how he becomes security for a person, and is generous when urged by motives of humanity.

"Take pleasure in your business and it will become your recreation."

Ontario Retailers Prepare for Annual Meet

Directors of Association Expect Record Attendance at Provincial Gathering to be Held in Toronto in January.—Instructive Programme and Live Topics will be Featured

In preparation for the annual convention the directors of the Ontario Retail Lumber Dealers' Association held a meeting on December 6th at the Board of Trade Rooms, Toronto. K. J. Shirton, president of the O.R.L.D.A., presided. The directors' conference took up both the morning and the afternoon. Judging from the programme finally adopted the gathering in Toronto on Jan. 15th, 16th and 17th will be the most profitable and entertaining that the Association has yet attempted. It only needs now the backing of the retailers themselves to make the convention "the biggest" from both a business and social standpoint.

President Shirton, said he had enjoyed every moment serving the association during the past year and was looking forward with interest to the coming gathering at the King Edward, Hotel, Toronto.

After Secretary Boulton gave the business report, the chairman called upon J. B. Mackenzie as chairman of the Redistribution of Districts Committee, to give his report. Mr. Mackenzie found, in studying the question of redistribution that the Stratford district was the only section which called for any extensive redistribution of territory. He reported that the dealers in Stratford and district were strongly in favor of adding the counties of Bruce, Huron and Perth.

M. R. Bogart, of Chatham, stated the counties mentioned had been allotted to the South Western Branch but that these countries had natural transportation connections into the Stratford district, and it would be a profitable change for the dealers in those counties. At the directors' meeting on the morning of the first day of the convention the matter of redistribution will be finally attended to when the members of the Stratford district will be consulted with.

The Details of the Convention

The Secretary read to the directors what the Entertainment Committee had drawn up in an endeavor to give the visiting members a real good time in the Queen City.

January 16th (Wednesday)—10.30 A.M. Registration of retailers.
12.30 Dinner party for the ladies and friends.

8.30 P.M. Theatre Party at Shea's Theatre.

January 17th (Thursday)—7.00 P.M. Annual banquet.

8.00, 8.45 and 10.15 Vaudeville Performance.

The social functions will not in any way conflict with the business meetings which will include many interesting trade discussions during the hours of the mornings and afternoons.

In a resolution adopted by the directors it was decided not to charge members for the expense of the dinner, banquet and entertainment but if a member brings his family or firm employees, the sum of \$3.00 for each extra plate and \$1.00 for the theatre reservation will be paid at the time of registration.

Another resolution which was moved by W. M. Tupling, of Orillia, and seconded by M. R. Bogart, was that the annual banquet be for retailers only. Tickets for the banquet could be procured only through the retailers. If the members desired to bring friends to the banquet, they would be very welcome but it was felt that the retailers should know who were with them when they sat around the festive table.

A resolution was also placed on record authorizing the secretary to invite representatives of the Canadian Lumbermen's Association, the Wholesale Lumbermen's Association, the Ohio, Michigan, New York and National Retail Associations, to come to Toronto and share with the Ontario men the discussions and entertainments of their annual meeting.

J. C. Scofield moved that the directors recommend that the fees obtained from exhibitors at the convention in the King Edward Hotel be used for defraying the expenses of the annual gathering.

The tentative programme drafted for the convention was submitted as follows.

Wednesday January 16th

A. M. Directors Meeting.

2. P.M. President's Address

Treasurer's Report

Secretary's Report

(Legislation Committee Report (Also Transportation)

(Sales Tax and Mechanics' Liens)

Redistribution Report

Membership Report.

Thursday January 17th

Insurance and Workmen's Compensation Report (Merit Rating)

Trade Relations and Arbitration Report.

Standard Sizes and Grades Report

Cost Accounting Report

Midsummer Outing

Periodical Market Surveys

District and Branch Reports

Kickers Half Hour

Trade Mark

Code of Ethics for Retailers

Building and Loan Associations

Plan Service

Friday January 18th

Election of Officers

Unfinished Business

New Business

Resolutions.

The question of traffic service was discussed for the purpose of checking over rates, routing, overcharges, etc., and it was decided that Secretary Boulton should communicate with R. L. Sargent of Ottawa, Secretary of the Canadian Lumbermen's Association, in reference to the extension of the facilities of the Traffic Department of that body to the O.R.L.D.A. and to inquire on what basis such an arrangement could be made.

Geo. S. Zimmerman of Tavistock, Chairman of the Cost Accounting Committee, reported that progress was being made, and that his committee would have a report to present at the annual gathering of the Association on January 16th and 17th. Edmund F. Hunt of New York, Secretary of the Eastern Millwork Bureau, Inc., will be present at the convention and deliver an address on Cost Accounting.

J. C. Scofield of Windsor brought up an important matter in reference to the interior finish being placed in buildings, when the plaster was green. If there was any after defect in the woodwork the blame was always thrown back upon the factory man. It was decided that a slip should be printed and distributed through the O.R.L.D.A. similar to announcements that had been sent out by the Southern Sash, Door and Millwork Manufacturers Association of Atlanta, Ga. The slip reads as follows:

DANGER

LOSS

TROUBLE

ANNOYANCE

Don't store or erect inside trim, sash, doors, millwork, or any kind of seasoned lumber in a building unless the plastering is thoroughly dry

Damp plaster will swell, warp, blister, twist, shrink and otherwise damage or ruin seasoned material.

Follow this advice and you will get a better job.

Southern Sash, Door and Millwork Manufacturers Ass'n. Atlanta, Ga.

Copies of this slip will be sent by retailers to contractors, architects and others.

The question of insurance was introduced by the Chairman, Mr. Shirton. He said insurance was a big item and large premiums were being paid, and if there was any profits they should revert to the retailers themselves. Several took part in this discussion. It was decided that it would be advisable to have a survey made of the retail yards of Ontario with a view of obtaining the lowest possible rate from insurance companies. A. D. Hardy of Ottawa will be communicated with in connection with the matter of a survey.

Mr. Scofield stated that the chief of Windsor department appeared on his premises the other day and asked that the whistle be blown as a fire alarm. The men in the plant, who are thoroughly trained, turned out quickly and efficiently and in one minute and thirty-two seconds 200 feet of hose was laid, the water turned on and every man at his place. There was no one in the factory who knew beforehand that a test was to be made.

Methods Employed in Getting

Logging, Driving, Towing Operations in Bringing White Pine Logs to Georgian Bay Sawmills

By W. R. Haddow

The spacious dining room of the camp

One of the oldest and most widely-known lumber organizations in Ontario is the Victoria Harbor Lumber Co., Limited, Toronto, whose sawmills are located at Victoria Harbor on Georgian Bay. The company was founded by the late John Waldie, a veteran lumberman, whose sons are today well and worthily carrying on the enterprise. F. N. Waldie is the president; R. S. Waldie vice-president and W. E. Harper secretary. The earlier lumbering activities of the company were in the French River district but since 1907 they have been conducted farther north.

The "North Shore," or that region tributary to Georgian Bay above the French River, became, after the supremacy of the Ottawa Valley had passed, the most important pine producing country in Ontario. The French River, and the Wahnapiatae, from about 1885 yearly carried large drives, while many smaller streams contributed their smaller quota of logs from the easily accessible lands. These logs at first were mostly exported across the lake to the state of Michigan; but later, when the embargo on the export of logs cut on Crown lands came into force, in 1898, a large sawmill industry was developed at the foot of Georgian Bay, and the logs were towed to be milled in Canada.

The decline in the total cut of pine in Ontario coincides with the diminution in the output from the "North Shore" as, indeed, a large part of the total cut came from this section. Fire has, of course, been very prevalent, particularly on account of the early prospecting for minerals in this region, so that with the heavy lumbering or the last thirty years, the stock of pine timber has been greatly depleted. Production of pine in the Western District of Ontario, of which the "North Shore" is most important has been as follows: 1918—197,181,151; 1917—187,349,181; 1916—266,853,223; 1915—338,941,457; 1914—287,608,122; 1913—280,810,994; 1912—373,393,923; 1911—464,040,275; 1910—469,093,674 board feet

In 1907, the Victoria Harbor Lumber Company purchased from the Saginaw Lumber Company, of Michigan, timber berths 83, 75, and 68, Algoma, which are tributary to Lake Panache, some twenty miles south west of Sudbury. The Company also owns berth No. 175 which is on the Blind River about one hundred miles west of Sudbury. The approximate area of berths 83, 75 and 68 is eighty-three square miles, and of No. 175, thirty-six square miles, a total of one hundred and nineteen square miles of timberland controlled by the company, on which ground rent and fire tax is paid. Berths 83, 75 and 68 are contiguous and were originally covered for the most part with pure pine stands, of unusual density, studded here and there by small areas of hardwoods. Being situated on Lake Panache, which drains through the Whitefish River to Georgian Bay, and has over a thousand miles of shore line, every part of these limits is readily accessible, and logging has been comparatively easy. Berth 175, on the other hand, contains pine of a much poorer quality, and is in a country very difficult to log, on account of its rough topography.

The Logging, the Drive and the Tow

The Victoria Harbor Lumber Company does its own logging, conducts its own drive through the Whitefish River, which it has controlled since the purchase of the limits on Lake Panache, and does its own towing to the mills at Victoria Harbor one hundred and twenty-five miles from the river mouth. Thus, besides the manufacture of lumber at the sawmill, and its sale, there are three distinct departments of work, the logging, the drive and the tow.

The company built three mills at Victoria Harbor, each of a capacity of 125,000 b.f. per day. One of these was destroyed by fire, and at present only one of the other two is operated. The amount of timber immediately available to the company, and the risk involv-

ed in holding it, would seem to have dictated the policy in regard to production capacity.

For the purpose of this report, a camp in township 83 was visited. Since 1907 nineteen separate operations have been carried on in berth 83, with as many as four camps operating in one year. These have been conducted from ten camp sites. Two years' operation from each camp has been the rule, though topography and differences in the stands of pine have caused variation in the amounts of timber accessible from the different camp sites. The camp occupied last winter had already been in use two years, and has still several seasons' cut ahead of it. The township will then be stripped of merchantable pine. The timber cut from this camp during the winters 1919-20 and 1920-21, is as follows:—

The camp which the company finds most efficient consists of around one hundred men. From 75,000 to 150,000 logs are cut during a season.

Last year the labor situation has been fairly satisfactory from the operator's viewpoint. There is little settlement in the region west of Sudbury, between the C.P.R. and Georgian Bay, on account of the lack of agricultural soil, so that labor for the camps is all brought in from outside. Before and during the war, labor was sought at the employment agencies in Montreal and Ottawa, as well as in Toronto and smaller Ontario towns. Labor secured in this way, at considerable expense, often proved very unsatisfactory, many men jumping after a few days' work, and frequently those remaining would be unused to the work and unskilled in the use of any wood tools. Usually some men from the mills spend the winter in camp, and some are secured from the settlements and villages toward Sault Ste. Marie. These men are the most efficient.

Standing timber in Township 83 has escaped serious fire damage. This may be partly due to the fact that it is naturally protected from invading fires by Lake Panache, Bear Lake, and others, which form in circle around it except on the southern side, which is open.

How Fire Ranging is Done

Fire protection is administered by the Ontario Forestry Branch. The Ranging District Headquarters is at Webwood, where the chief ranger of the district is stationed during the fire season, which is from May to the end of September. During the summer of 1921 seventy-five men were employed as fire rangers in this district, and 76 fires were reported, none of which became very serious before being brought under control. The direct protection afforded to Township 83, consists of a launch patrol on Lake Panache, and the control of settlers clearing fires by the permit system. A fire tax of one cent per acre is imposed on the limit holders.

Although the fire protective organization has undoubtedly reduced the fire hazard, it has not eliminated it, and there is constant danger of great loss to the operator through fire, which, in cases where a large initial investment has been made, compels the operator to cut rapidly.

The country southwest of Sudbury might best be described as a rocky, undulating plain, with a gentle south westerly slope. The valleys and ridges have a general N.E. and S.W. trend; the valleys

Victoria Harbor Lumber Co's. Depot, Lake Panache, Ont.

Out Timber on the "North Shore"

Different Departments of the Work Described—Character of Camps, Timber and Country

are frequently lake filled. The general elevation is from 900 to 1,000 feet above sea level. Lake Panache, which lies in a deep hollow, is 772 feet above sea level. The ridges and rounded hills seldom rise more than 150 feet above the level of the surrounding country.

Three forest types were distinguished in the area covered by the operation,—(1) Pine; (2) Spruce; (3) Mixed (conifers and hardwood). No stand of pure hardwood occurred in the vicinity of recent logging, but patches are not uncommon throughout the region, and some of the river bottoms are almost entirely pure hardwood.

No basis for the determination and classification of forest types seems as yet to be generally accepted. Viewed from the standpoint of site factors, based on soil and topography, the types distinguished would be, swamp, bottom, slope and ridge. The first of these occupied almost exclusively by black spruce comprised an insignificant part of the area being logged, a few acres being found in the south western part of the tract, at its junction with the area logged last season.

Pure Pine Covers Most of Area

The bottoms or the low-lying land not actually swamp, support a mixed forest composed mostly of red and white pine, black ash, yellow birch, spruce and cedar with balm of gilead, balsam, hemlock, maple (hard and soft) tamarack and white elm as secondary species named in the order of their apparent frequency of occurrence. There was no distinct change in forest type on the slopes as compared with the ridges. The whole area, with the exception of the swamp land, and the low-lying land, occupied by the mixed forest, was in practically pure pine.

The mixed type, which occupied the low land around Bass Lake, was logged for the pine which it contained. The largest trees of both red and white pine were found in the region, a specimen of the first named species measuring 32 in. on the stump, with a ring count of 200 years at this point. A slightly smaller stump was 195 years old. The amount of pine per acre in this type would average about 7 M b.f. of which perhaps a half would be red pine.

Pure pine forest covers most of the area, as stated above. It is evenly aged, 185 years on the stump, unusually close, with a general top level of 100 feet. As a result of the density of the stand, the boles are clean and slender, with low taper, slightly less than two inches in a 16-foot log, according to the scalers. The percentages of red and white pine were very hard to determine, as the red pine occurs throughout the stand in irregular scattered patches. It was conspicuously dominant on the rockier and more exposed sites, as well as on some of the smaller swampier soils. White pine, however, was considerably more numerous over the whole area, and frequently occurred pure. The cut was expected to contain one-third red pine.

One acre, an average of the better stocked white pine areas, gave the following volumes, Doyle Rule, based on the volume tables prepared at Burwash Lake.

White Pine 14,000 b.f. Red Pine 1,000 b.f.
The largest tree on this area was 17 in. D.B.H.

The scale of all the logs cut on an area of 6.11 acres gave the following figures:

Busy cookhouse, showing the cook and cookees

No. Logs	Scals (Doyle) Bf.
White Pine 1922	39,805
Red Pine 1163	34,425
Total	74,230

Thus there were 6,500 b.f. white pine and 5,600 b.f. red pine per acre, or 12,100 b.f. per acre in all. There were besides, 51 spruce logs. This represents an average of the red and white mixture. It would be safe to say 20,000 b.f. could be found on a single acre. The average log content is low, on account of the small size of the timber. The above figures give 21 b.f. for the average white pine log, and 29 for the average red, Doyle Scale.

Good Character of the Logs

The logs are for the most part very sound. This is especially true of the red pine, which does not seem to be subject to fungus diseases to as great an extent as is the white pine. It was only in the butt logs of the larger trees that rot was found. There seemed to be two kinds, a brown rot, which appeared at the centre, and worked out, leaving finally a hollow and also a punky rot, in color, which spread irregularly through the wood.

An interesting and important feature of the pine forest was the understorey of balsam and spruce, which trees were rarely of large size, but were everywhere numerous, except on the most exposed sites, often forming an almost complete cover over areas several acres in extent. On the single acre described above there were 150 of these trees, most of which were balsam, from 5 to 20 feet in height. Pine reproduction was conspicuous by its absence. Only around the lake shores, and in occasional openings in the forest, were any young trees seen above the snow.

On account of the location of its mills in relation to the limit, the Victoria Harbor Lumber Company must carry over a large number of logs in its booms in order to keep the mill running until the season's cut arrives in July. Logs floated in Panache Lake in the spring do not reach Victoria Harbor till July or later. Ordinarily from six to ten million feet of logs are kept over the winter.

The number of logs taken out of the woods in a season is determined by the available supply, the mill capacity and the cost of delivery in relation to the selling price of lumber. Last year's operation was undertaken on account of the existence of the camp in a tract of easily logged and good timber, when operations had been carried on during the two previous seasons, and from which, under the present wage scale, logs could be profitably delivered at the mill.

The Equipment for Log Hauling

From September 1st, fourteen teams of horses were required by the camp, one team being used exclusively for toting. After hauling commenced, early in January, six more teams were secured from Whitefish. The horses used would average 3,200 lbs. per team. The daily ration consists of 1½ bushels of oats, and about 50 lbs. of hay. During the summer the horses are pastured at Whitefish, on 200 acres of land which the company owns.

The following road equipment is used: 16 set of logging sleighs, 1 iron plow, 2 wooden plows, 2 sprinklers. The logging sleighs are of the useful camp construction type, made of yellow birch, and very substantial. The iron plow, assembled in camp, has rutters attached. The wooden plows are camp constructed, and are drawn by one or two teams. Sprinklers used are 14 feet x 8 feet x 3 feet, holding about 200 gallons. One team is used to draw the sprinkler. Jammers are used for log loading. These are constructed in camp. The skidding tongs are manufactured by the blacksmith, from rod

View of the houses, storehouse, alligator and other equipment

One of the camps, showing from left to right, barn, sleeping quarters, dining room and cookhouse, sleep camp at the right and storehouse in the middle

iron. Skidding chains are 12 feet long and are cut and fitted with hooks in clamp.

When hauling commenced there were about 20 inches of snow on the ground. The roads had been kept fairly open by occasional plowing, and a week before hauling was to begin the sprinklers were put on the roads. In order to improve the grade on the hill on the western haul road, over which the loads were drawn by donkey engine, two hundred feet of log bridging was constructed. This was done while the last logs were being skidded. The structure was a simple network, the logs roughly notched, and poles placed on top for surface.

Some difficulty was experienced in getting the roads in shape over the lakes. Although there had been some very cold weather, the early and heavy fall of snow had kept the ice from thickening. When more snow came, at the end of December, the lakes flooded and it was several days before the deep slush froze. Fortunately, this happened before preparations for hauling had been completed.

How the Scaling is Done

Scaling is by the Doyle Rule. It was done by three men, a head scaler, an assistant scaler, and a tally man. A detailed report of the cut is prepared by the head scaler, and in the spring, a copy is sent to the company head office, and to the nearest crown timber agency office. This is a sworn statement, and it is on these specified amounts of timber that the dues are paid to the government. A copy of the cullers return is appended.

The timber on the area being logged is small. As a result of the use of the Doyle Scale in measuring the logs, a large overrun occurs at the mill. A comparison of the scale by Doyle Rule and by International rule (taper $\frac{1}{2}$ inch in 4 feet, saw $\frac{1}{8}$ inch) of the logs found on five representative skidways, is made below:

	No. Logs	Scale b.f. (Doyle)	Scale b.f. (International)
White Pine	1,922	39,805	97,235
Red Pine	1,163	34,425	73,245
Total	3,085	74,230	170,480

The International Scale thus gives an overrun for the Doyle of 129.6 per cent on these logs.

The river improvements were purchased by the Victoria Harbor Lumber Company at the time the limits were secured. These consist of seven slides around falls and rapids on the stream. Between

Some white pine on the limits of the Victoria Harbor Lumber Co. Note the under-storey of balsam and spruce

these places the water is practically dead, and there are three lake expansions of considerable size, of which Long Lake is the largest. On these lakes the logs are either boomed up and towed or swept across, if the wind is favorable. The company has two alligators and a tug for handling the logs on Lake Panache and on the drive. These boats were built on the lake, the machinery being hauled in from Whitefish. The alligators were supplied by West, Peachey & Sons of Simcoe, Ont. One is propelled by double screws and the other by paddle wheels. The one with screw propulsion has proved to be the most satisfactory. They burn wood or coal, have a 4-foot x 8-foot boiler and a single 10-inch x 12-inch cylinder geared down to the paddle or screws, and they are provided with a 36-inch drum carrying about half mile of $\frac{3}{4}$ -inch cable, which can be geared to the crank shaft.

Collecting Logs Lost in Towing

The logs reach Georgian Bay about July 1st. With favorable weather conditions, they are towed to Victoria Harbor 125 miles from the river mouth, in about ten days' time. The tugs used for lake towing are 100 feet in length, and carry a 14-foot screw. An ordinary tow consists of 50,000 pieces, so that two tows are usually made up from a winter's cut. A double boom is placed around the logs, each containing 300 sticks. The tug carries a steam winch, with one mile of $1\frac{1}{4}$ -inch steel cable.

There is always some loss of logs during the tow. With good weather, less than 500 logs may be lost but in unexpected storms occur, there is a possibility of losing the whole tow, and serious loss is certain. Weather conditions are carefully watched before making the trip.

In order to collect lost logs, a co-operative picking company was formed by the operators on the north shore. It is entirely a non-commercial concern, the object being to return the logs to the owners as cheaply as possible. The price charged is determined by the operating expenses. During the summer of 1920, 48,000 logs were collected by this company.

In considering the future of the area in Berth 83 logged last winter, the most important factor to remember is that it may or may not be burned. Judging from the appearance of the rest of the township, one is inclined to believe that the chances of its surviving for many years without being burned, are pretty slight. If it is burned, the fire will be severe, on account of the unusually large amount of brush resulting from the close stand, and practically

Scaling logs at Lake Panache for the Victoria Harbor Lumber Co.

The alligator of the company tied up for the winter

nothing will be left. The area around the storehouse on Lake Panache was logged in 1908, and burned over shortly afterwards, to the edge of the standing timber. Today there is nothing on the area but a scattered growth of poplar here and there, with occasional patches, a few square rods in extent of fir, spruce and pine, in the hollows. The region between High Lake and Bear Lake is in the same condition. A fire absolutely destroys any possibility of a naturally regenerated commercial forest, and frequently any kind of forest.

The Danger of Fire From Bush

Two conditions exist on the logged-over tract which are of paramount importance in indicating its future, first, the relatively small amount of pine left, and second, the large amount of brush left on the ground. The fact that the brush constitutes a grave fire danger has already been mentioned. The remaining forest cover is composed mostly of inferior trees of inferior species. A few possible seed bearing pines, less than 6 inches, D.B.H., are left standing, but will probably be wind thrown or broken. There are also occasional mature spruce, hemlock, fir and cedar, which in places form small dense groups, these species not being cut, but forming only a very small part of the original stand. There are also specimens of yellow birch, black ash, poplar, elm and other hardwoods, which form, perhaps the most important part of the remaining mature trees.

A striking feature of the remaining woods is the number of small balsam, hemlock, and spruce, which had existed as a suppressed understorey beneath the pine. The removal of the pine has caused very considerable damage to these trees, but there still remains a sufficient number to influence very appreciably the composition of the future stand, if they respond to their release from suppression.

The pine does not reproduce under its own cover. In occasional openings in the forest and around the margins of lakes, satisfactory pine reproduction was observed, but, generally speaking, there is no young pine under the old stand. The possibility of reproduction from seed on the ground, after the removal of the crown of old trees must be considered. After a good seed year, such as occurred last year for red pine, a satisfactory restocking might take place.

In order to observe the conditions of unburned logged-over land, a large island in Panache Lake, which has been logged about fifteen years ago, was visited. Besides the growth of inferior species, which had been left at the time of logging, there were in openings and especially on the higher parts of the island and also close to the shore, dense stands of young red pine, and occasionally white pine, indicating that where conditions had been favorable for germination and development, natural seeding had resulted in good reproduction.

The brush on the ground is probably disadvantageously to the securing of reproduction from seeding. It offers very serious mechanical obstruction, and though conserving moisture, shades the ground to an undesirable degree. Brush also encourages the development of harmful insects and of fungus diseases, which makes its existence undesirable.

How Reproduction May Be Encouraged

Assuming that it is impossible or undesirable to change radically the present logging methods, reproduction could be encouraged and a potentially valuable forest maintained by improvements in the present system which would seem to be practicable and desirable.

The first of these is disposal of brush which, for silvicultural reasons might best be done by lopping during poor seed years, and lopping and piling if the operation took place during a good seed year. On account of the fire danger, however, disposal of brush by live burning is, probably, the procedure which should be recommended.

Another desired improvement in the logging practice is that the trees left by the operator, especially the well-established understorey of balsam, hemlock and spruce, should be spared the very serious damage to which it is now subjected, by the taking out of the pine. Many of these small trees are carelessly destroyed in felling and swamping, which if spared, would improve the present cover of the soil and form a part of the future forest.

If fire is kept out of the area, a mixed forest will mature here, largely balsam and hemlock, in other places largely birch and maple. Though much inferior to the stands now being removed, with the development of certain economic conditions, which will result from an increasing population and diminution of the timber supply, this future stand will help to satisfy a certain need and will have preserved the soil factors which some day it may be possible to utilize more carefully.

United States Faces Pulpwood Shortage

The National Bank of Commerce in a recent issue of "Commerce Monthly" in an article "Chemical Pulp and Wrapping Paper" says:—

"Canada ranks after the United States and Sweden as a producer of chemical pulp, with an output of 148,000 tons in 1913. Twenty

per cent. of this amount was exported, chiefly to the United States, Japan, United Kingdom and China. The remainder was manufactured into paper by the local mills. By 1922, production of chemical pulp had increased to 690,000 tons, and Canada is regarded as the main source of the world's future supply.

"During the war period, Canadian exports of chemical pulp to the United States were stimulated by the exclusion from the American markets of the larger part of Scandinavian products, through lack of shipping, and its being placed elsewhere. Since the war, although imports from Europe have grown to large proportions, Canada has retained its position as the leading foreign source of American imports of chemical pulp. Imports from Canada in 1922 were more than seven times the volume of the pre-war period."

In referring to the possibility of exhaustion of accessible supplies of pulpwood the bank says:

"During recent years and even before the war the matter was brought into special prominence as the result of the increasing cost of pulp. This is due in large measure to the gradual exhaustion of the more accessible and therefore cheaper supplies of pulpwood. The demand for wood-pulp is increasing, not only for paper making but for the manufacture of a large variety of widely different materials and articles such as artificial silk, wallboard, shipping containers, and utensils for dairy products.

"The United States has, in times past, imported considerable quantities of pulpwood from Canada. However, there is at present an embargo on exports of pulpwood from Canadian crown lands (covering about 85 per cent. of the forest area), while recent legislation empowers the government to prohibit all export of pulpwood. To meet the situation caused by the depletion of domestic pulpwood timber as well as Canadian embargo, the paper and pulp companies of the United States are conducting a campaign for Federal and state forestry legislation to encourage timberland owners to reforest their cut-over lands so as to create a continuous supply, but so far have received small encouragement. Under present conditions the United States faces a pulpwood shortage for half a century. With a decreasing supply of pulpwood in the United States and an increasing demand for paper, this country is the leading importer of pulp. Imports of chemical pulp for 1922 were three times as great as average imports for the pre-war 1910-1914 period."

Hauling Heavy Boiler Over Rough Roads

Charles Murphy, who operated a sawmill at Steenburg, Hastings County, has had a satisfactory season in the lumber business. His mill is five miles west from St. Ola station on the Central Ontario railway and turns out hardwoods, hemlock and railway cross ties. This season Mr. Murphy installed a new boiler, and in moving it from the siding to the mill site, it was necessary to cover a dis-

Upper view—Hauling heavy new boiler to the mill of Chas. Murphy at Steenburg, Ont. Lower—The arrival of the boiler at the mill ready to be unloaded

tance of several miles over rough hilly roads. It required three teams of horses for the heavy haul. The boiler is a 60 h.p. one and weighs about six tons. The accompanying picture shows the boiler on the way to the mill and also the old and the new one in the mill yard. Mr. Murphy has been in the sawmill line for several years and is well known throughout the Hastings County district.

Sudden Death of Thomas Phillips

The late Thomas N. Phillips, Toronto

Thomas N. Phillips, wholesale lumber representative, who died suddenly at his home, 19 Edgewood Crescent, Toronto, after a brief illness from blood-poisoning following the extraction of an ulcerated tooth, was widely known in the lumber arena. He had resided in Toronto for the past three years, managing for two years the eastern branch of Timms, Phillips & Co. About a year ago he opened an office for himself, specializing in British Columbia forest products. Mr. Phillips was born in Kenora in 1883, his father being engaged on some of the most important western contracts on the C. P. R. After attending school in Kenora and latterly McGill University for a couple of years, Mr. Phillips secured a position with B. L. Mather who was taking out a large quantity of ties at Vermilion Bay, fifty miles east of Kenora, and had a tie mill at that point. He spent some time at river driving and later was employed in the mill. Next he became identified with the Rat Portage Lumber Co. where he was engaged in both the sawmill and planing mills. Then he entered the office of the firm and specialized in the selling end. After some three years with this organization he took up his residence in Vancouver where he was associated with the Burley Lumber Co., with whom he remained for a long period. Subsequently he became identified with the Imperial Trading Co. and in 1912 became a member of the wholesale lumber firm of Timms, Phillips & Co., which until a year ago conducted an extensive business throughout Canada. In his younger days Mr. Phillips was a widely-known hockey player in which arena he won national fame. He always stood for what was fair, square and upright in sport and business life. The funeral which took place on December 3rd. was largely attended by representatives of the industry and floral offerings from various lumber bodies bore tribute to the esteem in which the late Mr. Phillips was held. The remains were taken to Hamilton for interment. A wife and three small children, are left to mourn a kind father and respected husband. There was no man of the younger generation in the lumber industry more highly regarded for his genialty, kindness and probity than "Tom" Phillips.

Will Cut Heavily Burned Areas

The Quebec limit holders and shippers, sanguine of better times ahead, are preparing for a busy 1924 season. Besides this demand for lumber from the American market, it is expected that there will come a big demand from the United Kingdom. The spirit of optimism prevails and as a consequence it has been decided to make a larger cut than usual in the woods. Of course, this applies in toto to the burnt areas, with a view to saving as much timber as possible before the borer, the budworm and fungus set in their work of destruction.

Chief Forestry Engineer of the province of Quebec, G. C. Piche, is responsible for the statement that one of the biggest cuts ever recorded in the province of Quebec is expected for the season of 1923-24. There will be approximately 30,000 men employed in 3,000 lumber camps, and to cope with the situation the staff of forest rangers have been doubled in number who will look after the interests of the Government and visit the camps to observe that only the proper timber shall be cut.

A feature in labor in the lumber camps this season is the employment of Czecho-Slovakias. Nearly 1,000 were brought to Canada from abroad under contract to work in the woods this winter by pulp and paper manufacturing interests. These importations, who landed at Quebec, are a splendid aggregation of physical manhood who intend to settle permanently in Canada.

An Englishman, who has worked for nine years in lumber camps, commenting on the arrival of Czecho-Slovakias to engage in logging operations, said there was no reason why such labor should not be brought over from among the unemployed in England, Ireland and Scotland. He said this could be accomplished if British manhood were educated as to the true conditions of lumber operations and made to understand that the work was congenial as well as healthy,

in contrast with the opinions they are allowed to entertain that a job in the camps is a hardship. If British farm laborers were educated to the truth as regards logging activities, there would be no need to bring in foreigners as thousands of Britishers could be induced to come out and work in the Canadian woods during the winter and take up farming in the spring. This is a question that should be studied in the interest of immigration as well as a precaution against scarcity of bush labor, and would, at the same time, regulate the rate of wages on a fair and equitable basis.

Secures Judgment in Claim for Timber

Alex. McCannell, of Saugeen Township, who is a former warden in the county of Bruce, brought an action recently at Walkerton against William Eldridge of Amabel, near Wiarton, and F. Beumer, of London, for \$1086.74. Mr. McCannell was awarded the full amount of his claim.

The case arose over a bush in Saugeen Township which Mr. McCannell had sold to the defendants in 1919 for \$4200, the balance due him on this transaction being \$1086.74. Messrs. Eldridge and Beumer were at that time doing business under the name of the Wiarton Lumber Co., which was later converted into a limited stock company known as the Wiarton Lumber Co., Limited. This firm later assigned.

The defendants were alleged to have tried to show that McCannell's debt was against the insolvent company as he had accepted cheques from the latter at different times in instalments on the bush. The plaintiff, however, showed that his bargain was with the two men, who were in partnership, and, on their failing to appear, he received judgment against them in full of claim and costs.

English Interests Acquire Big Limits

A block of timber lands located in the basin of the Manicouagan River, the continuation of the Manicouagan and English Bay Export Co., limit, of a total area of about 2,500 square miles, were sold by public auction in Quebec to English interests, said to include Lord Rothermere, who already have large areas of timber limits on the north coast. F. W. Clarke represented the buyers. The sale was presided over by Hon. Honore Mercier, Minister of Lands and Forests and both from the price involved and the development projected as a result, was the most important deal in many years.

There were only two bidders, the Ontario Paper Co., of Thorold, and English interests represented by Frank Clarke. One bid was 5 cents over the stumpage dues of \$2.70 and whatever amount they may be in the future, by the Ontario Paper Co., of Thorold and the other 10 cents, putting the price of stumpage dues at \$2.80, which was made by Mr. Clarke and accepted.

The successful bidder will have to pay \$1,000,000 in three instalments. The first on the day the contract is signed, the second in one year and the third in two years, interest in the meantime being at the rate of 6 per cent. In addition, the ground rental is set at \$6.50 per square mile, making a total of \$16,000 per year.

The successful bidder also will deposit \$50,000 to guarantee the fulfilment of the conditions, which include the construction of a pulp and paper mill in one of the largest centres of the province.

In addition to those blocks of land, small lots were sold in Metapedia region, the bidding in the latter case reaching \$3.30 over the upset price of \$2.70. This area, however, was very small and was adjudicated to Mr. Galland. In the Gaspé Peninsula 3½ square miles of land were sold at a price reaching 25 cents over the original \$2.70. In this case the successful bidder will have to pay \$1,000 per square mile as a bonus. Burnt timber in the Abitibi region was sold at 5 cents over the stumpage dues of \$1.50 but the sale of several of the lots was withheld.

Glimpse into The Ancestry of Trees

An interesting and instructive book entitled, "Tree Ancestors, A Glimpse Into the Past," has been issued by Williams & Wilkins Co., Baltimore, Md. The work, which is by Edward Wilber Berry, Professor of Paleontology in the John Hopkins University, is admirably printed and suitably illustrated. Prof. Berry gives a clear viewpoint of the marvellous history of present-day trees, the wonders of their present state and the greatness of their history. "Tree Ancestors" possesses all the charm and interest of a novel, is written in plain, understandable language and with the avoidance of all unnecessary technical terms. Not every tree, of course, is included in the work but rather those whose history is better known, but not worn threadbare.

Alphonse Ousts His Competitor

Human Interest Tale of the Experiences of a Travelling Salesman on His First Call Upon the Lumber Trade in the East Just Before Xmas

By A. T. Williams

I ALWAYS remember Alphonse Gagne. That was not his proper name, of course, but it will do as well as any other. Alphonse lived in a town on the old Intercolonial Railway, between Rivière du Loup, and Campbellton; its exact location is of little import. A good natured soul was Alphonse, and the first time I met him I almost threw my arms around him and shed tears of joy, because he could speak English.

I got into Alphonse's town one morning just as it was breaking daylight, from Montreal. It was a beautifully clear winter morning about a week before Christmas. Snow covered the ground to a depth of about twelve inches. The few men standing around the station, mostly sleigh drivers were muffled to the ears, and in the frosty air their breaths gave one the impression that they were all furiously smoking "tobac Canadien."

They swung their arms backwards and forwards; slapping their hands on their sides, to keep warm, toed the line, which railway companies have told cabbies "They shall not pass," and shouted and gesticulated to attract the attention of the three lone commercial travellers that stepped, reluctantly, out into the frosty air.

Two of these travellers were, unmistakably, French. This was their regular territory. They worked out of Quebec, and "made" all the towns along the lower St. Lawrence. The other man had the appearance of being a stranger to the town, and this impression was borne out when he addressed one of the drivers in English.

Two of the travellers climbed into one of the sleighs, and the stranger followed them, then changed his mind, remarked that it might be as well to distribute the meagre passenger list among the various competing cabmen as far as possible, and jumped into one of the other sleighs.

Down the Street, about a quarter of a mile to the main Street, around the corner by the big stone church, and along to the hotel St. Laurent,—pronounced "Sain Lauron,"—I believe, the bells on the horses jingled gayly in the frosty air. The main thoroughfare skirted the St. Lawrence, and this mighty river flowed and forbidding, its blackness enhanced by the snow covered shore, on towards the gulf. Later in the day, perhaps, if the sun came out the stream would look more friendly.

The big box stove in the hotel made the place comfortable, and several husky men in mackinaws and moccasins lounged around while they filled their pipes preparatory to setting out to their work. Cheery greetings were exchanged between the proprietor and the new arrivals, two of whom were well known to him. The English speaking stranger was greeted in his own tongue and made to feel at home, his brother travellers, who spoke English fluently, assisting in the welcome.

The two Frenchmen had some telephone calls to put in, for customers in nearby towns, so the other man went in for breakfast. He was alone in the dining room, the regular boarders having already breakfasted, and there being few salesmen on the road on account of the nearness of Christmas. The menu, in French might as well have been in Italian, as the English speaking guest could have read the one as easily as the other. Laying it down, after a perusal which told him nothing, he smiled at the petite French maiden and told her to bring him poached eggs on toast. She returned his smile with a "Oui, monsieur," and came back with steak and potatoes. In Quebec all waitresses have a motto, "When in doubt give him steak and potatoes."

After breakfast I, (you will probably have guessed by this time that I was the English speaking stranger) set forth to find the office of the Pierre Lumber Company. I wandered up and down three or four streets, without finding the

object of my search. Foolishly, I had neglected to ask for directions at the hotel. The town being quite a small one, I had thought that a lumber company's premises would have formed an important part of the landscape. I was mistaken, however, as it was nowhere to be seen.

Stopping several gentlemen on the street to make inquiries availed me nothing. They could not understand me, and I could not understand them. Mentally, I resolved that if I once found the gentleman I was in search of I would certainly learn to speak French before I again put my foot in Quebec province.

I pondered the situation, and decided that if there was one man in the community that should be able to speak English it was the station agent, and I was no far from the station by this time.

My reasoning was good. The station agent comprehended perfectly, and directed me to a house nearby, which didn't seem queer to me at the moment. When I opened

Come, come Alphonse, this is Christmas Eve. You don't want to kick a man when he's down, do you?

the door and walked in, I began to think the station agent was having a joke at my expense. It was, obviously, a private house, and I could not get out again without being seen, because a swarm of children rushed out into the hall in the course of their play, and stopped their noise, as if the earth had swallowed them up, when they saw a strange man in the house. In an attempt to explain my presence, and calm their fears, I asked the children if this was the office of the Pierre Lumber Co. They gazed at me blankly, and then one of them ran shouting for his mother, and mother came in and confronted me.

Had I been able to speak French it would have been a simple matter to apologise, and retreat. As it was, how on earth was I going to give the lady a reason for intruding in her home. As I hesitated she called her husband. The two of them waited for an explanation, while a cold sweat ran down my spine. I had visions of policemen, and spending the rest of my life in gaol, owing to my inability to speak French. Again I swore with all my heart to make a diligent study of the French language if ever I got out of this situation alive.

It was plainly up to me to say something, so I addressed the lady and her husband in English, intimating that I was in search of the office of the Pierre Lumber Company, but it meant nothing to them. They still awaited an explanation of my unseemly intrusion. An inspiration came to me. Frantically, I searched through my pockets, and pulled out a letter written on one of the company's letter-heads, and held it up for their inspection. Wonderful inspiration! They

both started to talk at once, and as nearly as I could learn from their gesticulations, some person had cut his throat.

What was I to do? Would I take the next train out, go back home and tell the boss I could not find the outfit? Or, had I better go out somewhere and see if I could bag an interpreter?

While I was turning these possibilities over in my mind a light step sounded on the stair, and a young man came bounding down. He paused as he saw a stranger and, taking in the situation, he said: "Were you looking for me."

And that is how I met Alphonse Gagne, manager of the Pierre Lumber Company. The sound of those simple words spoken in the English tongue were music in my ears.

Alphonse welcomed me cordially when I had explained the purpose of my visit, and told me that he had just been having a shave before going down to the hotel for breakfast. This, apparently was the throat cutting tragedy I had pictured. Fortunately, it was not as serious as that.

The Pierre Lumber Company used one of the front rooms downstairs in the house for an office, their yard being down the railway track about half a mile. They were planning to erect a mill and put in several fast feed matchers and resaws for milling-in-transit. I was there to try and sell them the equipment for this mill.

After we had discussed the matter in a preliminary way in the office Mr. Gagne asked me if I would excuse him while he went for his breakfast. He suggested that I take a walk down to the mill and look the situation over, and he would join me after he had appeased his hunger.

There wasn't much to see, so I climbed the fence and crossed the railway track to what looked like an opposition outfit directly opposite. Entering the mill I inquired for the boss, and that gentleman was pointed out to me. He was busily engaged setting up a matcher which, on closer view, had all the appearance of being a recent installation. A few feet from it was a resaw which, also, bore all the evidence of being just newly set up. This seemed to be an instance where the old proverb, "Better late than never," did not contain much comfort for me.

I stood watching the boss for a minute or two as he tinkered away with his machine, and then ventured to ask him if he were planning to add more machines to his equipment. He looked up at me and said: "Parlez vous Francais?" For answer I shrugged my shoulders, and stated in English that, unfortunately, I did not. Immediately he bent down to his work again and ignored me. I stood for a few minutes to see if I was to get any further attention, and while I did so one of the men came over to help the boss. They held a short conversation together, the outcome of which was that they looked at me and laughed, and continued their work.

Realizing that I seemed to be an unwelcome guest I departed with what dignity I could muster, with the sound of further amusement in my ears. The impression I got was that the boss had told his man what an awful lot of nerve I must have to attempt to do business with him without being able to speak French.

I returned across the railway track the way I had come, and waited for Alphonse. He arrived in a few minutes, and I related my experience. Alphonse laughed in his jovial way, and said: "Don't worry monsieur. That fellow thinks he has stolen a march on me, but he will be out of business in a very short time. I've got him sewed up tighter than the ice on a river."

Gagne impressed me as being a shrewd business man, in spite of his jovial nature. It was evident that he was acquainted with the lumber game in all its aspects. He had been brought up with it, knew the woods and milling end of the business first hand, and had travelled for some time for a firm of wholesalers in Montreal. He would be a hard nut for an opposition firm to put anything over on.

I did not understand the full significance of his remark about having his opponent "sewed up" until later. We were returning along the railway track to the office when Alphonse asked me if I would mind if he made a call at a house nearby. He explained that if he got it off his mind

now it would save him making a trip back later in the day. I was agreeable, so we went along to the house he had indicated.

It was a frame house, typical of towns where lumbering is the chief industry. The door was opened by a man well along in years, and we were invited into the living room. It was plain that Monsieur Gagne was considered a fairly important person, by the reception accorded him.

I was, of course, unable to follow the discussion, it being conducted in French, but it must have been satisfactory as the old gentleman produced a bottle of good brandy, and glasses. We drank to a successful culmination of "the deal," this much being explained to me by Alphonse, although it mattered little to me why we were drinking. The day was cold, and the brandy good; what more could one ask?

After we had left and were walking down to the office Monsieur Gagne burst into laughter, and slapped me on the back. I waited for an explanation of the joke, and Alphonse continued to chuckle. Then he let me in on it.

"I have an option on twelve acres of the old man's land that I want for piling space," he said. "I go along and discuss the deal with the old fellow every other day, and I think I will keep on renewing the option as long as his brandy lasts," and he continued to laugh heartily.

"But the biggest joke," he continued, "is that the twelve acres I've got the option on are across the railway, surrounding Chalfont's mill. All the land he has is that what his building stands on. He hasn't even got room for a siding, and he knows it now. He thought he was putting something over on me by rushing up a building and getting in machinery as soon as he heard we were going to put in a dressing plant. But, while he was sweating over his building and machinery, I grabbed off the land. The only thing he can do now is sell out to us, or move his outfit out of town, and he hasn't got enough money to move," and Alphonse laughed again at his competitor's predicament.

I was in town with Monsieur Gagne for several days, preparing plans and data relating to the new mill. The situation was this. If Chalfont realized the hopelessness of his position and approached Gagne with a proposition to sell out the latter could dictate terms. If these were accepted it would mean that the Pierre Lumber Company would require one less matcher and resaw. On the other hand, if Chalfont chose to be stubborn, it would simply mean that he would be left with a mill and machinery on his hands which he could not use, and the Pierre people would proceed to carry out their original plans.

I had accepted an invitation to accompany Monsieur Gagne to Montreal to spend Christmas. He had a young daughter at school there, and he wanted to pass the yuletide festival with her as well as to consult with the principals of his company. It was understood between us that, if Chalfont did not come to terms before that time, the deal would be closed in Montreal, and we had our reservations arranged for two nights before Christmas, which would get us into the commercial metropolis on the morning preceding Christmas eve.

Chalfont knew of Monsieur Gagne's plans, but he hated to knuckle down and acknowledge that he was beaten. Desperate as his position was, he continued to squirm around in search of a way out. But it was just as Alphonse said; he had him sewed up tighter than the ice on a river. He had taken up his option on the twelve acres of land around Chalfont's mill, and there was not another site available in the town.

Time passed quickly enough till Christmas. We were busy in the daytime, preparing the hundred and one details connected with the equipping of a new mill, to place before the principals of the Pierre Lumber Company when we reached Montreal. In the evenings we smoked, played cards and talked. Alphonse took all his meals at the hotel, so I had an interpreter and was doing very well from the food standpoint.

Twenty minutes before train time, on the night of our departure for Montreal, Monsieur Gagne and I were walking up and down the platform, killing time until our train should

pull in. Alphonse had by this time abandoned any hope of his fellow competitor seeking to come to terms, and had decided to let him stew in his own juice.

Personally, I felt rather sorry for the fellow, in spite of the fact that he had given me the cold shoulder, and considering, also that it meant a larger order for me if he stuck to his guns.

It was a bitterly cold night, but we chose to remain out of doors rather than tarry in the stuffy waiting room, filled as it was with women and crying youngsters. We took another smart walk down the platform, and were striding briskly back to be sheltered from the biting wind when Alphonse spied a figure hurrying to meet us. "Well, well," I heard him say, "here's our friend Chalfont at last. He left it pretty late; well, he can go to the devil now."

Chalfont approached us, and intimated to Monsieur Gagne that he would like to speak to him alone. They walked over to the shelter of the station, and as I stood some yards distant I could hear sharp exclamations in French.

They only had time for a short conversation, when our train steamed in, and we were off for Montreal. Alphonse did not speak about his talk with Chalfont, but I gathered from his manner that he was put out, and had turned down whatever proposition the latter had to make.

The night was Christmas eve, and we sat at dinner in the Windsor hotel, in Montreal, Monsieur Gagne, his

daughter, his two principals, and myself. It was a trifle early for the usual Christmas festivities, but we were dining early because Monsieur Gagne had promised to accompany his daughter to the school she was attending, where a Christmas tree was to be decorated. The other two men had promised to return home to their families as early as possible. The dinner before us was an excellent one, and the spirit of "Peace On Earth, Goodwill Towards Men" permeated the atmosphere.

Monsieur Gagne was relating to his principals the progress he had made in his preparations for the new mill, which was to be started as soon as the weather permitted. He told them, also, of Chalfont's proposition, made at the station a few minutes before the departure of the train, the evening before. The proposal, as outlined, meant a loss to Chalfont, but nothing in comparison with the loss he would sustain if he did not sell out, and the deal would be a profitable one for the Pierre Lumber Company.

You could gather from Alphonse's tone in communicating the information that he was disposed to let Chalfont hang on to his mill now as a souvenir of his folly. But, wiser counsel prevailed. "Come, come, Alphonse," said the president of the company, "this is Christmas Eve. You don't want to kick a man when he is down, do you?"

Alphonse's joviality asserted itself, and calling a waiter, he asked for a telegraph blank. He hastily scribbled, "Accept your proposition. Merry Christmas. Gagne," and we continued with our dinner.

Forest Resources of Canada Should Not Be Pawns on Political Chessboard

. By Fred Brown

The desire of the commonweal in forest conservation is to obtain natural blessings supplied by the forest, such as water supply, moderation of temperature, and rainfall.

To conserve our natural resources, the lumber, pulp, and other wood consuming industries, and our water power, Canada's supply of saw timber has been estimated at eight hundred billion feet.

Since then about one hundred and fifty billion feet of saw and pulp timber fell victims to the demon fire or about two and one-half times as much as the annual consumption of lumber.

We have used during that time nearly one hundred and forty billion feet of lumber and ties which amount represents only forty per cent. of the timber actually cut. Responsible for this wastage are market conditions, logging methods, and human greed. Today, no one knows approximately the remaining stand of timber, as during the past years damages done by insects, fires and windfalls, etc., have not been taken into consideration in our forestal inventories, but we know now that the available supply is receding from the centers of consumption, which means a high cost of manufacture and transportation. The fire hazard will be with us until doomsday, unless, we are able to prevent the periods of draught, but we can and we must prevent forest fires at all costs. One man, one organization, or a half dozen organizations are almost powerless to accomplish anything as long as the people of Canada are looking upon the forest as something to get rid of, as an encumbrance of the soil.

The present generation remembers the time, when our continental railways burned their way across the continent regardless of the actual and potential timberwealth destroyed, and to eradicate that erroneous conception it will tax the combined efforts of the press, the pulpit and schools. Fires in virgin forests are not so destructive as fires in second growth. Second growth has a potential value beyond calculations. Fire-killed wood in mature forests has a commercial value provided the facilities are at hand to mill and to market the wood.

The greatest menace to our forests and second growth is the permit dodger, the careless tourist, the irresponsible

hunter and fisherman. On the face of these facts it is absolutely necessary to issue permits to those desiring to enter the woods during the danger season, and when a culprit is brought to book put sentimentality and petty politics aside, and impose the jail sentence provided by the law. A little law enforcement for the reason of the novelty thereof will act as a deterrent.

The provincial government at present are spending about twenty to twenty-five per cent. of the forest revenues for protection and perpetuation of the forests. This amount is inadequate and unjust.

The government in following such a policy acts similar to the spendthrift who consumes the interest of his patrimony as well as a portion of the capital until sometime he lands in the bankruptcy court. No government has a right to spend from seventy-five to eighty per cent. of the revenue derived from forests until such times as the perpetuation and protection of the forest is absolutely assured.

While the embargo on pulpwood is a necessity from the standpoint of conservation and while it is most desirable for the maintenance of our national independence it can only be a palliative and not a panacea for the ills of Canadian forestry.

The remedy for the ills of Canadian forests are fire protection, regeneration and cutting for an annual sustained yield.

A few dollars well spent in fire protection will work wonders. As it becomes evident to the public that the forest wealth of the Dominion is receiving consideration from our governments, the people will naturally turn to reforestation.

To plant large areas now, say five or six million acres per year cannot be done, there is not enough money in the country to undertake a job like that at the present time.

To inaugurate a policy of cutting for an annual sustained yield is rather in the province of the Dominion government, the government being the logical custodian of the people's remaining forest wealth. The Dominion parliament has the power to create forest reserves and on those the policy of cutting for sustained yield could be tried out.

Embargo on Pulpwood is Leading Issue of Day

Editor of the Canada Lumberman:

I am very glad of the opportunity that is from time to time afforded me by some correspondent, who has little knowledge of what he writes, to further emphasize the alarming situation that is facing Canada with regard to its rapidly diminishing wood supply. Ellwood Wilson, one of Canada's foremost foresters, says that this is not only the most important pending question before the Dominion today, but is one for Canada alone to solve.

The figures pertaining to the amount of pulpwood now standing in Canada, as quoted by a correspondent in a recent issue of a Canadian newspaper, are, to say the least, very wide of the facts. The makers of these figures frankly state that they are a mere guess at best. In any event, we in the East are only concerned with the stand of spruce and fir pulpwood in the four provinces of Ontario, Quebec, New Brunswick and Nova Scotia. In this connection, I will quote from this same Dominion Forestry Branch document, referred to by this correspondent, which states that these Eastern Provinces contain 552,210,000 cords of all kinds of softwood, but as only two-thirds of this amount would be merchantable pulpwood, this would be reduced to 368,000,000 cords and deducting 80,000,000 cords for inaccessibility, we get 288,000,000 cords of accessible pulpwood in these provinces.

Accepting these figures, which I shall challenge later on, and allowing for an annual cut of 5,000,000 cords and a far greater depletion caused by insects, fungi, fire and wind, the situation is critical indeed. In support of this I need refer only to what has happened along just one line of railway in Canada, the Transcontinental between La Tuque and Cochrane, where, by an actual cruise, it was found that 20,000,000 cords of standing wood were destroyed by fire while the railroad records for the same period show that only 1,000,000 cords of all kinds of wood products were shipped, showing a loss of twenty cords by fire to one cord utilized. This, with the loss of 200,000,000 cords by the spruce budworm in these same Eastern provinces, will enable the people to understand how rapidly we are losing our wooded areas.

Over Optimistic Regarding Supply

The reason I challenge some of the figures that have been published in Government and Conservation Commission reports, which, as I stated before, even the makers say are largely mere guesses, is because some of these, by an actual cut, have proved to be over-optimistic as to the supply.

The exhaustive aerial survey made a year ago by the Ontario Government over the James Bay Watershed is a case in point. This territory has always been considered as a part of our future wood supply, while this survey revealed the fact that the wood resources of that region were a mere myth, as that whole area consists of either burns, muskeg or scrub, with merely narrow strips of wood along streams and in patches too small and remote to make commercial operations possible. As one member of a party who recently flew across that country stated, "the only visible resource was duck shooting."

The amount per acre that some of this small pulpwood timber will actually cut out has been alarmingly small, deceiving some

Mr. Barnjum Thinks That Royal Commission Should be Disbanded and that Public Money Spent on Investigation of Conditions Which Are Already Self-Evident, is Worse Than Wasted—Cry About Settler Having no Market is Misleading

of our very best foresters and lumbermen, as evidenced by actual operations in this small northern growth. I can refer to instance after instance where this has occurred. The most recent case that has been brought to my attention was at a hearing in Halifax, when the president of the company holding the "Big Lease" in Victoria and Inverness counties, Cape Breton, publicly stated that the territory covered by this lease contained only three million cords of pulpwood, while in the report of the Conservation Commission, it is stated that this lease contains twelve million cords. This estimate of twelve million cords, which was later corroborated by some of the best foresters and lumbermen of Maine, was made by the late Dr. Fernow who was probably the most noted, capable, highly educated and trained forester of his day. As it was also stated by this same witness that there was no budworm on this tract, and that only a matter of one hundred and fifty thousand cords had been cut since this estimate was made, it shows clearly that the amount called for in this report fell short just seventy-five per cent and this is only one instance of several of the same nature that has recently been brought to my attention, proving conclusively that the estimates in this small growth are almost invariably too high.

Ignoring Some Concrete Facts

In their frantic endeavor to fool the Canadian people, some of these American representatives, with their large figures, totally ignore the fact that we have lost two hundred million cords of pulpwood through the ravages of the budworm alone, while our forest fire loss is increasing from year to year, the present season having shown the greatest loss from this cause in Quebec and New Brunswick that has been experienced in the history of these provinces. There is not a water power or water shed in the Dominion that is not already suffering from a lack of forest cover, many rivers having been lower the present season than ever before, and many wells and springs having failed for the first time. This drying up of the earth's surface is accountable for the alarming increase of our forest fires, and is a phase of the situation that our puny politicians at Ottawa will be forced to recognize.

Judging from the "testimony" given by some American pulpwood dealers at these "hearings," one might be led to believe that with the advent of an embargo at least one-fifth of all the newspapers in the United States would go out of business,—while as a matter of fact, the only change that will be brought about will be the erection of at least sufficient new pulp mills in Canada to make good the deficiency in the unmanufactured wood that is now being exported. In order to provide a market for what actual farmers or settlers wood is now leaving the country,

not more than six mills of a hundred tons capacity each would have to be built.

No other solution would be open to the American newspapers whose owners care not whether their pulp or paper is manufactured one side of the line or the other, provided they can only be assured of a sufficient supply. They must have the paper, and if this cannot be obtained through the export of raw wood, then they will be only too glad to take it in pulp or paper.

All this hue and cry by the American pulpwood dealers for the farmers' and settlers' rights is pure bunkum. The farmer and settler will be very appreciably benefited by an embargo, as he will not only have ample home competition for his wood through the advent of, I am afraid, too many new mills, but he will have a home market for his farm produce and labor for himself and family as well.

Settler Benefited by Embargo

The Government of Ontario has already received applications for locations for ten new pulp mills, which causes the efficient Minister of Lands and Forests, the Hon. James Lyons, to remark that if all of these requests are granted, he does not know what will become of the pulpwood supply of the province. Several new pulp mills are projected in the provinces of Quebec, New Brunswick and Nova Scotia. If the mere agitation for an embargo has already produced such substantial results, I will leave the people to judge what the announcement of the actual embargo would accomplish for the welfare of Canada. As soon as the embargo goes into force, it will then become immediately necessary to take up the question of a reduction in the cut, better fire protective measures and a real forest conservation programme.

With reference to the embargo, it is with much pleasure that I quote what Sir John Willison, as President of the Canadian Reconstruction Association says, as follows.—

"We must either manufacture the raw materials of Canada within the country—thus employing labor, rearing new communities, providing local markets for merchants and producers, strengthening the national structure, making the back of Canada strong to bear its accumulating burdens—or the sons of Canada will follow these raw materials out of the country, establish themselves in foreign industrial centres, and more and more from year to year, the national burden will become heavier and the same issue of the great political experiment in which we are engaged become more difficult and uncertain. Every sound economic and natural reason, therefore, demands that the raw materials of Canada shall be manufactured in Canada, and the Canadian people protected in the possession and control of their natural inheritance."

Thinks Commission Serves Uselessly

The opinion and corroboration of such outstanding loyal Canadians and high authorities as those whose names I have the honor of referring to below will carry greater weight with the people of Canada than the mere rhetoric of a man engaged in the foreign export of his country's most vital natural resources.

The Right Honorable Robert Laird Borden, Sir Lomer Gouin, Sir William Price, Sir John Willison, J. R. Booth, Dr. C. D. Howe, Edward Beck, G. C. Piche, Ellwood

Wilson, Robson Black, and hundreds of others, including the editors of all of Canada's best newspapers, who have given the question serious study.

If the Government at Ottawa does not possess a sufficient sense of propriety to now issue an order disbanding the worse than useless waste of the people's money, the

Royal Pulpwood Commission, then the members of this Commission, out of self-respect, should hand in their resignations and decline to any longer continue participating in these farcical proceedings.

Frank J. D. Barnjum.

Montreal, December 3, 1923.

Automobiles or Homes—Which Will It Be?

In any city and even in the smaller towns a common sight nowadays is to see the old vacant lot filled with second hand motor cars, bearing attractive price tags. In most cases the tags are more enticing than the cars.

The dilapidated old speed wagons represent thousands of dollars that were poured in to the hands of the automobile manufacturers by people to satisfy their desire to roll independently along the highway of life, and live by the well-known hand-to-mouth existence.

These paragraphs are not intended to pull to pieces the pleasure derived from motoring; neither are they questioning the merchandising methods of the automobile salesman; but they are definitely intended to sew a few seeds for thought throughout the allied building industries.

It is not as hard to-day, to sell the average man the idea of owning an automobile as it is a home. But this does not mean that the purchaser will get more satisfaction from the car than he will from a home. Everybody knows, whether he admits it or not, there's more satisfaction in owning a home. It is true that motor cars can be purchased cheaper than a home, but it is also true that the same money could be the means of a start towards buying a home—and a guarantee of future happiness. Because joyriding is sensational it has emptied many a man's pocket book, who could ill afford it, and left him nothing but a car with a depreciation at the rate of thirty per cent yearly.

The automobile manufacturers have naturally played up the superficial benefits of having a car to drive around in. They have sold cars to people on the installment basis, who do their housekeeping in two rooms, and spend the remainder of their time in the automobile. These people drive about town like well-to-do citizens and to look at them, one would imagine they owned a ten roomed home. Many earnest folk, who are really better off than these gasoline fiends, and are trying to pay for a roof over their heads, see their neighbors driving around in cars and

become discontented. They sell their homes and put their savings into a car, just to be in the swim.

It is a common thing to hear men engaged in the executive ranks of the building industry declare that the automobile is ruining their business.

We must admit that the automobile has a strong pull on the people's money, but the home building and allied industries should have an even stronger pull, because, for the money spent on a home, more satisfaction is derived.

Must Use High Power Methods

Unity and enthusiasm are needed in the home building industry, together with the very necessary help and backing of the electrical installation and appliance people, the furniture and furnishings trade, plumbing and heating trades, etc., because without the erection of homes, these businesses would languish. High powered methods must be used by the building and allied trades because they are competing with a high powered competitor—the automobile manufacturer.

The people, who are now spending their hard earned dollars for automobiles, instead of homes, can be definitely brought to see the many more advantages and satisfactions of owning a domicile to that of a motor car, if the building trades will stand together and be persistent in bringing the home owning idea and all its consistent comforts and advantages before the public mind.

As an example how viewpoint will decide a person's mode of living, when the writer was a small boy he had a great distaste for brushing his teeth. It was much easier and less bothersome to run out and play ball without cleaning his molars after meals. One day his father called him and said: Your mother tells me you are not brushing your teeth. When you grow up to be a man, do you want to have dirty yellow teeth like the Chinaman? If you let your teeth get very dirty, you won't be able to get them nice and white when you go to parties, and that would make you very much ashamed.

From that day on my teeth were brushed regularly because my father had wisely ap-

pealed to my sense of pride, which is after all the chief reason why people like to be healthy and clean.

It is the same with selling homes. Many people who are now giving practically no thought to their old age, but just living for the present, can be made to see the true value of owning a home, by appealing to their sense of pride.

If the allied building industries would get together for the purpose of carrying on a vigorous campaign for the education of the public toward taking a deeper appreciation in the home, the effect would not go unrewarded. The sign board would be an excellent method of bringing the message of home owning before the public. The illustration accompanying this article is not meant as a work of art, but merely to convey an idea that would have far reaching results.

Waste in the Woods Must Stop

"Waste in the Woods" was the subject of an interesting address recently delivered by B. T. McBain, assistant general manager of the Nekoosa-Edwards Paper Co., Port Edwards, Wis., before a gathering of paper mill superintendents at Springfield, Ohio. The speaker dealt with the subject in a plain, pointed way and what he says regarding waste of timber in the United States is applicable to many sections in Canada.

In the course of his remarks Mr. McBain said:—"The more I study this subject of waste, the more I am convinced that we have only scratched the surface of the possibilities. It is waste in every department of the industry that keeps us in the loss column more than it is market conditions and price. We must, therefore, put our own house in order before we can expect to get much encouragement from the outside. If there is a profit in our waste, why not save that waste and find the profit?"

Now as to the subject of this paper. I was surprised to find on investigation that from eight to twelve million acres of timberland are burned annually in our good old United States. I was further surprised to learn that 78 million cords of firewood are burned for fuel by farmers alone each year in the United States alone.

I was further surprised to find on checking up the amount of wood consumed by American pulp mills, that not to exceed 12 million cords are used annually by the industry in the United States and part of this is imported from Canada as wood and from other countries in the form of pulp. From these surprises I have summarized the following:

Eight to twelve times as many cords as we use each year are burned in timber fires if an acre only produces ten cords of wood.

Seven to eight times as many cords as we use each year are burned for firewood by farmers.

Pulpwood requirements are only a small percentage of the annual legitimate consumption of wood for all purposes.

One to two times as many cords of wood are lost to the forest each year from insect life and disease.

Therefore, the waste in the industry in cutting, in shipping, in wood yards, in process and from every other point of view is only a very small part of the waste in wood, and while I am not asking that we let up in our efforts to conceive waste from the point where we take a hand in the wood business, I am asking that we all take more of an interest in the prevention of the greater waste that results before we in the pulp industry come in contact with the matter at all.

Christmas Eve at Camp Four

(Continued from page 50)

convulsively, as though what they would do to this upstart would be—plenty.

English Jack had removed his coat, folded it carefully and placed it away in his bunk. At French Joe's bellow, he stepped down from the deacon-seat, for his bunk was on the hurricane-deck, and walked directly into the enemy's lines, where he side-stepped the big Frenchman's lethal rush, slapping him smartly on the cheek as he swept past.

"Youah manners are simply disgustin', old deah," he said mildly.

Joe returned to the fray with murder in his eye and erupting censorable language, the burden of which was his intention to remove certain vital organs from the internal economy of "Eenglesh," and burn them in the stove. English Jack, looking if anything, a little bored, made no reply.

Ready hands transferred moveable objects to out of the way corners, and to the tops of bunks, for this looked like it would be the real thing; and the men crowded around to see the show.

"Keep back an' give 'em room," ordered Angus McLeod, restraining Spike Taylor by the neck-band of his shirt from becoming an active ally of English, who was dancing on tip-toe around French Joe, eluding the clutch of his powerful arms, and as a profane admirer remarked,—"hittin' him when an' where he liked."

"Just wait till Joe lands on him or gits holt of him," said another, "five bucks says English don't last ten minutes." The bet was immediately snapped up by Spike Taylor.

A fight was practically an every-day occurrence and gave an opportunity of keep-

brisk even when French Joe's backers offered odds of ten to one.

Joe had ceased swearing and had settled grimly down to business. Although his face was cut on both cheek-bones, and one eye was rapidly closing, while bruises on his ribs screamed of the Englishman's punching ability,—he had not yet succeeded in laying a finger on the elusive enemy who kept up his maddening will-o-the-wisp tactics; but when he did—. He growled deep down in his throat, in the primitive profanity of the man-animal before articulate speech had become a usable implement, and the crowd waited for the fatal moment when English Jack would slow down from lack of steam and come within the reach of those great hairy arms.

But, if some of the spectators were fearful on Jack's account, he, himself, did not seem to be worrying as he stepped lightly about, alert for openings that he might use in working French Joe's face over more in accordance with his own ideas.

"O man, he knows how to handle himself," Spike Taylor enthused, as English Jack took a glancing blow on the left shoulder in order to bore deeply into Frenchy's bread-basket with his right. "Hit him where he lives, English; that's the stuff," he yelled.

And so the fight raged without rounds or intermission; English Jack unfurried, his breathing normal; his only mark of conflict the bleeding knuckles of either hand: French Joe with face badly bruised and cut, one eye in mourning, and his wind equipment working in hoarse gasps; till English decided that it had gone far enough, and, changing a feinted side-step into a forward leap, smashing money in circulation; but this looked to be a one-sided affair and the betting was not

ed his right into French Joe's solar plexus, doubling him up and bringing out the point of his jaw to meet a 'haymaker' left that Spike Taylor swore afterwards had not travelled over ten inches.

Whatever the distance may have been, it certainly did the business, knocking the big fellow on top of the stove—dead to the world. Down came the stove-pipe, and Joe's slumbering form was pulled away from the wreck of the heater, appropriately decorated with soot as a sombre tribute to the fall of the mighty.

Joe's return to consciousness was, probably, accelerated by his first having struck the stove in a sitting posture. It was only a minute before he scrambled to his feet. He looked around and grinned, though the pain of the facial contortion brought tears to his one open eye.

Grabbing up the tin dipper from the bunk where it had been tossed, he strode over to where the can had been placed out of harm's way, and poured out a drink. Then, turning, he walked the length of the room to where English Jack was bandaging his bleeding knuckles.

"Eenglesh," he said, "By gar, I lak you have leetle drink wit me."

"Sure, Frenchy, old top, glad to," returned English Jack heartily. The crowd, Joe included, looked on admiringly while English took his medicine.

"By gar, she's fight lak bunch dam wile cats," said Frenchy, "I lak you be ma fren'."

"Fine," said English Jack as he clasped the extended hand, "you teach me how to use an axe, and I'll teach you how to fight. How's that, Eh?"

French Joe slapped him on the back.

"She's be de bargain, by gar," he said.

Effect of Rate of Growth

(Continued from page 48)

the ring is obviously the part of the wood which furnishes the most strength. Large pores have so little actual woody material that from the standpoint of strength they are little more than air spaces. The weight and strength of the material is determined by the summer wood. The medium growth wood represented by the middle photomicrograph, Figure 3B, has a narrower band of pores in the spring wood than the fast growth specimen with the wide ring. Moreover the summer wood of the specimen showing moderate growth rate occupies a larger proportion of the annual ring than the corresponding heavy wood in the wide-ring sample. Having a greater proportion of the annual layer composed of heavy summer wood, the moderate growth is heavier and stronger than the fast growth material, the broad rings of which contain a large proportion of pores and the summer wood of which is likely to contain many thin-walled fibres.

Ring-porous wood of extremely slow growth may be quite low in strength. Examination of Figure 3C, showing ash with very narrow and numerous rings, indicates why this is the case. After the first row of spring pores is formed, subsequent growth has been insufficient to add many fibres and the annual ring consists so largely of air spaces that the strength of the wood is much below normal.

The same kind of variation in strength as occurs in the ring-porous woods is sometimes found in diffuse-porous woods, but is usually less extreme.

Figure 4 represents the variation in strength of some diffuse-porous species of various growth rates.

Figure 5 (A, B, & C) showing a diffuse-porous wood (paper birch) indicates that these variations are related to anatomical features just as in the ring-porous woods. The amount of space occupied by pores in diffuse-porous woods tends to vary but little whether the annual rings are wide or narrow and the slight change in pore content explains, therefore, the relatively small differences in strength.

In fact the strength of some of the hardest and heaviest of North American diffuse-porous woods seems unaffected by changes in growth rate. The strength of yellow birch is but little altered by changes in the rate and very slow growth hard maple is undiminished in strength, the wood showing no appreciable difference from normally rapid growth wood in the volume occupied by pores. There

seems to be no doubt however that abnormally fast growth is never conducive to strength.

From tests made at the Forest Products Laboratories of Canada, the following conclusions may be drawn.

(1) The strength of any kind of wood is approximately proportional to the density of the wood.

(2) Hardwoods are heaviest usually when they have from 6 to 15 rings per inch.

(3) A hardwood with less than 4 rings per inch is below the maximum in strength value for the species.

(4) Variations in strength of hardwood timber of the same species but of different rates of growth are due to variations in the "pore content" of the wood.

(5) Variations in "pore content" are greatest in ring-porous woods and are of some consequence in the soft diffuse-porous hardwoods but are least noticeable in the hardest diffuse-porous woods.

(6) Ring-porous hardwoods and some of the softer diffuse-porous hardwoods decrease in strength as the growth rings narrow beyond 15 to the inch.

(7) The hardest diffuse-porous woods are least affected as regards strength by changes in growth rate.

The Cut in Quebec Will be Heavy

The lumber operations in the province of Quebec are progressing exceedingly well with the continuation of the fine weather, stated Gustave G. Piche, chief forester, and one of the biggest cuts ever recorded in the province is expected for the season of 1923-24.

In all there will be about 30,000 men working in the various lumber camps during the winter, if the different companies have been able to obtain all the help they required. This figure is an increase of 5,000 over the number given about a month ago as being how many would work in the camps this winter. The camps themselves will number about 3,000, it was stated.

To cope with the situation the staff of forest rangers has been increased by fifty per cent, and now number around 160 men, who will look after the interests of the Government and visit the camps to see that only the proper timber shall be cut. It is expected that all of the 3,000 camps in Quebec will be visited twice a month by the forest rangers.

Some Reflections at Yule-tide Season

Another year is closing in the lumber business and at this festive season the thoughts of men turn to the joys and delightful associations of Christmas time rather than to business cares, potential profits and quick turnovers. Holiday greetings are being extended on all sides and the spirit of "Peace on Earth and Goodwill to Men" is surcharging the atmosphere and creating kindlier feeling, greater happiness and wider generosity than is manifested at any other time.

The lumber business has often been described as a game that is full of speculation, uncertainty, struggle and triumph. In it, true exponents of the industry find their chief delight. Happy is the man who discovers fun in his daily work; if he does not, he will get but little enjoyment out of life. Most men are in the lumber line because they love it and are anxious to see it grow and become established on a firm pedestal. Supplying the material needs from which homes are built, is one of the greatest vocations of the present period.

It is well, however, for men at times to detach themselves from every-day duties and anxieties and reflect upon the blessings which have attended their efforts during the past year. While results may have fallen short of expectations, there is much to be thankful for both in personal affairs and in the realization that Canada is to-day in a much better shape from an employment, industrial and financial standpoint than many other countries. Her people are contented and happy and her citizens for the most part, industrious and thrifty, while her outlook in the larger affairs of world activities was never more luminous.

This, however, is not a dissertation upon trade topics or statistics. It is more in harmony with the thought that each one is entitled to the fullest measure of health, happiness and prosperity, coupled with the wish that good fortune may attend their particular ventures and the great lumber industry in general during 1924.

While there is rise and fall in the volume of turnover, prices and production, it must be remembered that back of all the lumberman has a high calling. His perspective must be wide and his sympathies deep. There is no finer study than that of forest products, and the successful manufacturer and distributor of them cannot possess too much knowledge relating to their growth, conversion and transportation. The question ever present is that the retail lumberman to-day occupies a big place in the plans and purposes of any community. From doing business on low-lying ground, in an out-of-the-way location and tumble-down premises, he has come to the forefront as an important factor and real force in the progress and stability of any centre. He believes in service and has broadened the scope of his activities until now the yardman might be dignified by the name of "home builder." He can do much by example and precept to encourage the construction of more and better houses in his town or city.

The trend is in the direction of better and more commodious dwellings. Any man, who fosters this spirit and points the way to more sanitary and comfortable domestic surroundings, is doing a work worth while. He, who gets behind the home campaign and assists in giving it impetus and strength, is a real live resident and of proportions, ample enough to rejoice in the welfare of his fellows and point with pride and satisfaction to the attractiveness and prosperity of the place in which he does business.

The community, which is one of homes, rightfully takes its place in the forward movement of the present day. The home-builder becomes a solid, substantial citizen, vitally interested in everything that relates to the advancement and reputation of the place where he resides.

It is interesting to note that last year 65 per cent of the occupied homes in Toronto were owner occupied. This is a splendid showing and a remarkable feature of the houses in all the leading cities of Canada is the preponderance of the substantial, brick structures. In these, surrounded by loved ones and in the association of friends, many a joyous hour will be spent at the present Yule-tide occasion. Around the family hearth scenes of other days will be recalled, reminiscences related and the spirit of unity, friendship and affection will have full sway.

So far as all members of the trade are concerned, they cannot get a better grasp of affairs during the coming year and start off under more propitious circumstances than by attending conventions, for January is a month of trade gatherings. They should not come to remain silent so much as to help and take part in the discussion, give their own views and listen to what others have to say on topics of mutual interest. By rubbing shoulders with the other fellow and coming in close personal contact with him, one is able to realize that, after all, the great human family is sound at heart and co-operative in spirit. The other fellow, too, has the same trials and troubles, as we ourselves, and, in mingling with ordinary mortals, we learn to appreciate the honorable, upright and true, and to discard the base, the mean and the false.

Longer Lengths in Hardwood Lumber

In birch, maple and elm a larger percentage of 14 and 16-foot lengths is being asked for by consumers and wholesalers and more particularly for the export trade. At a dinner arranged by W. Frank Oliver, of Toronto, (who is a director of the N.H.L.A., and held recently at the National Club Toronto) many Canadian members of the National Hardwood Lumber Association were present to discuss conditions in general. Among those present were W. C. Boadway, of the Wood Sales Co., who is experienced in operating, and John J. Miller, of the Anderson-Miller Co., who is a former National inspector and familiar with wholesale conditions. They were asked to frame a letter for publication in the "Canada Lumberman" urging, among other things, that, owing to the increasing call and great demand in hardwoods, particularly birch, maple and elm, that every jobber, mill man or lumber manufacturer do his utmost as far as possible, without entailing loss of timber, to largely increase the number of 14 and 16 ft. lengths.

By doing so it will not only be a decided benefit to consumer, but will be of equal or greater advantage to operator, as logs in 14 and 16 ft. lengths, although containing a much larger number of feet than shorter lengths, can be logged about as cheaply, which also applies to the milling end and the handling of lumber, both in mill yards and in course of inspecting and shipping. A larger percentage of these lengths would increase the cuttings in the No. 1 and No. 2 common, by one or two pieces in each board.

It is well known that many mill men are not giving the attention they should, to trimming and edging their lumber properly. Some have the idea that something is gained through increasing the width by leaving waney edge and also the length by not closely trimming. This is, of course, an entirely mistaken idea and instead of increasing, lowers the grade and value. Trimming and edging should be looked into more closely than at present. Bark is not even classed as a sound defect and so edging and trimming all bark from stock, would raise the grades 5% or more.

It is found that considerable stock, after being seasoned, runs thin of the thickness intended, owing to not enough being allowed for shrinkage when the lumber is sawn. Mill men should watch this important feature.

A. C. Huber, of Milwaukee, Wis., who for several years was associated with the Adams River Lumber Co. Chase, B. C., will arrive in Toronto shortly to look after the eastern interests of that firm as well as the Associated Mills, during the illness of J. T. Todd who was badly injured recently in a street car collision in Windsor. W. F. Lammers, managing-director of the Adams River Lumber Co., is accompanying Mr. Huber to the East.

Clever ball players from the woodworking plant of James Davidson's Sons, Ottawa, who have carried off many trophies in local league contests.

Woodworking Boys Who Can Play Ball

The aggregation of smart baseball players in the accompanying illustration represent the team of James Davidson's Sons, Ottawa. The boys won the championship in the Manufacturers' League during the past season.

The Manufacturers' League was formed in Ottawa in the summer of 1922 and consists of six teams,—McAuliffe-Davis Lumber Co.; J. R. Booth, Limited; James Davidson's Sons; Ottawa Dairy; British American Bank Note Co. and the Mortimer Co.

The members of the Davidson team have an enviable record and one that any club might well be proud of. In the summer of 1922 they played 56 games and lost only 3, thus capturing the championship of the League for the Reach trophy presented by the Reach Sporting Co. of the United States. The boys came up this year and repeated their past performance playing 30 games and losing only 3, and carrying off the Spanding trophy put up by Spanding Bros., of New York.

During the past season the Davidson team played off with the Beach Foundry, champions of the Mercantile League, for the Booth trophy donated by J. R. Booth, Jr. They landed the award by a score of 5—0.

The line-up of the James Davidson's Sons baseball team in the picture is as follows:—

Front Row—H. Rathwell, 3rd. base, Smith, pitcher, C. Craig, short stop.

Second Row—Woods, catcher, T. Hammell, 1st base, G. P. Davidson, A. Goulet, 2nd base, L. Fahey, pitcher.

Back Row—E. K. Davidson, Barclay, pitcher, Avotte, left field, W. Munroe, right field, Letang, centre field, J. Hartnett, manager.

Millwork Publicity Committee Meets

A conference of far-reaching effect, namely, the initial meeting of the Publicity Committee of the Millwork Cost Bureau occurred in Chicago lately, at the Congress Hotel. The committee which was created by resolution of the Bureau's ninth annual convention last April is representative of each branch of the industry, as well as of the various regional Millwork associations. Its members have given much study to the matter of collective advertising and this initial meeting was called for the purpose of deciding upon a proper plan of procedure.

F. J. Mose was unanimously elected chairman of the committee and W. P. Flint, secretary. The meeting was then given over to a thorough discussion of the requirements and effects of a national advertising campaign. Every one agreed that the general public knows less of millwork than of any other of the important industries, and that the millwork industry cannot hope to assume its rightful place except by overcoming that condition through the medium of

educational publicity. It was decided that the proposed campaign be directed to architects, contractors, and the general public, and that it be conducted under the name of American Millwork Institute. Because the entire trade is concerned, it was decided also that the whole industry rather than simply the members of the Millwork Cost Bureau, should be asked to participate in the campaign.

A complete prospectus of the campaign will be submitted at the annual convention of the Millwork Cost Bureau next April. The members of the Bureau will then be asked to decide whether the Millwork Cost Bureau shall become the American Millwork Institute, with a department devoted to the publicity campaign, or whether its name and functions shall remain as they are and the advertising program carried on by a separate organization. Meanwhile, in order that the committee may ascertain in advance the appropriate number of firms that will co-operate in the movement, all millwork establishments in the country will receive an outline of the program and will be asked whether or not they may be counted on to subscribe to the campaign fund.

How Trees Can be Colored Many Shades

By feeding dye to the living wood, according to S. Weinberg, a chemist, trees can be colored thirty-two different shades, including apple green, olive green, ebony, weathered oak, and salmon pink.

Experiments with a dye, which Weinberg has discovered, are being conducted in the botanical gardens of the University of Pennsylvania with three trees which have been presented to him by the department of botany.

Introduced into the base of the tree, the dye is diffused throughout the branches by the natural functioning of the tree, Weinberg said. Evidence is furnished by the presence in the botanical gardens of a dark blue tree, a vivid green poplar, and a salmon pink maple.

Assisted by Dr. Herbert Renner, of Germany, Weinberg also has experimented with a purple apple tree in Lansdowne, Pa.

Wood, which has undergone the coloring process, is more durable than the ordinary wood used in the manufacture of furniture, according to Weinberg, who mixes a preservative with the dye solution to be spread throughout the tree. The result, he said, is wood stained through and through, and not only on the surface, so that scratches and dents will not mar its presentability when made into furniture.

The dyeing operation is not a new one, but Weinberg declared that efforts heretofore have not been attended with success. Weinberg's method is to confine the sap to the roots of the tree by a series of borings at its butt. Above this the coloring is permitted to flow in, to be drawn up to the very top of the tree by pressure created.

Embargo Issue Has Tendency to Cripple Trade

On Both Sides of Border Lumber and Pulpwood Dealers Are in Uncertain Frame of Mind Regarding Outcome—Contracts Not Entered Into With Operators

By George S. Kerr, Campbellton, N. B.

Personally I feel similar to the majority of other pulpwood dealers and lumbermen throughout the country as being opposed to this much discussed question termed an embargo.

I have had the opportunity of hearing both sides of this question argued. I mean by both sides, that I have had heard this matter discussed by manufacturers and pulpwood owners throughout Northern New York and elsewhere, as well as the producers in Canada. The question has been brought up on several occasions as to how far the restriction regarding exportation would be involved. If it is, as I understand, that private lands—such as granted and freehold lots will come under this embargo, my opinion is it would be rather drastic and unfair to the multitude of farmers and settlers throughout the Province, who are depending solely upon that source of revenue, and in some cases the only source for their daily bread and butter.

We personally ship in the neighborhood yearly about 30,000 cords of pulpwood from all over the province in lots from one carload to ten carloads or more, having on our list about 75 shippers. These shippers as a rule are small dealers and merchants throughout New Brunswick and Quebec, which in turn buy from a number of farmers and incidentally homesteaders making their yearly required improvements and manufacturing into pulp such wood as is cut from said improvements which is naturally their only source of revenue during the fall and winter months. This is the only bit of encouragement the majority of younger men have to keep them home and on the farm, therefore, we naturally can form an idea of what it would mean to a multitude of people if such restrictions were put into effect.

The opinion I have heard expressed by some, who seem to be in favor of an embargo, is that the American manufacturers would be forced to come to Canada and, at least, build and operate ground wood mills, shipping their pulp to the other side and thus creating a finished product. I have been told by mill owners that it is only in cases of necessity that they buy ground wood in preference to buying the raw material and grinding it themselves, due to the fact that it costs in the neighborhood of \$5.00 per ton to have to lay up this pulp and put it again through their wet machine.

Can Paint Bright Picture Best

I do not know of any commodity whereby a more beautiful and profitable picture can be painted and brought to the favorable attention of the general public than the pulp business and the wonderful possibilities it would have and mean to Canada if such an embargo would be put in force. I have heard one speaker claim that the North Shore would be lined with pulp mills employing thousands of men. It is needless to say that this form of argument is far fetched and any party making such argument is certainly not in possession of all facts.

In the first place we have not sufficient power developed in New Brunswick to induce the American manufacturer to pull up stakes and leave behind the mill in full operation and migrate to Canada. It has been for five years the aim of the Canadian people and government to encourage foreign capital into the country. Today a great percentage of our timber lands and timber operations are owned and held by American capitalists, who have in the past and in good faith invested their money in our country. Would it then be fair on the part of the Canadian government to place restrictions such as are being agitated, without first giving the people that they have in the past encouraged over here, sufficient time and opportunity to find ways and means of bringing their business to Canada. This would naturally take, at least, from three to five years.

My opinion is that the sanest way of handling a situation of this kind would be for the Canadian Government to offer some inducement to the present established manufacturers in the U. S., as well as to others, that may be anticipating such a venture, to locate over here, if the Canadian people have not sufficient capital or enterprise to build and operate mills on their own behalf. It is certainly not to any advantage for the present pulpwood dealer in this country to ship his wood to the United States providing there

was a market in Canada equally as good as the existing one to the other side of us.

It would appear to me that we are endeavouring to force the American manufacturer over here to do something that we are failing to do ourselves. I feel quite certain that, if the Canadian Government could offer American capitalists some inducement and assist them to obtain water power and other facilities in Canada, that we would have no difficulty in getting our share of the business, and incidentally marketing our product in Canada. I would think that the present agitators in favor of this embargo were using a sort of dog-in-the-manger argument, and incidentally curtailing and trying to restrict the only profitable existing market which,

George S. Kerr, Campbellton, N.B.

if put in effect, would cause not only the mill owner in Canada to suffer, but would involve everyone down to the poorest immigrant who is depending upon this source of revenue for daily existence. As sane thinking people they now can see that such an embargo would be a painful realization if they were obliged to market their products altogether in Canada.

In other words the price, which would naturally prevail in Canada if we lost the present American market, would have a tendency to force the present lumbermen and small producer to leave thousands of cords of wood to rot in the woods, due to the fact that the existing demand would be limited, and not sufficient to make it profitable for them to manufacture tree-tops and the smaller lumber which is cut yearly in making slashings for clearing purposes and which to-day is manufactured into pulp and shipped to the United States.

Agitation is Crippling Business

My opinion is that this present agitation regarding an embargo has a tendency to cripple trade and commerce. It naturally has most of the lumber and pulp dealers on both sides of the line in a rather uncertain frame of mind as to what the outcome is going to be, restraining them from making preparations as to future contracts with the smaller operator. It seems to me that the Canadian Government should interest themselves by trying to find a way and means for diverting into pulp a vast amount of forest that has been unfortunately destroyed by fire. The latter is unmarketable as a long lumber product, and only fit for pulp. If some inducement was given to the people throughout the different provinces

to have this burned timber manufactured and shipped as pulpwood, it would naturally save thousands of cords of green standing timber. If this burned wood is not manufactured this year it will naturally be useless and unmarketable as either a lumber or pulp product.

I am safe in saying that the greater portion of the pulpwood shipped from the Province of Quebec, has a percentage of 75% balsam, and the manufacturers on the other side are unable to make a fair grade of paper from this class of wood. They are however fortunate enough to obtain thousands of cords yearly from the Adirondacks, Vermont and other parts of the country to mix with this poorer grade exported from Canada. If this wood was not cut and exported yearly it would only be so much more left in the woods as a prey of the bud worms and other destructive sources.

On the other hand, we must not lose sight of the fact that there are many ways in which our American friends can retaliate if the present discussed embargo was made effective. The friendly feeling existing between Canada and the U. S. at the present time seems to be mutual, and the present existing tariff wall between the two countries is, I imagine, sufficiently high. I think the people of New Brunswick should do all possible to reduce this tariff wall instead of trying to add to it.

Must Have Money to Carry On

Present conditions in New Brunswick are certainly not any too prosperous. The country must have money to pay its obligations and carry on and our greatest source of revenue is the lumber and pulp industry. This is a commodity that can quickly be diverted into capital which, if curtailed by an embargo or export tax, would naturally have a tendency throughout the East to make conditions in general worse instead of better. You certainly must all agree that the average lumberman and pulp man have had sufficient setbacks in the last few years to entitle them to a brighter future if they are to remain in business. Failures, we all must admit, have a tendency to give any Province an unhealthy advertising.

I think that the people of New Brunswick and Canada at large should consider themselves fortunate in having such a favorable market at the south of them, and should do all possible to retain such a privilege. I am of the opinion that any agitation to the contrary will only be forcing the American buyers to open up more friendly relations with the German and Scandinavian people. These people as we must regretably admit can land their products into the United States much cheaper than we are able to on account of the present rate of exchange, low freight rates and such like conditions.

Busy Eastern Organization is Expanding

One of the most aggressive and widely known organizations in the province of Quebec is the Brompton Lumber & Mfg. Co., of Bromptonville, Que., which has built up a splendid business during the last three years. The company which was formerly known as the Tobin Mfg. Co., for ten years, runs a sawmill for about five months of the year sawing some 10,000 feet daily. There is also a lath department which produces about 20,000 pieces daily. In its busy and expanding woodworking plant, the company turns out one

carload of windows, sash and frames daily and 15,000 feet of hardwood flooring, particularly in beech.

There are a number of special lines in which the concern is engaged, such as the famous Brompton, B. C., fir pantries and also the pine kitchen pantries. The Brompton Company supplied all the millwork for the McGill University Medical Building, Montreal, the Sherbrooke Housing Co., Sherbrooke, and the interior and exterior trim for some 100 houses built in 1921 by the E.G.M., Cape Co.

During the winter months the firm puts in a few camps cutting about 500 cords of body wood, 2000 cords of lathwood and 50,000 cedar and other logs. The firm runs a well-equipped planing mill in connection with its varied operations and power is supplied by a 300 h.p. Jenckes Corliss engine. The company has two yards, the upper one being 1,000 feet long and 300 feet wide and the lower yard 500 feet long and 300 feet wide, with private siding, located on the C.N.R. main line between Montreal and Portland.

E. W. Tobin, M.P., who has been a life-long lumber dealer, is president of the company. The vice-president is Pierre Alegre, who has had 25 years' acquaintance in the woodworking line and is head of the factory department. J. O. Asselin, the managing director and treasurer, has had wide banking experience as well as insight into the lumber line. Romeo Lafontaine, who for several years has been in forest products activities, is secretary and sales manager.

The company sells its products to wholesalers and retailers and has obtained a splendid foothold in the Sherbrooke, Montreal and Quebec markets. Delivery is handled locally by means of two National trucks, (six wheels) with two additional 2½-ton trailers each, one Ford truck of one ton capacity and seven horses. The Brompton Lumber & Mfg. Co. deals in Canadian and American lumber of all kinds and believes that the outlook for the coming season is particularly promising.

Veteran Lumberman Dies at Biscotasing

One of the oldest lumbermen operating in the Algoma district passed away recently at Biscotasing in the person of Patrick Shannon, who had been in poor health for some time. He was known throughout the northern country in connection with extensive bush activities which covered a long period.

Mr. Shannon was in his 76th year and, when 14 years of age started life in the shanties. He worked for several firms in the Ottawa Valley and some 30 years ago located in Biscotasing. He was in business in company with the late Robert Booth under the name of Booth & Shannon, which firm subsequently became P. & J. Shannon. The firm sold out their sawmill and other interests in 1923 to Pratt & Shanacy, of Midland.

The funeral of Mr. Shannon took place in Pembroke and was attended by many representatives of the industry. Mrs. William Burke, Toronto, is a daughter of the deceased lumberman, and John Shannon, of Sudbury, is a son.

The passing of Mr. Shannon marks another breaking of the link in the chain of pioneer sawmill men who have joined the silent majority. He was held in the highest respect and no greater tribute can be paid the departed than to quote the words of his employees that "the word of the boss was as good as a government bond."

Teacher—"Jonny, give me a sentence using the word 'diadem.'"

Jonny—"People who drink moonshine diadem sight quicker than those who don't."

General view of the well laid-out and admirably arranged factory of the Brompton Lumber & Mfg. Co., Bromptonville, Que.

Belting Methods That Save Money

Proper belting should be a big consideration to every mill owner. There is always something new to learn about belting, and the advantage of obtaining smooth running belting shafts, with minimum wear, is worthy of attention being given to the experiments and experience of other mill operators. The North American Filer says: No matter what position two shafts are relative to each other, if they are only a reasonable distance apart, they can be successfully belted and at that without being very unduly destructive on the belt. It does not hurt a belt much to twist it as shown in some of the dia-

grams, as long as it is not twisted over ninety degrees. All it does to the belt is to elongate it some on the edges, but if the proper care is taken in pulley alignment, no undesirable effect will be noted on the belt, unless the pulleys are too close together.

If a four-inch belt is used, the pulley may be as close as sixteen inches, and for an eight-inch belt thirty-two inches, and so on. What usually ruins a belt is a bad edgewise strain as caused by a common old style quarter-twist belt operated with no idlers, as clearly shown in the accompanying Fig. 13. In Fig. 13 it will be noted what an excessive edgewise strain there is on the belt near A, and if the pulleys are very close together relative to their diameter, this side pull of the belt will be so severe that the belt will actually begin to slide sidewise on the pulley before it unwinds from the pulley, and this sliding will quickly wear the belt.

Fig. 15 is the same drive provided with what was known as the Leffel idler, A. The idler, A, is set angling as shown to prevent any edge strain on the belt, and is accomplished by simply slightly twisting the belt at C.

Fig. 16 is another example of belting possibilities, and it will be noted that the belt runs on and off all the pulleys with practically no edgewise strain and a belt so installed would run with perfect ease and success.

He Favors Export Duty on Pulpwood

C. Howard Smith, of Montreal, who is President of the Canadian Manufacturers' Association, in a recent address in Toronto before the Ontario division, favored an export duty on pulpwood. On this point he said:—"I cannot see why we expect our resources of wood to last any longer in Canada than they have in the United States. We know what the indiscriminate cutting of wood has done in the United States, without exporting tremendous quantities of wood and raw material to the United States. If this is kept up the end is inevitable. Being a paper and pulp manufacturer, this matter is one to which I have given considerable thought and I have a suggestion to offer on this that may, at least, aid us.

"I can appreciate the position of a settler in the Northern Country that gets out a certain amount of wood. It is a paying crop and gives him money and he gets a ready sale. This man has to be looked after, and he is entitled to be looked after. On the shipment of his wood our railways get a certain amount of money in hauling the freight, although I cannot see why the freights on wood to the United States should be somewhat lower than freights on wood to Canadian points.

"But there are other conditions where the wood is cut on the St. Lawrence River, dumped into boats and brought to American points on which the railways get nothing.

"These woods are our heritage; they belong to Canada; they are what we have with which to develop the country and if these forests are not protected, our great pulp and paper industry cannot expand in the way it should in years to come.

"Now we have to spend a vast amount of money on these forests to protect them, and they have to be protected. It seems the logical thing to do would be to put an export duty on this wood and the amount of money so collected should be earmarked and returned to

the different provinces from whence the wood came and should be used exclusively for forest protection and cultivation. For example,

"I would say that pulpwood going out of this country for frontier points from the Gulf to the head of the lakes should pay a higher charge, a very much higher charge, than wood coming from the northern district. The charge for wood from these frontier points might be \$6 a cord and the charge from northern points might be \$1.50 a cord. This could be very readily worked out on the basis of freight rates. The advantage of this policy would be that neither trade or commerce nor the settlers' market would suffer, nor the railways lose their revenue, and I believe that the consumers in the United States would not be very much dissatisfied with this policy. They also save their money invested in producing pulp and paper, and they also look, with alarm, on the depletion of our Canadian forests.

"I estimate on this basis the Government would receive about four million dollars per annum and four million dollars put to forest protection and cultivation would accomplish a great deal.

"During the year ending September 1923 we bought from the United States goods valued at\$614,613,840 and sold to the United States goods valued at 406,563,363

That is, we bought \$208,050,477 more than we sold to them. In round figures, on the basis of population, our purchases from the United States averaged \$70 per head, while the United States purchases from us averaged \$4 per head. We are buying too much from the United States. I do not see how we can make much progress unless we change this."

Newsy Paragraphs of Trade Interest

The Bickwood Lumber Co., was recently registered at Montreal with Sidney Black one of the principals.

H. S. Perkins, of the H. S. Perkins Lumber Co., Calgary, Alta., was in Toronto recently calling upon the trade.

William Rutherford, of William Rutherford & Sons Co., Montreal, was in Toronto recently attending the funeral of the late Thomas N. Phillips.

J. H. Green, of Saginaw, Mich., manager of the hardwood department of the H. W. Kanouse Lumber Co., Detroit, was in Toronto recently on business.

J. L. Macfarlane, of the Canadian General Lumber Co., Toronto, who has been spending the past few weeks at Chatham and Newcastle, N. B., looking after the eastern interests of the firm, has returned home.

Cargill, Limited, of Cargill, Ont., announce that they are offering for sale their property consisting of 7,000 acres of timber and unimproved land, situated in the Township of Greenock, Bruce County, together with their mills in Cargill. W. D. Cargill is also selling his fine 720 acre farm adjoining the village.

R. S. Plant, of Toronto, eastern sales manager of the Vancouver Lumber Co., Vancouver, and Laurence Stark, of the sales staff of the Canadian General Lumber Co., Toronto, left recently on an extended trip to the Pacific Coast Province. En route they will visit Los Angeles, California, and other southern cities.

By a vote of 23 to 17 the Oliver administration was sustained in the legislature recently when opposition proposals to regulate the export of unmanufactured lumber were defeated. Hon. T. D. Pattullo, minister of lands, introduced an amendment proposing that the federal government be asked to extend the scope of the royal commission now considering an embargo on pulpwood export to include the British Columbia lumber situation.

W. A. Armstrong, of Flesherton, Ont., who for many years has been associated with timber activities in that section of Grey County, is taking out a quantity of spruce piling, and also several thousand cedar poles for the Hydro-electric Commission. The poles average in length about 30 to 35 feet and are 6 to 7 in. at the top while the piling averages about 35 feet with 7 in. top and 12 in. butt and is sold on a running foot basis. Mr. Armstrong also operates a portable sawmill at different times during the year and has bought up several timber and bush lots and does considerable business with the farmers in the surrounding district.

Taken suddenly ill shortly after leaving to visit his married daughter on Arundel Ave., Toronto, John Butler, former Mayor of Woodstock, collapsed and died. Mr. Butler played an important part in the municipal life of the city of Woodstock, Ont., several years ago. In 1903 and 1905 he served as Alderman and in 1906 was elected Mayor, which office he also held for two years. In 1855 he first came to Woodstock and opened a grocery store. A year later he formed a partnership with his brother, R. E. Butler, and went into the wholesale lumber trade. Later he came to Toronto, where he was in business for himself. Mr. Butler was 68 years of age and was born in Brighton, Ont. He is survived by his widow and two daughters.

Dryden Residents Oppose Pulpwood Embargo

At a recent meeting of those interested in pulpwood which was held in Dryden, Ont., S. Swanson was appointed a delegate from the district to appear before the Royal Pulpwood Commission when it sits in Northern Ontario after the Christmas holidays.

A resolution was carried at the meeting to the effect that those interested in the sale of pulpwood would regard the proposed embargo as detrimental to their interests by restricting the market for wood. At the same time they recognized that, if the duty at present imposed by the United States on kraft paper could be reduced or entirely removed, the resulting benefit to Canadian mills would go far to improve the lot of the settlers by providing a home market for their pulpwood and other products.

H. F. Bullard, general manager of the Dryden Paper Co., was called upon to state his views. He assured those present that so far as his company was concerned, there was no desire to interfere with their freedom to deal wherever their interests dictated. The problem of Canadian mills was not one of supply of raw material but one of wider markets for their product. Although they supplied a large portion of the western market, that after all was a restricted market compared to the immense market to the south. As long as raw material from Canada could reach American mills duty free and they were protected by a thirty per cent. tariff, the inequality would be to the serious disadvantage of manufacturers on this side. With a more equal adjustment of tariffs he believed the mills closer to the timber limits could hold their own. If they could supply the American market without the handicap of the tariff, his company probably would instal two more paper machines.

It surely needed no argument to convince them of the benefit that it would bring to the district. While the pulpwood embargo offered no particular advantage, he would be glad if the government could successfully place a case before the Washington government to leave the tariff handicap more evenly adjusted.

A. J. Clempson said that the Dryden mill was not asking for any privileges in the buying of wood, especially as they were able to use jackpine by their special process, and it was mostly spruce that was exported. There was, however, a heavy duty on the product of the mill when shipped across the line. If that could be modified, he thought the settlers around Dryden would not need to worry much about finding outside markets, for their own mill would buy all the pulpwood they could cut.

Would Stop Pulpwood Going Out

Hon. Dr. Landry, former Provincial Treasurer of New Brunswick, in a recent speech, severely criticized the appointment of the Royal Commission on pulpwood and came out strongly in favor of an embargo on the export of wood from Canada. In support of his contention he said that statistics showed that only about \$10 a cord was left in New Brunswick for pulpwood exported as such, whereas if it was made into paper, the benefits, which would come to the province, would be multiplied. The industries, which would result from an embargo against the shipment of pulpwood, would furnish employment for many people and serve to keep home the young men who were not leaving the province.

Mild Weather Adds to Logging Expense

The prevailing mild weather in the province of Quebec is having the effect of retarding and adding to the expense of lumber operations. Mr. John Power, in the employ of the St. Pâcome Lumber Co. as superintendent of operations in the woods, reached Quebec on December 3. Speaking to the Quebec correspondent of the "Canada Lumberman," he said the unprecedented mild weather and rain is greatly interfering with logging. The woods are filled with water, the ground slimy and, in consequence, the woodsmen have difficulty in maintaining their footing. These conditions especially apply to the low and marshy lands where the horses sink deep in the ground. In the high lands these conditions do not prevail,

nevertheless the ground is slippery, making it difficult for the loggers to hold their footing. Mr. Power also said that there are unusual activities progressing in the woods and the cutting for the season of 1923-24 will be as extensive, if not larger, than the previous year.

Although there are quite an army of woodmen and a large number of camps this season, there is an absence of the old-time, well-seasoned, capable woodsmen of the French Canadian race. The larger number of men at present employed are young French Canadians, and, though willing to work, are not of the same stamina as their forbears; hence the new scheme of importing Czecho-Slovakians to work in the woods by representative limit holders is hailed with satisfaction. Over 1200 Czecho-Slovakians have been brought to Canada during the past five or six weeks and have been distributed in the various centres of the mining camps of both Northern Ontario and Quebec. Their utility as woodsmen is being watched with interest by the firms who are making the experiment in such class of labor.

The importation of Czecho-Slovakians to work in the Canadian woods has of late attracted considerable attention and the question has arisen as to why the limit holders could not induce British labor to perform the same work. An Englishman, discussing this phase of the situation with the "Canada Lumberman," said that there were many thousands of sturdy men in England, Ireland and Scotland, who would be pleased to come out to Canada and engage in logging operations if they were properly educated regarding the true conditions. The Englishman in question said he had personally worked in the woods during nine years and found it a healthy and congenial work without much hardship. But in England and Ireland, as well as in Scotland, the sturdy men, who would be willing to come out and prove capable loggers, were under the impression that to labor in the Canadian woods during the winter season, was slavery.

New Barking Drums Being Installed

The Canadian Barking Drum Co., of Toronto, has recently sold two barking drums to Edward Lloyd, Limited, of Sittingbourne, Kent, England. The size of the drums is 9 ft. 6 in. by 30 ft. Edward Lloyd, Limited, are erecting a 100-ton ground wood mill which will be the largest mill of its kind ever constructed in England, and the wood for the operations will be imported from Norway, Sweden and Finland. The drums will be used for rossing the wood. The Canadian Barking Drum Co. has also received contracts for one drum each from the St. Maurice Paper Co. for their plant at Cape Madeleine, Three Rivers, Que., and the Glengarry Pulp Co., of Cornwall, Ont.

Discrimination Without Justification

Editor of the Canada Lumberman:

At the hearing of the Royal Commission on Pulpwood in the Maritime Provinces it was conclusively shown by the evidence of practical lumbermen, both in Nova Scotia and New Brunswick, that an operation for either sap-peeled or rossed pulpwood distributes as much money in the district in which it is carried on as does the ordinary lumber and saw-mill operation.

What justification then can be urged for a measure which seeks to restrict the exploration of the one and not the other?

Where the cost of production, applies to some common unit of measurement, is as great for sap-peeled or rossed pulpwood as for rough sawn lumber, can a government fairly say:—

"You, A, may not sell your wood in a round stick to an American pulp and paper manufacturer to make pulp or paper with."

But:—

"You, B., may, nevertheless, continue to sell your wood in a square or flat stick to a Cuban or South American to build a shack with."

Very truly yours,
Ralph P. Bell.

Boulderwood, Halifax, December 2, 1923.

CURRENT LUMBER PRICES—WHOLESALE

Toronto Hardwood Prices

The prices given below are the average quotations for carload lots, F.O.B. Toronto, from wholesalers to retailers, and are based on a good percentage of long lengths and good widths without any wide stock having been sorted. The quotations under plain and quartered oak refer to soft textured oak. Hard southern oak is usually quoted at \$10 less per M than soft oak. Dry weight white ash averages 3,800 lbs. per M. feet; birch 4,000 lbs.; basswood 2,500 lbs.; chestnut 2,800 lbs.; maple 4,000 lbs.; elm 3,000 lbs.; red gum 3,300 lbs.; hickory 4,500 lbs.; plain white and red oak and quarter cut white oak 4,000 lbs.

Quebec Retailers Had Good Season

The retail lumbermen of Quebec City report that the volume of business done during the past summer has been very satisfactory and they are looking forward to a fairly good trade this winter. Stocks of lumber are in general low and it is thought an advance in prices will take place before spring if there is a normal demand.

The Retail Lumber Dealers' Association of that city find that one of the pressing questions at the present time is the need of looking after their collections. They believe that they have been too generous in granting credit or, in some cases, to say the least, not prudent.

Ever since the association adopted a tariff for delivery charges the plan has worked out to great advantage. It has now been in existence seven years and all the members are well pleased with the improvement. Last summer three new members joined the organization and said that, even before they became members, they were charging for all deliveries because they knew that members of the association did. Besides they realized that the system was much more preferable to the old one of including the delivery charge in the selling price. In making a separate charge for delivery, the retailer interests the customer in doing his best to see that the material, which he requires, is delivered in the smallest number of loads possible. Then again, the yardman is not imposed upon by persons who own horses, as often, where no cartage fee is levied, such people openly request the dealer to make deliveries. Now this has all been eliminated and those, who own their own teams, come and get the lumber.

Although there are many hills in Quebec and the surrounding country, there are, at least, three retail lumbermen in the Ancient Capital using trucks for cartage purposes. Among them are O. Chalifour, Inc., who say that their experience is that a truck does the delivery at a cost that is no higher than horses and gives much more satisfaction to customers. In the rush hours it helps the shipping department out a great deal, making quick and satisfactory deliveries.

Retail Dealers Hold Session in Windsor

An interesting meeting was held recently in Windsor when the members of the South Western Ontario Retail Lumber Dealers' Association were invited to gather with the Border Cities Association. There were about thirty lumbermen present and a most inter-

esting time was spent. Major E. M. McLean, sales tax expert of Hiram Walker & Sons, Limited, Walkerville, gave an edifying address on the sales tax and how it is applied to the lumber business. Major McLean answered a number of interesting questions pertaining to the tax.

The Border Cities dealers who acted as hosts, extended a warm welcome to the visitors. A sum was subscribed to send flowers for a long period to the room of J. T. Todd, of Toronto, who is in Grace Hospital, where he will be confined for several months as a result of serious injuries in a recent radial car accident. Mr. Todd is now slowly recovering and a number of his friends and customers paid him a visit after the meeting.

Always tell the truth, my son.

But, father, mama says for me to always be polite.!

Major John R. Cosgrove, D.S.O., M.C., Trail, B.C., who has been appointed British Columbia Lumber Commissioner for the East and will shortly take up his residence in Toronto.

21-24

A deputation of three members, representing the Ontario Retail Lumber Dealers' Association will shortly wait on the Minister of Customs, Ottawa, in an endeavor to have the product of planing mills, except assembled millwork, classed as unmanufactured goods under the new sales tax act.

How Live Lumber Dealers Get Business

In a recent edition of the "Canada Lumberman" it was shown how retailers could estimate trade in the fall and early winter months by featuring storm sash and doors. It was also pointed out that here was a growing field of activity.

Comparatively few new houses are fitted with such accessories as storm doors and sash, which if properly installed, will, it is estimated, save from one-quarter to one third of the usual coal bill. A number of retailers have been alive to this and have made known through the press that they believe in reasonable publicity. When trade is quiet, they increase their newspaper space and labor all the more diligently to secure orders to keep their plant in operation and their organization intact.

Short selling talks on the use of storm doors and storm windows have been given by not a few firms and the results obtained have been satisfactory. One eastern firm doing business in a town of about 7000, has found that it pays to have a young man to go around to the various homes and talk to the owners or the housewives in regard to such conveniences. He is able to give an estimate then and there on the job required, and being Johnny on the spot and offering valuable and timely suggestions, has brought in a large amount of business for his employer.

Others have sent out leaflets, booklets, circulars, etc., illustrated with either an outside door or window, and some even contain pictures of homes, fitted on every side with these accessories which are so much appreciated at this particular period of the year.

The "Canada Lumberman" has collected the following from a dozen or more advertisements as typical of what retailers are doing in this line. An Orillia firm says,—“You will save fuel and it will add to the comfort of your dwelling if you put on storm doors and sash. We can fill your order promptly and efficiently.”

An Edmonton, Alta., yardman remarks,—“Let us fit storm windows or doors to your house. Phone our office and we will send our estimator to measure and give you a price on them.”

A lumber merchant at Cranbrook, B. C., declares,—“Now is the time to consider placing your order for storm sash and doors which will add greatly to the comfort of your home during the winter months and also reduce your fuel bill. Let us have your order which we can fill promptly.”

A Toronto company in their announcement state,—“Our storm sash are extra heavy and made of clear pine. We can give you an estimate covering fitting, glazing and hanging complete, if preferred.”

A Hamilton dealer proclaims,—“Better order those storm sash now. A dollar spent at this time will save you many a dollar in your coal bill. Our sash are made of clear white pine to the sizes you require. Storm doors are also a necessity and can be had on short notice. They are both inexpensive and durable and made with or without openings for glass. It is not too late to make yourself comfortable for the winter months.”

Another retailer in a neighboring town in Western Ontario, who does work not only in his own district but throughout the adjoining towns and townships, put an ad. in a Toronto paper, setting forth the necessity for and comfort of storm sash and doors. He told in a short, readable way what an economical move it was on the part of the householder to have these conveniences installed, adding to the enjoyment and coziness of the home. The advt. brought in so many out-of-town orders and inquiries that the dealer had to discontinue use of the newspaper space till his factory caught up with the business in hand. Then the advt. was re-inserted and several more responses came to hand. Who says that timely, well directed publicity does not pay the alert retail lumber merchant?

Should Form Building and Loan Society

That Chathamites should seriously consider the formation of a building and loan association in the city was a recommendation made at the Lion's Club, Chatham, Ont., by Sylvester Hadley, who spoke in his classification of “lumber.” Mr. Hadley stated that such an organization should be formed in Chatham for the purpose of encouraging people to build and own their own homes and that it would be of inestimable benefit in increasing the prestige and value of city property.

In his talk on lumber, Mr. Hadley gave an interesting description of a visit paid to the plant of the Great Southern Lumber Co. at Bogalusa, Louisiana, some time ago. The firm owns the town and employs about three thousand men. It takes four days to see the complete lumber plant in operation. Two 10-hour shifts are operated and the balance of four hours is given over to repair work. Approximately 1,000,000 feet of lumber is handled by the plant every day and the present limits of the company provide enough material to keep the employees busy for the next thirty years.

LUMBER TRADE CONDITIONS

Montreal Reports Stronger Prices on Spruce

As a whole the lumber market continues in a very satisfactory state with a healthy variation in the classes of lumber traded in. For instance spruce is decidedly strong having advanced \$2 to \$2.50 per M. feet during the past two weeks; thin lumber is in particular demand as the market seems almost bare of 1 in. stocks. On the other hand, spruce lath is wobbly and prices vary, some quoting as low as \$7.25 for No. 1 lath delivered Montreal, and No. 2 lath ranges all the way from \$4.25 to \$5.25 per M., a wide discrepancy for such class of stock. This is due no doubt to the fact that the latter price is paid when it goes straight into consumption, whereas, if the stock must be yarded \$1 per M. is taken off.

The New York, New Jersey and Pennsylvania markets are decidedly weaker, heavy shipments of lath having gone in there by water from the Maritime province ports, and consequently as low as \$5.50 to \$6.65 is now the best offered to the mills for No. 1 at New Brunswick or Nova Scotia points.

In pine stocks prices remain steady, wide stock being scarce, especially in the good siding grade, but there is evidently sufficient stocks to come out of manufacturers' hands in the narrow sizes to keep market at a level.

In B. C. fir the market continues to have a downward tendency as there appears to be plenty of stocks "in transit" in all lines to supply both immediate and future needs. In dimension sizes stocks are being somewhat pressed on the market from outside ports like New York and Portland, at as low as \$52 per M. ft. f.o.b. Cars Montreal, for No. 1 common, 18/38 ft. 12 in. x 12 in. and so on.

In hardwoods birch is an easy leader and prices in the upper grades are rather spectacular, as when one hears of such figures as \$67.50 for 1 in. \$72.50 for 1¼ in. and 1½ in. \$75 for 2 in., No. 2 common and better, and \$110 for F.A.S. Other hardwoods keep steady.

Turning to the financial side of the market, there is a very natural trend at this period of the year to go carefully, both on the part of buyers and sellers, which somewhat restricts operations. Many buyers are asking for 90 days on purchases whilst sellers, on the other hand, feel this is much too long a period to give, so that it will result in considerable business being laid over until the new year. As soon as the holidays are over there is every indication that brisk business will be resumed. The exceptionally mild weather has already helped the lumber and kindred lines very largely and the general feeling is that there will be no let up in trading immediately after the Yuletide period. Even the political turmoil in the Old Country has been lost in the busy atmosphere obtaining here.

Halifax Says Situation Remains Unchanged

There has been very little change in the lumber situation, in the Maritime provinces, during the past month. Owing to the decline in Sterling Exchange, prices which otherwise might be attractive for shipment to the United Kingdom are unprofitable. So far as existing stocks are concerned, this is not a serious situation, but it has a very important bearing on the production for the coming year. While a large number of camps are in the bush, as many operators have the firm conviction that conditions are bound to improve at the beginning of the year, there are several who are not so optimistic and are waiting for some sign of improvement before going ahead with any new undertakings.

It seems to be the general opinion, that after the elections in Great Britain, conditions will become stabilized and it will be easier to forecast whether returns for shipments for the coming season will be sufficient to justify operations on the usual scale. At the present time, even at the prices obtainable, the demand for spruce is slack and, in addition to this, the shippers on the other side advise restricted exports, owing to the condition of the market.

There is little call for hardwood of good manufacture, but even the price for very attractive specifications is disappointing, based on the present rate of exchange.

The facilities for shipment from the port of Halifax, for the coming Winter, promise to be unusually good. Several new lines of steamers are making Halifax a port of call and with the established lines, there is likely to be keen competition for business among the different steamship companies.

Prices for spruce, on the American market, have been fairly steady and, during the past month, have not fluctuated more than a dollar to two for narrow random, and this only when certain sizes

have proved to be almost unobtainable. That there is an absolute scarcity of merchantable stock is now fully realized, but the anticipated rise in price has not materialized as yet. The general opinion is that there will not be much buying by American firms until after the end of the year and indications seem to be that prices then will be firm and the demand considerably better.

The prices of lath has taken a drop recently and, with the prospects of round wood laths being produced in fair quantities during the winter, the chances are that the prices will be maintained at the lower level for sometime. This will depend, however, largely on the amount of building under construction in the United States.

The labor situation is much easier than it was earlier in the Fall, owing to the fact that much anticipated logging has been held up. Woodsmen are plentiful and while wages have not yet gone down, the chances are that after the Christmas season, a lower rate will be in effect.

Quebec Exporters Look For Business Increase

During the month of November 911,016 feet, b.m., of wood was shipped to the United Kingdom from the port of Quebec. This includes 83,982 feet b.m., spoolwood, 373,230 feet, b.m., lumber, and 452,804 feet, b.m., timber, making a total of 12,575,100 feet, b.m. wood shipped from the port from the beginning of the season of navigation to November 30th. The most important shippers were W. & J. Sharples Co., John Burstall Co. and the Louise Lumber Co. Though satisfactory, this amount of shipments is not up to spring expectations which, however, can be accounted for by reason of the English dockers' strike. It might be added that the majority of Quebec firms ship large quantities of sawn lumber from the ports of Quebec and Three Rivers and ports east of Quebec which are not enumerated in this trade letter.

Quebec firms are looking forward to an increase of business from the United Kingdom in 1924. In the meantime, expert reports received from agents in the United Kingdom, representing Quebec firms, are not quite as encouraging as were expected at this period of the season. Of course, this is due in a large measure to the continued unsettled conditions in the European situation and the rates of exchange, as well as the interest centred in the British general elections. Nevertheless the reports are not by any means pessimistic and go to show that the timber and sawn lumber trade is holding its own.

The Quebec agents point out in their latest reports that for some three weeks there was very little speculative trade done to prove that a change had come over the market and to make apparent a certain amount of nervousness by the fact that values had weakened to some extent in certain classes. In the meantime, lumber dealers in England are carrying heavy stocks, and if the spot market is quiet, it is due to lack of confidence. Traditional buying which was in vogue prior to 1914, has been upset since the world war. In consequence there is no regularity in the manner of purchase. Each different country with which British importing firms have had large dealings, have their own especial problems in requirements and prices that could be afforded without competition among nations. They are now to a large degree isolated on account of the fluctuating in exchange. This, together with the violent spirit of Nationalism engendered by the war, and the numerous custom barriers set up between nations, have interfered with trade coursing through national channels. Thus the British timber trade is nonplussed for guidance in conformity with past experience and cannot measure that developments will follow on lines for safe judgment.

The market is no longer steady. It is fluctuating violently, and on what basis contracts should be made for next season is uncertain. The November reports emphasize a noticeable decrease in free-on-board business with stock lists becoming less favorable and contracts fewer, with British shippers forced to conclude to winter over their balances, and there is not much chance of sweeping chances which were made last year.

In the meantime the consumption of wood in Great Britain still continues favorably. Reports of business in nearly all parts of the country are fairly satisfactory. Merchants have for some time past, given up the idea of a boom and are now confining their expectations to a gradual improvement in trade; consequently they have no reason to be disappointed with present conditions. Scepticism, which reigned in the minds of many English importers of a permanent vitality in the house-building industry, have had their doubts

Your Cook Will Get Better Results
By Using—

Quaker Flour

Always the Same—Always the Best

Quaker Flour is especially suitable for lumber camp trade. It ensures the best results and at the same time is most economical. This is because the quality never varies—it is the very finest, being made from Manitoba Hard Wheat. Place a trial order and ask your cook about it. He will tell you it helps baking and cuts down the flour bill.

Ivory Brand, our second patent, also made entirely from Manitoba Hard Wheat—popular among lumbermen and bakers.

Payette's VERY LATEST No. 2B Heavy Duty Saw Mill Carriage

Our very latest No. 2B Heavy Duty Saw Mill Carriage is the most efficient and up-to-date carriage you can install. Made to open 36" and 46" to 54", and in cast steel or cast iron as desired. Let us send you catalogue and blue prints.

All our carriages are equipped with Payette's Patent Mill Dogs and will handle frozen lumber or hardwoods of any kind with equal ease and facility.

P. PAYETTE CO., Penetang, Ontario

removed in regard to this line of business. There is little doubt about a steady trade for years to come while other lines of industrial activities using wood are expanding and, if the railway companies' plans are fully carried out, there ought to be a good consumption of sawn lumber for the usual railway requirements.

Conditions in Scotland give evidence of improvement but as far as actual dealing is concerned, business cannot be said to be brisk. The general tone of the market, however, continues somewhat improved and fair steady trading can be anticipated until the end of the present year but no pronounced improvement can be looked for until after the new year. The Government schemes for the provision of work and the better outlook for shipbuilding, combined with the expanding of building, is destined to the recovery of the timber trade.

The Irish situation is recovering. The latest report from Belfast says that business in the timber trade continues fairly well with moderate demand and keen competition for orders, the result being that in certain quarters there is a slight tendency to cut prices in order to acquire business. From the Dublin agents it is learned that trade continues satisfactory. The settlement of the dockers' strike and transport workers' dispute has caused a resumption of work of those employees on the terms of President Cosgrave in the first week of November which implies a reduction of a shilling per day in wages and the proposal to grant a court of inquiry.

Although the outlook, to say the least, is not propitious, a comprehensive study of the confidential reports received in Quebec by the Quebec lumber business interests, does not give cause for serious apprehension of the future. The European horizon may look dark on account of the political mix-up, the apparent bankrupt aspect of Germany and the evasion of one nation to meet its war obligations, etc. The British economist with his telescopic observation and ear continually to the ground has not lost hope in the chances for a settlement for the amelioration of the existing tragic conditions. In keeping with this sentiment the business interests of Great Britain are proverbially optimistic, which not only accounts for England's unique condition in comparison with other European nations, but for the improvement in trade and commerce of the nation during the past several months.

The political contest in Great Britain has to some extent for the time being interrupted business activities owing to the momentous questions at issue but just as soon as it is over, it is generally felt that a determined move will be made by the Government in office to end the political conditions that have brought on such lamentable chaos not only to upset the commercial relations of the world but have and still threaten the peace of the world.

The well-informed expert economists of England have come to realize that if the European situation is not soon cleared up, British public opinion will force upon the Government the thought of a new system of fiscal policy dealing entirely with the interchange of trade within the confines of the vast dominions of the Empire. These dominions are no longer infants with need of help from the motherland. They are now not only full fledged in manhood but rich in national wealth and with abundant resources. There is every reason to presume that, when the British prime minister decided to appeal to the British electoral public for a mandate to change England's fiscal policy, he had in mind a measure of protection, not only to keep out cheap German and other foreign goods, which threaten the existence of England's industry. He had in view an independent Empire with resources that would have it grow powerful within its own house apart from and independent of all other European nations as well as free from the turmoil and entanglements of European politics.

During the Empire Conference held in London, a cablegram was sent by the Quebec Lumber Exporters' Association to the Canadian prime minister in attendance, urging upon him to safeguard the interests of the Canadian lumber trade at the conference. Rt. Hon. W. L. Mackenzie King, in acknowledging the receipt of the cablegram, promised to give the representations made to him due attention. It is not known whether or not the Canadian Prime Minister brought the question before the conference, inasmuch as nothing further was heard about the matter from that time to this by the Quebec Lumber Exporters' Association. It may be, however, that the question was discussed and left in abeyance until after the general British election.

The Quebec Lumber Exporters' Association is prepared to take up this question with the British Government through the medium of the Canadian government in the event of the British government, now in office, being re-elected by the British people. But as this is a question, which affects the entire Canadian lumber trade, the Quebec Exporters' Association will need the co-operation of the whole Canadian industry and its associations from the Atlantic to the Pacific.

Ontario Trade is Fair With Good Outlook

Business in the lumber line continues seasonably quiet. Some carloads are being ordered by industrial concerns and retail lumber yards in various parts of the province in order to do a little sorting up and also in the hope of replenishing certain lines before the new sales tax comes into effect. November was a splendid shipping month and a great deal of lumber left the mill yards. The first two weeks in December were also favorable for distribution. Stocks at most points are not nearly as heavy as they were a year ago.

The retail lumberman is desirous to avoid overloading and keep his stock down to as low a point as possible in connection with the forthcoming inventories. Most yardmen are willing to gamble on prices after the new year rather than load up at the present juncture.

While salesmen are aggressive just now, there is not a great amount of business being placed beyond that of actual requirements. Notwithstanding that the demand in most lines is moderate, prices continue steady and no decrease in quotations is looked for during the early months of 1924. Financial and statistical bureaus, in forecasting the lumber situation, predict a steady growing trade during the first few months of next year. While there may be no actual boom, still the underlying conditions are good and the fact that lumber camps are being increased to such a large extent, indicates that operators have faith in the future.

The one disturbing element at the present time is the sales tax, its interpretation and application, and wherever lumbermen are gathered, the import and significance of this proposed levy is the subject of much conversation. There is no doubt that the imposition of six per cent will add considerably to the cost of lumber.

Practically all available stocks of dry jack pine and spruce have all been shipped out. Hemlock is only in fair requisition and is not moving in large quantities. Some wholesalers predict that before next spring hemlock is going to become a rather scarce commodity. Mill culls and dead culls in white pine are active and strong in price but mill run lumber is rather quiet and there has been some price-cutting on the best ends. This shading of values has been done by those who have a considerable stock on hand and desire to move it.

A survey of the available supplies of red and white pine shows that not nearly as large stocks were produced at the various points as was predicted at the beginning of 1923. Several logs were held up on their way to the mill and a number of plants did not get out the quantity which they expected.

One outstanding feature of the whole situation is that few price changes have occurred in any woods. There has been some decline in the takings of the automotive industry incident to a season of slackness. Hardwoods remain about the same with only a fair call and a gradual increase of inquiries for future needs. These come from a limited number of sources thus far and the buying thereunder will not be done until after the inventorying is completed. It is, however regarded as a favorable sign.

Good progress is now being made in the bush and the shortage of men, which was so pronounced a month or two ago, has been relieved. Pretty nearly all the camps are now well filled and logging activities have proceeded, owing to favorable weather, most satisfactorily. The tendency to increase wages, which was strong at one time, is now not in evidence, and most operators are paying \$45 to \$50 a month, which is considerably higher than last year and will, it is predicted, add from 10 to 20 per cent to the cost of taking out the timber.

Ottawa Reports Better Conditions in Logging

Further improvements in woods camps conditions of Ottawa Valley lumber companies was noted during the opening period of December when most camps were reported to be well filled and others beginning to get all the men they wanted.

In addition to the improvement in the labor situation, the continued open weather and the absence of snow up to December 4th, gave the woodsmen a good chance to catch up on the small log cut made during the early part of the season. Camp operators expected that unless there is a very hard and unfavorable winter, that the log production of this season's operation will be a normal one.

"As long as this kind of weather continues they can keep on making logs until the cows come home," was the comment of one manufacturer in regard to the favorable log making conditions.

Trading both with American and Canadian yards was slow, and, in fact, was hardly as brisk as during the closing period of November. Though a fair trade had been expected the slackening up of sales and orders did not surprise some of the older members, as they said the season was generally known as the inventory period, when accounts were being straightened out, collections made and stocks gauged.

Shipping by water fell off, but rail transportation remained good. Conditions with the woodworking factories, some of which were fairly busy did not show any general change.

We wish to take this occasion to extend to the Canadian Lumbermen, severally and generally, our heartfelt wishes for a Very Happy Christmas and a Bright and Prosperous New Year

LINN LOGGING TRACTOR

During the past winter Linn Logging Tractors were in operation between Newfoundland and Esher, Ont.,—this year over twice as many Linn Logging Tractors will be in operation in the woods of Canada than there were last year, and in territory from Western Alberta to Newfoundland.

In 1922-3 we were honored by visits in our various operations by a large number of operators, and this year on account of over double the number of Linn Logging Tractors being in operation it is our hope that double the number of operators will visit us.

Commencing with the January 15th issue of the "Canada Lumberman" we will issue a series of advertisements which will run throughout the year of 1924, and each of these advertisements will show a Linn Logging Tractor in each of the various operations across the Dominion where these machines are in use, and meanwhile we repeat

"Ask the logger who uses one"

—Logging Department—

MUSSENS LIMITED

Phillips Place Building

Montreal

Building Considerably Ahead of Last Year

The total awards for Canadian Construction for the month of November, according to MacLean Building Reports, Limited, were \$15,632,200, compared with \$30,078,100 in October, and \$21,453,900 in November, 1922. Residential building accounted for 42.8% of the November total, amounting to \$5,692,700. Business building amounted to \$2,834,900, or 18.1%; Industrial building, \$733,400, or 4.7%; and Public Works and Utilities, \$5,371,200, or 34.4%. The activity was distributed among the groups as follows: Ontario, 47.1%; Quebec, 39.2%; Western, 10.6%; and Maritime, 3.1%.

Construction awards for the year to date amounted to \$292,746,800, compared with \$259,381,400 during the corresponding period of last year, an increase of 12.8%. During this period residential building shows a falling off of 6.6%, compared with last year; but continues as the most active type of construction, while business, industrial and public works and utilities show increases of 3.4%, 12.4%, and 53.1% respectively, over the same period. The activity was distributed among the groups as follows: Ontario, 48.5%; Quebec, 33.4%; Western, 15.2%; Maritime, 2.9%. The Maritime and Western sections are the only divisions to display less activity than last year.

There is no ground for pessimism in so far as the business outlook is concerned. Canada's position is fundamentally sound and the course of business is distinctly on the up-grade. The agricultural community, which has borne the burnt of post-war adjustment and deflation, is now in a much more healthy position as a result of this year's bumper crop. The influence of this improvement will be far reaching, for practically every line of business in Canada is closely allied or dependent upon agriculture. Leading industries have experienced a fairly profitable season. Labor has been well employed. Weekly bank clearings testify to heavier movements of goods. Railway earnings appear to better advantage. In some spots business is poor, but, regarded as a whole, is in fair volume, and conditions warrant constructive policies.

It is evident that 1924 will witness considerable building activity—probably involving an expenditure of three hundred million dollars in the construction field. Much speculative activity has been eliminated in favor of investment buildings and other high-class structures, while considerable activity may be expected in the engineering field. Building material prices and the labor situation seem to be fairly staple, and it is expected that in 1924 there will only be a slight recession in building costs.

Why Eastern Limits Sell For Low Figure

In regard to the recent sales of several timber limits in New Brunswick, it was recently explained by a member of the Department of Lands and Mines in the eastern provinces why these figures were so low.

These licenses require a stumpage rate of \$4 per M for the spruce and \$3 per M for the fir and other lumber proportionately. Licenses also require a renewal fee for every year of \$8 per square mile and \$3.20 per square mile fire tax. It is stated that the lumbermen contend this is all the market can stand but, it is said, that in some cases, operators, who hold Crown land licenses and want to sell, frequently ask several hundred dollars per square mile and in some cases up to \$500.

In discussing the rates obtained for licenses in New Brunswick in comparison with those secured by the Ontario Government, it will be seen that the latter gets much better prices for its timber than the eastern province. The stumpage rate in New Brunswick is, practically speaking, 40 per cent higher than the Ontario rate, ground rent 60 per cent higher but fire hazard is 50 per cent less, being in Ontario \$6.40 per square mile. It would appear, therefore, that the New Brunswick man has the advantage in what he pays to the Government for his timber.

Would Stop Export of Raw Timber

Kenneth Duncan, Independent member for Cowichan, gave notice in the B. C. legislature recently of a competition to be forwarded to Ottawa requesting an embargo on the export of logs. The resolution pointed out that a large quantity of timber is being cut in British Columbia forests and taken outside of Canada for manufacture and also that numbers of wage earners are leaving British Columbia on account of insufficiency of employment, and the manufacture of all timber cut in the province would materially increase employment and conserve the timber resources for the benefit of Canada. Therefore be it resolved that this House is of the opinion that a heavy export duty should be imposed by the Dominion Government on all unmanufactured British Columbia timber going outside of Canada.

"And be it further resolved that a humble address be presented to His Honor the Lieutenant-Governor, praying that a copy of the

resolution transmitted to the Hon. Secretary of State or other proper official at Ottawa." The resolution created a lively debate and was finally carried by a 29 to 9 majority in the legislature.

Mr. Duncan said that eight mills with a daily capacity of 250,000 feet each had recently been erected, on the American side of the line in proximity to British Columbia, and that the bulk of the lumber used in these mills was being imported from British Columbia.

In his statement to the house, Mr. Duncan said that last year 151,000,000 feet of unmanufactured lumber had been exported from British Columbia, or enough to keep in constant operation five mills with a capacity of 125,000 feet daily. This year the amount exported would be considerably higher.

Figures presented by Mr. Duncan showed that had the lumber exported last year been kept in the province between \$2,000,000 and \$3,000,000 would have been paid in wages in British Columbia, a great deal of which would have found its way into circulation through other business channels.

A resolution from the Native Sons of British Columbia in favor of the proposed embargo was read. The memorial set out that the export of raw material was resulting in industries springing up on the other side of the line and young Canadians being forced to leave their own land in order to make a living. All this could be remedied and a great number brought back if the manufacturers were forced through an embargo to establish their mills on the Canadian side of the line.

In a recent address delivered by Hon. T. D. Pattullo, Minister of Lands in the British Columbia Legislature, he stated that the lumber industry to-day is more prosperous than ever and that the government is doing everything to assist the lumber interests to secure export markets. Mr. Pattullo referred to the efforts of some to make it appear that the government is in error in allowing the export of unmanufactured lumber to the States. He declared that only a comparatively small quantity of such lumber comes under government regulation, the great bulk of it being from Crown granted timber lands as to which the government is quite without authority to prohibit export. Those individuals who were working up this agitation, he averred, either did not know what they were talking about or had ulterior motives.

The policy of the government, he said, was that manufacture shall take place within the province. There has been some export from Crown granted lands over which the provincial authorities have no control. In 1922, out of a total of two billion feet, but 151,000,000 feet were exported in an unmanufactured state, and of that total 103,000,000 feet came from Crown lands.

Mr. Pattullo denied the charge that the government is building pulp and paper plants on paper, six or eight at a time. The minister referred to his endeavors to secure pulp and paper plants in the north but said that it is difficult to induce investors to put up five to ten millions. He also denied the charge that he had offered a permanent royalty to a mill which proposed to build at Fort George. The people there had asked for a fixed royalty for thirty years but this had been refused unless it was based on a sliding scale.

Big Timber Exhibit at Empire Exhibition

Hon. T. D. Pattullo, Minister of Lands for British Columbia states that plans are now complete for the exhibit of B. C. forest products at the British Empire Exhibition to be held at London next year. This exhibit of B. C. forest products is a co-operative effort with the lumber, shingle, sash and door, box and veneer manufacturers of the province, and will show to the visitors from all the corners of the British Empire exactly what results can be obtained by the use of the B. C. forest products. Part of the exhibit will be designed along the lines of the one recently installed by the province in co-operation with the lumber industry, in Toronto. This section will consist of a small bungalow with shingled side walls and roof, finished in Douglas fir, western hemlock, pine and cedar.

Another section will show sash and doors, boxes, veneers, silos and a miscellaneous exhibit.

A continuous film stereopticon will automatically show colored films depicting every phase of the lumber industry.

Mr. Loren L. Brown, timber trade commissioner for British Columbia left recently for England to install the exhibit.

While in England he will carry on trade extension work similar to that which he has directed in Eastern Canada for the past three years.

It will also furnish opportunity to convey similar information to people from all parts of the Empire. It is expected that visitors to the exhibition will run into many millions, and the B. C. timber exhibit, apart from the general exhibit being made by the Dominion Government will be situated in the industrial section of the exhibition.

The exhibit is being put on not only for show purposes, but as a part of a general campaign that is carried on to increase the sale of British Columbia timber products.

B. F. STURTEVANT COMPANY
of Canada, Ltd.

MONTREAL GALT WINNIPEG TORONTO

Edgings

The Crawford-Lockhart Lumber Co., Limited, Winnipeg, Man., was recently incorporated.

C. A. Spencer, Limited, Montreal, wholesale lumber dealers, were recently granted a voluntary petition for winding up their business.

James Lee recently purchased a large timber limit in North Keppel township, Grey County, and has a large gang of men cutting the trees into logs and wood.

The Canadian steamer "John C. Howard" recently left Richibucto, N. B., with a carload of 1000 cords of pulpwood shipped by A. R. Boye, of Chatham, to Ogdensburg, N. Y.

The St. Regis Paper Co., of Canada, Limited, Montreal, have started work on their hydro-electric development at Godbout, P. Q., at a cost of about \$100,000.

Osborne Craft Homes Corporation, Limited, Toronto, was recently organized to manufacture lumber, sash, doors, and portable houses. Capital \$40,000.

Mount Royal Lumber Co., Limited, Montreal, was recently incorporated to manufacture and deal in logs, lumber and wood products. Capital \$20,000.

M. C. Sewell Company, Limited, Portneuf, P. Q., is a new organization recently formed to conduct a general business of timber merchants and sawmill proprietors. Capital \$20,000.

J. Austin & Son, Kinmount, Ont., who operate a sawmill and grist mill, had the misfortune to lose the latter by fire recently. The grist mill was situated on the Burnt River just opposite the firm's sawmill.

Fire recently destroyed the box factory of Manufacture de Boites de St. Evariste, St. Evariste, P. Q. The loss on the building is \$20,000 and the damage to machinery and contents is estimated at \$10,000.

Biglow and Malstead, Limited, Timmins, Ont., is a new enterprise recently organized to conduct a general lumbering business, manufacturing and dealing in lumber, ties, fence posts, telephone poles and pulpwood. Capital \$40,000.

Escuminac Lumber Co., Limited, Escuminac, P. Q., is a new organization recently formed to manufacture and deal in timber, lumber and pulpwood. Capital \$500,000. Two of the incorporators are Stanley Douglas and W. D. Gunter, both of Fredericton, N. B.

Fire recently destroyed the planing mill of Rock Bros., Brodhagen, Ont., causing an estimated loss of \$16,000. The building was of frame construction and only partly covered by insurance. The owner expects to rebuild.

A provisional charter has been granted to the Caithness Lumber Co. with a capital stock of \$150,000 and head office in Hearst, Ont., to carry on the business of timber merchants, sawmill, shingle mill and pulp mill owners.

S. C. Hayward Sons Limited, Port Elgin, N. B., have been granted a charter to carry on a general lumber, timber and pulpwood business. The authorized capital is \$49,000, and among the incorporators are Christopher S. Hayward and W. H. C. Hayward, Port Elgin.

For many years manager of the Cedar Cove mill of E. H. Heaps & Co., of Vancouver, Percy Whalley has resigned his position to accept the management of the Excelsior Lumber and Shingle Co., Ltd. This company plans to build a sawmill to provide for its local requirements.

A. T. Murchie, chief scaler of the Department of Lands and Mines for New Brunswick, returned recently to Fredericton from a visit to Chipman. He reports that there appears to be a sufficient quantity of labor in that district to supply the requirements for logging operations during the winter.

The Hammond Cedar Mill have petitioned for the closing of certain streets in Maple Ridge, B. C., and the opening up of other thoroughfares. The reason for the application is that the company contemplate extensive improvements which will materially increase the output of the plant and for which the changes desired are imperative. The council agreed to the request of the company.

Aird Flavell, of Thurston-Flavell Limited, Port Moody, B. C., stated recently that his firm was negotiating for the purchase of the Rat Portage Lumber Company's holdings on Harrison Lake, Chehalis River and Suicide Creek, for the sum of \$1,250,000. The claims

included in the deal are said to contain one billion and a half feet of the finest standing growth of fir and cedar in British Columbia. A complete logging railway, steamer for handling log booms and other accessories are also included in the proposed deal.

The Loyal Legion of Loggers and Lumbermen which met recently in Spokane, Wash., arrived at an agreement regarding the increase in wages of common laborers in logging camps and lumber mills, from \$3.00 to \$3.40 per eight-hour day. The going wage for common labor throughout the North West is \$3.80 for an eight-hour day.

The Dominion Government Forestry Branch, through E. Walmsley, Dominion Timber Agent, New Westminster, B. C., shipped recently to the British Forestry Commission at London, England, 2100 lbs. of Douglas fir seeds collected from the Fraser valley. To secure this quantity of seed about 2000 sacks of cones were required. The collection of seed from coniferous trees has created world-wide interest, enquiries for seed and general forest information reaching Mr. Walmsley from many lands, particularly European countries.

Two actions entered by the Lumsden Lumber Co., which were to have been heard in the Supreme Court of Ontario at Ottawa, have been withdrawn. One of the actions was against W. L. and J. C. Hunter, lumber merchants, of Pembroke, and the other against Hunter & Co. Both the actions arose over the alleged non-payment of Crown dues to the Department of Forest and Lands of the Quebec Government, following cutting operations on a limit which was formerly owned by the Lumsden Lumber Co., and which had been sold to the Hunter interests.

The Mount Murray Woodland Corporation, which has large areas of timber limits in the northern sections of Quebec, will enter proceedings against four settlers residing in the vicinity of its limits, according to report received, claiming that they were responsible for damages amounting to \$100,000 caused by the destruction of timber by fire last June. The company, according to the meagre details on hand, would also enter action against other settlers said not to have taken the necessary precautions to prevent the burning of slash.

It is now learned that the pulpwood and lumber camps in Northern Ontario are sufficiently manned with men. For a long time this fall there was a great shortage of labor but, according to the statements of Ontario employment bureaus, the need for bush help has now been satisfied. Accordingly the unemployed, who have been holding back from the woods saying they would only take that work as a last resource, have waited too long. During the past few weeks upwards of 1600 men have been sent from Toronto through the Provincial Bureau to the northern camps. From now on it will be a case of calling for replacements only. This means a big falling off in the demand.

Experimental forestry re-seeding operations in New Brunswick have been concluded for the present season. These operations, which were undertaken under a co-operative arrangement between the federal forestry branch and the provincial Department of Lands and Mines, and for which a grant of \$5,000 was made, have resulted in the seeding of experimental plots on the Tabusintac and the Restigouche rivers in areas affected by this year's forest fires. Forty acres have just been seeded in the Tabusintac district, while some twenty acres have been completed on the Restigouche. It had been planned to complete the seeding of, at least, one hundred acres. White pine and spruce seed have been chiefly used.

Many friends in the lumber trade have learned with regret of the death of O. G. Anderson, which took place in Calgary. He retired from the manufacture of furniture in Eastern Canada and England about ten years ago. Mr. Anderson was 80 years of age and was born in Acton, Ont. For a number of years he owned and operated the largest furniture manufacturing plant in the Dominion with headquarters at Woodstock, Ont., now under control of the Canada Furniture Manufacturers, Limited. He was an exemplary employer and the hundreds of men who learned from him the value and dignity of artisanship and are now successful craftsmen, will remember him with gratitude.

It is expected that the Seaman, Kent Co., Toronto, whose hardwood flooring factory at St. Agathe, Que., was destroyed by fire some time ago, will establish a new plant in Renfrew, Ont. It is understood that negotiations have been going on for some time and have been practically concluded. A by-law was recently submitted to the ratepayers, granting certain concessions to the organization and was carried by an overwhelming majority. It is stated the new factory will have a frontage of 300 feet and will be 60 feet wide, occupying a ten-acre site. On completion of the plant about 100 men will find steady employment and construction will start in the near future.

Many Small Losers in Lumber Company

There are many thousands of small investors in Ontario and Quebec holding bonds in the International Land and Lumber Company, a firm with head offices in Ottawa, which recently defaulted payment of interest on its bonds and has gone into bankruptcy.

It is believed that more than \$800,000 worth of bonds were disposed of by the promoters and that thousands of persons of moderate means in the rural sections of Ontario and Quebec bought bonds of small denominations. Several large blocks were sold in England.

The assets of the company could not be ascertained by those who attended the meeting. On the petition of one of the creditors an interim receiver was appointed on October 5, and an application

for a permanent receiver is returnable in the Superior Court of Quebec at Montreal on November 27. Until the permanent receiver is appointed there will be no funds available to enquire into the affairs of the company and arrange for the disposal of the assets.

Just how great will be the loss to the bondholders, if there is any loss, cannot be discovered as yet. The assets are believed to be a lumber mill and certain timber limits at St. Felicien, about 200 miles from Quebec City. The value of these limits is not yet known.

At a meeting recently Mr. George F. Henderson, K.C., pointed out that, according to the financial statement issued by the company, \$484,000 was the amount of the promotion account. The company was incorporated for \$1,000,000.

WIRE ROPE

"We have the Right Rope for every purpose"

The contributing factors in making good Wire Rope are: 1. Men who know how. 2. The best grade of materials. 3. The most modern machinery. We have all three and are producing the goods. Give us a trial.

THE CANADA TRUST COMPANY

London — Ontario

Edgings

Jos. Gagnon Fils, Tadoussac, P.Q., have started work on a new sawmill.

A recent notice in the Ontario Gazette states that the charter of the Rainy River Lumber Co., Limited, has been surrendered.

St. Ursule Lumber Co., Quebec, P. Q., was recently granted a provincial charter to generally deal in timber, lumber and pulpwood and operate sawmills. Capital \$20,000.

Alphonse Lavoie and Alphonse Ross, of St. Quentin, N. B., have formed a partnership to carry on a business as sawmill operators and dealers in sawn lumber.

Fire destroyed the sawmill operated in connection with the construction work of the Newfoundland Power & Paper Co. at their new town site at Corner Brook, Bay of Islands, Newfoundland.

The Miramichi Lumber Co., of Chatham, N. B., recently closed down operations for the season. J. W. Brankley, general-manager of the firm, stated that the company would cut between 15,000,000 and 16,000,000 feet this winter.

The premises of G. W. Murray, limited, show-case makers, woodturners and moulders, and general lumber dealers, Bertha St., Winnipeg, were destroyed by fire recently. The loss has been estimated at \$45,000 and is fully covered by insurance.

J. Booth, of Burlington, Vt., was in Montreal recently on his annual trip to Quebec and the Provinces in connection with purchases for the coming season. Mr. Booth reported business very good and prospects bright, especially for this time of the year when most firms were busy on inventory work only.

A new factory is contemplated by the Canada Wood Specialty Co., Limited, Orillia, Ont., at an approximate cost of \$85,000. A by-law will be submitted to the ratepayers on January 1, to authorize a loan of \$50,000 for twenty years. If it is approved the company will wreck the present buildings in preparation for the new plant.

Judgment was rendered in the Recorder's Court, Quebec, in the two other cases against the Chateau Lumber Company, in which the defendant company was charged and found guilty of delivering short loads of wood. The Recorder sentenced the company to pay a fine of \$20 and costs on each of the charges.

During the year 1922 there were 3460 Orientals employed as sawmill workers in the province of B. C., according to a statement made by Hon. A. M. Mason. No information was available from the department of labor as to the number of sawmills owned by Orientals. The Orientals employed were: Chinese, 1784; Japanese, 1147, and Hindus, 565.

The supreme court in Washington held that the property of the U. S. Spruce Production Corporation, formed during the war to produce spruce for aeroplanes and all the stock in which is owned by the United States, was not subject to the taxation by the State of Washington. The suit involves taxes for the years 1919, 1920 and 1921.

A pulpmill with a daily production of 100 tons of pulp and 100 tons of paper and a large sawmill representing an investment of \$1,000,000 is contemplated by F. W. Clarke, 17 St. James St., Quebec City. The exact location of the new enterprise has not been made known, but Mr. Clarke has purchased forestry concessions on the Manicouagan River. The construction of the new plant is expected to go ahead in the spring.

A provincial charter has been granted the Farlinger Co., Limited, with a capital stock of \$2,500,000, and headquarters in Sioux Lookout, Ont. The company is empowered to carry on the business of timber merchants, sawmill and pulp mill owners and to deal in lumber, pulp, paper, creosoted products, etc. Among the incorporators are George E. Farlinger, lumberman, of Sioux Lookout, and Hugh Keefer, of Port Arthur.

E. Cowan, of Fort William, Ont., has been appointed mill engineer for the St. Lawrence Pulp & Paper Co., of Three Rivers, Que. He has been doing some work for the Guaranty Investment Corporation at the Nipigon plant operated by that concern and previously known as the Nipigon Fibre & Paper Mills, Limited. He had charge of the designing of improvements and extensions, with such good effect that the St. Lawrence company made a bid for his services.

D. M. J. Mooney, of the lumber firm of Mooney & Byrne, left Quebec recently for Newfoundland where he will start operations in taking out a large quantity of pulpwood for the American market. Mr. Mooney was recently instrumental in having legislation passed in Newfoundland which gives him extensive concessions on

Island, and should this winter's experiment of shipping pulpwood to the United States prove successful, it is expected that he will increase operations and eventually erect a pulp mill.

Hon. T. D. Pattullo, Minister of Lands, stated recently that plans are now complete for the exhibit of British Columbia forest products at the British Empire exhibition to be held in London next year. This exhibit of B. C. forest products is a co-operative effort with the lumber, shingle, sash and door, box and veneer manufacturers of the province, and will show to the visitors who will come from all the corners of the British Empire exactly what results can be obtained by the use of B. C. forest products.

The Miramichi Lumber Co., of Chatham and Newcastle, N. B., recently issued orders prohibiting hunters from trespassing on their lumber yards in the parish of Stanley without a permit. In previous years parties of amateur hunters from outside points have roamed over the company's lands shooting at everything in sight and occupying the vacant camps. It was with the object of putting a stop to this sort of practice and protecting teamsters from stray bullets, that the company issued the prohibitory order.

Douglas A. Stalker, wholesale lumber dealer, of Sherbrooke, Que., states that business with him has been good during the past season and that he has bought, sold and practically shipped out this year 10,000,000 feet of lumber, hardwood and softwood, 15,000,000 pieces of lath, and 2,000 cords of pulpwood. Mr. Stalker is carrying in stock about a million feet of hardwood and half a million feet of spruce and is of the opinion that prospects for next season are very promising.

Hon. H. J. Cody, Toronto, who recently took a trip to the extreme north in company with Premier Ferguson and Lieut. Gov. Cockshutt, was greatly impressed with the timber resources of that country and in a recent statement said there were vast but not limitless timber resources and pulpwood supplies. The aim of the Government would be to use greater care to protect this timber from the ravages of fire and so to conserve the forests that a steady harvest of trees would be reaped year after year.

An extra provincial license was recently granted to the Central Paper Co., of Muskegon, Mich., to manufacture and deal in paper and pulp in Ontario. The Central Paper Co. is an incorporation under the laws of Michigan and is empowered to invest in its operations in Ontario any sum up to \$1,000,000. The company recently acquired valuable timber holdings in Northern Ontario and may develop these at a later date but at present nothing definite is being done in that direction. It is understood the charter was obtained to facilitate a forward movement whenever the Central Paper Co. decide to go ahead with its development plan.

A well-illustrated brochure on Belgo-Canadian Paper Co. has been prepared in French by Rene T. Leclerc, Inc. The booklet tells the history of the Belgo Company in brief and summarizes the varied career of Hubert Biermans, the vice-president and general manager. Of interest is a discussion of the value to the country of exporting finished paper rather than raw material. It is estimated that if the 1,011,331 cords of pulpwood exported last year had been manufactured into paper in Canada, they would have brought \$45,195,400 to the country instead of but \$9,000,000, which was the approximate sum received by Canada for the exports.

The Abernethy-Lougheed Logging Company, Maple Ridge, B.C., will send a section of a fir log, 9 feet 6 inches in diameter, to the British Empire Exhibition in London. The huge tree which provided the log, from which the section was sawn, was found in the company's timber limit "W" in the northern part of the municipality, a few miles from Haney. The company were desirous of sending the whole log to give an ocular demonstration to the Old Country folks of what British Columbia can do in the way of lumber, but the Dominion timber authorities pleaded lack of space. The specimen can be seen at the company's booming grounds on the Fraser, one mile east of Haney, B. C.

J. B. Mackenzie, of Georgetown, Ont., who is one of the live wires in the retail lumber business in Ontario, believes in getting after seasonable trade at the proper period. He has been carrying an advertisement in the various papers setting forth the necessity for and comfort of storm sash and storm doors during the coming cold days, and telling what an economical move it is on the part of the householder to have these conveniences installed, saving coal and adding to the coziness of his home. Mr. Mackenzie put a small ad. in one of the papers outside of his own town, which resulted in so many inquiries being received, that he had to discontinue the ad. until his factory got in better shape to give prompt service. Then it was inserted a few days later and several more orders were received. Mr. Mackenzie reports that he has had a good year's business. He is always on the lookout for something original in advertising and this season is sending out at the Yuletide period a nut thermometer with his name upon it.

In the December 1st issue of the Canada Lumberman we introduced to you FARMYARD WHOLE EGG POWDER. The replies and enquiries we received from that little ad. are gratifying indeed.

JO-LO Farmyard Eggs have been used by the baking trade throughout Canada for a number of years with the greatest satisfaction. Every camp chef should have a barrel of these eggs on hand. Our laboratory will be glad to send him receipts for slab cake, pound cake, layers, drops, etc.

You not only save money on the cost price of Farmyard eggs but the freight, handling and storage cost are cut down to a fraction and the quality remains.

"Acme Waterproof" Leather Belting

This brand is especially well suited to the wet places in a saw or pulp mill and will run true as long as it is in service. When you are overhauling your mill equip it with "Goodhue Belts" and you will never regret it. They are honestly made of solid leather—every inch a good belt and they won't stretch.

NEW BOILERS FOR 1924

Squaring away for a bigger 1924 business will not be thoroughly done unless you take into account the condition of your Boilers. If they are undersized or worn out, you can't get economical results from them. Buying a clean, new, modern high efficiency Boiler from us will make your plant sound at the core. We make all sizes and types strictly to specifications, at moderate prices, and to requirements of the Interprovincial Boiler Code.

The National Hand Fired Stoker gives wonderful results with waste fuel—it's a smoke consuming device and semi-automatic stoker in one. The "greenest" hand can run it. Booklet on request.

Victrola No. 50 (Portable) \$62.50

Put a Theatre in Your Camp

Let the greatest performers in the world turn dull evenings into cheerful, happy ones for your men. And you can, simply by bringing a portable "His Master's Voice" Victrola, Model No. 50 to camp.

If your men like jazz, famous Paul Whiteman and his orchestra will play for them, if they want popular ballads, there's Billy Murray waiting their pleasure, then to feature the entertainment's there's world famous Sir Harry Lauder and his inimitable talent. Why really there isn't a famous artist in the world you can't call upon to entertain your men once you have a portable Victrola.

You'll find you never spent \$62.50 to greater advantage. You'll see discontent replaced with content—get a better day's work, have a better morale all through the camp.

"His Master's Voice" Victrola "The theatre" and "His Master's Voice" Victor Records "The performers" are a combination that ought to be in every camp. Any "His Master's Voice" dealers can put this "theatre" and "performers" into your camp—the moment you say the word.

HIS MASTER'S VOICE, LIMITED

FIRE BRICK AND CLAY

We make several brands of fire brick by every known process of manufacture from a selection of various high grade Pennsylvania clays. This enables us to furnish the best for your boilers, dutch ovens, refuse burners, kilns, etc. We specialize in fire brick for power plants and if you will advise us whether your boilers are hand fired or stoker fired and kind of fuel used we can then give you the proper brick for your work.

We carry a large stock of our different brands in various sizes and shapes in our Hamilton warehouse which enables us to ship at once.

We manufacture the following well-known brands:

**"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "M.D. Elk"**

Holt "CATERPILLAR" northern logger hauling train of logs on the operation of Abitibi Power & Paper Company, Iroquois Falls, Ontario

"Repeat" Orders are Proof!

The numerous repeat orders placed by satisfied "Caterpillar"* users in the northern woods as in lumbering regions all over the world, are the strongest possible proof of the practical value of the "Caterpillar" as compared with any other method. Winter work is always emergency in character; short logging seasons demand continuous operation and maximum output. The "Caterpillar" has established convincing records for dependable performance on the operations of many of the largest lumber and pulpwood manufacturers, as well as on the operations of contractors and loggers of smaller tracts.

The Anglo-Newfoundland Development Company says:

"Last winter our two "Caterpillars," operating an average of 110½ days each, hauled 10,984 cords of green pulpwood over ordinary snow roads. We are convinced that "Caterpillars" provide great economy in this country and are reducing our hauling costs approximately 50%.

For their 1923-24 operations, the Anglo-Newfoundland Development Company have purchased six additional "Caterpillars."

The Mt. Murray Woodlands Corporation, St. Fidele, Quebec after highly successful "Caterpillar" operations last winter, including comparative tests with other methods and machines, have adopted "Caterpillar" Tractors exclusively and purchased an additional fleet of four loggers for this winter's work.

The Abitibi Power and Paper Company, Iroquois Falls, Ontario, had highly satisfactory results last winter, reporting a reduction of 50% over their previous hauling costs.

We can give you convincing facts and figures about "Caterpillar" operations in Canada. We are prepared to make immediate delivery of Northern "Caterpillar" Loggers which contain many new and important improvements.

**There is but one "Caterpillar"—Holt builds it*

Relieve the Box Shook Shortage

By the use of

Gerlach Box Board Mills

For the cutting of

BOX, CRATE, CHAIR, FURNITURE, CABINET and other dimension stock, LATH, HANDLE MATERIAL, Etc. These machines are built in three sizes:—

CHAMPION for stock 10" to 24" Long
SPECIAL " " 10" to 36" Long
JUMBO " " 10" to 48" Long

All cut any required thickness from 1/4" to 3" and from 3" to 20" wide.

Cut either plain or quarter sawn, through the side or with the grain of wood, hence saw dust is like excelsior. Saw kerf 1/8". Round or quartered bolts may be utilized, as well as slabs and mill waste. Will cut 3000 feet of lumber per

man per day. Turns 80% of standing trees into finished product against 40% for the saw mill.

Average net cost of producing finished box lumber from small timber delivered at mill:

TIMBER	\$ 8.00
SAWING & OVERHEAD	2.00
NET COST	\$10.00 per M ft.

THE FORDSON

FOR THE LUMBERMAN

One of the most important problems which confronts the Lumber Dealer is handling costs. Cars must be switched and unloaded; there is always general yard work which demands attention and in many cases loads of lumber have to be hauled to and from outside points.

The Fordson Tractor with W & K Rubber Tired Wheels solves the problem. There are Rubber Tired Fordsons working in different Lumber Yards and without exception, these Lumber Dealers report that the work is being performed efficiently and at a substantial saving.

Let us show you how the Fordson can be adapted to YOUR needs.

W. C. WARBURTON & COMPANY LIMITED

Toronto, Ont.

AT the close of another year a review of our business relations with the lumber industry of this country gives us much gratification.

For many years it has been our pride and privilege to render service in the operations of Canada's second greatest manufacturing industry. That our products have brought to the lumberman greater facilities, conveniences, and comforts is well proven by the generous amount of business placed with us year after year, and especially during 1923.

We thank you, gentlemen, and wish you a Happy Christmas and a New Year of Health and Prosperity.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

A STURDY MEDIUM CAPACITY RESAW

This band resaw is considered the best of its type. One of its finest features lies in its capability to cut accurately. Takes stock up to 30 inches wide, 12 inches thick. Can be used for straight resawing, or by tilting the feed rolls, will saw bevel siding. Is an ideal machine for this purpose.

The yield rolls are at the left or outer side of the machine. The first infeeding roll at the left has an independent yield, which allows a thick board following a thin one, to be properly presented to the blade. Eight rates of feed 25 to 185 feet per minute are instantly available.

Upon request we will mail you circular which illustrates and outlines this machine fully.

Carson "Quality" Harness

CARSON Harness is made better to fit better, consequently horses can do a harder day's work with less exertion and the danger of breaking is minimized.

The best quality Oak Tanned leather is used exclusively and every section of harness thoroughly tested before leaving our factory. In short, it is a "Real" Harness with a reputation in the lumber industry that proclaims its worth. We also manufacture and carry in stock all kinds of Horse Goods and Equipment, such as, Saddlery Hardware, Horse Blankets, Horse Collars, Oiled Duck Covers, etc.

Carson Quality

We also manufacture:
"Carson Quality Luggage," Trunks, Bags, Suitcases, Packs and Canvas Goods, Oiltan Moccasins.

Catalogues and price lists on request.

GREENING'S WIRE ROPE

Its Quality Pays

Greening's Standard Crucible Cast Steel, Best Plough Steel and Acme Steel Ropes are made from wire specially manufactured and unvarying in quality.

All the wires are carefully tested for tensile strength, elongation and tension; all material that does not conform to the highest standard is rejected. Records of tests are kept for five years and there is no possibility of inferior material entering into these ropes.

Greening's Wire Rope, as used by Canadian Industry everywhere under all conditions, is proof positive, of the fact that "quality pays."

Our data files are always at your disposal or write for catalog.

Coleman Quick-Lite Lantern

"The Light of a Thousand Uses"

Here's just the brighter, better light you need for use in Lumber Camps, Bunk Houses, Saw Mills and Lumber Yards. Always ready for any job, any night, in any weather.

The finest kind of a light for night sawing, skidding, night-hauling—for any outdoor job. You can carry or hang the Coleman anywhere. Gives you plenty of steady, dependable light where and when you need it.

Lights with Matches—no old style lighting torch needed.

Makes and Burns Its Own Gas from common motor gasoline. Gives more light than 20 old-style oil lanterns.

No Wicks to Trim—No Chimneys to Wash—no dripping oil. No smoky dimness, no soot, no odor, no dirt.

Won't Blow out in Wildest Storm. Has wind-proof and

rain-proof mica globe with metal reflector.

Can't Spill Fuel even if tipped over. Can't be filled while lighted.

Most Economical Light You Can Have—48 hours brilliant service per gallon of fuel used.

Built of Brass; Simple in Construction—Only one working part. Inspected, tested and guaranteed. Will last for years.

Dealers Everywhere sell Coleman QUICK-LITE Lanterns, Lamps and Lighting Plants. See for yourself the reasons for its wide use by loggers, lumbermen, contractors, farmers, hunters, fishermen, campers and outdoor men. If he can't supply you, write us to-day for descriptive literature, prices, etc. Address Dept. CL 2.

1923-1924

THAT our efforts during 1923 have brought gratifying results is evidenced to us by the many valued friendships added to the goodwill of our business in all parts of Canada.

In thanking you, gentlemen, for the confidence reposed in our services, we wish you heartily an abundance of good things this Christmas. We hope that your daily endeavors throughout 1924 will be fruitful of success and prosperity.

How Does Your Flooring Output Compare with this?

Read what the Meadow River Lumber Company, Rainville, W. Va., did with the new No. 501-M Woods Flooring Machine

"We are quite sure that you will be interested in the results of our operation on October 25th. Our work day is ten hours, and on this date we produced on the 501-M, 110240 linear feet of 13/16 x 2 1/4" Birch and Maple flooring. Those accustomed to manufacturing flooring know quite well that these two woods are the most difficult to satisfactorily mill which we encounter. In all of our products we demand quality, therefore, all of this flooring which we manufactured necessarily conformed in every respect to the demands we make upon our equipment.

"We are quite enthusiastic about the machine, and feel that it leaves little to be desired in the way of flooring production. We might commend also the motors which you are at present constructing, mentioning that from the standpoint of ventilation they are far superior to any with which we have had experience."

**BIRCH AND MAPLE FLOOR-
ING IN ONE (10 HOUR) DAY
ON ONE MACHINE**

This represents the actual output of one Woods 501-M Electrically Driven Hardwood Flooring Machine.

This machine represents the highest development of modern planer design, combining superior mechanical construction with the feature of direct applied motor-driven cutter-heads and electric control.

As a planer it is designed with the single purpose of providing a simple and rugged machine for working narrow flooring of the hardwood varieties.

The machine is of the open or outside type, and all working parts are easily accessible. The board is in sight at every point on its way through the machine, and in case of a break up the stock can be quickly and easily cleaned out.
